

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E .

THE year 1875 presented generally throughout the world a peaceful aspect, although conflicts of principles were continued and hostilities commenced in some localities, which may yet involve the destinies of vast populations. The most extensive of these conflicts between some of the Governments of Europe and the Roman Catholic Church still continued, and in Germany, Switzerland, and Italy, the supremacy of the state was asserted and maintained without relaxation. The measures of each party to the contest and the documents issued are herein fully presented. In Spain, the heir of the late Queen has become established on the throne, and the Carlist forces have been defeated and have disappeared. In France, a constitutional republic has been established, and is in peaceful and successful operation. In the provinces of Turkey hostilities have broken out which have attracted the attention of the leading Governments of Europe. Incessant efforts have been made to suppress them without success, lest they should lead to the downfall of Turkey in Europe, and a general war over her remains. All these extensive subjects, and the important questions involved in them, and the circulars expressive of the views and measures of the Governments, are fully set forth in these pages.

In the United States peace has everywhere prevailed. The difficulties in Louisiana, in Arkansas, and in Mississippi, were soon adjusted, and the public attention has been engrossed by the embarrassed state of commercial affairs, with preparations for a Centennial Exhibition, and the numerous other measures appearing at the entrance upon a new career.

The details of American affairs embrace the finances of the Federal Government; the results of its systems of revenue and taxation; the banking system; the currency, and the effects of irredeemable paper money; the commerce, manufactures, and general state of the country; the finances of the States; their debts and resources; their educational, charitable, and reformatory institutions; the various political conventions assembled during the year, with their nominations and platforms; the results of elections; also, commercial and financial conventions and their proceedings; the important questions before Congress, such as specie payments, expansion or contraction, presidential elections, etc., with debates and decisions of that body; the proceedings of State Legislatures on the various local matters of importance—the extension of railroads and telegraphs, and all those improvements involved in the rapid progress of the country. These are contained, with ample details, in these pages.

A special article is devoted to the affairs of every foreign country, which

contains a brief sketch of its history during the year, and all official or trustworthy information later than that given in the preceding volumes, on area, population, religion, education, finances, army, navy, commerce, industry, etc. Great efforts are made to secure the completest material from all parts of the world, and the succeeding volumes of this Annual not only show, from year to year, a greater abundance of information, but its superiority over all other publications of a similar scope is more generally appreciated and recognized. It is felt that in this, as in other departments, the work may be safely consulted as the completest and most reliable book of reference; and many of its figures, like those on the area and population of the several countries, have passed into the geographical text-books used in American schools.

In order to make this information still more useful, a comparative article has this year been introduced, under the head of *THE EARTH*, which gives the summaries of the area and population of the large divisions of the globe, as well as the latest statistical aspects of the great creeds of mankind. It is intended to continue this comparative article in subsequent volumes, and to extend the summaries to other subjects.

The special articles on the great religious denominations constitute in their entirety a brief religious history of the year, probably the only one now accessible in the English language. The extensive use which is made of these pages of the *CYCLOPÆDIA* in the religious press and contemporaneous literature proves its value, and is a spur to making it, from year to year, more comprehensive without increasing its bulk.

The biographical department comprises articles or brief notices of deceased persons of distinction in state, church, society, and literature. The department will this year be found to be very complete, and to include the last owners of several names of great lustre in history (*see* *CAVOUR*, *SCHARNHORST*, and *STUART*, in *FOREIGN OBITUARIES*). The space devoted to living men is gradually enlarged, as it is intended to embrace within its scope the plan of a dictionary of men of the times. Men will be noted when they rise to eminence or fill prominent positions. Among the biographical notices given in the present volume are the new Ministers of several European States, the Presidents of Legislatures and large religious assemblies, and brief notices of each of the seventy-five French Senators elected by the National Assembly.

The advance in the various branches of astronomical and chemical science, with new and valuable applications to various purposes, is extensively described.

The narrative of geographical discoveries in the different parts of the earth, with their results, is very complete.

The record of literature and literary progress in the United States, and in each of the countries of Europe, is as full and important as during preceding years.

All important documents, messages, orders, and letters from officials, have been inserted entire.

A General Index of all the volumes, in one volume, is not only completed, but will soon be issued.

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, a country in Eastern Africa, area about 158,000 square miles; population variously estimated at from 3,000,000 to 4,000,000.*

The successor of Theodore II. as King of Abyssinia, Prince Kassa, who assumed the title of "Johannes, King of the Kings of Ethiopia," has been entirely unsuccessful in his efforts to subject the whole of Abyssinia to his rule. The King of Shoa, Menelek, has always remained independent. A new expedition was, in 1875, undertaken against him by King Johannes; but, while the latter was on his way to Shoa, a nephew of the late King Theodore, Ledj Ubie, placed himself at the head of the numerous malcontents, and by rapid military operations conquered the wealthiest provinces of Central and West Abyssinia (Dembea, Koara, Begemeder, Vogara, Sakalt), and took possession of the important fortress of Vokhamba.

Even more dangerous to Abyssinia than these civil wars is the irrepressible progress of the Egyptians. The Abyssinians have looked with alarm and distrust upon their Egyptian neighbors ever since the troops of Mehemet Ali pushed their conquests to the Abyssinian frontier in pursuing the Mamelukes. Abyssinia is now almost powerless to defend herself against her neighbor, who is gradually drawing in upon her from all sides. All the roads which connect Abyssinia with the seacoast pass through Egyptian territory. The road from the western provinces on the Blue Nile goes partly by Senaar to Khartoom, the capital of the Soudan; the remaining and largest part passes by Gallabat and Kassala to Suakim, on the Red Sea. The principal road from Central Abyssinia, Amhara, and Tigré, ends at Massowah, the chief harbor of Abyssinia on the Red Sea, which has now for three hundred years been under Turkish rule. From the fertile districts of Southern Abyssinia, too, the roads leading to the Indian Ocean have been in

Turkish hands since Egypt occupied the Somali coast in 1874. All these facts are well known to the Abyssinians, and are not calculated to give rise to a friendly feeling toward Egypt. Unfortunately, they are quite convinced that they are the first nation in the world, and every Abyssinian Christian firmly believes that his country will, at some future day, conquer Mecca and Medina, take Jerusalem from the Turks, and cause Mohammedanism to disappear from the face of the earth. European adventurers, who have from time to time sought to mend their fortunes in the country, have encouraged the Abyssinians in this belief; and their sovereigns have only been prevented by incessant rebellions and civil wars from attempting to carry out their supposed mission. Though no open war was carried on between Egypt and Abyssinia, the Khedive, without meeting with any serious obstacle, took possession of the Bogos country, in the north of Abyssinia, and of some districts in the west. In the latter part of 1875 the Egyptians were reported to be farther advancing into Abyssinia. According to dispatches received in November, the Abyssinians had surprised and killed a body of 1,200 Egyptians. Later accounts state that the Khedive was sending a force of 15,000 men against the Abyssinians.

The English Colonel Kirkham, having received from the King as a present a piece of land called Ghenda, on the borders of Hamasia and Egypt, gave part of it to the Swiss and Swedish missionaries at Massowah. These built some houses on the land, and sent a native missionary to reside there. The peasants of Hamasia, however, declared that Ghenda belonged to them, and threatened to kill the missionaries and burn their houses. The missionaries then escaped to Eilet; but the Government is so weak that it has not yet been able to take any steps in the matter. The ringleaders were the Abyssinian monks and priests, who are strongly opposed to foreign

VOL. XV.—1 A

missionaries, and have great influence over the people.

A German-Abyssinian Company, which was formed in Berlin for the colonization of Shoa, the most southern province of Abyssinia, was dissolved in September, only a few days before the intended departure of the colonists. The financial affairs of the company were found to be in such disorder that recourse was had to the police. The society had, from the very beginning, great difficulties to struggle with, for scientific authorities, such as Baron von Richthofen, the President of the Berlin Geographical Society, and the African traveller, Dr. Nachtigall, pointed out that the undertaking had no probable chance of success, besides which the German press, too, warned people against embarking in such a speculation.

ACHARD, LOUIS AMÉDÉE EUGÈNE, an elegant French writer, born in April, 1814; died March 24, 1875. He was at first intended for a commercial life, was in Algeria from 1884 to 1835, and upon his return became private secretary to the Prefect of Hérault. After 1838 he devoted himself to literature, and in 1835 wrote "Lettres Parisiennes," on the life in Paris, for the *Courrier de Paris*. After the Revolution of 1848, M. Achard engaged in politics, and edited an illustrated journal, *Le Pamphlet*, in the interest of the royalists. During the terrible days that followed in Paris he lost his brother, and was himself taken a prisoner by the revolutionists. The next year he took charge of *L'Assemblée Nationale*, in which paper he published "La Chasse Royale." In 1858 he fought a duel with Fiorentino, the editor of *Le Corsair*, in which he was severely wounded. His principal works are: "La Belle Rose" (5 vols., 1847), "Histoire d'un Homme" (1863), "Le Clos-Pommier" (1856), "L'Eau qui dort" (1860), "La Misère d'un Millionnaire" (1861), and "Madame de Sareus" (1865). He was decorated with the cross of the Legion of Honor in 1847, and became an officer of it in 1866.

ADVENTISTS. SEVENTH-DAY ADVENTISTS. The following is a summary of the statistics of this denomination as they were reported at its General Conference in August, 1875:

CONFERENCES.	Minist.	Churches.	Members.	Amount pledged to the System- atic Benevo- lence Fund.
Maine.....	1	9	966	\$1,848 87
New England.....	2	17	850	2,800 00
Vermont.....	5	14	828	1,780 22
New York and Pennsylvania.....	8	85	591	2,799 22
Ohio.....	1	12	266	1,494 84
Michigan.....	17	71	2,226	6,481 70
Indiana.....	8	8	158	985 23
Wisconsin.....	6	87	988	8,400 00
Illinois.....	4	22	850	1,800 00
Minnesota.....	6	28	700	2,500 00
Iowa and Nebraska.....	9	45	884	2,325 90
Kansas and Missouri.....	4	22	845	1,640 17
California.....	4	14	450	4,000 00
Swiss Mission.....	2	5	900	300 00
Total.....	69	389	8,022	\$32,618 62

The total number of licentiates was 76.

The treasurer of the General Conference reported that his receipts for the year, including the balance from the previous year, had been \$7,435.63.

The fourteenth annual session of the Seventh-Day Adventist General Conference was held at Battle Creek, Mich., beginning August 15th. Elder James White presided. Resolutions were passed recognizing "the hand of God in establishing a school in the city of Battle Creek, for the special purpose of presenting facilities, under favorable circumstances, for the thorough education of the youth of Seventh Day Adventists," and recommending the institution; expressing confidence in the principles of health reform which had been introduced to the denomination and adopted at Battle Creek, and urging their more thorough adoption and extended dissemination, and recognizing, in the fulfillment of the message of Rev. xiv. 9, "the nearness of the end" of the world. The executive committee were advised to take immediate steps to establish a printing-office in Europe, to issue periodicals in the French and German languages, and also "to enter the openings presenting themselves in Great Britain, France, Germany, Holland, Italy, Hungary, Africa, and Australia." Continued prosperity was reported in the work on the Pacific coast, through which about a thousand souls in the territory between Mexico and British Columbia had received the doctrines of the denomination. The secretary was instructed to prepare the constitution of the General Conference, with amendments, for publication.

The sixteenth annual meeting of the Advent Christian Association was held at Chapin's Grove, Springfield, Mass., August 9th and 10th. Six official delegates, forty-seven ministers, and thirty-three lay delegates, were present. An address was made by the president, Elder S. G. Matthewson, at the opening of the meeting, in which he described among the objects which it was the duty of the association to promote:

"We are to define and maintain a pure code of Christian doctrine. We must defend the time-honored and evangelical doctrine of the regeneration of the human heart; the personal advent of the Lord Jesus Christ; the physical resurrection of the dead, just and unjust; the retribution due to sin, and the reward of the good and holy in the kingdom to be established under the whole heaven; and last, but not least, that great scriptural truth which underlies all others, the essential deity of the Lord Jesus."

The principal business of the meeting was the reception of reports and adjustment of the concerns of the Publication Society and the newspaper organs of the Association. The receipts of the Publication Society were represented to have been \$18,697.61, and its expenditures \$18,888. The publishing-house had

property on hand valued at \$8,765.22, and its entire capital stock was stated to be \$17,843.98. More than 1,800,000 pages of tracts had been published during the year, and grants and sales of books and tracts had been made to the value of \$4,698.81.

Dissatisfaction had been expressed with the management of the *World's Crisis*, because it was thought to have given undue prominence "to a modern phase of the doctrine of holiness." The editors were instructed "to make prominent the great judgment message," or the doctrine of the speedy coming of the Lord Jesus Christ. The Association recommended the holding of a General Conference some time in the fall, to be composed of delegates from State conferences.

The tenth annual meeting of the American Advent Mission Society was held at Springfield, Mass., August 11th. The treasurer reported that his receipts for the year had been \$6,429.60, and his expenditures \$6,082.09, leaving a balance in his hands of \$347.51. Mission-work had been prosecuted chiefly in North and South Carolina, Virginia, Alabama, Tennessee, Florida, and Kansas. Help had also been sent to ministers preaching in new places in Nova Scotia, Michigan, Ohio, Kentucky, California, Missouri, Massachusetts, New York, and New Hampshire.

The annual camp-meeting of the American Millennial Association (Evangelical Adventists) was held at Hebronville, Mass., beginning August 12th.

The annual meeting of the American Millennial Association was held in connection with the camp-meeting at Hebronville, Mass., August 14th. The treasurer represented that there had been for the past two years a deficiency of about two thousand dollars a year in the running expenses of the publication-office. The subscription list of the *Messiah's Herald*, the organ of the denomination, was reported to number about twenty-eight hundred names. The committee on colportage was given charge of the ordination of ministers and the care of feeble churches. A woman's missionary society was organized in connection with the Association.

Elder G. W. Burnham, a missionary of the Board of Home Missions, reported that during the year he had given one hundred and thirty-six discourses, in thirty-two towns and cities, in the States of Maine, New Hampshire, Massachusetts, New York, New Jersey, and Pennsylvania.

AFGHANISTAN,* a country in Central Asia, bounded north by east by Toorkistan, east by British India, south by Beloochistan, and west by Persia; area 278,000 square miles; population about 4,000,000. Present ruler, Amir Shere Ali. This country continues to be in a most disorganized condition. The

Amir, Shere Ali, kept his eldest son, Yakooob Khan, as a prisoner at his capital. The first commercial caravan which the Russians, during the last spring, sent from Astrakhan to Afghanistan, under command of Colonel Gluchowski, and which was instructed to obtain trustworthy information concerning the actual frontier between Afghanistan and Persia, had to return when near Meshed, without having accomplished any thing. Serious difficulties have arisen with the Mir (ruler) of the Uzbek principality of Mymana. This state, situated nearly two hundred miles to the northeast of Herat, owes allegiance to the Amir of Afghanistan, but has never been very hearty in its obedience. So little can the ruler of the state be relied upon that, in 1874, the governor of Balkh did not dare to march the troops, which were to occupy Herat, through this territory. In the second half of the year 1875 the Mir of Mymana was more than ever suspected of acts inconsistent with his position of feudatory, and, when he sent his son on a mission to Cabool, the Amir promptly seized and detained the youth as a hostage for his father's good behavior. This characteristic act of Oriental statecraft seems, however, to have been without effect. The Mir continues his intrigues with neighboring states, and Shere Ali thereupon determined to take active measures against him. The governors of Herat and Balkh have been ordered to march a force upon Mymana without delay. An Indian paper, the *Pioneer*, estimates the troops of Mymana at twelve thousand horsemen, and says that they are rather a feudal militia than a regular disciplined force. In the valley of the Cabool, Naarus Khan, an uncle of the Amir, who resides at Lalfura, raised, in 1875, the standard of revolt, and collected among the savage Mommands, who have repeatedly harassed the agriculturist population in the neighboring districts of India, a force of about twelve thousand. He was, however, defeated, and fled into the mountains, where a number of chieftains maintain an almost complete independence.

A great danger arises to Afghanistan from the Toorkoman tribes, which, by the establishment of Russian forts on the eastern shore of the Caspian Sea, have begun to be alarmed in regard to their independence. The *Delhi Gazette*, in June, published a report from Cabool, that the leaders of the Toorkomans near Merv had inquired of the Amir of Afghanistan whether in a religious war against the Russians they might expect to receive aid from the Afghan provinces of Herat and Balkh. The Amir was said to have replied that he regarded them as boasting robbers. The prince of Mymana likewise refused to join them, and notified of his intentions, not only the Amir at Cabool, but the Russian authorities at Samarcand. It is feared that the Toorkomans, finding that they are unable to infest Russia, or even Persia, may commit depredations in the unprotected frontier districts of Afghanistan.

* For an account of the regulation of the northern frontier, and of the population of the several provinces, see *ANNUAL CYCLOPEDIA* for 1874.

As Afghanistan is now the only country of any importance which separates the Russian possessions in Asia from the British, the Governments of both these countries are watching Afghan affairs with the most intense interest, in order to be prepared for future contingencies. The plans both are forming in regard to the future are studiously kept secret, and little therefore that is published about the movements of the two great European powers in this part of Central Asia can lay any claim to authenticity. A profound impression has therefore been produced by the outspoken and straightforward views on this subject published in the new work by Major-General Sir Henry Rawlinson, entitled "England and Russia in the East" (London, 1875). The author, in the preface to his work, disclaims emphatically any official authority for his statements, he has for many years been one of the most prominent representatives of English diplomacy in the East, and still is an influential member of the "Council of India." In view of the importance which the opinions of such a statesman must have for an understanding of the Central Asiatic question, we give his concluding remarks on the relations of England and Russia to Afghanistan (p. 362):

Russia by advancing on Merv evidently means mischief. She would never embark on an enterprise of so perilous a nature for mere purposes of trade or police. Political objects of high import could alone justify the movement. These objects necessarily point to Herat, which would lie at the mercy of a European power holding Merv, and whence India would be seriously threatened. Herat possesses natural advantages of quite an exceptional importance. It is the frontier town between Persia and India. It is connected by high-roads with the capitals of all the surrounding countries, with Cabool through the Hazareh Hills, with Balkh and Bokhara through Mymeneh, with Kibiya through Merv, with Meshed, with Yezd and Ispahan, with Seistan, and with Candahar. It enjoys an admirable climate, and is situated in the midst of one of the most fertile and populous valleys in Asia. Above all, the city itself is surrounded by earthworks of the most colossal character, dating from prehistoric times, and which, with the adaptations and improvements of modern science, might be rendered quite impregnable to an Asiatic force. Russia in possession of Herat would have a grip on the throat of India. She would, indeed, in virtue of the position, command the military resources both of Persia and Afghanistan, and would thus oblige us at once to increase our frontier army by at least twenty thousand fresh British troops. Viewing, then, the question as merely one of finance, it may be assumed that our advance above the passes and occupation of Herat would be the cheapest insurance against Russia that we could effect for the benefit of our great Indian estate. Let it be further remembered that all these considerations have been already discounted by our statesmen in regard to the smaller question of a Persian occupation of Herat. We sent a considerable expedition to the Gulf in order to oblige Persia to raise the siege of Herat in 1838, and, when Persian troops occupied the place in 1856, we actually went to war with the Shah for the purpose of compelling their withdrawal. If, then, such measures were justifiable in order to prevent the western Afghan capital from falling into the hands of Persia, who was only to be feared as the minion or

precursor of Russia, much more must they be required when the danger comes directly from Russia herself. I will not pretend to calculate the cost of sending an expedition to Herat. Any estimate, based on the uncertain premises which are alone at present available, would be fallacious; but I may point out that the expenses of our defensive position, however great, must be far less than those encountered by Russia in constructing or maintaining her elaborate system of attack. For when Russia is established at Merv, and has completed the communications of that post with the Caspian on one side, and with the Oxus and Toorkistan on the other, she will have at least fifty thousand soldiers in Central Asia, and it is not too much to assume that the main object of bringing that large body of troops into the field, toward whose support the conquered Uzbek states contribute little or nothing, will have been to enable her to threaten India.

There is one other aspect of the question that requires explanation. Some of our best authorities on Central Asian politics maintain that not only should we incur an enormous and useless expenditure in advancing to meet Russia above the passes, but that we should be intensifying tenfold the difficulties of our position. They believe that we should everywhere meet with hatred and resistance, that we should thus throw the Afghans into the hands of Russia, who would in fact when she advanced be hailed by them as a deliverer rather than opposed as an invader. My own experience points in an exactly contrary direction, and I am happy to find my views corroborated by the independent testimony of our latest travelers. Believing as I do the western Afghans to be the most contemptible of enemies, and hardly, therefore, caring to consider the possibility of a skirmish in the Bolan or Khojek Passes, the only defensible positions on the line from Scinde to Herat, I still feel satisfied that we should generally receive the warm support of the great mass of the population in the districts that we traversed. The Syuds of Pishin, the Atchikzyes of the Khojek, who adhered to us in all our troubles in 1841-42, the Persian peasantry of Candahar, the mercantile and agricultural classes throughout the country, would one and all throng to us for support and protection. Mindful of past benefits, hopeful of future favors, they would bring in their camels from the desert and empty their granaries of corn to supply our wants, as they did in those days when, although Ghizni and Cabool were lost, and an army had perished in the passes, we were safe and strong and triumphant at Candahar.

The only parties from whom we should experience ill-will would be the priesthood and a few of the Durani chiefs; and they might be called upon to retire to Cabool. Most assuredly, as far as the disposition of the natives is concerned, we should not have more difficulty in governing Candahar and Herat than the Russians encounter in governing Tashkend and Samarcand; while our long familiarity with Eastern administration, our special knowledge of Western Afghanistan, our consideration for Mohammedan prejudices, our prestige, our high reputation for justice and good faith, ought to make the task of maintaining the position far more easy to us than to our less experienced Northern neighbors.

I will only say one word in conclusion, that I counsel nothing rash or premature. If Russia remained encamped on the Caspian, we should not, of course, leave the valley of the Indus. So long as she held aloof from Merv, we should hold aloof from Herat; but, if she deliberately threw down the gauntlet, she must expect it to be taken up. We could not, as the guardians of the interests of India, permit her, on the pretext of curbing the Toorkomans or establishing a trade-route through Asia, to take up a position unopposed on the Murghab, which would compromise the safety of Herat. That city is both strategically and politically an indispensable

bulwark of India, and we cannot and will not allow its future fate to be at the disposition of a foreign power.

AFRICA. In consequence of the annexation of Darfour, and other territories, Egypt has advanced another step toward a front rank among the great nations of the globe. It now has an area of more than 1,500,000 square miles, and while a year ago (*see ANNUAL CYCLOPEDIA*, 1874, article **AFRICA**) its population was estimated at only 8,000,000, it is now estimated at more than 14,000,000. Its area already exceeds that of the whole of the other dominions of the Sultan, and, as it is now extending westward and southward with uninterrupted rapidity, the same will soon be the case with its population. In view of this rapid growth, the establishment of its entire independence within a few years can no longer be doubted. As internal reforms continue to go hand in hand with the steady extension of its boundaries, it will soon be recognized as by far the greatest of all the African states. Financial embarrassments, however, compelled the Khédive, in November, to sell his shares of the Suez Canal Company to Great Britain, a transaction which was expected to increase English influence in Egyptian affairs. (*See EGYPT*.)

Abyssinia again suffers severely from civil wars, and appears to be in imminent danger of being swallowed up by the rapid advance of the Egyptians. In November the Abyssinians claimed to have obtained a great victory over the troops of the Khédive, who, toward the close of the war, dispatched a considerable new force toward Abyssinia. (*See ABYSSINIA*.)

The Sultanate of Morocco was greatly disturbed by insurrections. The Government appears to be anxious to strengthen its connection with the nations of the civilized world, and to introduce telegraphs, railroads, and other improvements. (*See MOROCCO*.)

In Tripoli, insults were offered by the populace to the American consul, and subsequently, in August, to the officers of the American war-steamers Congress and Hartford. Satisfaction was immediately given for the insults to the officers, and somewhat later for those to the consul.

The boundaries of the British dominions in South Africa were again extended by the annexation of East Griqualand, which the Governor of the Cape Colony, Sir H. Barclay, on the 10th of October, 1874, incorporated with the British territory. The annexed country was formerly called Adam Kok's territory, and is situated south of Natal, in independent Kaffraria. Its boundaries, according to the "Map of Independent Kaffraria," in *The Mission Field* (London, January, 1874), are, on the north, the Umzinkulu, which separates it from Natal; on the west the Kwathlamba Mountains; on the south and west a line which runs down from the Kwathlamba Mountains along the Umsimvubu River, then turns in a northwesterly direction, along the Jugele Mountains,

toward the source of the Umtanfana, passes along an affluent of the Umzinkulu, and finally reaches the latter river. By the annexation of East Griqualand to the British possessions, the territory of independent Kaffraria has been reduced to 11,672 square miles, with a population of about 175,000. The area and population of the British possessions are now computed as follows:

COUNTRIES.	Square Miles.	Population.
THE CAPE:		
Cape Colony.....	192,420	496,881
British Kaffraria.....	3,468	56,201
Basooto Land.....	8,451	75,000
West Griqualand.....	16,682	25,477
East Griqualand.....	8,402	85,000
Natal.....	17,802	239,778
Total.....	242,170	1,007,882

A movement for uniting all the English possessions of South Africa into one confederacy was not only meeting with great favor in the colonies, but a tendency to join it was even manifested in the Transvaal Republic. Sir Garnet Wolseley, the successful commander of the expedition against the Ashantees, was appointed Governor of Natal, which, with all its fine resources, has thus far not made that material progress which is the very breath of life to a colony. The hope was widely entertained that under the new Governor the colony would triumph over the difficulties and dangers which must beset 16,000 whites surrounded by 350,000 blacks. In the latter part of the year, however, Sir Garnet Wolseley was recalled to England, and another Governor appointed for Natal. Langalibalele, the arrested native chief, has been released and provided with a comfortable location in the Cape Colony, where, with such wives and relatives as choose to join him, he will reside as an exile on parole and under surveillance. His tribe has been broken up, the people being allowed to seek work and to go where they will, but not to reform themselves into a tribe.

In Liberia, a war commenced in September against the aborigines, under several educated natives. It was believed that the natives were supplied by English traders with firearms and ammunition. The "American Colonization Society," to which the Liberian Republic owes its foundation, applied to the President of the United States for assistance.

The French colony of Senegal appears to be in a very disaffected state. In February, a revolt was organized by a Marabout, named Amadon-Sekon, a very courageous native. He succeeded in collecting a force estimated at 10,000 infantry and 3,000 cavalry, but, in an encounter which took place on February 11th, was not only defeated but killed.

The kingdom of Wadai, in Central Africa, has for the first time been made fully known to the civilized world by the African traveler Dr. Nachtigal. (*See WADAI*.)

The successful issue of the war against the

Ashantees has greatly strengthened the authority of the English on the west coast. In February, the Wassau chiefs met the English Governor at Elmina. They had been sent for to answer to a charge of seizing persons and property not their own. The Governor instructed them to make restitution, and to be careful not again to infringe the law. In the same month King Coffee Calcalli, of Ashantee, was deposed. Contrary to the former custom prevailing on the Gold Coast, and in many other African kingdoms, which obliged deposed kings to blow themselves up in the ruins of their palaces, the King of Ashantee was allowed to retire to a village in the interior, and to take with him a certain quantity of gold-dust and slaves, and about fifty wives. The others (some hundreds) went to the new King, who was the crown-prince. The new King invoked the assistance of the English Government against Asafa Agai, chief of Djuabin, who soon after the end of the war had achieved his independence of Ashantee, and manifested an intention to subdue the entire kingdom. In October, messengers from both tribes were at Cape Coast Castle, awaiting the return of the Governor.

The outrages committed by the piratical and thieving tribes living on the Lower Congo led to a new English expedition. In January these tribes plundered an English schooner, the *Geraldine*, and murdered four of her crew. The

commodore of the naval station, Sir William Hewett, and Captain Hopkins, the English consul at St. Paul de Loando, tried to make the local chiefs themselves surrender the culprits, by going, in March, to Ponta de Linha, a place nearly twenty-five miles up the river, and there holding a "palaver" with the princes of the district. But, so far from giving the names of the criminals, those native dignitaries insulted the commodore and laughed in the consul's face; hence it was determined that the work of punishment should be undertaken by the English squadron. On the morning of the 30th of August the following ships proceeded up the Congo: the *Active*, the *Encounter*, the *Spiteful*, the *Merlin*, the *Foam*, the *Ariel*, and the *Supply*. Several towns and villages of the natives were destroyed, and the remains of the murdered merchantmen were found by the landing party. Four kings of natives came on board the English vessels and expressed themselves highly pleased with the design of the English to secure the safety of the trading-vessels. The expedition returned on September 15th, after having sailed up the river about eighty miles. It was regarded as a complete success.

According to the latest accounts, the area and population of the geographical and political divisions of Africa (*see* Behm and Wagner, "*Bevölkerung der Erde*," vol. iii., Gotha, 1875) were as follows:

COUNTRIES.	Square Miles of Subdivisions.	Population of Subdivisions.	Square Miles of Divisions.	Population of Divisions.
Morocco.....	259,598	6,000,000		
Algeria.....	258,817	2,414,218

* The area, according to Engelhardt, is 11,557,000 square miles.

In the French colony of Algeria, the territory subject to civil government is steadily enlarged. In 1874, the area amounted to 15,059 square miles, and the population to 992,368. The department of Algiers was divided into the three arrondissements of Algiers, Dellys, and Milianah; the department of Oran into the four arrondissements of Oran, Tlemcen, Mascara, and Mostaganem; and the department of Constantine into the arrondissements of Constantine, Philippeville, Bona, and Sétif.

The progress of civilization is greatly promoted by the extension of railroads and telegraphs which from various points on the coast are steadily advancing into the interior. The telegraph, between Khartoom and Cairo is now in successful operation, and among the new routes projected is even one from Constantine to Timbuctoo. Various schemes continue to be proposed for converting a part of the Sahara into an inland sea.

AGRICULTURE. The crops in the United States for the year 1875 were extraordinary in quantity, but not uniformly of the best quality. Extremes of cold and heat, long and violent storms, and in some places inundations, were unfriendly to the productions of the earth. In certain regions grasshoppers, Colorado beetles, or other insects, made desolating raids. The dreaded migratory grasshopper or locust of the lands beyond the Mississippi was less destructive in 1875 than in 1874. In Coffee County, Kansas, there was a visitation nearly approaching in severity that of the previous year, cutting the wheat in the head, devouring the corn as fast as it came up, and standing guard over the roots. They destroyed potatoes and garden vegetables by wholesale; and devoured the fruit, foliage, and even the bark of fruit-trees. They left tokens of their mischievous presence in many other parts of Kansas. They also damaged cereals and fruits in Missouri, Iowa, Minnesota, Wisconsin, and Nebraska. In many places they appear to be perishing from the assaults of parasites. In one instance from two to eleven worms were observed upon the body of a single locust feeding on the internal parts and leaving only the shell. In another case one-third of the locusts were infested with red parasites. The Colorado beetle has reached New England, but its severest ravages were felt in the Middle States, Maryland, and Virginia. In the West it was comparatively harmless. The grass army-worm, or something resembling it, was especially destructive of the oat-crop of Ohio and of a few counties in adjacent States. The dreaded chinch-bug scourged only a few localities. Cotton-insects did so little harm that they did not affect the general yield, while fruit and grain insects were very sporadic in their demonstrations.

Wheat.—The wheat-crop of 1875 in the United States was considerably below that of 1874, notwithstanding the increase in acreage. The estimated yield, per acre, of the leading

wheat-producing States, given below, will indicate the comparative range of this crop in the past two years:

STATES.			STATES.		
	1874.	1875.		1874.	1875.
	Bush'/a.	Bush'/a.		Bush'/a.	Bush'/a.
New York....	15.6	8	Wisconsin.....	11.5	14
Pennsylvania..	14.8	12.8	Minnesota.....	18.4	17
Ohio.....	15	9.5	Iowa.....	11.6	9.7
Michigan.....	14.2	18.5	Missouri.....	18.5	9
Indiana.....	12.2	9	Kansas.....	18.7	12.5
Illinois.....	11.5	10.5	California.....	18.2	11

Of these States only Wisconsin and Minnesota had an excess over 1874, which is more than counterbalanced by the reduction in other States. The crop shows a depreciation in quality as well as a decrease in quantity in the great wheat-growing regions.

The little wheat grown in New England was about the same quantity as in former years. The Middle States had about two-thirds of the crop of 1874, the decline being greatest in New York, and growing less with lower degrees of latitude. All the Southern States below Virginia increased their production, some of them from 50 to 75 per cent.

The crop of the Pacific coast was also short. The average for the entire territory was about 80 per cent. of the production of 1874. It gives a crop of 246,000,000 bushels, with a depreciation of nearly 62,000,000 bushels. In quality the crop averaged 84, or 14 per cent. below sound condition. The losses by sprouting and rotting in shock or stack, though not so heavy as was expected, were so great, however, as to cause shipments of wheat from Maryland to Ohio in order to make a mixture that would produce a salable flour. And yet during the spring of 1875 in Marion County, Oregon, the price of wheat was so low that farmers fed it to hogs, the price being 65 cents a bushel, while pork was worth from six to seven cents per pound.

Corn.—The following facts show the comparative yield, per acre, of the largest corn-producing States for 1874 and 1875: Tennessee, 1874, 16.8 bushels; 1875, 80.5 bush.; Kentucky, 1874, 25 bush.; 1875, 33.8 bush.; Ohio, 1874, 36 bush.; 1875, 33.2 bush.; Indiana, 1874, 27 bush.; 1875, 34.5 bush.; Illinois, 1874, 18 bush.; 1875, 34.5 bush.; Iowa, 1874, 29.2 bush.; 1875, 35 bush.; Missouri, 1874, 16 bush.; 1875, 36.6 bush.; Kansas, 1874, 10.5 bush.; 1875, 38.4 bush. All the New England and Middle States had an increased yield, except Connecticut; New Jersey and Pennsylvania had a very marked increase. All the Atlantic States showed a decreased average, as also did Ohio, Wisconsin, Minnesota, and Oregon. All other States increased their yields.

Rye.—The product of rye for 1875 falls short about 4 per cent. of that of 1874, which was about an average crop. In the States which grew it on a large scale, the figures for comparative product and quality are: New York, 81 and 98; New Jersey, 79 and 97; Pennsylvania, 93 and 98; Maryland, 97 and 96; Vir-

ginia, 100 and 95; Kentucky, 88 and 84; Ohio, 71 and 79; Wisconsin, 129 and 105. Among the remaining States the product, compared with last year, is greater in Tennessee by 1 per cent. and in Kansas by 5 per cent., while in Nebraska it is less by 40 per cent. In others it ranges from 77 in Indiana up to 100 in Delaware, South Carolina, Florida, and Oregon.

Oats.—Between the thirty-fourth and forty-first parallels of latitude, the crop of 1875 was largely diminished and universally damaged in quality by long-continued and flooding rains. The comparative figures are: Delaware, 68; Maryland, 91; Virginia, 81; North Carolina, 101; West Virginia, 94; Ohio, 100; Kentucky, 98; Tennessee, 102; Indiana, 77; Illinois, 106; Iowa, 107; Missouri, 109; Kansas, 84; Nebraska, 73. In all these States the quality was below that of 1874, averaging about 88. Outside of the rainy section, with few exceptions, superior crops in quantity and quality were produced. The returns make the entire product about five per cent. greater than in 1874.

Barley.—The product of barley returned in 1875 is 87 per cent. of last year's crop. About an equal reduction in quality is reported. Except in Rhode Island, 77 and 93; Delaware, 65 and 87; and California, 79 and 78, the falling off in quantity and quality is almost exclusively within the area of excessive rains. The States in which the crops suffered most are Indiana, 47 and 64; Nebraska (owing in part to locusts), 53 and 82; Ohio, 63 and 78; West Virginia, 77 and 84; Kansas, 78 and 99.

Buckwheat.—The entire product of this grain equals that of last year. Early frosts reduced the crop in Illinois, Wisconsin, and Minnesota, and slightly in the section east of Lake Erie. Except in Wisconsin, 45, the crop does not fall more than 1 per cent. below that of last year in any State in which it is extensively grown. Maine returns 116, Vermont and New York 99, New Jersey 100, Pennsylvania 112, Michigan 132.

Potatoes.—This crop was extraordinary, both in product and quality. The total yield in the districts reported was fully one-fourth greater than last year. Of *Sweet-Potatoes* the yield in the Gulf States greatly exceeded that of the previous year, and the quality was about the average. In New Jersey, Delaware, and Maryland, the product was about 3 per cent. greater than in 1874.

The variations in the prices of wheat in the United States, on December 1st, in the last four years, may be seen from the following figures:

STATES.	1872.	1873.	1874.	1875.
New York.....	\$1 65	\$1 60	\$1 26	\$1 81
Pennsylvania.....	1 67	1 50	1 21	1 29
Ohio.....	1 42	1 81	1 04	1 09
Michigan.....	1 46	1 85	1 08	1 15
Indiana.....	1 32	1 22	94	97
Illinois.....	1 28	1 10	86	91
Wisconsin.....	1 08	97	83	91
Minnesota.....	58	80	70	86
Iowa.....	55	79	65	71
Missouri.....	1 41	1 13	83	95
California.....	1 11	1 32	99	1 18

Rice.—The most southern latitudes of the United States report the best yield of this crop for 1875. Thus Louisiana reports a production of 25 barrels per *arpent*; Florida, in one case, planted 500 per cent. beyond any previous year, and obtained a very remunerative crop. In Georgia the crop on the Santilla River amounted to 140,000 bushels, or about 20,000 bushels more than in 1874. In South Carolina the tide-water plantations yielded plentifully, while the upland fields lost one-half by drought. In Brunswick, N. C., the great crop was formerly rice, but since the war the production has fallen off from 200,000 baskets to less than 20,000, and no crop has taken its place on the large and valuable rice-plantations, which have consequently almost all gone to ruin.

Sugar.—Sugar-cane in parts of Georgia and Alabama suffered from drought. The leading planters in Mississippi manufactured their sugar and molasses at home from Louisiana and African cane. In Louisiana the season of 1874 was good, but the floods of April destroyed 24,713 acres of cane. The next six months, with the exception of the first half of July, were very dry, and the grinding season found the planters with short supplies of water. The total loss from flood and frost is estimated at 50,000 hogsheads of sugar. Mr. Sterling, of Point Coupee, after several years of planting the butts and tops of the cane separately, has found in every instance that the tops produce a superior cane. The "Robert diffusion" process of sugar-manufacture promises satisfactory results. A large factory upon this principle has been started in St. Charles Parish. The crop of Louisiana sugar for the year 1874 was 116,867 hogsheads.

Maple Sugar and Molasses.—In 1875 New England enlarged her product of sugar. The only State which has fallen below 1874 is Connecticut, in which the product was 95 per cent. New Hampshire was full average; Maine, Vermont, and Massachusetts, were very considerably above the average. The product of molasses was not so large. New York declined from 1874, both in sugar and molasses. Pennsylvania yielded about three-fourths of the crop of 1874. Virginia reported a product of sugar equal to 87 per cent. of 1874, and 96 per cent. of molasses. West Virginia and Kentucky were a little in advance of 1874. Northward from the Ohio River the sugar and molasses product declined gradually from 11 per cent. in Wisconsin to 39 per cent. in Michigan. West of the Mississippi the product of sugar increased in Minnesota, and declined in Iowa and Missouri. The season was generally shortened by the cold weather.

Sorghum.—This crop, cultivated almost entirely for the manufacture of molasses, shows an extraordinary increase over the year 1874 in the Southern States and in the Missouri Valley. Farther north there is a general decrease, though Indiana, Michigan, and North Carolina, are exceptions. In Ohio the crop is decreasing

every year. In Kansas the crop was too large to be worked up by the machinery. In cane Utah fields have yielded as high as 200 gallons of sirup per acre.

Hay.—In 1874 New England, except Maine, and the Middle States, reported a large crop of good quality. The entire crop of 1875, compared with that of 1874, is 3 per cent. greater in quantity. Compared with 1874, Maine had an increase of 10 per cent.; but in the other States of that section there is an average falling off of about 13 per cent., the principal cause being an early drought. In New England, as a whole, the good quality of 1874 is fully maintained; but in the other States throughout the whole section north of the thirty-sixth parallel and east of the Mississippi, the quality was much damaged by the rains prevailing in the season of cutting and curing.

Fruit.—The year 1875 was unfavorable for apples, while the crops of peaches and grapes have been considerably above the average. Texas is the only State that had a full average crop of apples. Peaches were abundant: New Jersey, 97; Delaware, 112; Maryland, 102; Mississippi, 108; Arkansas, 106. The large crop in Maryland, although near the markets, did not prove remunerative, and would have been lost but for the introduction of canning on an extensive scale. The grape attained a higher condition than either apples or peaches. The culture of oranges, lemons, and bananas, in Florida, has reached that point of enthusiasm which is sometimes called a "fever." In Orange County, Florida, this has proceeded so far that cereal crops are largely abandoned, and the whole county bids fair to become one vast orange-grove. Limes are already promising to be produced in quantities for shipping. In 1874 the number of bearing orange-trees in Florida was estimated at 50,000; the number of groves averaging 100 trees each at 100,000; to which were to be added many larger groves in which the number of trees ranged from 200 to 7,000. The estimated increase of orange-groves in Florida in 1874 was 25 per cent. In Middle Florida, on both sides of the river Appalachicola, many young orange-groves are coming rapidly forward. It is claimed that the soil is richer here than on the St. John's; the trees mature earlier, and bear more fruit, than in Eastern and Southern Florida. One grower reports that he realized \$900 from six trees; another that he realized over \$100 from one tree. The production of bananas is mainly limited to the southern section of the State. It has proved quite successful, and is extending. One cultivator in Marion County has a thrifty plantation of twelve acres. The area covered by plants in the State equals 500 acres, and the number of growing plants exceeds 300,000.

Tobacco.—Few if any plants are so modified by peculiarities of soil, culture, and curing, as tobacco. The Connecticut seed-leaf, used as wrappers for Havana fillers, when cut is left on

the ground to wilt; then bundles of from five to seven plants are strung on a lath four feet long, and hung in the curing-house in tiers, and dried by the atmosphere. The mode of housing and curing in Maryland is as follows: In Calvert, when the leaves are mature and soft from moist weather, they are stripped from the stalk and tied up in small bundles, care being taken to keep the several qualities separate. Nearly all the crop is air-cured. In Montgomery the cut is hung on sticks four and a half feet long. On one end of these sticks is an iron spear, on the points of which the plants are pressed, while the other end is made fast in the house, and thus about ten plants are hung upon each for curing, the sticks being hung ten or twelve inches apart upon poles. Fires are kindled beneath the tobacco, which is hung ten feet above. The curing process demands great experience to secure the desirable color, and caution to prevent the burning of the house and its contents. The fires are kept up until the tobacco is thoroughly dry. Much of it is exported; a large order is usually filled for the French Government. It sells at a moderate price, and is chiefly used for cigar-fillings, snuff, twist and plug chewing, and for manufactured smoking brands. Kentucky, the tobacco-field of America, has many varieties. That grown in the "Clarksville district" has a heavy body, and is largely exported to Germany, Austria, and the north of Europe, though a portion is sent to Mexico and Africa. It resembles that which is cultivated on the manured lands of Virginia. Its mode of curing contributes largely to its peculiar qualities. It is cured in close barns in the course of two or three days of heavy firing, which gives greater body than the air-cure. The coal-cured tobacco of North Carolina is cut when it begins to yellow in the hill. In the barn it is first heated gradually until the leaf is nearly cured, when the temperature is raised to 175°, and kept to that point until the cure is complete. Heavy fertilizing is avoided for the bright, charcoal-cured, high-priced grades, in order to obviate the danger of a dark color and bad bloom from too much sap. On this account it is grown usually on new land in a light-gray soil. In some districts of Missouri charcoal-curing has been introduced, with increase of price from twenty-five to fifty per cent. In Vinton County, Ohio, after stripping off the leaves in the field, hauling to houses, stringing on strings with a flat needle, and fastening the strings to the ends of sticks, and curing three days with furnace-heat, the stock is ready to take down and pack for market.

Twenty-five years ago Virginia stood at the head of tobacco-growing States. Since 1860 it has given place to Kentucky, which in the year 1870 is credited with more than 105,000,000 pounds. The export of leaf-tobacco from the United States in 1874 was 318,097,804 pounds, and valued at \$30,399,181.

In California the early attempts to grow tobacco according to the methods in use in the older States proved unsuccessful. The plant grew luxuriantly, but the product was very indifferent. Within the last three or four years a planter in Santa Clara County, after several years of experiment, succeeded in producing a fair merchantable article. A patent was taken out for the new process of culture and preparation, and a company formed for operations under it. The first crop, in 1872, amounted to a few thousand pounds; in 1873 it rose to 500,000 pounds, and to about 1,500,000 pounds in 1874, including other parties using the process under permission. A portion of the crop was from Havana seed, adapted to cigar-making, the remainder being from Florida seed, and better adapted to pipe-smoking and chewing-tobacco. The manufacturers, having no confidence in the quality of the new product, refused to take it, and the company were compelled to manufacture their own material. They were, in March, 1875, making 200,000 cigars per month, besides packing about 10,000 pounds of smoking-tobacco per day. The area suited to the growth of tobacco under this process in California is said to be without limit. From the United States returns for November, 1875, we learn that an experiment on about thirty acres of dry and unirrigated soil in Contra Costa, California, was quite successful. It is thought that this State can raise a very fine article of smoking-tobacco.

Throughout the United States in 1875 there was an increase in the yield of over 75 per cent., as compared with 1874. All the large tobacco States had a marked increase of production, especially Tennessee and Kentucky. The New England crop increased about 10 per cent. in quantity, and showed an improvement in quality. Maryland increased her yield about one-tenth, and Virginia and North Carolina between a fourth and a third. Georgia and the Gulf States all showed an increased yield. In Texas some farmers made two crops. In Tennessee the yield vastly surpassed that of 1874, both in quantity and quality. In all the tobacco States north of the Ohio River there was an increase of production, but a decline of quality. All the States west of the Mississippi report a great increase, especially Missouri and Nebraska. It must be remembered, however, that the crop of 1874 in the United States was uncommonly small and poor. It was, in fact, a disastrous year for the crop, except in the Connecticut Valley.

Cotton.—In 1875 the crop of cotton was increased about two per cent. The plant obtained rather a fairer start than usual, although germination was delayed in the Atlantic coast region. The June returns averaged in condition a small percentage under the standard of good development; in July improvement was indicated in every State except Texas, where drought and insects were locally injurious, but the average condition of the entire area was very near

the standard, or 100; in August the effect of drought, especially in South Carolina, Georgia, and Louisiana, was manifest in a small reduction of their percentage, yet the general average for this month was fully as high as that of June; and in August and September the blighting of drought was followed by excessive rains, causing injury by floods, by the shedding of bolls, by rust, and other abnormal conditions, reducing the general percentage month by month from August to October. An eminent European authority concurs with the United States Commissioner of Agriculture in estimating the crop of 1875 at about 4,100,000 bales. The crop of 1874 amounted to 3,833,000 bales. As for quality the Carolinas and Georgia reported an inferiority in three-fourths of the counties. In Alabama the depreciation in half the State was 20 per cent.; in about one-fourth of the area the quality was decidedly better. Louisiana and Tennessee reported a good quality from nearly half of the area; the only States in which the quality of lint was improved were Arkansas and Texas.

Fattening Cattle.—The number of fat cattle in the United States in 1875 was somewhat greater than in the year 1874. There was a falling off in all the New England States except Connecticut, where there was an increase which nearly balanced the deficiency of the others. Of the Middle States, New Jersey equaled the previous year, but the others showed a decline, Pennsylvania reducing her estimate six per cent. The States of the South Atlantic showed a small increase; Texas, by an increase of six per cent. upon her large aggregate, raised the amount for the Gulf States considerably above the year 1874, notwithstanding the decline in all the other States, amounting to 12 per cent. in Louisiana. Of the Southern inland States, Arkansas reported an increase, but this was more than counterbalanced by the loss in all the others. North of the Ohio River, Michigan and Illinois equaled last year, but the other States fell below. West of the Mississippi, all the States reported an increase ranging from two per cent. in Nebraska, to 53 per cent. in Kansas. On the Pacific coast the loss of eight per cent. in California largely exceeded the gain of nine per cent. upon the smaller aggregate of Oregon.

All the New England and Middle States reported in October, 1875, a condition above the average, except in Massachusetts, where the deficiency was only one per cent., the maximum. 107, being in Connecticut. The South Atlantic coast and Gulf States were almost all above the average. The Southern inland States and the States north of the Ohio and west of the Mississippi were uniformly above the average, the maximum, 112, being in Arkansas. California was five per cent. below the average, and Oregon two per cent. above. Texas reported large sales of beeves in the Kansas and Missouri markets. Both a scarcity and a plenty of food may tend to increase the number of fat cattle.

ALABAMA. The session of the Legislature of Alabama, which began in the latter part of 1874, continued till the 20th of March. After the interference of the Federal authority in the organization of the Legislature of Louisiana on the 4th of January, resolutions were presented in both branches condemning the action of the military authorities in New Orleans. These were referred to the appropriate committees, and finally a protest was agreed upon, which was adopted and directed to be sent to the Governor of each State and to the Senators and representatives of Alabama in Congress. This protest, after recounting the occurrences in New Orleans, ran as follows:

This General Assembly cordially recognizes the authority of the Government of the United States in all its branches, in all matters of national importance, and which are confided to it by the Constitution of the United States. This General Assembly recognizes the fact that by authority as high as that which ordained that Constitution, and in recognition of which that same Constitution was formed, a large part of the powers and duties for which a government is established, is to be exercised by the States, through their own organs of State government. To perform the duties so confided to the States, their governments in their several departments must be free from all dictation by any other power, and should be protected against the use of external force in the discharge of these duties.

This is a principle fundamental to American institutions, and, as to legislative bodies, is expressed in the formula incorporated in the Constitution of the United States, that "each House shall be the judge of the election, returns, and qualification of its own members." Every legislative body must, of necessity, be free from external dictation, as to its own membership, and as to the laws it shall enact, otherwise it is the mere register of the will of some other power, and not a law-making body. This General Assembly can discern in the expulsion on January 4, 1875, from the House of Representatives of the State of Louisiana, of certain of its members, by an armed force of the United States soldiers, nothing short of a plain violation of a right of necessity belonging to, and inherent in, each of these United States, as a community charged with the duty of local self-government, an offense against the people of the United States, and against each of the States which form the American Union.

This General Assembly does hereby declare that the good people of this State are, and have been, since the recognition of Alabama, as a readmitted State, loyal to the Union of these States, and the Constitution and laws thereof.

With this honest expression of loyalty to the Union, and with an earnest desire that its government may, by all proper means, "form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," this General Assembly, actuated alone by principles of patriotism and the love of liberty, regulated by wise laws, does solemnly and earnestly protest against the course which has been pursued toward the State of Louisiana by the military authorities of the United States. Such course has no justification in any of the powers granted for the grand objects and purposes for which the Constitution declares the Government of the United States to be established. It is utterly subversive of the right of local self-government by the States of the Union, and is, in fact, the destruction of the liberties of the people of the several States.

Early in February, a memorial signed by

several Republican members of the Legislature, and addressed to the President of the United States and the Republican members of both branches of Congress, was submitted to the United States Senate by George E. Spencer, one of the Senators from Alabama, setting forth—"1. That changes have been made by the Alabama Legislature in the penal code of the State by which a system of involuntary servitude and espionage for African citizens is sought to be inaugurated; 2. That political legislation has been enacted by means of which ninety-three thousand Republican voters are practically deprived of representation; that the Republican constitution is restricted, and there is a practical nullification of the constitutional amendments;" and asking Congress to empower the President to suspend the writ of *habeas corpus* in certain contingencies, in order to preserve the peace in the Southern States.

When this memorial and the fact that it had been submitted to the United States Senate were made known in Montgomery, the Senate of Alabama adopted resolutions declaring it to be a "gross misrepresentation of the facts and liable to do great injury to the people of Alabama," as no laws had been passed "by which a system of involuntary servitude and espionage for African citizens is sought to be inaugurated; but all penal laws that have been passed have had for their object the suppression of crime which was admitted by all to exist, and said laws affected alike all races and were not discriminative in their character, and no law had been passed that prevents any class of citizens of the State from equal representation." A joint committee of the two branches of the General Assembly was raised to ascertain whether or not "said document is authorized, and, if so, which members, if any, of this body, signed the same, and what should be the action of this Senate in the premises." The committee in its report gave the names of certain members who had signed the memorial, and certain others whose names were appended without their consent, and made the following statements regarding the matter:

Your committee are required to report what ought to be the action of the Senate after their investigation. The act of an individual is innocent or criminal when viewed through the motive which prompted it; and looking at the evidence, your committee are of the opinion that the Senators who signed said memorial were imposed upon and deceived as to its contents, by the designing and unscrupulous men who were its authors.

Your committee cannot condemn in too strong terms this attempt to stab the reputation of the Senate, and through them to assassinate the liberty of every citizen of Alabama.

The statement of the prayer of the memorial is the demonstration of its atrocity. The unscrupulous leaders who concocted this libel had but one object in view, and that was to procure the passage of an act by Congress authorizing the President to suspend the writ of *habeas corpus* at his own will and pleasure. To accomplish this they willfully and maliciously perverted the truth, and, not satisfied with their own

turpitude in this transaction, they induced Senators of their own political faith to charge on a majority of this Senate a willful purpose to take away from the colored man his liberty, by enacting stringent laws against the crimes of larceny and burglary; while the record as well as the statements of Senators, show that these measures were supported by several Republican Senators who signed said memorial.

How laws punishing the crimes of larceny and burglary, applicable to all parties irrespective of race or color, could be construed to operate upon the Republican party more oppressively than the Democratic party it is difficult to perceive, in the absence of an admission that there are more thieves and burglars in the Republican than in the Democratic party. The statements made to your committee show that the memorial forwarded to Washington does not express the sentiments of a single one of the Senators whose names appear attached thereto. As to some of them, a palpable fraud seems to have been committed in the use of their names. As to these Senators so situated with regard to the memorial, your committee feel that they are the victims of designing men and are to be excused rather than condemned. As to those Senators whose names were actually obtained on false pretenses, while they are not to be condemned for any malicious attempt to defame their fellow-Senators, they are censurable for allowing the use of their names without first obtaining information of the contents of the paper signed by them.

This memorial is unjustifiable in every respect in which it can be regarded. It is false in its inferences and allegations. It is a libel and a slander, and its perpetrators should meet with the scorn and contempt of all honest men.

The report was adopted, and, shortly after, resolutions were passed declaring that "whereas, in the opinion of the General Assembly of Alabama, Hon. George E. Spencer does not rightfully occupy a seat in the Senate of the United States as a Senator from Alabama, a joint committee to consist of two Senators and three members of the House of Representatives be appointed to investigate, examine, and report to the two Houses of the General Assembly the facts relating to his alleged election as Senator, and the means by which such election was procured, and his credentials as a Senator were obtained."

The committee were empowered to sit during the recess of the Legislature, to send for persons and papers, and examine witnesses under oath, and were required to report the results of the investigation together with all the evidence taken. Their report was not made during this session of the Legislature.

A joint committee appointed to examine into the affairs of the Auditor's and Treasurer's offices reported that everything was found to be regular and satisfactory, except so far as related to the drawing of three warrants for the payment of interest on the public debt, one for \$228,000, one for \$221,180, and the other for \$35,846.76, making \$484,846.76 in the aggregate. No evidence was found that this sum had been appropriated to the object for which it was drawn. It was found that a debt of \$441,733.50, due to the financial agents of the State, and incurred by Governor Lewis, had been paid in part by the sale of \$260,000 of bonds issued in 1878. The balance of this debt, amounting with accrued interest to \$248,-

297.13, was settled by the payment of \$25,150 in cash and the giving of a note for \$227,203.15, now past due and unpaid, secured by the hypothecation of \$228,000 in bonds. In this transaction was traced the use of \$253,150 credited to the payment of interest. It was further found that the payment reported of \$260,000 of hypothecated bonds had been effected by the purchase of the bonds at 60 cents on the dollar, and paying for them in new obligations at par, making their cost \$150,000. From this it appears that no part of the \$484,846.76 was legitimately used for the payment of interest, and that \$75,196.76 remained wholly unaccounted for. The transaction is condensed as follows:

1. Money was drawn from the Treasury for the ostensible purpose of paying interest on the bonded debt, and was otherwise used.
2. Bonds were purchased without authority of law.
3. Funding obligations were used in purchasing bonds in violation of the act under which they were issued.
4. The sum of \$75,196.76 was used in some way not disclosed by the records and papers in the Treasurer's office, in which vouchers and papers for disbursements ought to be filed.

It was also found that an unreasonable amount had been expended for stationery, supplies being purchased in New York at two or three times the cost at retail in Montgomery. Another committee appointed to inquire into the use of the contingent fund reported that it had been used very lavishly under Governor Lewis, and in some cases illegally. The Governor had himself been paid \$800 for services while visiting New York, and \$800 for expenses in traveling in Florida and New York, and his private secretary had received \$1,600 for services in distributing bacon donated by Congress to the people of overflowed districts. One W. H. Smith had received \$500 for services in Georgia, the character of which could not be ascertained, and the State Treasurer had been paid \$1,200 for expenses in visiting Mobile and New York. These were a few of the items showing the extravagant use that had been made of the contingent fund.

A new act to regulate elections was approved on the 8d of March. It designates all the officers to be chosen by an election of the people, and makes elaborate provision for the conduct of elections. Three inspectors and one returning officer for each voting precinct must be chosen by the judge of probate, sheriff and clerk of the circuit court of the county or any two of them, at least thirty days before the election. The inspectors and clerks are required to take oath for the truthful performance of their duties, and are placed under penalties for any violation of the law. Although every voter must be registered after taking oath as to his qualifications, the inspectors are required to make a list of the persons voting, writing down their names and the order in which their ballots are received. Any quali-

fied elector may challenge the right of any person to vote if he suspects he is not qualified, and such person must take oath as to his qualifications before his vote is received, being liable to trial and punishment for perjury if he swears falsely. Returns of the election are to be made from each precinct to the sheriff of the county and by him to the Secretary of State in the case of State officials. Provision is made for contesting the election of any person declared elected to any office, the contest to be made by any qualified voter who will assume the necessary obligations, and to be conducted before the probate judge of the county. The following provisions are made for the prevention of bribery, fraud or intimidation:

SECTION 92. *Be it further enacted,* That if any person by bribery or offering to bribe, or by any other corrupt means, attempts to influence any elector in giving his vote, or deter him from giving the same, or disturb or hinder him in the free exercise of the right of suffrage at any election within this State, he is guilty of a misdemeanor and on conviction must be fined not less than one hundred nor more than one thousand dollars, and sentenced to any workhouse or jail of any county in this State for not less than thirty days nor more than six months, at the discretion of the jury trying the same.

SEC. 93. *Be it further enacted,* That any person who fraudulently alters or changes the vote of any elector by which such is prevented from voting as he intended, is guilty of a misdemeanor, and on conviction must be fined not less than one hundred nor more than one thousand dollars, and shall be imprisoned in the county jail not less than thirty days nor more than six months.

SEC. 97. *Be it further enacted,* That if any person or persons disturb on election-days, or prevent or attempt in any way to prevent any elector from freely casting his ballot, such person or persons shall be guilty of a misdemeanor and on conviction shall be fined not less than five hundred nor more than one thousand dollars, and sentenced to any workhouse or jail of any county of this State for not less than six months nor more than one year, at the discretion of the court trying the same.

The sheriff is required to preserve order at all voting-places, and the sale of liquor on the day of election and the day preceding is prohibited. Special election laws were enacted for the cities of Mobile and Montgomery.

Some of the general legislation of the session was quite important. Among the acts passed was one declaring what constituted the school fund, and one revising and amending the act of 1873 to keep in each county a proportionate share of the school-money. The Governor was authorized to lease out or rent the penitentiary farm with its stock and materials, and to hire to the lessee such convicts as might be agreed upon, not to exceed one hundred in number and for a period not exceeding eight years. An act was also passed to regulate the business of fire, inland, and marine insurance companies of other States and countries doing business in Alabama. This requires every such company to have at least \$125,000 capital, to pay \$100 into the Treasury of the State and to make a report to the Auditor of the State of its capital, assets, and liabilities, in detail. An act was also passed redistricting the State into

eight congressional districts. An act to induce and encourage immigration into the State provided for the appointment of a commissioner of immigration, and a board of directors to collect and disseminate information regarding the resources and advantages of the State, and to promote in various ways the settlement in Alabama of immigrants from other parts of the Union and other countries. O. F. Sievers, of Mobile, was appointed commissioner. The Governor was authorized and directed to appoint five centennial commissioners "whose duty it shall be to secure proper apartments in the exhibition buildings, and to make such necessary arrangements for the display of such articles as may be forwarded from Alabama for exhibition, and to do whatever they may deem best to have the State of Alabama represented upon an equal footing with her sister States at the Centennial Exhibition to be held at the city of Philadelphia, Pennsylvania, July 4, 1876."

Among other acts of the session was one establishing boards of health, making the Medical Association, organized at Tuscaloosa in March, 1873, the State Board of Health, and county medical associations boards of health for their respective counties; one enabling aliens "to acquire, hold, and dispose of property, real or personal, as native citizens;" one prohibiting the sale of agricultural products between the hours of sunset and sunrise; one making persons ineligible to offices under the laws of the State who hold offices of profit or trust under the laws and Government of the United States; one repealing the act of December, 1868, "to suppress murder, lynching, and assaults and batteries," known as the Ku-klux act; and one changing the name of Baker County to Chilton.

The question of providing for a new State constitution occupied a large share of attention. The existing constitution was framed and adopted under the operation of the reconstruction acts, and was in some of its features obnoxious to a large portion of the people of the State, and especially so to the Democratic and Conservative party. A bill was introduced in the Legislature and passed without much difficulty, providing that the question of holding a convention to frame a new constitution should be submitted to a vote of the people at a special election on the 3d of August. Provision was made for the election at the same time of one delegate in each county, one for each senatorial district and one additional for the county of Mobile, making ninety-nine in all. It was also provided that, in case a majority of the votes cast were in favor of holding a convention, the delegates elected should assemble at Montgomery, on the 6th of September, for the purpose of revising and amending the constitution, subject to the ratification of the people. The enabling act also contained the following provision:

SEC. 9. *Be it further enacted,* That if such conven-

tion be called, it shall not be authorized to make any ordinance, rule, or law which shall be binding on the people of this State, or any part of them, nor to deprive any person in office of his right to said office, as now held by him under the constitution and laws of this State, nor to place any property or educational qualification upon the right to vote in this State, nor to do any act but to frame and recommend for adoption a constitution, amendatory and revisory of the constitution now in operation in this State. In the constitution so framed, it shall be the duty of the Convention to provide for a system of common schools, as liberally as the means of the State will permit, and to be enlarged as those means shall increase.

An active canvass was made on the question of holding the convention. On the 7th of April the Democratic State Executive Committee issued an address to the party, urging a thorough organization in favor of the convention, and appointing the times and places for holding the county and district nominating conventions. It also called attention to the objectionable features of the old constitution, and presented the reasons for desiring a revision of the organic law of the State. It urged the nomination of the best men for delegates, and declared its desire to be the promotion of the best interests of all the people of the State.

In May an address signed by Alexander White, and proceeding from the Republican State Executive Committee, was issued, calling upon Republicans to oppose the convention, and to nominate no candidates for delegates. In this address it was represented that the purpose of the Democrats was to destroy the public-school system, restrict the right of suffrage, authorize imprisonment for debt, abolish exemptions of property from sale under execution, and accomplish other objects calculated to degrade and injure the colored population. It was also intimated that they would refuse to submit the constitution when framed to a vote of the people. Shortly after the appearance of this address resolutions were put forth by the Republican members of the House of Representatives, and signed D. E. Coon, which repudiated the policy recommended in the address signed by Mr. White, and while urging the defeat of the convention favored the nomination of delegates, and requested the Republican legislative committee to issue an address on the subject.

The address mentioned was soon after issued, and on the 17th of July the Democratic State Committee sent out another address intended to refute the accusations made against the purposes of the Conservative party. At the election which occurred on the 3d of August, 77,763 votes were cast for the convention, and 59,928 against it, making the majority in favor of the convention 17,835. Wilcox County was excluded from the count on account of failing to make return within the time prescribed by law. The vote in that county was 1,190 in favor of the convention and 8,714 against it. Of the 99 delegates chosen, 80 were Democrats, 12 Republicans, and 7 Inde-

pendent. A few days after the election the Democratic State Executive Committee issued a congratulatory circular attributing the result to "harmony, organization, and efforts of the Democratic and Conservative party; to the transcendent exertions made by the free press of this State; to the powerful canvass made by our able and patriotic speakers in the field; to the patriotism and efficiency of our party agencies in the different counties; and, above all, the intelligence and virtue of the people."

The convention met and was organized on the 6th of September. It completed its work in twenty-seven days, its deliberations being characterized by the utmost harmony. The financial condition of the State was a subject of serious consideration, and a committee to which all resolutions relating to that subject were referred made a report in which it was declared that the Treasury was almost exhausted, and the financial condition of the State "absolutely appalling." The committee stated that the indebtedness of the State amounted to \$29,000,000, and the total value of taxable property to \$159,000,000. The "direct debt" is stated as follows:

Five per cent. bonds, embraced in Auditor's report of 1874.....	\$3,295,600
Six per cent. bonds, embraced in Auditor's report of 1874.....	770,500
Eight per cent. bonds, embraced in Auditor's report of 1874.....	2,212,700
Unpaid interest, about.....	850,000
Seven per cent. bonds issued, and to be issued, to the South & North, Savannah & Memphis, and Grand Trunk Railroad Companies, under the act authorizing the substitution of straight for indorsed bonds.....	1,192,000
State obligations.....	1,000,000
Short bonds sold by Governor Lindsay, including unpaid interest, about.....	170,000
Total.....	\$9,490,500
The annual interest upon this indebtedness is \$638,000.	

State bonds hypothecated to various parties to secure claims against the State amounted to \$1,700,000. There was also a large floating debt, "the extent and validity" of which were "undergoing investigation." One item was \$524,000 alleged to be due to the school fund, and another \$800,000 claimed by the South & North Alabama Railroad "under an act appropriating the three per cent. fund prior to the war. These with other claims made up a floating debt of \$1,500,000. The contingent liability on account of bonds loaned to and indorsed for railroad companies amounted to over \$14,000,000, making up the grand total of \$29,000,000, on which the annual interest would be not less than \$1,900,000. The committee adds:

It is only necessary to present this statement of formidable indebtedness to convince the creditors of the State that full payment is impossible, and that the State can never resume the payment of interest until the debt is adjusted and reduced, so as to correspond with our diminished resources. But in the face of this dark feature it affords us pleasure to state that the commissioners are sanguine of their ability to reduce the entire indebtedness of the State, exclusive of the educational and trust funds, to a sum not

exceeding \$10,000,000, the interest on which will not exceed \$420,000 per annum.

In view of these facts, your committee have been stimulated to extraordinary exertions in trying to so shape the financial article in the constitution as to meet the ends which we have been induced to believe can be accomplished.

We recommend economy in each branch of the government.

We recommend property to be taxed in proportion to its value.

We recommend a prohibition of the State from engaging in works of internal improvement, or the loaning of its credit for that purpose.

We recommend that no debt shall be incurred by the State, except to suppress insurrection, rebellion, or invasion.

We recommend a reduction of 25 per cent. on all salaries, and a reduction of pay and mileage of members of Legislature, from six to four dollars per day, and from forty to ten cents per mile.

We recommend that the Legislature shall not, in any one year, levy more than three-fourth of one per cent. tax upon the property of the people for State purposes.

We believe with these economical views, fully carried out, and the contemplated compromise consummated, with this rate of taxation fixed at three-fourths of one per cent. as a maximum, that our State will once more gain her deserved prosperity; that capital seeing that our debt is reduced, and our taxing power limited, will seek investment in our cheap lands, and population, always following capital, will fill up our waste places; that our property will enhance in value and a rapid reduction of the rate of taxation may be had, with yet sufficient revenue to meet an economical administration, and pay interest on the public debt.

With this report the article on taxation was submitted. The constitution when completed was adopted by the convention with but two dissenting votes. The first article is made up of a "Declaration of Rights," in thirty-nine sections. Among these are the following:

SECTION 1. That all men are equally free and independent; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.

SEC. 2. That all persons resident in this State born in the United States, or naturalized, or who shall have legally declared their intention to become citizens of the United States, are hereby declared citizens of the State of Alabama, possessing equal civil and political rights.

SEC. 3. That all political power is inherent in the people, and all free governments are founded on their authority, and instituted for their benefit; and that, therefore, they have, at all times, an inalienable and inalienable right to change their form of government, in such manner as they may deem expedient.

SEC. 4. That no religion shall be established by law; that no preference shall be given by law to any religious sect, society, denomination, or mode of worship; that no one shall be compelled by law to attend any place of worship, nor to pay any tithes, taxes, or other rate, for building or repairing any place of worship, or for maintaining any minister or ministry; that no religious test shall be required as a qualification to any office or public trust, in this State; and that the civil rights, privileges and capacities of any citizen, shall not be in any manner affected by his religious principles.

SEC. 21. That no person shall be imprisoned for debt.

SEC. 31. That immigration shall be encouraged; emigration shall not be prohibited; and no citizen shall be exiled.

SEC. 33. That no form of slavery shall exist in this State; and there shall be no involuntary servitude,

otherwise than for the punishment of crime, of which the party shall have been duly convicted.

SEC. 34. The right of suffrage shall be protected by laws regulating elections, and prohibiting, under adequate penalties, all undue influences from power, bribery, tumult, or other improper conduct.

SEC. 35. The people of this State accept as final the established fact that from the Federal Union there can be no secession of any State.

SEC. 36. Foreigners who are or may hereafter become *bona fide* residents of this State, shall enjoy the same rights in respect to the possession, enjoyment, and inheritance of property, as native-born citizens.

SEC. 37. That the sole object and only legitimate end of government is to protect the citizen in the enjoyment of life, liberty, and property; and when the government assumes other functions it is usurpation and oppression.

SEC. 38. No educational or property qualification for suffrage or office, nor any restraint upon the same on account of race, color, or previous condition of servitude, shall be made by law.

Article II. defines the boundaries of the State, and declares that the counties shall remain as before, the Legislature having power by a two-thirds vote to change their boundaries. Article III. lays down the distribution of powers into legislative, executive, and judicial. Article IV., consisting of fifty-six sections, treats of the Legislative Department. It provides that the General Assembly shall consist of not more than thirty-three Senators and one hundred members of the House of Representatives, apportioned among the several districts and counties as prescribed in the constitution. The term of service of Senators is fixed at four years, and of Representatives at two years, the election occurring on the first Monday in August, 1876, and every two years thereafter, and all the Representatives and half the Senators being elected at each election. The pay of members is fixed at four dollars a day and ten cents a mile for travel in going to and from the seat of government, "by the nearest usual route traveled." The Senate elects a President and the House a Speaker from their own members. The General Assembly is required to meet biennially, "on the day specified in this constitution, or on such other day as may be prescribed by law, and shall not remain in session longer than sixty days at the first session held under this constitution, nor longer than fifty days at any subsequent session."

The date for the beginning of the regular sessions is nowhere prescribed in the constitution. The requirements and restrictions laid down for the guidance of the Legislature do not differ in their main features from those of other States. The following provisions are made regarding local and special legislation:

SECTION 23. No special or local law shall be enacted for the benefit of individuals or corporations, in cases which are or can be provided for by a general law, or where the relief sought can be given by any court of this State; nor shall the operation of any general law be suspended by the General Assembly for the benefit of any individual, corporation, or association.

SEC. 24. No local or special law shall be passed, on a subject which cannot be provided for by a gen-

eral law, unless notice of the intention to apply therefor shall have been published in the locality where the matter or things to be affected may be situated; which notice shall be at least twenty days prior to the introduction into the General Assembly of such bill, and the evidence of such notice having been given shall be exhibited to the General Assembly, before such bill shall be passed: *Provided*, That the provisions of this constitution, as to special or local laws, shall not apply to public or educational institutions of or in this State, nor to industrial, mining, immigration, or manufacturing corporations or interests, or corporations for constructing canals, or improving navigable rivers or harbors of this State.

Other interesting features of this article are the following:

SECTION 29. No bill shall be passed giving any extra compensation to any public officer, servant or employe, agent or contractor, after the services shall have been rendered, or contract made; nor shall any officer of the State bind the State to the payment of any sum of money but by authority of law.

SEC. 34. No appropriation shall be made to any charitable or educational institution not under the absolute control of the State, other than normal schools established by law for the professional training of teachers for the public schools of the State, except by a vote of two-thirds of all the members elected to each House.

SEC. 37. When the General Assembly shall be convened in special session, there shall be no legislation upon subjects other than those designated in the proclamation of the Governor calling such session.

SEC. 54. The State shall not engage in works of internal improvement, nor lend money or its credit in aid of such; nor shall the State be interested in any private or corporate enterprise, or lend money or its credit to any individual, association, or corporation.

SEC. 55. The General Assembly shall have no power to authorize any county, city, town, or other subdivision of this State, to lend its credit, or to grant public money or thing of value in aid of, or to any individual, association, or corporation whatsoever, or to become a stockholder in any such corporation, association, or company, by issuing bonds or otherwise.

Article V., relating to the Executive Department, consists of twenty-six sections. It provides for the election of a Governor, Secretary of State, Treasurer, State Auditor, and Attorney-General, by the qualified electors of the State for a term of two years. It also declares that there shall be a Superintendent of Education, and a sheriff for each county, the latter to be elected in the several counties for terms of four years. The compensation of executive officers is left to be fixed by law. In case of the death, removal, or disability of the Governor, the President of the Senate acts in his place; and in case he also is absent, removed, or under disability, the Speaker of the House assumes the executive office. The rest of this article is taken up with defining the duties and qualifications of executive officers.

Article VI. relates to the Judicial Department, and contains twenty-eight sections. The judicial power is vested in the Senate as a Court of Impeachment, a Supreme Court, Circuit Courts, Chancery Courts, Courts of Probate, such inferior Courts of Law and Equity to consist of not more than five members, as the General Assembly may from time to time

establish, and such persons as may be by law invested with powers of a judicial nature. The Supreme Court is clothed mainly with an appellate jurisdiction, and is required to sit at the capital. It is to consist of one Chief-Justice and such number of associates as may be prescribed by law. The General Assembly is required to divide the State into circuits not exceeding eight in number, unless the same is increased by a two-thirds vote of the Legislature, each circuit including not less than three nor more than twelve counties. There shall be a judge for each circuit and a circuit court in each county at least twice every year. The Circuit Courts have original civil and criminal jurisdiction of a general kind. The General Assembly is required to establish a Court or Courts of Chancery, dividing the State into not more than three chancery districts, unless increased by a two-thirds vote at any time, with a chancellor for each district, and a Chancery Court in each district at least once a year. The General Assembly is also empowered to establish a Probate Court in each county, and may provide for other courts of inferior jurisdiction. The judges of the Supreme Court, the Circuit Courts, and Probate Court, and the Chancellors, are to be elected by the people of the State, districts, and counties, respectively, for a term of six years, and shall receive a compensation to be fixed by law. No judge of a court of record can practise law. The Clerk of the Supreme Court is to be appointed by the judges, and registers in chancery by the chancellors, but the clerks of the Circuit Courts are to be elected by the people. A solicitor for each circuit is to be elected by the Legislature. Justices of the peace may be elected, not exceeding two for each precinct.

Article VII. makes provision for the impeachment and removal of executive and judicial officers for cause.

Article VIII. covers the subject of "suffrage and elections." The qualifications of electors are as follows:

SECTION 1. Every male citizen of the United States, and every male person of foreign birth, who may have legally declared his intention to become a citizen of the United States before he offers to vote, who is twenty-one years old or upward, possessing the following qualifications, shall be an elector, and shall be entitled to vote at any election by the people, except as hereinafter provided:

1. He shall have resided in the State at least one year immediately preceding the election at which he offers to vote.

2. He shall have resided in the county for three months, and in the precinct, or ward, for thirty days immediately preceding the election at which he offers to vote: *Provided*, That the General Assembly may prescribe a longer or shorter residence in any precinct in any county, or in any ward in any incorporated city or town having a population of more than five thousand inhabitants, but in no case to exceed three months: *And provided*, That no soldier, sailor, or marine in the military or naval service of the United States shall acquire a residence by being stationed in this State.

SEC. 3. The following classes shall not be permitted to register, vote, or hold office:

'1. Those who shall have been convicted of treason, embezzlement of public funds, malfeasance in office, larceny, bribery, or other crime punishable by imprisonment in the penitentiary.

2. Those who are idiots or insane.

Article IX. is entitled "Representation," and makes specific provision for the apportionment of Senators and Representatives.

Article X. provides for the exemption of a homestead and one thousand dollars of personal property from sale on execution or other legal process. Article XI. relates to taxation. A poll-tax not exceeding one dollar and fifty cents is authorized, to be applied to the school fund; the State tax for any one year is restricted to three-fourths of one per cent.; county taxes to one-half of one per cent., except that one-fourth of one per cent. additional may be levied for the payment of debts already existing; town and city taxes to one-half of one per cent. except that one per cent. additional may be levied to pay existing debts, the city of Mobile being allowed to levy one per cent. for general purposes and one per cent. for paying of existing debts until January, 1879, and three-fourths of one per cent. for each of these objects thereafter. The following restrictions on incurring debt in the future are made:

Sec. 3. After the ratification of this constitution, no new debt shall be created against, or incurred by, this State or its authority, except to repel invasion or suppress insurrection, and then only by a concurrence of two-thirds of the members of each House of the General Assembly, and the vote shall be taken by yeas and nays and entered on the journals; and any act creating or incurring any new debt against this State, except as herein provided for, shall be absolutely void: *Provided*, The Governor may be authorized to negotiate temporary loans, never to exceed one hundred thousand dollars, to meet deficiencies in the Treasury, and until the same is paid no new loan shall be negotiated: *Provided further*, That this section shall not be so construed as to prevent the issuance of bonds in adjustment of existing State indebtedness.

Article XII. provides for a State militia, and Article XIII. deals with the subject of education. It requires the General Assembly to "establish, organize, and maintain a system of public schools throughout the State, for the equal benefit of the children thereof, between the ages of seven and twenty-one years; but separate schools shall be provided for the children of citizens of African descent." The school-fund consists of the proceeds of the sale of land or other property granted or intrusted to the State, or given by the United States for educational purposes, all lands or other property given by individuals or appropriated by the State for the same purposes, the principal of which must be preserved inviolate and undiminished, and the income "faithfully applied to the specific objects of the original grants or appropriations." The poll-tax must be applied to the support of public schools in the counties in which it is levied and collected.

The supervision of the public schools is vested in "a Superintendent of Education whose powers, duties, term of office, and compensation shall be fixed by law. The Superintendent

of Education, shall be elected by the qualified voters of the State in such manner and at such time as shall be provided by law."

Sec. 8. No money raised for the support of the public schools of the State shall be appropriated to or used for the support of any sectarian or denominational school.

The State University and the Agricultural and Mechanical College are placed in the charge of boards of trustees appointed by the Governor for terms of six years, one-third to vacate their seats at the end of every two years, two members being selected from the congressional district in which the institution is located, and one from each of the other congressional districts.

Article XIV. relates to corporations, and consists of twenty-five sections. Corporations, except for municipal, manufacturing, mining, immigration, industrial, and educational purposes, or improving navigable rivers and harbors, must be formed under general laws, unless in the judgment of the General Assembly their objects cannot be attained without special acts. The powers and privileges of private corporations are duly defined and placed under various restrictions. The General Assembly is prohibited from incorporating banks or moneyed institutions with power to issue bills of credit except as prescribed. No bank can be established except under general laws, and on a specie basis. All bills and notes issued by banks must be redeemable in gold or silver, and no suspension of specie payment can be authorized. Every bank or banking company must cease operations within twenty years from its organization, unless the time is extended by the Legislature, and promptly thereafter close its business. No bank is allowed to receive more than the legal rate of interest. The State is forbidden to be a stockholder in any bank, or to loan its credit to any banking concern. Among the provisions relating to railroads are the following:

Sec. 22. The General Assembly shall pass laws to correct abuses and prevent unjust discrimination and extortion in the rates of freights and passenger tariffs on railroads, canals, and rivers in this State.

Sec. 23. No railroad or other transportation company shall grant free passes, or sell tickets or passes at a discount, other than as sold to the public generally, to any member of the General Assembly, or to any person holding office under this State or the United States.

To the constitution a schedule was appended by the convention declaring that all laws in force at the time of the ratification of the constitution, if not inconsistent therewith, shall remain valid until duly altered or repealed; that all claims and contracts shall remain unaffected; that all bonds and obligations shall remain unaffected; that all persons in office shall remain undisturbed till the end of their terms; that the constitution shall be submitted to the people for their ratification as provided in the law authorizing the convention; that if ratified it shall go into effect within the time stated in the proclamation of the Governor;

that the Governor shall take steps to give publicity and circulation to the instrument "in as economical a manner as possible; that all laws requiring an enumeration of the inhabitants of the State in 1875 are annulled; that the Board of Education is abolished; and that the salaries of executive and judicial officers already in office and of members of the existing Legislature shall not be affected by the provisions of the constitution."

Soon after the convention had completed its work, an address to the people was issued by a committee chosen for the purpose, in which the new constitution was commended to the approval of the citizens.

There was a warm canvass in behalf of the new constitution, and very little opposition to it was developed. It was submitted to a vote of the people on the 2d of November, and was ratified by a very large majority. The total vote was 114,879, of which 85,662 were in favor of ratification and 29,217 against it, making the majority for the constitution 56,445. On the 2d of December the Governor issued his proclamation making known the result, and declaring that the constitution should go into effect on the 6th day of December, and be henceforth binding on the people of the State.

The public debt of Alabama has been stated in connection with the report on the finances of the State to the Constitutional Convention. The report of the Treasurer, for the fiscal year ending June 30th, shows the receipts of the Treasury for that period to be \$1,128,569.80, including a balance of \$395,199.58 on hand September 30, 1874. The disbursements for the year amounted to \$1,058,988.30, including \$54,203.28 "interest on obligations," \$2,763.83 "expenses in providing interest on obligations," and \$1,590 "interest on temporary loan." Besides this \$13,007.36 was in part on old warrants of 1873 and 1874, leaving a balance in the Treasury, September 30th, of \$51,574.14.

According to the Auditor's Report for 1871, there were in Alabama that year 1,496 miles of railroad, valued at \$25,943,052.59; in 1872 there were 1,629 miles, valued at \$29,580,737.64; in 1873 there were 1,793 miles, valued at \$25,408,110.76; in 1874 the value was \$22,745,444. The statement for 1875 is as follows:

Alabama Central.....	\$550,280 11
Alabama & Chattanooga.....	1,488,900 00
East Alabama & Cincinnati.....	106,585 00
Montgomery & Eufaula.....	442,884 09
Memphis & Charleston.....	1,440,250 00
Mobile & Girard.....	470,700 00
Mobile & Montgomery.....	1,584,625 00
Mobile & Ohio.....	748,592 50
Mobile & Alabama Grand Trunk.....	287,862 50
Nashville & Chattanooga.....	233,170 88
Nashville & Decatur.....	226,815 00
New Orleans & Selma.....	84,450 00
Savannah & Memphis.....	255,619 50
Selma, Marion & Memphis.....	187,017 50
Selma & Gulf.....	172,770 00
Selma, Rome & Dalton.....	1,216,192 91
South & North.....	1,223,964 67
Southwestern of Georgia.....	5,225 00
Western.....	1,228,036 25
Tuskegee.....	83,800 00
Vicksburg & Brunswick.....	98,600 00
Total.....	\$12,038,763 39

This shows the value put upon the roads by the Board of Equalization. The aggregate value, according to the returns made by the officers of the companies, is \$9,654,684.99.

The fifteenth annual report of the Alabama Insane Asylum shows the number admitted and discharged since 1861 as follows:

INMATES.	Men.	Women.	Total.
Admitted.....	633	487	1,120
Discharged recovered.....	193	158	351
Discharged improved.....	48	39	87
Discharged unchanged.....	86	11	97
Died.....	171	108	279
Remaining, September 30, 1875..	180	172	352

The expenses of the institution, for the year ending September 30th, were \$62,773.42, of which \$11,125 was covered by receipts from paying patients.

A case was decided in the Supreme Court in February involving the validity of the decrees of the courts of the State made during the civil war. After a thorough discussion of the question, the judges reached the conclusion announced as follows:

Our conclusion then is, that the courts of Alabama, during the war, were a portion of the rightful *de jure* government of the State; and that their judgments, decrees, and proceedings, not in violation of the Constitution and laws of the United States, or of any right or obligation arising under them, and not in violation of the constitution of Alabama, are valid, and must have operation and effect accordingly.

One consequence of this holding is, that no act of the Legislature or ordinance of a convention is necessary to give validity to the judgments, decrees, and proceedings of those courts.

Another consequence is, that the records and papers of those courts during the war are to be preserved with the same care, and certified in the same manner, as those of courts held since; and like punishments are to be inflicted for the destruction, mutilation, abstraction, or falsification of the records and papers of the one, as of the other.

In a case in the United States Circuit Court, decided by Mr. Justice Bradley, in June, involving the validity of bonds issued by the city of Montgomery in 1850 and 1852 to aid in the construction of the Montgomery South Plank Road and the Montgomery & Wetumpka Plank Road, the conclusion was laid down that the city had no authority to issue these bonds, and that the holders had no remedy. No authority to issue bonds or to subscribe to the stock of private corporations was contained in the charter of the city, and no special power to issue these particular bonds had been granted by the Legislature, and in the absence of these specific provisions the court decides that the authority and power did not exist.

The Alabama Centennial Commissioners appointed under authority of the act of the last Legislature, alluded to above, and consisting of John T. Milner, chairman, Peter Hamilton, R. O. Pickett, A. Cunningham, and John S. Kennedy, held a meeting at Montgomery on the 10th of September, and appointed Colonel Hiram Haines secretary and agent, to take

charge of the preparation of "suitable and attractive specimens, endeavoring to get such as will show the quality of our coals, ores, and minerals, and prepare such geological maps and sections as will indicate the position and extent of the same, the region and localities of our timber, productions, manufactures, etc., and have them carefully boxed and labeled, and forwarded to Philadelphia." The Faculties of the State University and Agricultural and Mechanical College were requested to lend their aid, and the Judges of Probate and Commissioners of Roads and Revenue in each county were appointed executive committees to aid in carrying out the work of the commissioners.

ALASKA. "A Report upon the Condition of Affairs in the Territory of Alaska, by Henry W. Elliott, Special Agent of the Treasury Department," gives a very different picture of the character and resources of that acquisition, although its agricultural statements are disputed by Colonel S. F. Tappan. Regarding the productiveness of the soil, and its availability for agricultural purposes, he says: "There are more acres of better land lying now as a wilderness and jungle in sight of the mountain-tops of the Alleghanies from the car-window of the Pennsylvania road than can be found in all Alaska." It is subject to frosts as late as June 10th and as early as August 20th even in the southern districts, and nothing which the gardener plants will ripen. For the most unsatisfactory and unprofitable agriculture which is possible in some spots, "there is not one acre of tillable land to every ten thousand of the objectionable character throughout the larger portion" of this southern area, and "certainly not more than one acre to a thousand in the best regions." Cattle cannot find food in winter, and the making of hay is "simply impossible. . . . The country will not, in its whole extent, allow the successful growth and ripening of a single crop of corn, wheat, or potatoes," and "the most needful of domestic animals cannot be kept by poor people." Of the climate the report says that on the Sitkan or southern division of the coast the winter is "never anything but wet and chilly," unfavorable for the production of ice and subject to high winds and drizzling rains. In the interior the winters are extremely cold, and the vast rolling plains and rounded mountain-tops are covered with a dense jungle of spruce, fir, and cedar, so thick, dark, and damp, as to be nearly impenetrable. The next division to the north, reaching to Prince William's Sound, presents 800 miles of bold sea-front with scarcely an island or a rock, and has belts of spruce in the lowlands by the sea, while the interior is mountainous and bare, abounding in glaciers. It is a desolate region, poor in game and fish, and avoided by the Indians. The peninsula and Khodiak District is described as the most valuable portion of the territory, growing the best garden vegetables, and having some valuable timber of spruce and fir.

Within a limited area grass grows luxuriantly, but cannot be cured for hay. There are many winters in which cattle might be kept there in small numbers. The greater part of this district, however, is broken and barren, and subject to foggy and dark weather which renders agriculture impossible even in the arable patches of land. North of this is the Yukon District extending to the arctic regions, "an immense area of desolate sameness, almost unknown, and likely to be so for an indefinite time." The summers there are short, but warm and pleasant, while the winters are "long and bitterly cold and inclement." The Ounalashka District, embracing the Aleutian Islands, is a "great chain of rugged islands, enveloped the greater part of the year in fogs and swept over by frequent gales." The summers are "mild, foggy, and humid;" the winters damp, with a temperature averaging 30° above zero, but often dropping to 3°. "Rain falls at all times and with all winds. . . . Snow begins to fall in September (and even in August), and does not cease earlier than May." The cloudiness of the district is remarkable, and there are not "a dozen cloudless days in the whole year," while winds prevail almost constantly. Of the whole Territory the report says: "It would seem undeniable that, owing to the unfavorable climatic conditions which prevail on the coast and in the interior, the gloomy fogs and dampness of the former, and the intense protracted severity of the winters, characteristic of the latter, unfit the Territory for the support of any considerable civilization." The mineral wealth of Alaska is represented as wholly imaginary or yet to be discovered. Nothing is said of the existence of whales near the coasts, but the walrus are declared to be "so shy and timid that they have deserted the other islands, as they were populated by man," and have retreated to Walrus Island, a remote place seldom visited. They are also declared to be of little commercial importance, the ivory being of poor quality, the oil of a low grade, and the hide valueless. The fur-product is valuable, coming chiefly from the seal and sea-otter. The sea islands are leased to a company which is restricted to the killing of 100,000 seals a year, and it is thought that with this destruction the number will be kept up. The whole number of breeding seals that visit the islands, and their young, is estimated at 4,700,000. The inhabitants of the Territory, both the Christianized Aleuts and the savage Indians, are represented as having deteriorated since the acquisition of these possessions by the United States. They are practically exempt from all restraint, and have sunk into drunkenness and sloth. Whiskey is freely imported, and the natives brew a strong beer from sugar, dried apples, and other ingredients. The number of inhabitants is estimated at 5,000 Aleuts and 18,000 to 20,000 Indians, the latter having no settled abodes, but wan-

dering from place to place. The Government maintains a single revenue-cutter, a sailing-vessel, to guard the whole vast coast with its numerous islands and inlets, and the military force consists of two companies of artillery stationed at Sitka, and with no adequate means of transportation to any other point.

AMERICA. Peace has prevailed throughout North America during the year 1875. Some local disturbances have occurred in one or two of the States of the Federal Union, but these were of momentary importance.

In the United States political questions have excited very little interest. The attention of the public mind was chiefly engrossed with financial affairs. The great stagnation of commerce caused much anxiety and social distress. The best method by which to reach specie payments on the part of the Government and people was a question that created much conflict of opinion, and no definite result was reached. In some of the States the elections turned upon the issue of the substitution of the paper-money of the Federal Government, known as "legal tenders," in the place of the paper-money or bills of the local banks. Those are the most important subjects for decision at present before the people. The prosperity of the country during the year, although limited, has been very substantial.

Some measures were adopted in almost every State to secure a representation of its products at the Centennial Exhibition to be opened in May, 1876, in Philadelphia. In some quarters the arrangements proposed were of a most extensive character.

In the Latin-American states the year commenced with the suppression of two revolutions, one in the Argentine, the other in the Peruvian Republic, and both of which had for some time threatened to be obstinate and very detrimental to the general interests of the respective countries.

A new and happier state of things has, however, been established in those republics: unconstitutional acts are not only no longer popular, but are promptly opposed by the people, now resolved upon the maintenance of peace as indispensable to the national weal.

In Peru, notwithstanding, the public tranquillity was frequently disturbed by political uprisings, in one of which an attempt was made upon the life of the President. Internal strife has been the invariable order of the day in Bolivia. In the second half of the year, the signal for revolution was given by the assassination of García Moreno; and Colombia in the mean time was thrown into commotion, for the first time after a period of thirteen years of peace—unprecedented in the Spanish-American republics. But only a few of the Colombian States were placed under martial law, and there was comparatively little bloodshed. The Central-American republics and Mexico have been to an unusual degree exempt from civil turmoils, and warfare has been almost forgot-

ten in Venezuela; nor has any international disturbance taken place from the Rio Grande to the Pampas. Little progress has been made toward the settlement of the boundary questions so long at issue between Brazil and the Argentine Republic, in relation to Paraguay; the Argentine Republic and Chili, concerning Patagonia; and the Argentines and Bolivians.

The Spanish-American states and Brazil have not been exempt from the paralyzing effects of the great financial crisis; foreign commerce in most of them has been materially reduced, but more especially in the Argentine Republic and Peru.

In the first of these numerous failures have occurred, and many of the oldest importing-houses been constrained to suspend their payments; but trade is now gradually recovering its wanted buoyancy; and the producing power, neither in the two mentioned, nor in any of the others, has been affected in the slightest degree.

Colonization bills were laid before the legislative bodies in Brazil and the Argentine Republic, offering extensive inducements to immigrants, and making more liberal provision for their well-being and prosperity in the respective countries. In the mean time material improvements have been pushed forward as rapidly as possible; railways and telegraphs extended, and new lines projected. Mexico seems at last determined to establish the link between her railway system and the United States network; and even Ecuador has her locomotives, some thirty miles of the southern line having been completed as early as January, 1875. The most liberal measures and untiring energy are everywhere brought to bear upon the extension of public instruction.

ANCELOT, MARGUERITE LOUISE VIRGINIE CHARDON, a French authoress, born March 15, 1792; died March 21, 1875. In 1818 she married Monsieur Ancelot, to whose lighter works she largely contributed. The first of her own works, "*Le mariage raisonnable*," was written in 1832, and followed by her best work, "*Marie, ou trois Époques*," which was translated into almost every language of Europe, and was well received on every stage of importance. She supplied, until 1848, the *Gymnase*, *Variétés*, and the *Vaudeville Theatres*, with a large number of plays, all of which met with considerable success. She also wrote several novels, among which "*Renée de Varville*" and "*La Nièce*" are best known; and even had time to cultivate her talent for painting, of which she sent some good specimens to the exhibitions from 1835 to 1845. The house of Madame Ancelot was, during this time, among the most influential of Paris, and, like that of Madame Récamier, formed a centre for the literary conflicts of the period, and the intrigues connected with the filling of the vacant seats of the French Academy. Her daughter married the celebrated advocate Lachaud, and it used to be Madame Ancelot's delight to say, "I

have a son-in-law of whom every one speaks, and a daughter of whom no one has said a word," which is considered the greatest praise that can ever be given to a woman in France.

ANDERSEN, HANS CHRISTIAN, a Danish author, was born at Odense, April 2, 1805; died in Copenhagen, August 4, 1875. His father, a poor shoemaker, died when Hans was nine years old, leaving the family entirely destitute. After his father's death a good lady gave him a home, making him the companion of her children. Here he showed his taste for learning by studying some tragedies, which he tried to imitate. In this his first attempt, however, he was not successful. He soon after went to work in a factory, where he endeavored to amuse his fellow-workmen by reciting dramatic pieces. But, as his efforts were not appreciated by them, he returned home, where he spent most of his time in studying the few books he had at his command. His mother intended to apprentice him to a tailor, but, before sending him to work, she let him go to Copenhagen to see a drama. The play made such an impression upon him, that Hans, then fourteen years old, resolved to be an actor. As the manager would not engage him, he went to work for a time with a carpenter. Being soon again without occupation, he went to the Royal Conservatory, where Prof. Siboni received him kindly, and, recognizing his talents, had him instructed as a singer for the stage. At the end of six months his voice failed him, and his teacher advised him to return home and learn a trade. This he was too ambitious to do, and so for one or two years he struggled on, either as a member of a theatrical corps, or engaged in his studies. During this period he wrote some tragedies, which, however, met with no success. At this time, when his prospects were so gloomy, a good friend turned up for him in the person of Councilor Collin, who, seeing that he was clever and fond of study, had him admitted, free of charge, to the Royal College. Before this he had written a poem, "The Dying Infant," which was greatly praised. While at college he wrote his first book, "A Journey on Foot to Amack," which gained for him many friends and great fame. Some volumes of poems which followed greatly increased his reputation. Aided by a royal stipend, obtained for him by some friends, he visited Italy in 1833, and in the year following gave his impressions of that country in his novel, the "Improvisatore." This work, which has been translated into almost all modern languages, is considered one of the finest on the scenery and manners of Southern Europe. He subsequently traveled considerably through Europe and the East. His next novel, "O. T.," described life in the North, and "Only a Fiddler" presented some striking scenes from his youth. Among his other works are "Fairy Tales," "Picture Book without Pictures," "Travels in the Hartz Mountains," "A Poet's Ba-

zaar," "Ahasuerus," and "New Fairy Tales." He published his works not only in Danish but also in German. Of the second German edition of his complete works, forty-six volumes had appeared at the time of his death. An edition of "The Story of a Mother" in fifteen languages was published in Copenhagen in 1875. A German edition of his "Fairy Tales," with excellent illustrations by Richter, Pletsch, and other artists (Leipsic, eleventh edition, 1874) was published by Reuscher. His works have been translated into English by Mary Howitt and others. The first complete edition of his works in English was published in New York in 1870-'71, in 10 vols., 8vo. He has also written one of his longest works, "The Two Baronesses," in the English language. In 1845 he received an annuity from the King, which placed him in comfortable circumstances for the rest of his life. In his old age he was greatly honored in his own land and abroad. Twenty thousand crowns were subscribed in Denmark for a monument for him. His fairy-tales have been read by children of almost all nations, and when, in 1874, it was said that the old "tale-teller," as he called himself, was living in straitened circumstances, the children of America raised a considerable sum of money to be sent him as a Christmas present. A small part of this sum was reserved for the purchase of a copy of "Picturesque America." This present reached him on his seventieth birthday, and gave him great pleasure. His death was mourned not only in Denmark, but wherever his works have been read. The day of his funeral, Wednesday, August 11th, was made one of national mourning throughout Denmark. In Copenhagen all business was suspended and flags were placed at half-mast. The King and other members of the royal family, with the ministers and chief officers, attended the funeral. Deputations from all parts of the kingdom had arrived, while in the cathedral were representatives of the public bodies, the diplomatic corps, the faculty and students of the university, and workmen's societies. Thus he died, loved and respected by all.

ANDREE, KARL, an eminent German geographer, was born October 20, 1808; died August 10, 1875. He studied in Jena, Berlin, and Göttingen, and, being under suspicion of having taken part in the revolutionary movements of the time, he could not obtain an appointment as teacher. He therefore devoted himself to journalism, and was successively editor of the *Mainzer Zeitung*, the *Kölnische Zeitung*, the *Bremer Zeitung*, and the *Deutsche Reichszeitung*. In 1858 he was appointed consul of Chili for the kingdom of Saxony, which position he retained until 1869. His principal works are: "Nordamerika in geographischen und geschichtlichen Umrisen" (Brunswick, second edition, 1854); "Buenos Ayres und die argentinische Republik" (Leipsic, 1856); "Geographische

Wanderungen" (two vols., Dresden, 1859); "Geographie des Welthandels," of which he published two volumes. After his death the third volume was continued by Dr. Glogau. He was also, since 1861, the editor of the geographical journal *Der Globus*, published at first in Hildburghausen and afterward in Brunswick. His son Richard, who has also devoted himself to the study of geography, was born February 26, 1835. He traveled through the northern part of Scotland, and also gave considerable attention to Slavic ethnography. He has written "Vom Tweed zur Pentland-förde" (Jena, 1866); "Das Amurgebiet" (Leipsic, 1867); "Abessinien" (Leipsic, 1869); "Die Nationalitätsverhältnisse und Sprachgrenze in Böhmen (Leipsic, second edition, 1871); "Der Missionär Livingstone" (two vols., Leipsic, 1868); "Die deutschen Nordpolfahrer und der Kampf um den Nordpol 1868-1872" (Leipsic, second edition, 1874); "Das Sprachgebiet der Lausitzer Wenden vom 16. Jahrhundert bis zur Gegenwart" (Leipsic, 1873); and "Wendische Wanderstudien" (Leipsic, 1873).

ANGLICAN CHURCHES. Convocation.—The Convocation of Canterbury met April 13th. The principal business was to consider the reports of the Committee on Rubrics. The committee of the Upper House, in their report, omitted to deal with the Ornaments Rubric, or with the position of the celebrant. The House decided not to recommend any change in these two particulars. The committee of the Lower House recommended the addition of a note to the rubrics, permitting the clergyman to stand either at the east side or the north side of the table, but declaring that no sanction was intended to be given to doctrinal innovations. They also reported in favor of allowing the use of both the eucharistic vestments, subject to the consent of the bishops in each case, and the use of the black gown in the pulpit. The Lower House, without dissent, adopted the following resolution in reference to the position of the celebrant:

Resolved, That this House, having regard to the fact of the widespread diversity of practice with reference to the position of the celebrant in the administration of the Holy Communion, is convinced that it will be for the welfare of the Church that, in cases where changes are made and disputes arise, it should be left to the ordinary to determine whether such practices should be adopted; and, further, this House declares that by this resolution no sanction is intended to be given to any doctrine other than is set forth in the Prayer-Book and articles of the Church of England.

In the Upper House, in reply to a question from the Bishop of Gloucester, as to whether any steps were being taken to call a conference of bishops (Pan-Anglican Synod), the president stated that a resolution had been passed by the Convocation of the Province of York at its session in February preceding, that it was desirable that such a conference should be assembled, and that he had received communications from

the United States, expressing the wish on the part of the bishops of the Protestant Episcopal Church that they should have the opportunity of gathering again at Lambeth. The conference would take place in the early summer of 1877. No intention was entertained to gather the bishops of the Anglican Church for the sake of defining any matter of doctrine; nor to interfere in matters of discipline. But the president would be glad to hear from his brethren what the exact subjects were on which they wished to hold a conference. There were many points respecting the connection of the mother church with the colonial churches on which a friendly conference would be very valuable.

A petition was presented by the Bishop of Lincoln from the Earl of Devon, complaining of the use which, it was alleged, had been permitted of Westminster Abbey, for the delivery of lectures by persons not in communion with the Church of England, and professing opinions repugnant to its doctrine and discipline. The case of a Presbyterian minister who had spoken in the abbey, and an invitation which had been given to Bishop Colenso to preach there, were especially referred to. The petitioner asked that measures be taken "to prevent the recurrence of similar scandals and abuses."

The Convocation met again June 30th. The subject of the "Ornaments Rubric" was discussed. The following resolution was adopted in the Lower House:

Resolved, That in consideration of the long dispute of certain of the vestures specified in the First Prayer-Book of Edward VI., and referred to in the Ornaments Rubric, this House recommends: 1. That in celebrating the Holy Communion, as well as at all other times of his ministrations, it shall suffice that the minister do wear a surplice with the addition of a stole or scarf, and of the hood of his degree; and that in preaching the minister do wear a surplice, with stole or scarf and the hood of his degree, or, if he think fit, a gown, hood, and scarf. 2. That the other vestures specified in the First Prayer-Book of King Edward VI. shall not be brought into use in any church, other than a cathedral or collegiate church, without the previous consent of the bishop.

And it is hereby declared that no sanction by this resolution is intended to be given to any doctrine other than is set forth in the Prayer-Book and in the Articles of the Church of England.

The Upper House took the following action upon this resolution and the one previously adopted in reference to the position of the celebrant in the administration of the sacrament of the Lord's Supper:

Resolved, That this House acknowledges the careful and patient consideration which the Lower House has given the difficult subjects of the Ornaments Rubric and the Rubrics governing the position of the minister during the celebration of the Holy Communion, but, believing legislation on these points to be at the present time neither desirable nor practicable, does not deem it expedient now to discuss the course which any such legislation should take, or the principles according to which it should be regulated.

Pastoral of the Bishops.—The following pastoral letter was issued by the archbishops and

bishops of the Church of England on March 1st. It was signed by all the prelates holding sees in England, except the Bishops of Salisbury and Durham :

LAMBETH PALACE, *March 1, 1875.*

We, the undersigned, archbishops and bishops of the Church of England, under a deep sense of the duty that rests upon us of endeavoring to guide those committed to our pastoral charge, desire to address some words of counsel and exhortation to the clergy and laity of our dioceses in the grave circumstances of the present time.

We acknowledge, humbly and thankfully, the mercies vouchsafed by Almighty God to the Church of England. By His blessing on the labors of the clergy and laity, our Church has of late been enabled in a marvelous manner to promote His glory, and to advance His kingdom, both at home and abroad. If we judge by external signs—the churches built, restored, and endowed during the last forty years; the new parishes formed in that time, especially in our great towns and cities; the vast sums of money voluntarily contributed for the promotion of religious education; the extension of the Church in the colonies and in foreign countries, including the foundation of more than fifty new sees; the great increase in the number of persons of all classes who by prayers and labor assist in the work of converting souls to Christ—all bear witness to the zeal and earnestness of the clergy and laity of the English Church, an earnestness and zeal which we rejoice to know is by no means confined to any section or party. We may humbly trust that the inward work of the Holy Spirit of God in the hearts of men, a work which He alone can measure, has been great in proportion to these outward efforts.

While, however, we thankfully recognize these abundant mercies and blessings, we cannot but acknowledge with sorrow that serious evils disturb the peace of the Church, and hinder its work.

One of these evils is the interruption of the sympathy and mutual confidence which ought to exist between the clergy and laity. Changes in the mode of performing Divine service, in themselves sometimes of small importance, introduced without authority, and often without due regard to the feelings of parishioners, have excited apprehensions that greater changes are to follow; distrust has been engendered, and the edification which ought to result from united worship has been impeded. The suspicions thus aroused, often, no doubt, unreasonable, have in some cases produced serious alienation.

The refusal to obey legitimate authority is another evil in the Church at the present time. Not only has it frequently occurred that clergymen fail to render to Episcopal authority that submission which is involved in the idea of Episcopacy, but obedience has been avowedly refused to the highest judicial interpretations of the law of this Church and realm. Even the authority which our Church claims, as inherent in every particular or national Church, to ordain and change rites and ceremonies, has been questioned and denied.

We also observe, with increasing anxiety and alarm, the dissemination of doctrines and encouragement of practices repugnant to the teaching of Holy Scripture and to the principles of the Church, as derived from Apostolic times, and as authoritatively set forth at the Reformation. More especially we call serious attention to the multiplication and the assiduous circulation among the young and susceptible of manuals of doctrine and private devotion, of which it is not too much to say that many of the doctrines and practices they inculcate are wholly incompatible with the teaching and principles of our Reformed Church.

Further, we feel it our duty to call attention to the

growing tendency to associate doctrinal significance with rites and ceremonies which do not necessarily involve it. For example, the position to be occupied by the minister during the Prayer of Consecration in the Holy Communion, though it has varied in different ages and different countries, and has never been formally declared by the Church to have any doctrinal significance, is now regarded by many persons of very opposite opinions as a symbol of distinctive doctrine, and, as such, has become the subject of embittered controversy.

We would seriously remind our brethren of the clergy of the solemn obligation which binds us all to be ready to yield a willing obedience to the law of the Church of England, of which we are ordained ministers, and to recognize the necessity of submitting our own interpretations of any points in that law which may be considered doubtful to the judicial decisions of lawfully constituted courts. We, the clergy, are bound by every consideration to obey the law, when thus clearly interpreted; and to decline to obey when called upon by lawful authority, is to set an example that cannot fail to be most injurious in its influence and effects. We are convinced that the number of those who would refuse such reasonable obedience is small, and that the vast majority of the clergy and laity of the Church of England are thoroughly loyal to its doctrine and discipline. We fully recognize the difference between unity and an overstrained uniformity, and are well aware that our Church is rightly tolerant of diversity, within certain limits, both in opinions and practices. We would not narrow in the least this wise comprehensiveness; but liberty must not degenerate into license and self-will; as fundamental truths must not be explained away, so neither must those clear lines be obliterated which separate the doctrines and practices of our Reformed Church from the novelties and corruptions of the Church of Rome.

We live in an age which prides itself on freedom of thought and emancipation from the control of authority. In every portion of Christendom men are more disposed than ever to run into extremes of opinion and practice. While, on the one hand, fundamental truths are increasingly neglected or denied, vain attempts, on the other, are made in many quarters to meet this infidelity by the revival of superstition.

Under these grave circumstances, we solemnly charge you all, brethren beloved in the Lord, to cultivate a spirit of charity and mutual forbearance, laying aside dissension and disputes which must issue, not in the victory of one party over another, but in the triumph of the enemies of the Church, and indeed of those who are enemies to the faith of Christ. We exhort the clergy not to disquiet their congregations by novel practices and unauthorized ceremonies, and to discountenance those who seek to introduce them. We entreat the laity not to give way to suspicions in regard of honest efforts to promote the more reverent worship of Almighty God in loyal conformity with the rules of the Book of Common Prayer. Surely this is not a time for estrangement, but rather for drawing closer together the bonds between the clergy and their parishioners, when vice, ignorance, infidelity, and intemperance are calling for united effort on the part of all who hold the faith of Christ crucified, and love and serve Him as their common Lord.

Let us all, then, both clergy and laity, be faithful to the doctrine and discipline of our Church, founded as they are on Holy Scripture, and in accordance with the teaching and practice of the Primitive Church. We entreat all whom our words may reach to strive together with us in prayer to Almighty God, that as there is but one Body and one Spirit, and one hope of our calling, one Lord, one Faith, one Baptism, one God and Father of us all, so we may henceforth be all of one heart and of one

soul, united in one holy bond of truth and peace, of faith and charity, and may with one mind and one mouth glorify God, through Jesus Christ our Lord. Amen.

(Signed) A. C. Cantuar, W. Ebor, J. London, E. H. Winton, A. Llandaff, R. Ripon, John T. Norwich, J. C. Bangor, H. Worcester, C. J. Gloucester and Bristol, William Chester, T. L. Roffen, G. A. Lichfield, J. Hereford, W. C. Peterborough, C. Lincoln, Arthur C. Bath and Wells, F. Exon, Harvey Carlisle, J. F. Oxon, J. Manchester, R. Cicester, J. St. Asaph, J. R. Ely, W. Basil St. David's, Horace Sodor and Man.

The Bishop of Salisbury (Dr. Moberly) assigned as his principal reasons for withholding his signature from this address that, in his view, it was too severe, and exaggerated the evils which it was intended to condemn; even supposing that those evils were not over-stated, he regarded it as injudicious, as tending to irritate rather than soothe, and to confirm the impression that the legislation of the previous year (1874) was directed against the whole of the High Church party, and against that party only. The Bishop of Durham (Dr. Baring) refused to sign it, first, because he could not agree with the paragraph having reference to the eastward position, believing contrary to the expression of the address that that position is held by those who advocate and adopt it to have an important doctrinal significance; second, because he could not with any confidence declare that "the vast majority of the clergy and laity of the Church of England are thoroughly loyal to its doctrine and discipline;" he believed the assertion to be true with regard to the laity, but was in doubt whether it applied to the same extent to the clergy; third, his chief objection to the manifesto was that it was "so indefinite in its statements, so feeble in its conclusions." He objected to it that it said nothing in regard to what he described as "the two most serious errors which are the cause of embittered controversy," which it mentioned, viz., the extensive teaching of semi-Romish doctrine as to the presence of our Lord in the elements of bread and wine, and the introduction of auricular confession by a large number of the clergy." The bishop added that, had the allocution been in his judgment only useless, he should not have separated himself from his Episcopal brethren; but it appeared to him mischievous, "because," he said, "it minimizes or ignores the greatest danger, at a time when the clergy and laity need to be most distinctly warned that the foe is already within the camp."

Church Missionary Society.—The seventy-seventh anniversary meeting of the Church Missionary Society was held in London, May 4th. The Earl of Chichester presided. The receipts of the Society and its associations for the year were reported to have been £174,340 18s. 3d. A surplus of £922 4s. 9d. remained on hand at the close of the year. Reports were received from missions in Africa, Asiatic Turkey, India, Ceylon, Mauritius, China, Japan, New Zealand, and Northwest America.

The total number of mission-stations was 157; of clergymen, European, 211; native born, 154; total clergymen, 365; of European lay agents, schoolmasters, printers, etc., 23; of European female teachers (exclusive of missionaries' wives), 12; of native and country-born Christian catechists, and teachers of all classes, not sent from home, 2,391.

The following table was presented, showing the increase in the number of communicants at the mission-stations during the preceding ten years:

Number of communicants in 1865.....	14,155
" " " 1866.....	14,028
" " " 1867.....	15,154
" " " 1868.....	16,145

" " " 1870.....	17,943
" " " 1871.....	20,125
" " " 1872.....	21,043
" " " 1873.....	22,555
" " " 1874.....	24,497

Society for the Propagation of the Gospel.—

The one hundred and seventy-fourth annual meeting of the Society for the Propagation of the Gospel in Foreign Parts was held in London, April 28th. The Archbishop of Canterbury presided. The annual report stated that the income of the Society for 1874 had been £134,826 19s. 3d., the largest sum ever received in one year. The greatest part of this sum had been devoted to the propagation of the Gospel in Asia. The Society had provided wholly or in part for the support of 508 ordained missionaries, distributed as follows: In Asia, 127; in Africa, 98; in Australia and the islands of the Pacific Ocean, 53; in America and the West Indies, 224; in Europe, 1. In this number were included first two native clergy in India. There were also about 828 catechists and lay teachers, mostly natives, in heathen countries, and about 141 students in colleges abroad.

The Exeter Reredos Case.—The Judicial Committee of the Privy Council gave a final decision, February 25th, in the case known as the "Exeter Reredos" case. This case originated in 1874, when the Dean and Chapter of Exeter Cathedral, in repairing that building, undertook to remove from behind the altar a tablet containing the ten commandments and put in its place a reredos containing sculptured representations of the Ascension of our Lord, his Transfiguration, and the Descent of the Holy Ghost, on the day of Pentecost. The Bishop of Exeter, supported by a judicial decision of a lower court, which he had sought and obtained, in his favor, decided the erection to be unlawful, on account of the images upon it. The dean and chapter took an appeal, both against the authority of the bishop, and on the question of the lawfulness of the images, to the Court of Arches. This court reversed the decision of the bishop, pronouncing the images not unlawful and declaring that he had not such supervisory authority over the cathedral as would allow him to order their removal. An appeal was then taken to the Queen in

Privy Council. The decree of the Judicial Committee reversed the decision of the Dean of Arches so far as it denied the jurisdiction of the bishop over the structure and fabric of the cathedral, but affirmed it so far as related to the lawfulness of the representations upon the reredos. The doctrine of the Church of England, it held, with regard to images, was clearly set forth in the twenty-second article of religion: "The Romish doctrine concerning purgatory, pardons, worshiping, and adoration, as well of images as of relics, and also invocation of saints, is a fond thing vainly invented, and grounded upon no warrant of Scripture, but rather repugnant to the word of God." The distinction must be between images which were likely to be abused and those which were not, and in that view they must consider the character of the new reredos at Exeter, the purpose and end for which it was set up, and its tendency or otherwise to be abused. The structure depicted historical subjects with which the minds of people were all quite familiar; it was not erected for superstitious reverence of any of the figures upon it; and it in no way differed from similar sculptures or representations in many parish churches throughout the kingdom to which had never been attached any idolatrous or superstitious use whatever. Its position in the cathedral made it no infringement of the ecclesiastical law. Their lordships desired it to be clearly understood that nothing decided in this case affected in any way that superstitious regard or worship of things which are or might be set up in churches, and to which the twenty-second article referred. The law would always be sufficiently strong to control and correct any such abuses as they arose; the sculpture in question was not liable to be impugned in that respect.

Martin vs. Mackonochie.—The Dean of Arches pronounced a decision December 7, 1874, in the case of *Martin vs. Mackonochie*. This case was a prosecution against the incumbent of St. Alban's Church, Holborn, for ritualistic practices, and was defined in several specifications. The Dean of Arches, in his judgment, condemned, as proved against the defendant, the practices of the use of lighted candles for ceremonial purposes; taking part in processions in the church, with representations of the Virgin Mary on a crescent; the singing of the hymn "Agnus Dei;" the making of the sign of the cross before the congregation; the use of wafer bread; the wearing of the cope, chasuble, and alt, and the position on the west side in the communion service. The dean held that Mr. Mackonochie had disobeyed the judgment of the Court of Arches and of the Privy Council; his offense was no moral offense or doctrinal charge, but an access of ritual observance. The defendant was bound to obey the law, and was not to select what portion he would obey or disobey what he pleased. It was the duty of the court to con-

demn him for his disobedience, and admonish him as to his future conduct. Mr. Mackonochie was sentenced to a suspension of six weeks and the payment of the costs of the proceedings, with the admonition that, if the offenses were repeated, greater severity would be used. Mr. Mackonochie took an appeal to the Privy Council, and thereby delayed the execution of the sentence. The appeal was afterward withdrawn, and the sentence went into operation June 13th. Mr. Mackonochie maintained a defiant attitude during the period of his suspension, and at its expiration returned to the performance of the services in his church without discontinuing or abating the ritualistic practices for which he had been condemned.

The Right to the Title Reverend.—In May, 1874, the Rev. Henry Keet, Wesleyan minister at Owsten Ferry, ordered a tombstone set up over the grave of his deceased daughter in the parish churchyard, on which was an inscription containing the words, "In loving memory of Annie Augusta Keet, the younger daughter of the Rev. H. Keet, Wesleyan Minister." The rector of the parish objected to the use of the term "Reverend" as applied to a Wesleyan minister, and for that reason refused to allow the stone to be set up. Mr. Keet complained of the rector's action to the Bishop of Lincoln and besought him to overrule the prohibition. The bishop in reply informed Mr. Keet that "it is the duty of an incumbent to examine the epitaphs which it may be proposed to inscribe on gravestones in the churchyard of his parish, and that he is required by law to make objections to anything in them which in his judgment is liable to exception." Mr. Keet then wrote to the Archbishop of Canterbury, asking him "whether the vicar has the right to object to a stone bearing a title which is acknowledged by the Government of the kingdom, and in accordance with general usage." The archbishop replied that, without deciding whether the rector had gone beyond the law, he considered his objection as one that ought not to be made. Mr. Keet submitted the letter of the archbishop to the Bishop of Lincoln, and appealed to him again for permission to set up the tombstone. The bishop replied that the point at issue was whether the title of "Reverend" should be conceded to the petitioner on a tombstone by ministers of the Church of England, who are the responsible guardians of their churchyards, and continued: "It is not easy to determine what is the exact meaning of the title 'Reverend' as claimed by a Wesleyan preacher. If the title is to be taken to imply that he is a person in holy orders, duly qualified to minister the Word of God and sacraments in a church, then I am bound to say the law to which I am subject would not allow me to recognize him in that capacity." The bishop then quoted some injunctions of John Wesley and ancient customs of Wesleyan connection against the improper assumption of titles by their ministers, and said, in

conclusion: "If I give a title to a person to whom it does not belong, I am liable to a charge of flattering him, and of wronging those to whom the title does belong. For such reasons as these I have abstained from giving the title of "Reverend" to Wesleyan preachers, not (I need hardly say) from any feeling of disparagement toward them, but because I honor consistency and truth, and because I am sure they would despise me if I acted against my conscience and were to practise the kind of liberality which courts popularity by giving away what does not belong to it."

Mr. Keet brought the subject before the Wesleyan Conference of 1874, and it was referred by that body to a committee to take such action in reference to it as should be thought fit. It was decided that the question of the right of Wesleyan ministers to the use of the title "Reverend" should be pressed by means of a suit in the civil courts for a faculty permitting the erection of the tombstone. The case was begun in the Consistory Court of the diocese. The Chancellor, Mr. Phillimore, decided in June adversely to the right of the complainants, sustaining in general terms the views which had been expressed by the Bishop of Lincoln, and declaring in addition that "a Wesleyan minister is and professes to be nothing else than a schismatic and a leader of schismatics." An appeal was then taken to the Court of Arches. The dean of this court, July 31st, pronounced a decision sustaining that of the court below, and supporting it by the additional argument that the rector had an absolute control over all structures proposed to be placed in the churchyard. On this point the dean said:

"The churchyard is the freehold of the incumbent, subject to the right of the parishioner or the stranger happening to die in the parish to simple interment, but to no more. Indeed, the incumbent has the right to pasture animals which do not injure the bodies interred in the churchyard, and every gravestone, of course, interferes with that pasturage. The incumbent for this, as for other more important reasons, has a *prima facie* right to prohibit altogether the placing of any gravestone, or to permit it on proper conditions, such as those which relate to the size and character of the stone, the legality and the propriety of the inscription upon it, or the payment of a proper fee. Usage, indeed, has much favored the placing of such stones, and, as a general rule, the incumbent permits them; while the exercise of his right of refusal has become, or perhaps always was, subject to the control of the ordinary."

The dean in his decision quoted the letter written by the Bishop of Lincoln to Mr. Keet, approving all of its positions, and concluded: "I do not think that it would be proper or consonant to practice that this court should overrule not only the direct dissent of the incumbent,

but also the deliberate judgment and authority of the bishop in a matter, not of state law applicable to all cases, but of discretionary permission, applicable to the particular case; and I think that in refusing to do so I act in accordance with the spirit both of the general law and of those rubrics in the Book of Common Prayer which relate to the authority of the ordinary. I decline to issue the faculty as now prayed."

An appeal was taken to the Judicial Committee of the Privy Council.

The Right to exclude from the Communion in Case of Heresy.—A suit was brought in 1874 by Mr. Henry Jenkins, a parishioner of Christ Church, Clifton, against the Rev. Flavel Cook, vicar of the parish, for illegally refusing to administer the sacrament of the Holy Communion to him. The vicar having preached a sermon on future punishment, Mr. Jenkins wrote him a letter protesting against the doctrines which he had announced. The vicar was prompted to inquire into the character of Mr. Jenkins's faith, and found that he disbelieved the doctrines of future punishment and of the personality of the devil, that he had published a book of selections from the Bible, from which all passages inconsistent with his views were excluded, and that he regarded a great number of passages in the Scriptures as "in their generally received sense quite incompatible with religion or decency." On the ground of the avowal of these doctrines the vicar excluded Mr. Jenkins from the sacrament, as being in the sense of the canon and rubrics of the Prayer-Book "an evil-liver," and a "hinderer and slanderer of God's Word." The case was carried by Mr. Jenkins to the Court of Arches. A decision was given, July 17th, by Sir Robert Phillimore, dean of that court, sustaining the position and course of the vicar. Mr. Jenkins then took an appeal to the Privy Council.

Increase of the Episcopate.—A bill providing for the increase of the Episcopate in the Church of England was passed by the House of Lords early in the session of Parliament. It was passed to a second reading in the House of Commons, but its further progress was opposed by dilatory motions, and the House adjourned without finally acting upon it. Mr. Beresford Hope gave notice that he should raise the question again the next year, when he hoped the subject would be properly discussed. He had presented a petition on the subject, signed by four or five thousand clergymen, a proportion of nearly one-quarter of the clergy of the Church of England.

Coadjutor Bishops in India.—Arrangements were completed early in September for increasing the number of bishops in India, by the appointment of coadjutor bishops. Efforts to effect this purpose had been making for some time, but were opposed by difficulties, the chief of which were legal ones. It was found that these could be overcome by conse-

crations held in India. The Rev. R. Caldwell, D. D., LL. D., and the Rev. E. Sargent, D. D., both South Indian missionaries of more than thirty-five years' standing, were named as the coadjutor bishops designate. The names of their respective sees have not yet been finally determined. The stipends of the new bishops were to be cared for by the Church Missionary Society and the Society for the Propagation of the Gospel, and the Christian Knowledge Society had expressed a willingness to help support them.

The Public Worship Regulation Act of 1874 began to take effect as a law on the 1st of July, 1875, agreeably to its own terms. The new orders for carrying out the act were signed by the Queen on the 28th of June, and were laid before Parliament for its approval.

The Church Congress.—The fifteenth annual Church Congress met at Stoke-upon-Trent October 5th. The Bishop of Lichfield presided. The opening sermon was preached by the Bishop of Rochester, on the "Manifestation of the Spirit." The Bishop of Lichfield, presiding, made the opening address. He read a letter of sympathy and fellowship from the President of the House of Bishops of the Protestant Episcopal Church in the United States. He stated that there were present at the Congress the Bishop of Tennessee, Dr. Potter, Secretary of the American House of Bishops, and several other clergy of the American Protestant Episcopal Church; the Archbishop of Armagh, representing the Irish Church; the Bishops of Edinburgh and Argyle, representing the Scotch Church; the Bishops of Ontario, Melbourne, and Nassau, representing the Colonial Church; so that he might say that all the branches of the Anglican Church were represented. He then proceeded to the consideration of the subject, "The Church of England and the Churches in Communion with her—how they may be drawn more closely together." He claimed for the preceding Church Congress a considerable agency in promoting intercourse between the English, American, and Colonial Churches, and reviewed the results of the Conferences held at Cologne in 1872, and at Bonn in 1874 and 1875, as tending to bring the Old Catholic and Eastern Churches into a nearer fellowship with each other and with the Anglican Churches. The discussion of this subject was followed up by the Bishop of Edinburgh, the Bishop of Melbourne, the Rev. Lord Plunkett, the Bishop of Tennessee, and the Rev. Dr. Potter, of Grace Church, New York. Other subjects discussed were: "Missions and Missionary Bishoprics;" "The Countraction of Drunkenness;" "Woman's Work in the Church;" "The Popular Arguments for Unbelief, and how to meet them;" "Lay Agency;" "Personal Holiness as influencing Conduct in the Family, Society, and Trade;" "The Church and Elementary Education;" "Free Churches;" "Funeral Reform;" "Discoveries in Bible Lands;" "Pastoral Work."

The Irish Church.—The second session of the second synod of the Irish Church met in Dublin, April 6th. The occasion was signalized by the presentation to the Church, by Mr. Henry Roe, of a new hall, which he had built for the use of the synod. The report of the representative body was presented. It showed that the Church had now invested in securities sums amounting to £5,835,920, and yielding a yearly income of £257,462. The voluntary contributions almost equaled this income, having, during the preceding year, amounted to £257,021. The legal costs of the representative body during the four years since the act disestablishing this Church came into operation had been £1,496. They had paid to compounders a total amount of £1,169,650, and had thereby extinguished annuities to the amount of £172,764. The balances left in the hands of the Church by compounders amounted to £1,108,955. The total assets of the Irish Church from every source, on December 31, 1874, amounted to £7,062,693 19s 4d.

The synod was occupied during most of the session in the consideration of the bills for the revision of the Prayer-Book, which had been prepared by the committee appointed at the last session, and were intended to embody the substance of the resolutions recommending modifications, which were passed at that session. A new preface was adopted. It contains a disclaimer of any intention to change the tenor or structure of the book, but states that it was sought only to make its meaning more clear, and to remove expressions liable to mistake or perversion. In making the changes, no censure was implied upon the former book. It explains that the adoration of the elements is guarded against in the communion service by a rubric, asserting that the kneeling is designed merely to be significant of a humble and grateful acknowledgment of the benefits. Touching the baptismal service, it says: "It is not known to all that, of a long time past, controversies have prevailed in the Church concerning the precise nature and extent of baptismal grace, and the time and manner of its operation; and these services have been diversely expounded by different parties in the Church, who, nevertheless, have never on either side been censured by public authority as unfaithful members of it. And we now hereby declare that though, on a review of the Prayer-Book, this Church has not deemed it expedient to change these services in respect of expressions which some have desired to alter, but which have been used in connection with this sacrament by the universal Church, from the earliest times, yet it is not our meaning, in thus retaining those expressions, to limit or abridge, on the one side or the other, that liberty of expounding them which has been hitherto allowed by the general practice of this Church, and, upon occasion, by solemn decision of the Court of Final Appeal in Ecclesiastical Causes in England;

nor do we require thereby the ministers of our Church to hold or teach any other doctrine concerning this sacrament than that which is set forth in the articles of religion. And it should be plain to all men from the express declarations of the offices themselves that no language therein used is meant to exclude the necessity of repentance toward God and renewal of the heart by the power of the Holy Ghost on the part of all who shall live to be capable of the same."

The preface says on another subject: "The special absolution in the office for visitation of the sick has been the cause of offense to many, and as it is a form unknown to the Church in ancient times, and as we saw no adequate reason for its retention, and no ground for asserting that its removal would make any change in the doctrine of the Church, we have deemed it fitting that in the special cases contemplated in this office, and in that for the visitation of prisoners, absolution should be pronounced to penitents in the form appointed in the office for the Holy Communion. No change has been made in the formula of ordination of priests, though desired by some; for upon a full review of our formularies, we deem it plain, and here declare, that no power or authority, saving such as may belong to him in the remission of ecclesiastical censures, is ascribed to the priest in respect of absolution of sins after baptism other than the ministerial one of declaring and pronouncing, on God's part, remission of sins to all that are truly penitent, to the quieting of their conscience, and the removal of all doubt and scruple; nor is it anywhere in our formularies taught or implied that private confession to, and absolution by, a priest, are any conditions of God's pardon, or needful or availing for any other purpose than that we have before set down; but, on the contrary, it is fully taught that all Christians who sincerely repent, and unfeignedly believe the Gospel, may draw nigh, as worthy communicants, to the Lord's Table, without any such confession or absolution; which comfortable doctrine of God's free forgiveness of sins is also more largely set forth in the Homily of Repentance, and in that of the salvation of mankind."

The preface also says: "With respect to the Athanasian Creed, commonly so called, we have retained it unaltered among our formularies; but we have directed that only that part of it which is strictly speaking a confession of faith shall be recited on certain days, instead of the Apostles' Creed, declaring, nevertheless, that in this order it is not our meaning to withdraw the witness which the Church is ever bound to bear (and which we here solemnly bear) to the Incarnation of our Lord Jesus Christ, and to the obligation which lies on every man, as he regards his everlasting salvation, to acquaint himself according to his ability with all that God has revealed, and to accept with faith and humility whatever shall

be sufficiently proposed to him out of the Word of God and proved by clear and certain warrant of Scripture."

The principal changes made in the Prayer-Book were as follows: The sentences after the preface "concerning the service of the Church," beginning "Though it be appointed," and ending "pray with him," were omitted; also, in the title, "the order for morning and evening prayer daily to be read and used throughout the year."

The saints whose names are printed in black-letter, and all the lessons from the Apocryphal books, were excluded from the Lectionary and Calendar.

The rubric called "the Ornaments Rubric" was omitted.

The so-called "Damnatory Clauses" were omitted from the Athanasian Creed. The creed was made to begin with the words "We worship one God in Trinity," and to omit the warning clauses in the necessity of belief in the Trinity and the Incarnation. The amended creed was appointed for recitation on three feast-days only of the year. To the rubric before the prayer for the Church Militant, "The priest shall then place upon the table so much bread and wine," were added the words "if he have not already done so," thus avoiding the idea of an oblation.

In the rubric before the Prayer of Consecration were added the words "standing at the north side of the table," making this position compulsory.

It was ordered that the communion office may begin with the collect, epistle, and gospel.

Instead of the words "Every parishioner shall communicate three times a year, of which Easter to be one," were inserted, "All ministers to exhort their people to communicate often."

In regard to the number of persons to whom the administration of the communion may be made, it was enacted that "the words may be used once to as many as shall together kneel."

Evening communions were distinctly recognized.

The following new question and answer were inserted in the Catechism:

"After what manner are the body and blood of Christ *taken and received* in the Lord's Supper?"

"Only after a heavenly and spiritual manner, and the means whereby they are received is faith."

Instead of the rubric in the Confirmation office, "And there shall none be admitted to the Holy Communion until such time as he be confirmed," etc., was inserted, "Every one ought to present himself for confirmation before he partakes of the Lord's Supper."

For "It is expedient that the new married shall receive the Holy Communion," etc., was inserted, "If there be no Communion, the minister shall say," etc.

A burial service was provided for unbaptized

infants or persons certified to have been desirous of and prepared for baptism.

The words "We give Thee hearty thanks" were omitted from the burial service.

In the service for the sick, the form of absolution in the communion service (the necessary change from plural to singular being made) was substituted for the form of absolution beginning "Our Lord Jesus Christ," etc., which it was directed should be omitted.

The alterations made in the Prayer-Book by the synod, particularly the emendation of the Athanasian Creed, excited opposition from a part of the Church. Shortly after the synod adjourned, Archdeacon Lee, of Dublin, made public the correspondence he had had with Dr. Pusey and Canon Liddon, of the English Church, in which he had proposed to establish a party who would hold to the Prayer-Book without revision, and would build churches in which it would be used in its old form. This movement does not seem to have secured any considerable following.

Synod of Rupert's Land.—The Provincial Synod of the new ecclesiastical province of Rupert's Land held its first meeting in St. John's Cathedral, Winnipeg, beginning August 3d. The diocese of Rupert's Land, Moosonee, and Saskatchewan, was represented by their bishops, the dioceses of Rupert's Land and Athabasca by lay delegates. It was resolved to address a communication through the metropolitan (the Bishop of Rupert's Land) to the Bishop of British Columbia, inviting his diocese to take such action as may lead to its union with the ecclesiastical province of Rupert's Land. The constitution of the new province was adopted. The three prayers for the Governor-General, for Parliament, and for the synod, already in use, were recommended for future use in the province.

ARGELANDER, FRIEDRICH WILHELM AUGUST, a celebrated German astronomer, was born March 22, 1799; died at Bonn, February 19, 1875. He studied in the University of Königsberg under Bessel, was successively instructor in the same university, director of the observatory at Abo and afterward at Helsingfors, and finally settled down as professor in Bonn in 1837. His principal works are: "Observationes astronomicæ Abœ factæ" (three vols., Helsingfors, 1830-32); "Ueber die eigene Bewegung des Sonnensystems" (St. Petersburg, 1837); "Neue Uranographie" (Berlin, 1843); and "Atlas des nördlichen gestirnten Himmels" (Bonn, 1857). The accuracy and trustworthiness of his figures in his first work, "Untersuchungen über die Bahn des grossen Kameten von 1811" (Königsberg, 1822), excited general attention at the time in astronomical circles, as it has been without parallel. In Argelander the astronomers lose one of their most prominent representatives.

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA), an independent state of South America, extending from the 22d to the 41st parallel

of south latitude, and from 53° to 71° 17' west longitude. Its boundaries are: on the north, Bolivia; on the east, Paraguay, Brazil, Uruguay, and the Atlantic; on the south, Patagonia, from which it is separated by the Rio Negro; and on the west, Chili, the dividing line with which is formed by a portion of the great Andine chain.

The boundary questions with Chili and Paraguay are still pending, nor does any advancement toward an amicable settlement seem to have been effected.

The efforts of a special envoy to the court of Rio de Janeiro, in the first half of 1875, to bring about a solution of the Paraguayan difficulty, proved unsuccessful; and the interchange of diplomatic correspondence between the Argentines and Chilians has been no less unremitting than in 1874, and the two years immediately preceding it, without any symptom of change in the determination of either Government to maintain its claim to Patagonia.

For territorial division, statistics concerning area, population, etc., reference may be made to the ANNUAL CYCLOPEDIA for 1872.

The number of immigrants in 1874 fell very far short of the glowing estimates formed for that year, and based upon a steadily-increasing current which reached its maximum strength in 1873. Nor is the result confined to the Argentine Republic, a proportional decline having been reported in several countries in the same year 1874, and notably in the United States. An explanation of this decrease may perhaps be found in the extensive recruiting of some of the European armies, and the improved condition of the people in a few countries of Central and Western Europe.

Immigration to the Argentine Republic has, besides, been very irregular, as is shown by the annexed table, embracing the seven years 1868-'74:

YEARS.	Arrivals.	YEARS.	Arrivals.
1868.....	39,284	1873.....	41,009
1869.....	37,984	1874.....	79,719
1870.....	41,068	1874.....	68,277
1871.....	21,768		

Examine the years 1870 and 1871, and there is a decrease in the second of nearly one-half as compared with the first; and then 1873 and 1874, and the decline is 11,435. "It is impossible," observes Dr. Avellaneda, "to prevent the effects of war or crises. When poverty prevails, people will run away, as they are now doing in New York as well as in Buenos Ayres. But we can distribute immigrants better through the country; we can offer land-grants to industrious settlers and open up a fresh stream of hardy North Europeans by providing them with passages to Buenos Ayres at the same rate as they can procure them to the United States. Public opinion urgently calls upon Congress to adopt these measures. Meantime, I have done all that was in my power, forwarding immigrants to the upper provinces, organizing provincial committees, inciting the

several governors to coöperation, sending agents in all directions, and locating 4,400 people in the first quarter of 1875. In this number are included 25 sent to the Rio Bermejo, now open to steam navigation, and who will shortly be followed by thousands of others. During my tour through Entre-Rios I visited the rising colony of Villa Colon, where the custom-house yielded in the first quarter of 1874 and 1875 \$3,000 and \$16,000 respectively. In proof of the success of our agricultural colonies, I may add that the value of the grain-crop alone of those of Santa Fé amounted to \$2,000,000 in 1874. To the Concordia colonists, on the western frontier of Buenos Ayres, who had suffered greatly by war and the failure of the crops, I had assistance promptly sent."

Indeed, in the early months of the year, the Government and the public press were very much concerned at the large numbers of foreigners who daily left the republic, mostly for Chili or Brazil, owing to the difficulty or rather impossibility of obtaining work in the city in consequence of the general stagnation in every branch of commerce and industry. A circular was addressed by the President to the governors of provinces, urging them to set apart lands for suitable families to settle upon, and an appeal made to Congress for the necessary funds for the successful establishment of colonies. Notwithstanding the vast and hitherto unreclaimed territories possessed by the several provinces, these have so far shown little disposition to make free land-grants to colonists individually, except in comparatively dangerous and exposed regions. A much-desired reform in this respect is, however, looked forward to at no far-distant day. The very existence of the republic depends upon its labor, and the distribution of that labor over its immense agricultural surface, where the most encouraging results are undoubtedly to be obtained. But existing circumstances are of a nature to turn any foreigners from venturing into the interior.

Official statistics showed the aggregate value of the property held by the settlers of the six flourishing colonies in Santa Fé to amount, in 1875, to rather more than \$10,000,000, or an average of about \$4,000 per family, against \$3,000 in 1872. The farming stock was set down at 11,160 draught-oxen; 42,747 cows; 14,178 horses; 6,833 sheep; and 6,988 swine.

A project of a new homestead law was laid before Congress by the Government, and a large majority was in favor of its passage.

The President of the Republic is Dr. Don Nicolás Avellaneda (succeeded Señor Sarmiento in 1874); the Vice-President, Dr. Don Mariano Acosta (elected in the same year); Minister of the Interior, Dr. Don Simon de Iriondo; of Foreign Affairs, Dr. Don Bernardo de Irigóyen; of Finance, Señor Don Lucas L. Gonzalez; of Justice, Public Worship, and Public Instruction, Señor Don O. Leguizamon; of War and Marine, Señor Don Adolfo Alsina. Argentine

minister to the United States, Señor Don Manuel R. Garcia (in Europe since 1872); *chargé d'affaires*, Señor Don G. Videla Dorna.

The following is the list of the Governors of the fourteen provinces:

Buenos Ayres.....	C. Casares (May, 1875).
Minister of the Interior.....	Dr. A. del Valle.
Minister of Finance.....	R. Varela.
Catamarca.....	General O. Navarro.
Córdoba.....	Dr. E. Rodriguez.
Corrientes.....	Dr. V. Pampin.
Entre-Rios.....	Dr. E. Febre.
Jujuy.....	F. M. Alvarez Prado.
La Rioja.....	R. Ocampo.
Mendoza.....	F. Civit.
Salta.....	M. F. Arasz.
San Juan.....	E. Doncel.
San Luis.....	R. Cortes.
Santa Fé.....	S. Bayo.
Santiago.....	G. Santillan.
Tucuman.....	B. Lopez.

The financial situation of the country, though generally improving, is subject to considerable fluctuations from year to year.

The following tables set forth the amount and various branches of the revenue and expenditure for 1874:

REVENUE.

Import duties.....	\$12,512,578 55
Export duties.....	2,303,029 08
Public warehouse fees.....	473,077 58
Stamped paper.....	267,155 46
Post-Office.....	174,300 48
Telegraphs.....	77,930 75
Lighthouses.....	85,601 73
Dividend of Central Argentine Railway Co.	116,620 00
Sundries.....	130,187 70

Total..... \$16,090,661 58

EXPENDITURE.

Ministry of the Interior.....	\$3,847,968 30
Ministry of Foreign Relations.....	128,656 08
Ministry of Finance.....	12,794,406 63
Ministry of Justice, etc.....	1,153,045 17
Ministry of War and Marine.....	8,006,501 62

Total..... \$25,929,248 83

On comparing the totals of these tables, a deficit of \$9,838,582.30 will be observed; but it is here necessary to consider the unusually large outlay in the Ministry of War and Marine, no less than \$3,076,156.33 having been incurred by the rebellion in Entre-Rios and that in Buenos Ayres, the first headed by Jordan, and the other by Mitre; and also the marked decrease in the revenue in 1874 as compared with that of 1873, notwithstanding the addition of a new source of national income, under the title "Lighthouses" (which stands for nearly \$4,000,000), as will be seen by the subjoined comparative table of the revenue for the two years mentioned:

BRANCHES.	1873.	1874.
Import duties.....	\$16,516,706 40	\$12,512,578 55
Export duties.....	2,488,513 64	2,303,029 08
Public warehouse fees.....	544,142 13	473,077 58
Stamped paper.....	288,849 64	267,155 46
Post-Office.....	158,714 08	174,300 48
Telegraphs.....	53,273 86	77,930 75
Lighthouses.....		85,601 73
Dividend of the Central Argentine Railway Compy. }	54,852 25	116,620 00
Sundries.....	108,180 42	130,187 70
Total.....	\$20,217,281 87	\$16,090,661 58

Here, then, is a difference of no less than \$4,126,570.29, which, with the above-mentioned extraordinary expenditure of \$3,076,156.33 for rebellions, almost reestablishes the equilibrium between the national income and outlay for 1874.

We annex a table showing the amount of the revenue for each year of the decade 1864-'74:

YEARS.	Revenue.	YEARS.	Revenue.
1865.....	\$3,293,071	1870.....	\$14,883,905
1866.....	9,563,554	1871.....	12,652,155
1867.....	12,044,987	1872.....	18,172,879
1868.....	12,490,136	1873.....	20,217,292
1869.....	12,676,650	1874.....	16,090,662

In spite, however, of the decline in the revenue, all war expenses, as well as the ordinary expenditure of the budget, have been met; \$1,500,000 of arrears have been paid to the War Department between January, 1874, and May, 1875; arms and ships, for which no special appropriation had been made, have likewise been paid for, and all without the slightest injury to the national credit, and even without the necessity of negotiating the balance of the loan in London. "The Minister of Finance," observes the President, "even in the darkest hour, paid no more than the national bank-rate for money."

The public works of the 1871 loan progressed uninterruptedly, and the expenses thereof were defrayed out of that loan.

In the estimated budget for 1874, the ordinary expenditure had been set down at \$23,383,000; but, at the end of the year, there remained a surplus of \$3,702,000. By virtue of special laws, an extraordinary expenditure of \$25,000,000 had been authorized; but of that sum \$8,929,000 only were used.

Concerning the foreign debt, amounting to about \$50,000,000, some interesting details will be found in the ANNUAL CYCLOPEDIA for 1874 (page 32).

The following particulars relative to the home debts of the republic were published on April 12, 1875, by the national accountant, Señor P. Agote: "The sum total of the home debt is somewhat over \$21,000,000, being much under that of Uruguay. With us it amounts to about \$10, while in the other republic it is between \$50 and \$60, for each inhabitant." Here follow the different branches of the debt:

BRANCHES.	Debt.	Redeemed.
National bonds (1868-'75).....	\$21,890,500	\$4,778,488
Municipal bonds (1860).....	2,674,828	1,188,059
Roads and bridges (1868-'69).....	1,888,000	124,000
National bank (1873).....	400,000	8,000
Foreign claims.....	1,190,826	235,109
Total.....	\$27,599,149	\$6,378,656
Deduct redeemed.....	6,378,656	
Total home debt.....	\$21,165,493	

The Argentine navy, according to the report of the Minister of War and Marine, comprised in 1875:

Two iron-clads, at a cost of \$500,000 each; 2 gunboats, \$180,000 each; 13 steamers, at an

average cost of \$42,461 each; 2 brigs, \$14,000 and \$500; 1 pontoon, \$12,000; 4 faluas, \$1,000 each; and 1 gig, \$160; total cost \$1,842,660.

On the subject of public instruction, so peculiarly favored in the Argentine Republic, and especially so by the present zealous and indefatigable minister, Señor Leguizamón, the following remarks are quoted from the President's message to Congress in May last:

The census of schools has been retarded by war; but we have to report renewed activity in Mendoza, Santa Fé, Entre-Ríos, and Buenos Ayres. In Mendoza City we find one-fifth of the inhabitants attending school, including night schools for adults. A normal school is about to be opened in Tucumán; that of Paraná has doubled the number of its pupils. The government of Buenos Ayres has approved the plan for the normal school for females, for which the national Treasury holds \$40,000, appropriated by act of Congress. The National College of Rosario was opened on March 1st. There are in the other fourteen national colleges 4,000 pupils, and since January, we have appointed sixty professors for new courses of study. Apparatus for the natural sciences, books, etc., have been ordered from Europe, and the number of the latter, as also that of free libraries, will greatly increase in the current year. The Córdoba Academy of Sciences has been reopened, and the new building is rapidly pushed forward toward completion. The Faculty of Science in Buenos Ayres has been remodeled; institutions of this kind raise our intellectual level, and bestow lasting glory on the country. Dr. Gould (an American, director of the National Observatory of Córdoba) has presented two luminous reports on the Astronomical and Meteorological Departments. "We shall," he says, "shortly require funds for the publication of the *Uranometria Argentina*, and climatic observations, which will form a voluminous work." Several scientific associations in the United States have sent us donations of valuable works as an encouragement to our efforts. Such friends deserve our public thanks.*

Thanks to the unremitting efforts of Señor Leguizamón, the normal school bill, of which a translation is here annexed, became a law during the second session of Congress:

Buenos Ayres, October 13, 1875.

Whereas, the Senate and Chamber of Deputies of the Argentine nation, assembled in Congress, have decreed:

ARTICLE I. That the Executive be empowered to establish a normal school, for the preparation of schoolmistresses for the elementary branches of education, in the capital of each province that demands one, and that offers as basis a suitable location belonging either to the province or to the municipality, or that may procure such location out of the national resources, in accordance with the general law of subventions.

The first course of instruction being terminated, the Executive will hand over the normal schools to such provinces as will bind themselves to defray the expenses required for their support, either wholly, or in accordance with the law of September 25, 1871.

ART. II. Annexed to every normal school will be established a graduate school, which will serve as a scale for normal studies, and at the same time a practical course for the female teachers to be prepared therein.

ART. III. The normal course will embrace a term of three years, and the graduate school two years,

* Minute educational statistics will be found in the ANNUAL CYCLOPEDIA for 1874.

according to the form and rules which the Executive will ordain.

ART. IV. These establishments will be under the immediate control of the chief school authorities of the respective provinces. The supervision will be decided upon by the Executive, its principal object being to report on the state and progress of the schools, and to propose the improvements which may be considered necessary in the staff, order, and rules of the establishment.

ART. V. Let ten burses be established in each school, of the value of twelve silver dollars per month each, which will be distributed by the Executive in each province among poor girls of the rural districts who may wish to devote themselves to teaching, on condition that they employ in their respective districts double the time they have spent occupying a free place in the normal school. This may be done, enjoying the usual salary in a public school, or in a private school without salary.

In both cases there will be no obligation if a situation be not given to the schoolmistress within the term of a year, counting from the time she leaves the school.

ART. VI. The Executive is empowered to engage a staff of teachers in a foreign country, in case suitable teachers cannot be obtained in the republic.

ART. VII. Let the Executive be authorized to spend to the amount of twenty thousand dollars (hard) in the execution of the present law, submitting to the first session of next Congress, in the ensuing year, the budget of expenses.

ART. VIII. Let it be communicated to the Executive.

Given in the hall of sessions of the Argentine Congress, in Buenos Ayres, the 11th of October, 1875.

MARIANO ACOSTA.

B. ZORRILLA.

CARLOS M. SARAVIA, Secretary of the Senate.

MIGUEL SORONDO, Sec. of the Chamber of Deputies.

In virtue of the above:

Let the law be fulfilled, communicated, published, and filed in the national registry.

AVELLANEDA.

O. LEQUIZAMON.

The trade returns for 1874 show a slight falling off in the exports, and an enormous decrease in the imports, as will appear from the subjoined comparative tables of those two branches for 1873 and 1874:

EXPORTS.

TO	VALUE.	
	1873.	1874.
Germany.....	\$449,044	\$769,071
West Indies.....	665,447	427,382
Belgium.....	13,890,166	14,729,131
Bolivia.....	5,043	2,362
Brazil.....	670,705	515,594
Chili.....	463,438	513,613
Spain.....	1,225,955	1,530,909
Uruguay.....	904,941	1,757,124
United States.....	8,029,925	8,747,255
France.....	8,651,231	7,548,066
Holland.....	228,204	24,149
Great Britain.....	9,438,519	4,778,299
Italy.....	1,484,635	1,686,406
Paraguay.....	21,378	24,797
Peru.....		1,460
Portugal.....	72,584	42,372
Other nations.....	451,508	176,503
Total.....	\$41,644,836	\$39,235,048
In transit.....	747,209	1,183,217
Free of duty.....	\$42,392,045	\$39,413,265
General total.....	\$45,869,814	\$43,104,712

IMPORTS.

TO	VALUE.	
	1873.	1874.
Germany.....	\$3,238,015	\$2,341,471
West Indies.....	877,597	336,373
Belgium.....	2,967,596	1,814,457
Bolivia.....	81,194	44,601
Brazil.....	2,963,953	2,623,173
Chili.....	1,444,139	1,522,413
Spain.....	2,932,000	2,684,583
Uruguay.....	2,735,299	3,193,313
United States.....	5,167,616	3,504,537
France.....	18,255,188	13,113,577
Holland.....	1,611,616	1,051,229
India.....	251,821	973,614
Great Britain.....	19,844,143	10,938,914
Italy.....	3,754,384	2,534,008
Paraguay.....	689,651	970,121
Peru.....	445	
Portugal.....	183,379	116,637
Other nations.....	310,724	38,734
Total.....	\$66,456,734	\$45,736,963
In transit.....	4,606,826	3,620,166
General total.....	\$71,063,560	\$49,357,129

By comparing the general totals for 1873 and 1874, in this last table, a decline of nearly \$21,000,000 for the latter year is at once discovered, while in the export table the decline is little over \$2,500,000. The decrease in the revenue for 1874 is here explained; but, as that decrease arises from a decline in the imports, it argues no diminution of the productive power of the republic.

The proportion of the exports through the various custom-houses of the republic is set forth in the following table, embracing the years 1873 and 1874:

EXPORTS.

CUSTOM-HOUSES.	1873.	1874.
Buenos Ayres.....	\$34,432,582	\$30,522,003

Foremost among the articles of export stands wool, of which 80,206,652 kilogrammes, or rather more than 200,000,000 lbs., were sent out of the country in 1874, of the value of \$17,967,054. Hides come second in importance, having been exported in the following quantities: ox and horse hides, 2,207,731; do. do., salted, 535,350; dried calf-skins, 332,153; salted do., 31,666; dried horse-hides, 142,714; salted do., 112,599; *nonatos* calf-skins, 170,-

246 kilogrammes; and sheep-skins, 24,502,558 kilogrammes. Of animal fat (tallow and oil) 15,248,648 kilogrammes were shipped, of the value of \$2,089,561.

Of jerked beef, the quantity exported was 25,504,897 kilogrammes, the value of which amounted to \$1,018,745.

The value of the jerked beef exported in 1873 was \$1,883,000, that is to say, more than a quarter of a million greater than that of the quantity exported of the same article in the year following.

Other articles, with their quantities and value, were as follows:

ARTICLES.	Quantities.	Value.
Bristles.....	21,089,482 kilos	\$898,054

	Cleared.....	1,814, " 764, " 465,598 "
1874	Entered.....	" 1,108, " 902, " 492,191 "
	Cleared.....	" 916, " 902, " 492,191 "

There are at present 899 miles of railway open to public traffic, the last 55 miles of the East Argentine, from Federacion to Caseros, having been completed in the course of the year, and 75 miles of the Rio Quinto line.

The railways in process of construction form an aggregate of 1,132 miles; and those projected or conceded, some 2,796 miles, including that to connect the Atlantic and Pacific coasts, by the ports of Buenos Ayres on one side and of Valparaiso and Caldera on the other.

A proposal was made by Messrs. Telfener & Co. to purchase the Tucuman Railway, and construct branches to Salta, Jujuy, Rioja, Catamarca, and Santiago, the terms of which purchase, as recommended by a committee of deputies, and reported as likely to be received favorably by the Senate, were as follows:

ARTICLE I. The Government is authorized to sell the railway from Córdoba to Tucuman (continuation of the Central Argentine, 90 miles) to Messrs. Telfener & Co., on the following terms:

1. The price shall be the same as the line has cost the nation.
2. The Government gives a 7 per cent. guarantee for twenty-five years on the amount.
3. The line will be handed over in sections, the purchaser paying for each section at the time.
4. The working expenses shall be fixed at 55 per cent. of the gross receipts.
5. The guarantee must be liquidated and paid half-yearly.
6. When the earnings exceed 7 per cent. the surplus shall go to reimburse the sums paid on account of guarantee by the Government.
7. The tariffs shall be regulated in accord with the Government.
8. The guarantee shall run on each section as paid for.
9. The buyer or buyers must carry the mails and mail agent gratis; also Government employés, soldiers, and merchandise for half price, as well as immigrants and materials for branch railways.
10. The legal head-office of the company must be in this republic.
11. The railway and branches to be free of taxes for twenty-five years.
12. The company may import materials for the line, duty free, during twenty-five years.

ART. II. The proceeds of the sale of the Tucuman line shall be devoted to extending it to Salta and Jujuy, and making the necessary branches.

ART. III. The Government shall proceed to have surveys made for the branches to Santiago, Catamarca, and Rioja.

ART. IV. If Messrs. Telfener & Co. do not accept these terms, the Government may sell the line to any other company on the same terms.

The chief modifications proposed by Mr. Telfener were in regard to the branches, which he offered to build himself on a 7 per cent. guarantee, whereas Congress preferred to devote to that purpose the \$8,000,000 fixed upon as the amount to be paid by the purchasers. This latter disposal of the proceeds of the sale would, of course, be all the more agreeable to British capitalists, as it would show them that the money obtained in 1871 for the building of railways continues to be appropriated to the same object.

"It is not hazardous to predict," writes a London editor, "that the Tucuman Railway and branches will increase by one-fourth the products and revenue of the country; and Mr. Telfener's interest in London will be considerably favored by a statement recently published, to the effect that the traffic on the Great Southern Railway for the first six months of 1875 was 50 per cent. in advance of that of the corresponding period of 1874, and that the net profits averaged nearly 12 per cent. on the company's capital. (The Great Southern line unites Buenos Ayres and Dolores, the length being 130 miles.) The Central Argentine returned a like increase of 50 per cent. for the year ending May, 1875." Moreover, money was then at 2 per cent. in London, which low rate had only been reached five times in the course of a century.

The department of engineers having been abolished, the surveys for the projected line from Concordia to Gualaguaychú (160 miles) were approved by the new Committee of Public Works.

The Provincial Legislature of Buenos Ayres has decided to prolong the Western Railway to Bragado, thirty-two miles from Ohivilcoy, at a cost of £250,000, to be defrayed out of one-fourth of the profits of the line from January, 1876. The annual profits average about £80,-

000. It is proposed to raise £200,000 by an issue of debentures.

No new telegraph-lines were made, but much trouble and expense were incurred by repairing during the war the already-existing lines. No less than 748 miles were repaired on the Entre-Rios and Corrientes line, the rebels having destroyed 27,000 pounds of wire.

The receipts for telegrams show an increase of 40 per cent. over those of 1873, and telegraphy, wherever practicable, has been generally adopted by the people. Two extra wires were in process of establishment between Buenos Ayres and Córdoba, and one from Rosario to Santa Fé.

More telegraphs are, however, still required. President Avellaneda in his message speaks of towns in Buenos Ayres with populations of from 7,000 to 10,000 suffering from the absence of telegraphic communication with the capital, adding that he has offered every assistance to the Governor to meet the want; and the Minister of War urges the necessity of establishing lines between the war-office and the military posts on the frontier of that province, as indispensable to prevent the incursions of the Indians.

The yield of the Post-Office Department amounted to \$174,000, or \$16,000 in advance of that of the year immediately preceding; and the increase for 1875 was estimated at three times that amount.

The mail matter for 1874 was as follows:

Letters	8,731,924
Dispatches	280,143
Newspapers, etc.	1,964,864
Total	5,918,881

The cost of transport for each letter, etc., was two-thirds of a cent., and the profit one-third of a cent.

Some idea of the national manufacturing industry can be derived from the following list of prizes, etc., distributed at the industrial fair held at the capital in the early months of the year: Diploma and medal for a steam-engine; diploma and medal for the manufacture of artificial marble; diploma of honor for the manufacture of silk fabrics; diploma of honor for calcareous mosaics; diploma of honor for the manufacture of tubes and wire from lead extracted from Argentine mines; diploma of honor for clocks and watches manufactured in the republic; diploma of honor for the manufacture of glassware; diploma of honor for skins prepared for glove-making in the republic; diploma for pianos made with Argentine wood, etc., etc.

Magnificent specimens of marble are found in great abundance in the Córdoba Mountains, some of which are reported equal in quality to the finest Carrara marble.

No better summary of the improvements in progress and of the present state of the country can be presented than the subjoined extract from the President's message, already drawn upon, and which, though dating from

the month of May, is generally applicable to any month in the year:

President Sarmiento made ports at Ensenada, Zarata, and San Pedro, tending greatly to facilitate commerce and increase the revenue. I have in like manner opened Bahía Blanca and Ajo for coasting and foreign trade. The port of Ajo yields a revenue of \$40,000 in the first three months of the present year. The new custom-house at Rosario is now open; a port will at once be made, and the Minister of Finance is negotiating for the extension of the pier of a branch of the Central Argentine Railway, which branch can be built at little expense, and will be of material benefit to the trade of nine of our provinces.

The new regulations and facilities for northern trade are found to be of great service.

The proprietors of the Catalina wharf have petitioned for permission to extend their work.

The dredging of the Riachuelo has been carried on without ceasing throughout the year. Two dredges are working; 10,000 tons of mud have already been removed from the river, and a project for canalizing the latter will be submitted to you.

Surveys are in progress for the canalization of the Gualaguaychí, Victoria, Goya, and Esquina Rivers; but there are many other bars in the Paraná and Uruguay, for which I propose to have dredges imported; and we shall then have all our ports and channels unobstructed for commerce.

The Department of Agriculture is doing much good in all parts of the republic. Last year 200,000 plants and 16,000 parcels of seed were distributed; and there is in each province an agent appointed to facilitate the work, and report upon the nature of the soil and the climate. The park at Palermo, for the city of Buenos Ayres, progresses rapidly under the able direction of the late President of the Republic.

The war-office was busily employed in the equipment and distribution of army corps. When the rebellion was ended, divisions had to be paid off, and men sent to their homes: most of the forces of the northern reserve and Buenos Ayres divisions were National Guards. The troops of the line had to be sent to the frontier, where barracks and plantations, established at a heavy outlay, had been destroyed. In short, all had to be done anew.

The army was found much reduced, the rebellion having cost four cavalry regiments and two battalions of foot; but, as the ballot was judged undesirable, the Minister of War ordered a general recruiting by voluntary enlistment; for which purpose the republic has been divided into eight sections, each under the command of a field-officer.

The report of the war-office will soon be laid before you, with a new system for protecting frontiers, and some bills on army reform. It is proposed to suppress the *proceedurias* which have been making money out of the soldiers' rations.

The artillery depot has undergone a complete reform. Steam workshops are in course of preparation for the manufacture of every description of arms and ammunition.

The Marine School is reorganized; and a floating school for young sailors is in process of equipment, under the auspices of the Government.

MESSENGERS, SENATORS AND DEPUTIES: You represent a nation which is making great strides, and which only requires wise laws and prudent administration. The rebellion was but an accident, serving to show that the republic will not consent to anarchy or disorder. The commercial crisis, far from indicating decadence, is precisely such as the most flourishing nations at times experience: the causes in our case can easily be remedied, and will serve as a lesson for the future.* When people employ capital in un-

* Numerous suspensions (among others, that of the Mail Bank) and failures occurred after the termination of the re-

productive investments, or when the consumption of imports is excessive, the only alternative is to increase labor and production, and lessen, at the same time, all sorts of expenditure, as well public as private. Our people now begin to open their eyes to this, and the adoption of a general system of economy is visible in the great reduction of the imports (for the past and current year).

I cannot perceive a single cloud on any side of our horizon. Our home policy is one of clemency and reconstruction; and our policy, as regards the rest of America, is one of peace.

The only negotiations of importance in the Foreign Department were those with Brazil, which may be succinctly related as follows:

On April 24th, Dr. Tejedor, minister plenipotentiary from the Argentine Republic to Brazil, was received in official audience by the Emperor Dom Pedro II., for the formal presentation of his credentials. Dr. Tejedor remarked in his address that, upon the friendly relations between the empire and the republic depend not only the commercial prosperity and the civilization of the Atlantic states of South America, but the maintenance of peace in the Platine republics; and that perhaps the only obstacle to the unification of Brazilian and Argentine policy was the question of limits still pending with Paraguay and the military occupation of its territory.

A friendly solution of this vexed question seemed probable at the commencement of the negotiations, and was, for a time, confidently expected; but the Argentine envoy returned home before July, without having effected any appreciable change in the position of affairs. The Brazilian negotiators were the Viscounts do Rio Branco and de Carvelhas.

The importance, in a strategic point of view, of the island of Martin Garcia, situated at the head of the Rio de la Plata, near the confluence of the Paraná and Uruguay, and commanding the entrances to those great fluvial arteries, is well known. But as that island has of late been a subject of no little discussion, particularly in the European press, whose interpretations of Argentine policy appear to conflict, not only with Argentine professions, but with facts, the following extract from a speech, delivered by President Avellaneda in September last, on the occasion of the inauguration of the submarine cable between the national capital and the island, may not be found inopportune in this place:

I inaugurate the submarine telegraph which unites the city of Buenos Ayres to the island of Martin Garcia. You know, gentlemen, he who arrives from Europe or from the United States sees for the first time floating the Argentine flag, with its glorious colors. It is there to announce free labor and generous hospitality, and to accord a welcome in the name of fraternal institutions to the people of all nations. May the new telegraph serve to transmit these salutations of a kind reception, which offers a new country to those who seek a new world. The island of Martin Garcia is the key of our rivers, not the key which Dr. Francia forged for Paraguay with the tools of colonization, in mixing up with the cautious superstitions of the Indians the narrow policy of his dominating retrogression. It is the

hollow, and some of the largest real-estate holders became bankrupt, or insolvent debtors. The importing community suffered more than any other, for, while they had millions of outstanding debts in the hands of the dealers, these, having their capital for the most part engaged in real estate which they were unable to realize upon, could not pay, and many of the oldest importing houses were forced to suspend.—V.

key which opens and not that which closes, and which, handled on a day memorable by the expansive spirit of human progress, has consecrated the universal access of our great rivers, declaring them free as our seas, and belonging to the common domain of nations. I inaugurate the telegraph at Martin Garcia under the auspices of that inexpressible declaration. May it always remain attached to the destinies of these Platine waters! I pray that each of these transmissions may identify itself with the announcement of new immigrants, and with fresh progress arriving at our shores, without ever separating them, as it is impossible to detach from the waves of the ocean the torrents which supply it.

ARIZONA. See ANNUAL CYCLOPEDIA for 1874.

ARKANSAS. There has been a very peaceful state of affairs in Arkansas during the year. Early in January a document was submitted in the United States Senate signed by 195 persons calling themselves "soldiers of the late Union Army," and setting forth the existence of outrages and intimidations which put their lives in constant peril. As soon as this became known in the State, Governor Garland brought these persons before the grand-jury to substantiate their declarations and furnish evidence for the indictment, under the "Ku-klux" law of 1869, of any persons connected with leagues and combinations which disturbed the peace of the community or endangered the lives of citizens. He also submitted a special message to the Legislature, then in session, in which he said:

If there is terrorism or any denial of right to any person in this State under this government, or if there is a White League in this State, or any similar or kindred organization, I do not know it, and I do not believe such to be the case. But to ascertain this definitely, and assure protection to those who say they do believe these things, I have requested the prosecuting attorney of this circuit to have these persons brought before the grand-jury now in session, to testify fully about them, with the intention, if there is power in this government, to break up all such organizations, and to punish all parties belonging to them, as well as all parties who may threaten or try to alarm citizens of the State, or to deprive them of any right. The prosecuting attorney has assured me he will at once afford every facility to those persons who believe this state of affairs exists, to appear before the grand-jury and establish it; and if it does, he will spare no efforts to suppress it, and to bring to immediate and severe punishment those who are concerned in it.

I call your attention to these matters, that you may consider what legislation is necessary to secure the end indicated here.

If the act of March 13, 1862, in relation to "Ku-klux," which is still a law, is not broad enough, I would advise that it be so amended, changed, or modified, as to meet the necessities of the case. The most stringent law you can pass to suppress and put an end to all such evils, if they exist, will meet with my ready and unqualified indorsement.

Under the liberal, just, and fair constitution we now have, we want no man in the State to be afraid, or to carry his life in his hand, but all must be free and unembarrassed, that they may remain long in the land, and do well and prosper.

No evidence was furnished upon which any indictment could be found, and no further legislation was found necessary. Meantime an investigating committee from Congress had been

examining into the condition of affairs in the State, and two reports were submitted to the national House of Representatives on the 6th of February. The majority report, signed by Luke P. Poland, Henry W. Scudder, Milton Saylor, and Joseph H. Sloss, stated its conclusions as follows:

The new constitution we regard as republican in form, and, in many respects, an improvement upon that of 1868. The committee are satisfied that the convention to frame the constitution, and the constitution itself, were voted for by, and are satisfactory to, a majority of the voters and people of the State. The State officers were certainly elected by a majority of the votes cast, and we think by a majority of the votes of the State. The condition of the State has been as peaceful since the new government was inaugurated as it ever has been. The mass of the people on both sides are inclined to peace and good government, and to allow every one the enjoyment of his legal rights, but there is a class of men—the outgrowth of the former state of society—who delight in disturbing and depriving the colored and Northern people of their rights. These are young men, and cannot be restrained. This class of men, together with the custom of carrying deadly weapons, another legacy of their barbarism, are the real causes of violence and bloodshed. The changes caused by the war—giving freedom and political equality to the colored people—are not well relished by the Southern people, but most of them would do nothing to disturb them. But the class to which we have alluded feel that they may invade the rights of the colored men, especially in any political quarrel, and that their offenses will be winked at. We are satisfied that the true prosperity of the Southern States depends more upon just and stern dealing with this lawless class of men than any other cause. Arkansas probably presents no different condition from that of other cotton States where political control has passed into the hands of the classes who ruled before the war. The people of every State have the right to make their constitution to suit themselves, provided it be republican in form and in harmony with the Constitution of the United States. The national Government has not the authority to deprive them of that right. The election held for the ratification of the constitution was under the form of law, and the officers who conducted it acted under appointment and under official oaths; and although we regard all as defective, however, being prescribed by a convention instead of the Legislature, we believe it entitled to be regarded differently from mere voluntary meetings held under no pretense of legal authority. The committee do not recommend any action by Congress, or by any department of the General Government, in regard to the State government of Arkansas.

The minority report was signed by Jasper D. Ward, of Illinois, and concluded with the following resolution:

That Joseph Brooks, having been by the people of Arkansas elected to the office of Governor of said State, under the constitution of 1868, for a period of four years ending in January, 1877, and said constitution never having been legally overthrown, and being still in force, he is the lawful Governor of said State of Arkansas.

About the same time, President Grant submitted the following special message to the Senate:

EXECUTIVE MANSION, February 8, 1875.

To the Senate of the United States:

Herewith I have the honor to send, in accordance with a resolution of the Senate of the 3d inst., all the

information in my possession, not heretofore furnished, relating to affairs in the State of Arkansas.

I will venture to express an opinion that all the testimony shows that in the election of 1873 Joseph Brooks was lawfully elected Governor of that State; that he has been unlawfully deprived of possession of his office since that time; that in 1874 the constitution of the State was, by violence, intimidation, and revolutionary proceedings, overthrown, a new constitution adopted, and a new State government established. These proceedings, if permitted to stand, practically ignore all the rights of minorities in all the States. Also, what is there to prevent each of the States recently readmitted to Federal relations on certain conditions, from changing their constitutions and violating their pledges, if this action in Arkansas is acquiesced in?

I respectfully submit whether a precedent so dangerous to the stability of the State government, if not of the national Government also, should be recognized by Congress.

I earnestly ask that Congress will take definite action in this matter in order to relieve the Executive from acting upon questions which should be decided by the legislative branch of the Government.

(Signed)

U. S. GRANT.

The request of the President was not heeded, and, after considerable discussion, the "Poland report" was adopted in the House on the 2d of March. On the 8th of the same month, Governor Garland issued his proclamation, appointing Thursday, the 25th of March, as a day of thanksgiving. In his proclamation, the Governor said:

We have been sustained by the true conservative republican sentiment in the North, which is one of the most gratifying features connected with our struggle, and one of which we should feel proud; and we should strive by all means to prove ourselves worthy of this indorsement so emphatically given by those supposed to differ with us politically, and who were begged and importuned under all circumstances to put us down. With all we have undergone, if our cause has been the occasion of harmonizing and uniting liberal and conservative elements in the nation that have heretofore been discordant, we are more than paid, and it should be one of our chief duties to see that they be kept together hereafter.

The Legislature of Arkansas, which met in November, 1874, continued in session until the 15th of March, 1875, and then adjourned to the 1st of November. Early in January the following joint resolutions were adopted in regard to Federal interference with the organization of the Legislature of Louisiana:

A joint resolution, expressive of the sense of this Legislature in regard to the recent military interference in the affairs of Louisiana, and denying that terrorism or secret political organizations exist in this State.

Whereas, By means of telegraphic dispatches, and the press of the country, the alarming information has reached us that recently in the city of New Orleans the Legislature of the State of Louisiana, chosen by the people thereof, has in substance and in fact been dispersed by the military authorities of the United States, without authority of law or sanction of the Constitution, thus endangering and disregarding the rights of the States to govern in their own local affairs and the constitutional liberties of every American citizen; and—

Whereas, In a telegraphic dispatch to the Secretary of War, dated at New Orleans on the 5th inst.

stant, signed by "P. H. Sheridan, Lieutenant-General U. S. Army," the following sentence occurs: "I think the terrorism now existing in Louisiana, Mississippi, and Arkansas, could be entirely removed, and confidence and fair-dealing established, by the arrest and trial of the ringleaders of the armed White League;" and

Whereas, So far as the State of Arkansas is concerned, the assertions of the dispatch are without foundation in fact, and must have been made upon wrong information; and as the circulation of such erroneous statements is calculated to do great injury to the character of the law-abiding citizens of the State, if not contradicted: therefore—

Be it resolved, by the General Assembly of the State of Arkansas, That we do earnestly protest, in the name of the sovereign people of the State of Arkansas, against such unauthorized military interference in the local affairs of a State duly acknowledged to be and compose a part of this American Union; and we do here and now appeal to the candid judgment of the people of these United States to know whether or not the States composing the Union are mere provinces or dependencies on the General Government, or independent States, with the reserved and constitutional right to govern in their own local affairs; and—

Be it further resolved, That, so far as the State of Arkansas is concerned, it is to-day as peaceful, as free from domestic violence, its laws as justly and equitably administered, the rights of its citizens, without discrimination or distinction on account of race or political belief, as fully protected and cared for as in any State in this Union.

Resolved further, That it is not within the knowledge of the members of this General Assembly, voting herefor, that either the organization known as the White League, or any other recent political organization, has existence among the Democratic Conservative people of this State; and for the truth of this assertion the members of the General Assembly voting herefor solemnly pledge their honor.

Resolved further, That the Governor be requested to forward to the President and Vice-President of the United States, and to the Speaker of the House of Representatives of Congress, a copy of these resolutions, accompanied by a copy of the journal of each House, showing the names and residences of the members voting hereon, with the request that the two officers last named lay them before the two Houses of Congress over which they respectively preside.

The most important legislation of the session had reference to the finances of the State. A bill was passed creating a Board of Finance, consisting of the Governor and two other members, for a term of four years, to have "general charge and control of the financial interests of the State." This Board was authorized to appoint a financial agent in the city of New York, and to issue bonds to the amount of \$2,500,000, payable in thirty years with interest at six per cent. These bonds may be sold and payment received at par in warrants of the Auditor or certificates of the Treasurer of the State, but when sold for money it shall be for not less than sixty per centum of their value, and the Board may increase the minimum price at any time. The Governor is authorized to mortgage any of the unsold lands of the State, except school-lands and lands occupied by public buildings for the security of these bonds, the bonds to be conveyed to trustees with power to sell the same at a price not less than one dollar per acre. A sinking-fund to secure the pay-

ment of interest and the redemption of the principal of the bonds at maturity is created by a provision that an annual tax for this special purpose shall be levied and collected sufficient to produce the sum of \$150,000 for interest and \$38,000 for the sinking-fund proper. The following provision is made regarding the proceeds from the sale of bonds for money:

SECTION 11. None of said bonds shall be sold for money for any other purpose than to defray the expenses of the State government, and the proceeds of such sales shall be applied to that purpose exclusively, and shall be apportioned by said Board among the various appropriations for paying the said expenses, in such manner as may best serve the interest of the people, and no money shall be paid out by the Treasurer, except in pursuance of such apportionment: *Provided*, That not more than five hundred of such bonds shall be sold for money in any one year.

Sec. 12. There shall be annually levied a further tax to pay interest on the public debt, of one-tenth of one per centum of the valuation of property in the State; and the Treasurer shall not make any payment of moneys derived from said tax, except to supply deficiencies, if any, in the tax provided for in section 10 of this Act, unless upon the order of said Board.

Another act provides for the issue of scrip by the Treasurer, payable to bearer, with which the Auditor's warrants may be paid, and which are receivable for all dues to the State. The certificates, or scrip, are to be paid out of the current funds appropriated for the payment of the expenses of the State government. Another act authorizes the counties to fund their outstanding indebtedness in bonds, bearing interest at the rate of seven per cent., and payable in not less than ten nor more than twenty years. These bonds are to be issued by the county courts at their discretion, and may be called in at any time by the same authority on payment of the interest due, and the principal "in lawful currency of the United States." These bonds are to be sold for county warrants or scrip in sums of \$25 and upward, which are then to be canceled. A general law regulating municipal corporations, passed at this session, also provides for the funding of city scrip in bonds of not less than \$50, bearing interest at a rate not exceeding ten per cent. per annum and payable in not less than ten nor more than twenty years. A sinking-fund must be created to secure the payment of interest and the final redemption of the bonds, and the Treasurer may purchase any of the bonds at the lowest market price, whenever there is sufficient money accumulated in the sinking-fund to buy one or more of the bonds at par. Another act provides for a strict accounting for all fees and emoluments of officers of the State, counties, cities, towns, or villages. An act was passed suspending the sale of property for the non-payment of taxes in 1873 and 1874, the reasons therefor being set forth in the following preamble:

Whereas, The people are in a bankrupt and impoverished condition, brought about from the enor-

mous taxes unjustly imposed upon them for the last five years; and—

Whereas, In consequence of the extreme dry weather the crops are unusually short, and in many parts of the State almost an entire failure, and the people are unable to pay their taxes.

When this act was under discussion in the Senate, one of the Senators made the following statement in explanation of his reasons for supporting the bill:

Up to February 10, 1871, there had been confiscated by means of high taxes 1,908,308 acres of the people's lands. We see from the report of the Commissioner of State Lands that there is now in progress of confiscation, by means of forfeitures, for the years 1870, 1871, and 1872, fully a million more acres, which will be transferred to his office in September, making 2,908,308 acres. This does not include lands sold by the Auditor and tax-collector to speculators. Instead of making liberal provisions for the redemption of these lands, we have, by the funding act, authorized the transfer of them to a trustee for the benefit of scrip-holders, thus barring the right of redemption by the original owners, and denying the right of donation to actual settlers. Not content with the radicals' spread of confiscation, we have placed upon the already overburdened tax-payer nearly three and a half mills additional tax, to be paid in currency, for the benefit of these scrip-holders, and have refused to remit any portion of the tax heretofore levied. I fear that the postponement of the interest tax will have a tendency to destroy the State's credit, and that the suspension of the county and city tax will very much embarrass the county and city governments for the want of means to subsist the prisoners, as neither county nor city can issue interest-bearing obligations. It can, however, make but little difference to the people after their property is confiscated and they compelled to seek some other country (where confiscation laws have passed away) to live in, whether the State has a credit or not, or whether the county and city governments are administered or not. In order to stop the confiscating machine until the people can be heard from, I shall vote aye.

A new election law was passed, requiring the county courts on or before the 1st of August preceding an election to revise the formation of election precincts, and at least thirty days before the election appoint three judges of election for each precinct, the judges to choose two clerks. When the judges are not acquainted with the qualifications of any person offering to vote, they may put him under oath regarding them, and take other testimony on the same point. Section 20, of the law, reads as follows:

Any election officer who shall fraudulently and corruptly permit any person to vote illegally, or refuse the vote of any qualified elector, cast up or make a false return of said election, or any person who shall vote when not a qualified elector, or vote more than once, or bribe any one to vote contrary to his wishes, or intimidate or prevent any elector by threats, menace, or promises, from voting, shall be guilty of a felony, and upon conviction thereof be imprisoned in the penitentiary not less than one nor more than five years.

All dram-shops and drinking-places must be closed on the day of election and the night following. All ballots must be numbered and registered, and careful provision is made regarding an honest and correct counting and

return of the same. Sections 30 and 31 read as follows:

Any person who shall furnish any elector who cannot read with a ballot, informing him that it contains a name or names different from those which are written or printed thereon, with an intent to induce him to vote contrary to his inclination, or who shall fraudulently change a ballot of any elector, by which said elector shall be prevented from voting for such candidate or candidates as he intended, shall, on conviction thereof, be fined in any sum not exceeding seven hundred dollars.

The judge, to whom any ballot shall be delivered, shall, upon receipt thereof, pronounce, in an audible voice, the name of the elector from whom he receives the ballot, and, if no objection be made to him, and the judges be satisfied that he is legally entitled, agreeably to the constitution and laws of the State, to vote at the election, he shall immediately number the ballot, as provided in section 23 of this act, and put the same in the ballot-box without opening, or, in any way, inspecting the names written or printed thereon.

The usual provisions are made for the return of the results to the proper officials in the counties, and from them to the Secretary of State in the case of State officers.

A new school law was enacted, providing for a State Superintendent of Schools, with a salary of \$2,000 a year, and an allowance for actual traveling expenses incurred in the discharge of his duties, not to exceed \$500 in any one year. It establishes the office of county superintendent, and provides for a county examiner, to be appointed by the county courts. Three directors are to be elected in each school district by the voters thereof. The school-fund consists of the proceeds of all lands that have been or hereafter may be granted by the United States, and not otherwise appropriated by the United States or the State; also, all moneys, stocks, bonds, lands, and other property now belonging to any fund for purposes of education; also, the net proceeds of all sales of lands, and other property and effects, that may accrue to the State by escheat or from sales of estrays, or from unclaimed dividends or distributive shares of the estates of deceased persons, or from fines, penalties, or forfeitures; also, any proceeds of the sale of public lands which may have been, or may be hereafter, paid over to the State (Congress consenting); also, ten per cent. of the net proceeds of sales of all State lands; also, all the grants, gifts, or devises that have been, or hereafter may be, made to this State, and not otherwise appropriated by the tenure of the grant, gift, or devise, all of which shall be securely invested and sacredly preserved as the public school-fund, which shall be the common property of the State. Besides this a *per capita* tax of one dollar is provided for the benefit of the free schools of each county, and the qualified electors in any school district may levy a special tax of not more than five mills on the dollar to be used exclusively for the benefit of the schools of that district.

Among the other acts of the session was one to "regulate the labor system." This gives a lien upon the products of labor to secure the

value of money and supplies advanced by employers and the wages of laborers, and affixing a penalty for the disposal of these products by either party for the purpose of defrauding the other. To secure the benefits of this provision the contract must be filed in the county recorder's office. If an employer dismiss a laborer before the expiration of the contract, without a good cause, he is liable for the full amount due at the time of such expiration; and if a laborer leave his employer without good cause before the contract expires, he forfeits whatever is due him, but is held liable for what he may owe. It is also enacted "that if any one shall willfully interfere with, entice away, knowingly employ, or induce a laborer or a renter, who has contracted as herein provided, to leave his employer, or the place rented, before the expiration of his contract, he shall be liable to the party or parties injured in the sum of all moneys due and damages in the case."

Another act requires persons contracting marriage to obtain a license from the clerk of the county court and to enter into a bond "in the penal sum of \$100 for the use and benefit of the public-school fund of such county, conditioned that the parties applying therefor have a lawful right to the same, and that they will faithfully carry into effect and comply with the provisions thereof." Any one obtaining a license to marry without first obtaining the consent of the other party is liable to a fine. Other acts provide for recovering damages from railroad companies for injuries to persons and property, and for the punishment of persons who maliciously cause injury to railroad-trains and thereby endanger the lives of persons; abolish the office of Insurance Commissioner, transferring the duties thereof to the State Auditor; prohibit lotteries and the selling of lottery tickets; prohibit the sale of intoxicating liquors within three miles of any academy, college, or university, "while pupils are being taught or instructed in the same;" and prohibit the carrying of side-arms and other deadly weapons, except on the person's own premises or while traveling. An act to encourage mining and manufacturing in the State exempts from taxation for seven years the capital employed in these industries: "Provided, That the capital invested in such manufacturing establishments shall exceed \$2,000, and, provided further, that no person, corporation or company having, prior to the passage of this act, invested capital in any such manufacturing establishment in this State, shall be entitled to the exemption here-in provided for, unless the capital stock so invested shall be increased twenty-five per centum of its value as determined by the last annual assessment." The appropriations for the Executive, Legislative, and Judicial departments of the government amounted to \$300,000.

The most important business at the ad-

joined session of the Legislature in November related to the finances of the State. The Governor in his message to that body stated on behalf of the Board of Finance that the parties offering to loan the State money were not satisfied that the Board "had the power to bind the State by proper writings, or the authority to pledge or hypothecate the bonds of the State to secure the loan, and the money was withheld and the negotiation delayed till legislation could be had to meet these objections." He recommended that an act be passed that would secure the loan; also that the new scrip consisting of Auditor's warrants and Treasurer's certificates be funded; that authority be given to use any moneys in the Treasury from time to time not otherwise appropriated by law, for the payment of the obligations of the State "in such manner as in the judgment of the Board may best subserve the public interest, but they shall not, with this money, pay in whole, or in part, any bonds issued prior to April 1, 1874;" and finally that the rate of taxation be fixed at five mills on the dollar for the expenses of the government, three mills to pay the interest on the public debt, and two mills on a dollar, besides a *per capita* of one dollar, for the support of the public schools. These recommendations were all promptly carried out. The bill for giving additional power to secure the loan provided for at the previous session empowered the Board of Finance "to pledge the bonds of the State which were authorized to be issued by the act last aforesaid, with power of sale on default of payment of said loans, on a notice of twenty days to said Board of Finance of the time and place of said sale; and, for this purpose, said bonds may be executed by the proper officers in the same manner as if a contract of sale had been made therefor, provided that such bonds shall not be pledged at a rate less than one-half their par value, and that no more than five hundred of said bonds shall be pledged in any one year."

STATE SEAL OF ARKANSAS

The Governor, in his message to this adjourned session of the Legislature, recommended that the time for holding the biennial

elections of the State be changed from the first Monday of September to the Tuesday after the first Monday of November, and that the sessions of the Legislature begin on the first or second Monday of January. No action was taken on these points before the end of the year.

The subject of the Centennial Exhibition at Philadelphia, in 1876, was commended to the attention of the Legislature by Governor Garland in February. Dr. George W. Lawrence was appointed as the State Commissioner, with George E. Dodge as alternate. A State advisory board was organized, and the commissioner issued an appeal to the people of the State, calling for their energetic coöperation to secure a favorable representation of the interests, industries, and resources of the State at the Exposition. In November the Governor renewed his suggestions to the Legislature on the subject. He said:

The State Commissioners, and the different boards appointed by them, have worked, and are now working, with great industry, to have our State properly represented at the Exposition; but, for the want of means, they have not accomplished all they desired. I have selected Hon. David Walker as the orator, to speak for and in behalf of Arkansas at that time, and he has kindly accepted the appointment. I think it is due the event that a suitable appropriation be made, and all other steps taken by the Legislature necessary to place Arkansas creditably in the list of the States and nations to be present at that national celebration.

The annual meeting of the State Grange of the Patrons of Husbandry was held at Little Rock early in February. Mr. E. D. Boyd was appointed to gather information on the resources of Arkansas, to be used in a treatise, under preparation by J. S. Stanley James, of Leamington, England. The subjects of immigration, and the methods of agriculture in the cotton-producing States formed the leading topics of discussion. A circular was prepared by the Executive Committee, setting forth a plan for securing loans through the agency of the Grange for those farmers who were in need of funds, and could furnish good security.

The total acreage under cultivation in Arkansas is 822,298. The following table shows the production, average per acre, and aggregate value of different crops:

Corn, bushels.....	16,208,000	28.5	\$12,984,400
Wheat, ".....	785,000	10.0	1,117,500
Eye, ".....	89,700	12.8	89,650
Oats, ".....	754,000	22.4	550,300
Potatoes, ".....	408,000	50.0	408,000
Tobacco, pounds.....	910,000	650.0	148,640
Hay, tons.....	12,800	1.18	294,500
Total value.....			\$15,510,990

The average cash value of all agricultural products, per acre, for Arkansas, is \$18.86—or higher than in any other Southern State, and exceeded only by Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, California, and Nevada. A beginning has been made in the cultivation of grapes and other fruits, and vineyards of considerable extent

have been planted. The lands now belonging to the State and subject to disposal amount to 1,807,268 acres, 1,084,268 of which have been forfeited for taxes. The question was brought before the Commissioner of State Lands, in July, as to whether a patent issued by the Governor of the State during the war was valid, and it was decided in the affirmative. The Commissioner said, in concluding his opinion on the subject:

In the rulings of this office hereafter, I shall hold every entry of lands of every character, paid in any kind of funds receivable for lands of the State at that time, as valid, and where parties present certificates of purchase and ask patents for the same, I shall give a certificate recommending his Excellency to issue the same. The sixteenth section, seminary, saline, internal improvement, and swamp and overflowed lands belong to the State. They belonged to her during the war, and she had a perfect right to dispose of any or all of them in any manner she saw proper, so that it was not in furtherance of the rebellion, and it was her province to take such currency as she pleased. Where she received her pay and gave her certificate of purchase, what right has she to arbitrarily set aside the sale and demand payment again? I can see no equity in such a demand, and shall recognize all sales made during the war, and all patents and certificates issued during that period, as though the transaction occurred prior to or since that time.

On the 26th of July, B. B. Beavers, Secretary of State and *ex-officio* Superintendent of Public Instruction, made an apportionment among the several counties of the State, of the school-fund for the years 1873 and 1874, in accordance with the requirements of an act of the last Legislature. It was based on the number of persons between the ages of five and twenty-one in the several counties on the 1st of October, 1874. The total number of such persons in the whole State was 168,929, and the aggregate sum apportioned from the revenues for 1873 was \$65,522.66, for 1874 \$40,444.46.

In a case before the United States Circuit Court in the Eastern District of Arkansas at the April term, it was decided that the partners in a bankrupt firm were not entitled to assets out of the bankrupt estate to make up the sum of \$2,000 for each, exempt under the constitution of the State from sale on execution or other final process of any court. In this case the separate individual property of one of the partners amounted to about \$500, and that of the other to \$150, and they claimed from the assets of the firm sufficient to make this up to \$2,000 each. The assignee in bankruptcy refused to allow this, and the matter was brought before the District Court, whereupon the action of the assignee was disproved and set aside, and he was directed to "allow to each of the bankrupts, out of the partnership effects, a sum which added to their respective individual effects will give to each an exemption of personal effects to the value of \$2,000." The assignee excepted, and brought the matter before the Circuit Court on a petition for review. Judge Dillon in deciding the case reached the conclusion that, under the

bankrupt law and the constitution of the State, construed together, the claims of the bankrupts could not be sustained. He added:

But, conceding that the language of the bankrupt act and of the constitution of the State is not so clear to this end as to exclude doubt, the general principles of the law are against the allowance of the exemption claimed. Where, as in this case, the partnership and all its members are declared bankrupt, the firm is treated as being dead, except to close up its affairs. There is no exemption to the firm as such; nor is it contended that there can be. But each of the partners claims an individual exemption to the amount of \$2,000 out of the firm property, and at the expense of the firm creditors; and if the claim is valid it would equally be so if there were six partners instead of two. It is a claim not depending upon the amount of capital which the partner making the claim contributed to the firm, or upon the state of the accounts between him and his copartners. He may never have put a dollar of capital into the firm, or he may have drawn out all his capital and owe the firm, yet it is insisted that not only as against his copartners but as against the creditors of the firm he may, in default of not possessing individual estate, lay his hand upon \$2,000 of the joint estate, and appropriate it as exempt. This, I am sure, he could not do before bankruptcy without his copartners' consent, and after the bankruptcy, the copartner is incapable of giving any consent to affect rights fixed by that event. The pretension set up in this case, whether considered with reference to the rights of copartners or the rights of the firm creditors, cannot be maintained. The case might be different as to mere joint ownership where no partnership relation existed, but it is not necessary to consider this point.

ARMY OF THE UNITED STATES. The Army of the United States now consists of 25,000 men. The headquarters are established at St. Louis, Mo., under William T. Sherman, General. There are four military divisions: that of the Missouri, under Lieutenant-General Philip H. Sheridan, headquarters at Chicago, Ill.; that of the South, under Major-General Irwin McDowell, headquarters at Louisville, Ky.; that of the Atlantic, under Major-General Winfield S. Hancock, headquarters at New York; and that of the Pacific, under Major-General J. M. Schofield, headquarters at San Francisco, Cal. The Division of the Missouri includes the Department of the Gulf, under Brigadier-General O. C. Angur, headquarters at New Orleans, La.; the Department of Dakota, under Brigadier-General Alfred H. Terry, headquarters at St. Paul, Minn.; the Department of the Missouri under Brigadier-General John Pope, headquarters at Fort Leavenworth, Kan.; the Department of the Platte, under Brigadier-General St. George Crook, headquarters at Omaha, Neb.; and the Department of Texas, under Brigadier-General E. O. C. Ord, headquarters at San Antonio, Texas. The Division of the South comprises only one Department, that of the South, under General McDowell; and the Division of the Atlantic, under General Hancock, is also undivided. The Military Division of the Pacific comprises the Department of the Columbia, under Brevet Major-General O. O. Howard, headquarters at Portland, Oregon; and the Department of Ari-

zona, under Brevet Major-General August V. Kantz, headquarters at Prescott.

The number of desertions during the year ending June 30th was 2,521, or 2,085 less than during the preceding year. There were 1,986 reenlistments, or 1,287 more than in the year previous. The condition of the army is reported to be excellent. There were 362 prisoners received at the military prison during the year, and 225 remaining there at the end of the year. These are employed about the institution, but it is proposed to have workshops established to make their labor more systematic and profitable. The regimental bands have all been mustered out of service, and the only authorized band connected with the army is that at the Military Academy at West Point. There are 1,300 laundresses employed in the army, at an annual expense to the Government of about \$100,000 for rations and \$200,000 for transportation and quarters.

The actual expenditures of the War Department for the year ending June 30th were, \$41,277,875.28, a reduction of \$1,048,989.48 from the amount expended the previous year. The estimates for expenditures for the year ending June 30, 1876, were \$32,488,969.50, but the appropriations made were but \$28,727,407.99. The estimates for the year 1876-'77 are \$33,452,396.50. The estimates of the Chief of Engineers for his department are, \$2,044,000 for fortifications and other works of defense, \$14,301,100 for road and harbor improvements, \$714,474 for public buildings and grounds and the Washington Aqueduct, \$85,000 for surveys, and \$34,300 for Engineer depot at Willett's Point, N. Y., or, \$17,298,874 in all.

The battalion of engineers has been reduced to 200 enlisted men, which, in the opinion of the chief, is far too small a number. He recommends that 500 be established as the minimum. The works for seaboard defense are reported as having made satisfactory progress. They consist mainly of heavy earth-batteries arranged for guns and mortars suitable to resist the attacks of the most powerful ironclads. The trials with torpedoes have continued, and their importance as an auxiliary in the defense of harbors is regarded as thoroughly demonstrated. Among the works for the improvement of rivers and harbors, permanent jetties are to be constructed at the mouth of the Mississippi River, for the purpose of maintaining a wide, deep, and permanent channel to the Gulf through the South Pass of the river. The work is under the charge of Captain James B. Eads; and the surveys, conducted by Major O. B. Comstock, of the Engineers, are well advanced. The work of construction is also under way.

The work of concentrating the arsenals has made some progress. The Detroit Arsenal has been turned over to the Interior Department for sale; that at Columbus, O., has been transferred to the recruiting service to be used for

depot purposes; and recommendation is made for the immediate sale of that at Pikesville, Md. The plan which it is proposed to carry out contemplates the establishment of a grand arsenal of construction near New York City; the retention of the Springfield Armory and the Frankfort Arsenal as adjuncts for manufacturing purposes; the retention of the arsenals at Indianapolis, Ind., Kennebec, Me., Fort Monroe, Va., and Augusta, Ga., as places for storage and repairs; and the sale of the Alleghany, Watervliet, Watertown, and Washington Arsenals. The proceeds of the sales, it is thought, would exceed \$3,000,000, which might be devoted to the establishment of the grand arsenal. The Rock Island Arsenal, now uncompleted, will, it is believed, have sufficient capacity to supply all the armies organized in the Mississippi Valley in any emergency.

On the Pacific coast the arsenal facilities have been concentrated at Benicia. The only powder depot for the War Department is now located at the St. Louis Arsenal, about twenty miles south of the city of St. Louis, and another in the eastern part of the country is regarded as indispensable. The entire army has been supplied with new rifles and carbines, calibre .45, and there are 26,000 of these arms in store. The necessity of supplying heavy ordnance for the armament of fortifications has been urged upon Congress, but an appropriation of \$75,000 is all that has been made for the purpose thus far.

The military operations of the year have been of trifling importance, and directed chiefly against the Indians on the frontiers. There have been depredations in the North by Sioux from the reservations, and incursions farther south from the Mexican borders. The military forces in those regions are used chiefly for defense and the punishment of depredatory bands. The Kiowas, Cheyennes, and Comanches on the borders of the Staked Plains have been brought into subjection and disarmed. There have been many outrages on the Mexican borders, and a vigorous campaign against the Indians in that quarter is in progress. The campaign against the Cheyennes, Arapahoes, Kiowas, Comanches, and other bands in the Southwest, has been successfully terminated, the Cheyennes surrendering themselves as prisoners of war, and giving up their captives. There has been some difficulty in the Department of the Platte, in preventing the invasion of the Black Hills reservation by venturesome miners in search of gold, but no serious trouble has thus far occurred. All efforts to induce the Sioux tribes on that reservation to give up their treaty rights have been unavailing. The vigorous operations against hostile and intractable Indians in Arizona have resulted in reducing that Territory to a condition of comparative peace and security.

Geographical explorations and surveys have been going on in Arizona, New Mexico, and Colorado, under the auspices of the War De-

partment, but it is impossible as yet to give definite results.

The Signal Service has been conducted with remarkable success during the year. One hundred and two signal-stations have been maintained for meteoric observations and calculations of coming changes. Arrangements have been made for a series of daily reports from Cuba, by Jamaica, to Barbadoes and the Windward Islands. In the calculations of coming meteoric changes 87.3 per cent. have been verified. In the display of cautionary signals on the Atlantic and Gulf coasts 76 per cent. have been justified by events. Telegraphic lines have been kept in operation from Barnegat to Cape May and from Norfolk to Cape Hatteras as part of the Signal Service. Telegraphic lines have also been established in the interior, and on the frontiers between military posts.

The work of taking care of and improving the national cemeteries has been satisfactorily performed. Inclosing walls have been completed at nine cemeteries, and eleven more still need them. The amount expended for this and other necessary work is \$231,387.25. The total number of interments in national cemeteries, on the 30th of June, was 306,053; number of headstones furnished, 63,112.

Under authority of an act of Congress of February 10th, for the relief of persons suffering from the ravages of grasshoppers, the officers of the Subsistence Department issued 1,957,108 rations to 63,553 adults and 43,942 children under twelve years of age, in Minnesota, Nebraska, Iowa, Kansas, Dakota, and Colorado.

The work of preparing for the preservation of the official records of the War of the Rebellion, both on the Federal and Confederate sides, has made satisfactory progress. The Chief Clerk of the War Department and several assistants are kept at this work, and it is intended to make it every way as thorough and complete as possible. The estimate for the expense of continuing the work for the next fiscal year is \$50,000.

The Military Academy at West Point is in a flourishing condition, but has undergone no important change. The construction of a new cadet hospital is in progress.

Work is going on for the purpose of securing a full display of war materials at the Centennial Exhibition, under the direction of an army officer. For this purpose \$133,000 has been appropriated, and \$89,000 more is asked for.

ARNIM, HARRY KARL KURT EDUARD, Count von, a German diplomatist, born October 3, 1824. At first he studied law, but in 1850 he entered the diplomatic service of Prussia, being attached to the legation at Munich. In 1853 he was sent to Rome, and in 1855 received an appointment in the ministry of Foreign Affairs in Berlin, which position he retained until 1858. From 1859 to 1861 he was first counselor of the Prussian embassy at Vienna. In 1862 he was sent as envoy extraordinary to

Lisbon, and in 1864 to Munich. In the same year he was sent to Rome as envoy extraordinary for Prussia, and in 1866 for the North-German Confederation. In 1870 he was created a count, and in 1871 was appointed a commissioner to attend the peace convention in Brussels, and afterward to that of Frankfort-on-the-Main. On these occasions he showed himself to be both an experienced and able diplomatist, so that on August 23, 1871, he was appointed German ambassador to the French Republic on an extraordinary mission, and was accredited as ambassador of the German Empire on January 9, 1872. In the mean while, the difference of opinion between Arnim and Bismarck about the policy to be pursued toward France, particularly with regard to the definite form of the constitution and the government of the country, and also with regard to the German church policy, had become so marked as to make it impossible for the Chancellor of the Empire to leave Arnim any longer at his post. He was, therefore, recalled on March 2, 1874, and on March 19, 1874, was appointed ambassador to Turkey, but did not enter upon this office, as he was retired on May 15, 1874. Prince Hohenlohe, Arnim's successor as ambassador in Paris, reported as early as June 8, 1874, that a number of official documents were missing in the office of the German embassy. A closer revision of the archives of the embassy revealed the fact that the number of diplomatic documents which had been taken away was much larger than had been at first reported. The repeated requests made on Arnim to deliver the missing documents were not complied with by him, as he claimed that they were his own property and not that of the embassy. Upon the pressing demand of the Government, however, he delivered to the Foreign Office fourteen of the less important documents, but persistently refused to give up the others. He was consequently arrested by order of the ministry, but, upon the recommendation of a physician, was released on giving bail to the amount of 100,000 thalers. He was soon after accused of malfeasance in office by having removed documents, and appropriated to himself objects, which he had received in an official position. The trial began on December 9th, before the City Court of Berlin. The defense questioned the competency of this tribunal. But this objection was overruled by the court, and it sentenced the count to three months' imprisonment. In its decision the court stated that it was questionable whether the missing documents had been removed at all by the prisoner, and even if they had been removed by him, whether it had been done intentionally. For this reason it did not find him guilty of removing the documents, but simply of an offense against public order. From this decision both the count and the Government appealed to the "Kammergericht." The Kammergericht gave judgment on the appeals on June 24, 1874. It decided

that the count did willfully make away with state papers, which had been officially intrusted to him, and for this offense sentenced him to nine months' imprisonment, with deduction of one month, the period of his imprisonment during the preliminary examination. From this decision Count Arnim again appealed to the Supreme Court, and on October 20, 1875, the appeal was heard. The appellant produced no new features of interest, while the prosecution upheld the competency of the civil court, as Count Arnim was subject to extraterritorial jurisdiction in his capacity as an ambassador. In accordance with this view the offense must be regarded as having been committed in Berlin. The prosecution also contended that the thirteen ecclesiastical documents in question possessed the character of official state papers, and therefore urged the court to reject the appeal. The judges decided against the appellant, and ordered that he must bear the costs of the trial. It was thought that this would end the matter, and that neither party would take any further steps. But early in November a profound sensation was created by the publication of a pamphlet, entitled "Pro Nihilo," which was supposed to have been written by the count himself, or to have been inspired by him. The preface opens with an attempt to rebut, by anticipation, the charge of indiscretion or want of patriotism in giving to the world details which had hitherto been kept in the background, but the understanding of which is, in the opinion of the writer, necessary to the formation of a clear and unbiased judgment upon the merits of the case. The publication had, indeed, we are assured, been postponed for some time, in deference to the injudicious recommendations of certain friends, who thought that the step might not only be attended with disagreeable consequences to the count himself, but be prejudicial to the public weal. The case, it was urged, was not yet over, and any act of imprudence on the part of Arnim himself or his friends might influence the decision of the Supreme Court of Justice, whose judgment was still pending. On the other hand, it was urged that, in view of what may be termed the present split, or what is very near to a split, between Prince Bismarck and his new friends of the National Liberal party, together with undoubted signs of a leaning on the part of the former to his old friends the Conservatives, the appearance of this book might be singularly ill-timed, and, in fact, nip this conversion in the bud. With regard to Prince Bismarck's supposed change of policy and return to the Conservative camp, the writer of "Pro Nihilo" says such an event is far from being improbable. Many quite recent facts have been adduced in its favor. Among other things it is stated that, in conversation with certain leading Conservatives, the prince expressed himself in very significant terms, the reverse of complimentary, with regard to the Liberal deputy

Laaker, and it is furthermore stated that the recent onslaught made upon that gentleman by Prince Putbus and his friends, through the medium of the press, was at the instigation of the Chancellor himself, who is reported, moreover, to have in a private conversation lately condemned his own church policy as an act of folly (*sine Thorheit*).

The following is the account given of Count Arnim's interview with the Emperor in September, 1873. He dates from July, 1872, the first misunderstanding between himself and the Prince Chancellor:

The months of July, August, and September, 1873, were passed by Count Arnim, now greatly enfeebled in health, at Carlsbad, Ragaz, and Möritz. During this time, also, the ambassador received several communications from the Imperial Chancellor, all containing abundant evidence of the passionate hostility which the latter had now conceived against him. From other quarters he heard that he was not the only person to whom the cause of this hatred was an utter mystery. The late Herr von Balen wrote to him: "The motive of Bismarck's hatred against you is unknown to me. Things are going on in Berlin which I fail altogether to understand." Toward the end of August Count Arnim came to Berlin, and on the morning of the 1st of September was received by his Majesty. The ambassador asked his imperial master whether he desired his (Arnim's) recall from Paris and retirement from public service. His Majesty replied in the negative, adding that he had no reason to wish for any such thing. He then went on to say that the matter of the alleged delay in the conclusion of the Convention of the 15th of March, 1873 (regarding the quicker payment of the war indemnity and the recall of the troops in occupation of the French soil), had been satisfactorily cleared up, and that nothing remained except the grudge felt against him by Prince Bismarck. His Majesty was the less able to understand this, as he himself was incapable of bearing a grudge against anybody. But spitefulness was, in fact, Prince Bismarck's prevailing characteristic, and it was sad to be obliged to say so of a man to whom we were all so deeply indebted. This temper had already compelled the Emperor to part from many faithful servants, among whom were Golz, Thile, Savigny, Usedom, Werther, etc. "And now it is your turn," the Emperor added (*Jetzt sind Sie an der Reihe*). Count Arnim replied to his Majesty that he, the Emperor's, and not Prince Bismarck's servant, deemed it his duty to see the Imperial Chancellor and to labor once more to convince him how groundless were the assumptions upon which he, probably through false information, had grounded his feeling of hatred. His Majesty agreed to this.

Then come the particulars of the interview between the two men, once such fast friends:

At two o'clock in the afternoon of the same day Count Arnim called on Prince Bismarck.

The ambassador was at that time in such a state of suffering, and his nervous system had received such a shock, that some minutes passed before he could utter a word. Those who are familiar with the nature of the disorder with which Count Arnim was at that time afflicted in the highest degree know that one of its effects is that the patient, if greatly excited, is almost unable to speak. The tongue, as it were, cleaves to the palate.

Prince Bismarck, who could not fail to observe Count Arnim's painful condition, did nothing whatever to relieve it.

"Se pământ d'aise de se trouver en si bonne santé," the prince opened the conversation in an irri-

tating tone of haughty condescension and wholly unwarranted by the circumstances.

On Count Arnim's request to be informed of the real motive of the "cruel persecution" to which he, the Imperial Chancellor, had subjected him, the prince replied with a flood of reproaches which he had already prepared himself to deliver, as was evident from a sight of the documents which lay piled upon the table before him.

"I am," said the prince, "the persecuted one. These eight months, this twelvemonth, you have injured my health and robbed me of my rest. You conspire with the Empress, and will never rest until you can sit here at this table, and convince yourself that this, too, is nothing after all (*das es auch nichts ist*). I have known you from your youth upward. Years ago you said that every man set in authority over you was your natural enemy. That enemy am I just now. You delayed the settlement of the Convention of the 15th May in order to overthrow Thiers, and I am now answerable for this political blunder. You have accused me to the Emperor. You have connections at court which have hitherto prevented me from recalling you from your post."

To all this the prince added certain peculiar expressions, which were, to say the least, quite unnecessary. Rage, whether real or feigned, made his speech incoherent. He confounded the order of events, referring to matters of long date as if they were quite recent, and the reverse. In conclusion, he maintained that whatever he had said was taken from the documents, without, however, offering any proofs of the assertion.

He laid particular stress on the fact that in November, 1872, Count Arnim had expressed to Count Eulenberg the desire to be admitted to a seat in the House of Lords.

This was for Prince Bismarck a sure symptom of an insatiable thirst for revenge.

"You then," he added, "applied for a long furlough and remained here without leave for no other purpose than to intrigue against me in court circles while I was in Varzin, so that I was at last compelled to call upon you officially to return to your post."

"All this," remarks the writer, "is false."

The above incident is graphically told, but whether it be or be not an objective and thoroughly trustworthy account of what took place on the occasion is a matter known to two men only, and perhaps not even to them, for it is presumable that they were both in such a state of overwrought excitement as to pay but little attention to what they said. There seems to be no doubt that Count Arnim conceived himself born for higher things than to be continually executing the orders received from others, and that he really did at one time conceive the design of leaping into the Chancellor's seat; and it is also certain that he was most vigorously pushed by the Conservative party for this position. The writer of "Pro Nihilo" admits that certain acts of imprudence were committed with reference to this matter. In well-informed Berlin circles Arnim was "imprudently" spoken of as the successor of the sick statesman. And Arnim himself was "imprudent" enough to lay a printed paragraph to this effect before his subordinate, Herr von Holstein, who, as came out at the trial, was watching Arnim from the Foreign Office in Berlin.

As an answer to the charge of having wittingly thrown obstacles in the way of the con-

decision of the evacuation treaty, in order to bring about the fall of M. Thiers, the writer of "Pro Nihilo" quotes a letter written to Arnim by the French statesman on the 16th of May, 1873—that is to say, on the day following the conclusion of the treaty. Here are M. Thiers's own words:

SUNDAY, March 16, 1873.

MY DEAR COUNT ARNIM: I wished to write to you yesterday evening, but unfortunately had neither time nor strength enough to do so. To-day I should be ungrateful, as I am not and never shall be, if I did not hasten to thank you for the services rendered to myself, and, what is better still, to France, during the long negotiations just brought to a close. You know that we have had nothing to do with the incident by which Berlin became the place of signature. But the place is of moment, and you are none the less in our eyes one of those who, by your high wisdom, most materially contributed to a result which will bring the frightful war of 1870 to an end. Believe me, with the highest esteem, yours most cordially,

THIERS.

M. de Rémusat also wrote to him from Paris, expressing the pleasure which it gave him to think that Arnim, "through his just influence," had borne his part in bringing about "this happy result."

The pamphlet also contained dispatches, hitherto unpublished, written or received by Count Arnim. In one of these, dated just after M. Thiers's resignation, he states that, thanks to Mr. Thiers's plain dealing, and in spite of his ability, Germany, some short Chauvinistic interludes excepted, had lived with no French Government in such proper relations as with him. This dispatch was directed not to Prince Bismarck, but contrary to all diplomatic usage to the Emperor himself. On June 19, 1873, Bismarck sent the following dispatch to Count Arnim:

Your Excellency, in your report to the Emperor, dated the 8th June, expresses the opinion that, for us, the best government in France would be that which would have to expend the greater part of its strength in combating its home enemies. Already, in your communication of the 27th May, your Excellency had veered toward that view; I, therefore, see that you recognize the value of the opinions which I, but without success, formerly laid before the Emperor relative to the way in which you regarded the situation in France. During eight months, therefore, you have induced his Majesty to entertain opposite ideas; you have thus, if not produced, at least facilitated the recent change of government which is not advantageous for us, even by your own admission, in this sense, that you paralyzed my efforts to maintain M. Thiers. You have induced the Emperor to adopt your opinion that the development of events in France, under the direction of M. Thiers, might have become dangerous for the monarchical principle in Europe. His Majesty did not consider that a support to be given by us to the government of M. Thiers was so indispensable as I thought for the above-mentioned reasons of your dispatch of the 8th June. The Emperor would not permit me to give you for instructions to employ all the weight of our influence to sustain M. Thiers; that is what has, in great part, rendered his overthrow so easy.

The tone of your reports has been, during eight months, in opposition to the tendency defended by me with his Majesty. In thus preventing me from efficaciously supporting M. Thiers, you placed me under the necessity, as responsible adviser of the

Emperor, to indorse a political fault which, on account of the incessant efforts I made in a contrary sense, was not mine. Your action on his Majesty's mind exceeds the attributes of an ambassador; it assumes a ministerial character; it has entered upon a rivalry with the legitimate influence of the minister; it becomes dangerous for the state.

Your Excellency disposes of leisure and means to defend, with the Emperor, by writing and orally, a policy different from that of the responsible minister. I am exhausted by serious labors, crowned with success, and I can no longer, beyond regular affairs, struggle in his Majesty's cabinet against an ambassador hostile to my views. I conclude from your latest dispatches that your Excellency will also have comprehended the difficulties which arise from that state of things for the Emperor's service, and you will agree with the reasons which induced the proposition I made to his Majesty for the reestablishment of unity and discipline in the Department of Foreign Affairs. Accept, etc.

BISMARCK.

The publication of this pamphlet, which appeared at Zurich, was not announced in the usual way, and a few copies only were sent through the post by way of an experiment to test the powers of endurance possessed by the police, and these few copies were at once snapped up by the relatives and intimate friends of the count himself. Since then the demand has been enormous. On the 12th of November, however, it was confiscated by the police in all the book-stores in Berlin. On November 26th, the public prosecutor applied to the Senate of the State Tribunal to indict Count Arnim for high-treason, because of his alleged authorship of the pamphlet, and on November 30th, the Senate formally indicted Count Arnim as requested.

ARNOT, WILLIAM, D. D., popular Scottish preacher and author, was born in Perthshire, Scotland, in 1808, and died in Edinburgh, June 8, 1875. He was educated at the University of Glasgow, was ordained in 1839, and afterward joined the Free Church movement, of which he became one of the champions. In 1863 he removed to Edinburgh. He was a delegate to the meeting of the Evangelical Alliance in 1873, at New York. Dr. Arnot was the author of several works, among which are "The Race for Riches;" "Illustrations of the Book of Proverbs;" a volume of sermons entitled "Roots and Fruits of the Christian Life;" "The Parables of our Lord;" and "The Life of James Hamilton, D. D."

ASIA. According to the latest accounts, the area and population of the political and geographical divisions of Asia (*see* Behm and Wagner, "Bevölkerung der Erde," vol. iii., Gotha, 1875) are those given in the following table.

No event in the history of Asia during the year 1875 has attracted so general attention as the recent progress made by the Russians in Central Asia. An insurrection in Khokan against the rule of the Khan not only led to an armed intervention of the Russians, but to the annexation of a large portion of the khanate to the Russian dominions. The invasion of Khokan was followed by an expedition

against Karategin, a khanate situated south of Khokan, which by the English is sometimes regarded as belonging to Afghanistan, while the Russians regard its ruler as a vassal of Bokhara. Russian accounts suspect that Yakob Khan, the ruler of Kashgar, while professing friendship for the Russians, has treacherously instigated the new troubles in Central Asia. The immediate annexation of the whole of Khokan was demanded by prominent organs of the Russian Government as indispensable. (See RUSSIA AND KHOKAN.)

The English diplomatists in India are watching the steady advance of Russia with increasing anxiety. One of the most important English publications on the Central Asiatic question is the new work by Major-General Sir Henry Rawlinson, "England and Russia in the East." We give, under the head of Afghanistan and other Central Asiatic states, the views of this British statesman, who regards the situation as so critical that he does not hesitate to say that, "if Russia should overstep certain limits in her approach to India, she must be checked by an armed resistance, even at the risk of

producing war between the two countries." On the advice of the English statesmen, the Prince of Wales paid a visit to the British possessions in India. The treacherous murder of Mr. Birch, the British resident at Perak, to which all the native rajahs were believed to be accessory, led to a British expedition against the Malays. Serious difficulties prevailed during a part of the year between the English Government in India and the King of Burmah. (See INDIA.)

The youthful Emperor of China died in January, having not yet completed his twentieth year, and having carried on the government for only two years. No civil disturbances followed this event, and the government of the vast country is peaceably administered by the uncles of the late Emperor in the name of his successor, who is still a mere child. The Chinese Government is still making warlike preparations to reconquer Kashgar, but no operations of an important character had been reported to the end of the year. The fanatical hostility to foreigners continues to prevail in many parts of China, and again cause repeated

insults of the foreign population and even of foreign ambassadors. Difficulties between the Chinese and British Governments led to the presentation of a British ultimatum. (*See CHINA.*)

The attention of Japan is chiefly directed to the introduction of a constitution, and considerable progress was made in this direction during the past year. The endeavors of the Government to learn from the great civilized nations of the present age are zealously continued, and the work of reform is steadily going forward. (*See JAPAN.*)

The Government of Holland has not yet succeeded in completing the subjection of Acheen. The military operations during the year 1875 have never exceeded the proportion of skirmishes, and the Dutch troops appear not to have always been victorious. No effort has been made to strike a decisive blow. (*See NETHERLANDS.*)

Afghanistan continues to be in a very disorganized condition. The Amir, Shere Ali, is unable to enforce his authority against rebellious chieftains, and is maintained on the throne only by the mutual jealousies of Russia and Great Britain. (*See AFGHANISTAN.*)

The Government of Persia still promises, but fails to execute, the reforms which were expected from the visit of the Shah to Europe. The hopes for a better future still rest on an unsafe basis. (*See PERSIA.*)

In regard to Kashgar, England pursues the policy to prevent at all hazards the establishment of a Russian protectorate in Eastern Toorkistan. It appears to be satisfied with the result of its diplomatic movements, for the ruler of Kashgar is generally believed to be more friendly to English than to Russian policy. (*See KASHGAR.*)

ASPINWALL, WILLIAM H., an eminent merchant of New York City, was born in New York, December 18, 1807, and died there, January 18, 1875. Being a nephew of Gardner and Samuel Howland, he was at an early age taken into their house as clerk, and in 1832 he became partner in the firm. In 1850 he left the active management of the affairs of the firm in order to embark in the enterprise of building and managing the Panama Railroad, for which he formed a partnership with his brother, Mr. J. Lloyd Aspinwall, and Mr. Samuel W. Comstock. The business afterward became more banking than mercantile in character. The founding of the Panama Railroad and the Pacific Mail Steamship Company were the master-efforts of Mr. Aspinwall's life. The Isthmus of Darien for many years a barrier to commerce seriously felt. The necessity of breaking it down seemed imperative; yet, from the magnitude of the undertaking, it was deemed almost impossible. England and France had entertained the project, but the wellnigh impenetrable condition of the isthmus defied skill and physical endurance. The war with Mexico, which added California to

the United States, finally turned the attention of Americans to the enterprise. Congress, in 1850, in order to render California more accessible to immigrants, authorized contracts to be entered into for the establishment of two mail lines of steamships, the one from New York and New Orleans to Chagres, and the other to connect with this, by the isthmus, from Panama to California. The inducements did not attract capitalists, and the contracts were purchased by persons who for a long time unsuccessfully offered them for sale. Finally, William H. Aspinwall secured the line on the Pacific side, and George Law that on the Atlantic. The latter contract was considered a safe one, but the Pacific contract, it was thought, would certainly sink a large amount of money, with little prospect of remuneration, and there was general surprise that a man so sound in business judgment as Mr. Aspinwall should have engaged in it. But it was soon perceived that this was only a portion of the stupendous plan which he had laid out, the other part being the building of a railway across the Isthmus of Darien. With Henry Chauncey and John L. Stephens, Mr. Aspinwall entered into a contract with the Government of New Granada for the construction of the work. Mr. Stephens, who had had extensive experience in the country, made with an engineer an exploration of the route, and decided that the plan was entirely feasible. At this time (the latter part of 1848), the discovery of gold in California, with its accompanying tide of immigration, changed the prospects of the road, and it promised immediate returns. A charter was granted by the Legislature of New York for the formation of a stock company, under which \$1,000,000 of stock was taken, the original grantees transferring their contract into the hands of the company. John L. Stephens was elected president of the company. Early in 1849 a contract was entered into with George M. Totten and John C. Trautwine for the construction of the road. With a small party, these engineers began in May, 1850, the great work at Manzanilla Island, on Navy Bay, which was to be the Atlantic terminus of the road. The work continued for two years amid great discouragements. Up to 1851 the settlement about the terminus at Navy Bay had no distinctive name, and it was in that year proposed, by Mr. Stephens, that it should commemorate the services of the originator of the road. Accordingly, on February 2, 1852, the place was formally named Aspinwall. The road was formally opened to the city of Panama on February 17, 1855, being forty-nine miles in length, though cars were run, as the road advanced, from December, 1852. The returns of the road over the running expenses for the seven years ending in 1859 were \$5,971,728.66. In 1847 Arnold Harris was awarded a contract by the United States for a monthly mail service on the Pacific Ocean, but, on account

of pecuniary embarrassments, awarded it to Mr. Aspinwall, who, with Richard Alsop and Henry Chauncey, Messrs. G. G. and S. S. Howland, and Edwin Bartlett, took the necessary measures for carrying out the undertaking. Mr. Aspinwall was made the active manager. A charter was procured from the Legislature of New York in 1848, to continue in force for twenty years, under the title of the Pacific Mail Steamship Company, with a capital stock of \$400,000. The pioneer steamship was the California, which sailed on October 5, 1848. In 1850 the capital stock was increased to \$2,000,000. From this time to 1856 the company was very prosperous. In that year Mr. Aspinwall, the founder, its first managing director, and its president up to that time, retired from the executive chair. About eight years ago an elegant and costly monument was erected at Aspinwall, in honor of the founders of the Panama Railroad, Messrs. Aspinwall, Ohauncey, and Stephens, whose busts in bass-relief were carved at its base. Mr. Aspinwall was a patron of the fine arts, and his gallery of paintings was one of the best private collections in the United States. It was for some time open to the public. Mr. Aspinwall spent a considerable part of the last twenty years of his life in travel.

ASTOR, WILLIAM BACKHOUSE, was born in New York, September, 1792, and died in the same city, November 24, 1875, aged 82 years. He was the eldest son of the celebrated John Jacob Astor and his wife Sarah Todd. At the time of his birth his father was a furrier, doing business at No. 149 Broadway. Until he was sixteen he went to the public schools, employing his spare hours and vacations in assisting his father in the store. He was then sent to Heidelberg in Germany to continue his education, and after two years of study he went to Göttingen in 1810, and chose as his tutor a student, a year older than himself, afterward known as the German scholar and diplomatist, Ohevalier Bunsen. Young Bunsen acted as an instructor to him, residing with him, and acting as his traveling companion. In 1818 they traveled together in Austria and Northern Italy. The connection continued with some interruptions nearly six years, until July, 1816, when Mr. Astor was unexpectedly called home by his father. After forty years Mr. Astor renewed his friendly acquaintance with Baron Bunsen, writing to him in 1855 and visiting him at Heidelberg in 1857. Upon his return to New York at the age of twenty-three his father then engaged in the China trade, and took him into partnership. In 1827 the firm was dissolved, and the "American Fur Company" was formed, William being appointed its president. In 1812 the war with Great Britain having defeated the scheme of monopolizing the fur-trade, both father and son withdrew from the company and abandoned commercial pursuits. The father had early begun to make investments in real es-

tate in New York. These were so successful that at the time of his death in 1848 he is said to have left \$20,000,000. Observing the law of primogeniture, he made his eldest son the principal heir, although he provided well for his other relatives. William was already rich, having been successful in business, and having received a large sum, a bequest from his uncle Henry. William B. Astor, then fifty-six years of age, gave himself to the preservation and growth of the vast property. But he first supplied what he regarded as deficiencies in his father's will. He increased the annuity of Fitz-Greene Halleck from \$200 to \$1,500 a year, and sent a handsome sum to an old sea-captain in China who had saved a large property from destruction. He also added to the bequest of his father for the Astor library the sum of \$250,000, of which he paid during his lifetime \$201,000 in land, books, and money. The project of founding a library for the use of literary men was suggested by Washington Irving to his father, who bequeathed for that purpose the sum of \$400,000. William B. Astor having literary taste, and being in full sympathy with American men of letters, gave much patient attention for many years to the administration of the affairs of the library. Following the example of his father, he invested principally in real estate, which rapidly increased in value. For about thirteen years prior to 1873 he was largely engaged in building, until much of his hitherto unoccupied land was covered by houses, mostly of the first class. His rent-rolls were enormous, and at the age of eighty he is said to have owned 720 houses. The records of the tax-office show that he paid taxes in 1875 on about \$16,000,000 worth of real estate in the city of New York. The market-value of this property is said to be about thirty per cent. above the assessed valuation, or about \$20,000,000. The same records show that he possessed about \$686,000 in bank-stock. He was also a holder of large amounts of State, city, and national bonds and railroad-stock. Probably the total value of his estate does not exceed \$45,000,000. He possessed a valuable private library, and passed many of his leisure hours among his books. For many years he contributed annually to various charities. The most noteworthy of his earlier gifts was that of \$50,000 to St. Luke's Hospital. He leaves a legacy of \$10,000 to the American Bible Society, with lesser bequests to other societies. Of general interest is that part of William B. Astor's will which relates to the Astor Library. The will recites that the testator had formed the resolution to add \$250,000 to the endowment of the library, and had intended to execute it in his lifetime. He directs his executors to pay to the trustees of the library whatever portion of this sum may remain unpaid. In a codicil he declares that the unpaid balance is \$49,000, and by the same codicil he gives to the trustees of the library an addition-

a sum of \$300,000 to be paid in three annual installments; this sum he directs to be kept invested as a permanent fund, the income of which shall be applied from time to time to the purchase of books and the maintenance of the library, with liberty to expend not exceeding \$25,000 of the capital in the purchase of books.

ASTRONOMICAL PHENOMENA AND PROGRESS. Solar Researches.—In the *American Journal of Science and Arts*, for March, 1875, Prof. S. P. Langley, of the Alleghany Observatory, gives an interesting account of his recent solar researches, with the conclusions which he derives from the facts of observation. His results are briefly stated as follows:

1. The spot phenomena observed and described seem inconsistent with the theory of a liquid or viscous solar shell; or at least such a stratum must, if it exist, be at a considerable distance below the surface of the photosphere.

2. It seems difficult to reconcile the bright, sharply-defined inner penumbral edge, and the regular structure discerned in the umbra, with another view, in which this umbra is a sort of stagnant pool, formed by cold vapors, or clouds, which have settled there after depressing the general surface by their weight till the penumbral slope is determined.

3. Finally, it seems to be little more than a summary of the facts of observation to say that traces of a vertical action are found throughout the spot, and especially in the umbra. The theory which regards cyclonic or vertical action as a prominent agent in determining the forms we have studied, appears then to be in closer accordance with observation than the former

The Sun's Diameter.—The *Astronomische Nachrichten*, No. 2,040, contains a discussion, by Dr. Fugh, of the Greenwich solar observations from 1836 to 1870. The mean apparent diameter derived from 6,827 measurements is $32' 2''.99$ —a value somewhat less than that adopted in the American Ephemeris.

The Late Transit of Venus.—The discussion of the observations of the transit of Venus in 1874 has not yet been completed. M. Puiseux, however, has given the result derived from the observations at Peking, lat. $39^{\circ} 54' N.$, long. $7^{\circ} 46' E.$, and those at St. Paul, lat. $38^{\circ} 43' S.$, long. $5^{\circ} 10' E.$ The four contacts were observed at the former station, the two internal at the latter, and a large number of photographs were obtained at each. The parallax derived from these observations is $8''.879$, corresponding to a mean distance of about 91,800,000 miles.

The principal stations at which successful observations were obtained are given below; together with a brief account of the work accomplished at each. The object of the photographs, it may be proper to remark, is to determine the exact path in which the planet crossed the sun's disk. The rate of Venus's motion being well known, the photographs of the sun and planet, taken at accurately-recorded times during the transit, will enable astronomers to determine, by microscopic measurement, the precise distance between the

centre of Venus and the centre of the sun on each of the photographic plates. With a series of pictures from the different stations the object sought may therefore be accurately determined.

In the following list of stations, those of each hemisphere are arranged in the order of distance from the equator:

NORTHERN HEMISPHERE. 1. *Honolulu.*—Lat. $21^{\circ} 18'$, long. $10^{\circ} 31' W.$ English station. Observers, Captain G. L. Tupman, Lieutenant F. E. Ramsden, and Mr. Nichol. The first two contacts were well observed, and the complete disk of the planet was seen twelve minutes before the internal contact. The first contact was observed $1^m 43''$, and the second, $2^m 55.7''$, later than the computed time as given in the *English Nautical Almanac*. During the passage of the planet across the limb of the sun 40 micrometer measures were taken by Captain Tupman and Mr. Nichol.

2. *Near Thebes, Egypt.*—Lat. $25^{\circ} 43'$, long. $2^{\circ} 10' E.$ English station. Observers, Captain W. de W. Abney and Colonel Campbell. The last two contacts were well observed, and 50 photographs were secured. The observers at the Russian station in the same vicinity were also successful.

3. *Roorkee.*—Station of the British East India Company. Observers, Colonel Tennant, Captain Campbell, and Captain Waterhouse. One hundred and nine photographs were obtained.

4. *Suez.*—Lat. $29^{\circ} 58'$, long. $2^{\circ} 10' E.$ English station. Chief observer, Mr. Hunter. The last two contacts were successfully observed. "For some time after contact," Mr. Hunter reports, "the edge of Venus was brilliantly illuminated, that edge which had just left the sun, so that for a little I thought the sun was appearing behind it still, although the cusps were then well marked. It was a clear, silvery light, like the edge of a cloud."

5. *Cairo.*—Lat. $30^{\circ} 6'$, long. $2^{\circ} 5' E.$ English station. Observers, Captain O. Orde Browne and Mr. Newton. The last two contacts were well seen.

6. *Ispahan.*—Lat. $32^{\circ} 40'$, long. $3^{\circ} 27' E.$ German station. Nineteen photographs were obtained.

7. *Nagasaki.*—Lat. $32^{\circ} 45'$, long. $8^{\circ} 39' E.$ American and French station. The American observers were: Prof. George Davidson, United States Coast Survey, chief, with O. H. Tittman and W. S. Edwards, assistants; S. R. Seibert, of the Treasury Department, Washington, chief photographer, with Messrs. Williams and Lodge, assistants. The second contact was well observed; the first and third were partly, and the fourth wholly, obscured by clouds. A summary of results is thus given by Prof. Davidson:

During the day there was no time after 10 A. M. when the sun shone from a blue sky. The upper stratum of clouds acted as a screen to the sun's heavy rays, and the atmosphere was quite steady. Objects at a distance were dark, but clearly defined. Of photographs, we got none near first contact, and only began to receive them when the planet was half on.

After that we obtained about sixty good ones. Altogether, with the second contact, the micrometric measures, the meridian transits, the different declinations, and the photographs, I believe we have more than average satisfactory results. Our observed first and second contacts were about one minute and forty-five seconds after *American Almanac* data, and about three minutes and thirty seconds after the English. The third contact was near the American data.

The report from the French station is also highly interesting. We quote from M. Janssen's communication to the French Academy:

On the morning of the 9th the weather was pretty good, although the sky was a little overcast. The first contact was secured by M. Tisserand and myself. In the 8-inch equatorial, of which the object-glass was very good, the image of Venus appeared very round and well-defined, and the relative motion of the disk of the planet with regard to the solar disk went on in a geometrical manner, without any appearance of ligament or black drop. But rather a long time elapsed between the moment at which the disk of Venus was tangent to the sun's limb internally and that of the appearance of the fine line of light between them. This anomaly I ascribe to the atmosphere of the planet. I caused a photograph to be taken at the instant the contact appeared to be geometric, and on the plate the contact had not yet taken place. M. d'Almeida obtained a plate containing forty-seven photographs of the solar limb, which leads to the same conclusions. I intend to discuss these observations, which seem to me to lead to important consequences.

After the first interior contact, M. Picard and M. Arens took as many photographs as possible, but the clouds greatly hindered us.

Finally, near the second interior contact, the sun cleared as if providentially, and M. Tisserand was able to determine the time with precision. The sky was perfectly covered at the time of the last exterior contact.

I must not conclude without referring to an observation which relates to the corona and the coronal atmosphere of the sun. With glasses of a certain violet-blue color, and very pure, I was enabled to see Venus before she had touched the sun's disk. She was visible as a small, very pale, round spot. When she commenced to bite into the sun's disk, this spot completed the black segment which was visible on the sun. It was a partial eclipse of the coronal atmosphere. I saw Venus two or three minutes of arc from the sun's limb.

8. *Beyrout*.—Lat. $33^{\circ} 49'$, long. $2^{\text{h}} 21^{\text{m}}$ E. The observations were successful.

9. *Kobe*.—Lat. $34^{\circ} 40'$, long. $9^{\text{h}} 1^{\text{m}}$ E. French station. The observations, though in some respects unsatisfactory, were in a good degree successful.

10. *Yokohama*.—Lat. $35^{\circ} 36'$, long. $9^{\text{h}} 19^{\text{m}}$ E. Russian and Mexican station. The observations at this station were eminently successful. The Mexican party were under the direction of Señor Covarrubias.

11. *Tehran*.—Lat. $35^{\circ} 37'$, long. $3^{\text{h}} 25^{\text{m}}$ E. Russian station. Observations successful.

12. *Tschifu*.—Lat. $37^{\circ} 30'$, long. $8^{\text{h}} 5^{\text{m}}$ E. German station. The weather was fine, and the observations in general were eminently successful.

13. *Peking*.—Lat. $39^{\circ} 54'$, long. $7^{\text{h}} 46^{\text{m}}$ E. American and French station. Prof. Watson's party succeeded in observing all four of the contacts, and secured ninety photographs. It

is to be regretted, however, that Prof. Young, of Dartmouth College, who was with this party, was unsuccessful in his efforts to obtain spectroscopic observations. The first two contacts were sixty-eight and seventy-five seconds later than the computed times, while the third and fourth were forty-three and sixty-five seconds earlier than predicted. These discrepancies may be explained by supposing the sun's diameter to be somewhat less than the value used in the *American Nautical Almanac*.

14. *Orianda*.—Russian station. The third and fourth contacts were well observed.

15. *Port Possiet*.—Lat. $42^{\circ} 49'$, long. $8^{\text{h}} 43^{\text{m}}$ E. Russian station. The second and third contacts were observed, and thirty-eight photographs taken.

16. *Vladivostok*.—Lat. $43^{\circ} 7'$, long. $8^{\text{h}} 47^{\text{m}}$ E. American and Russian station. Prof. Asaph Hall, and his assistant, O. B. Wheeler, of the American party, observed the first two contacts, and the photographers obtained thirteen pictures. As Venus approached the third contact, the cloud, or haze, grew more dense, and the fourth contact was entirely obscured.

17. *Yassy*.—Lat. $47^{\circ} 3'$, long. $1^{\text{h}} 50^{\text{m}}$ E. German station. The condition of the atmosphere was very unfavorable. The fourth contact, however, was successfully observed.

18. *Habarooka*.—Lat. $48^{\circ} 16'$, long. $8^{\text{h}} 58^{\text{m}}$ E. Russian station. The first two contacts were visible.

19. *Kiachta*.—Lat. $50^{\circ} 20'$, long. $7^{\text{h}} 6^{\text{m}}$ E. Russian station. Eight photographs were secured.

20. *Nertchinsk*.—Lat. $51^{\circ} 18'$, long. $7^{\text{h}} 58^{\text{m}}$ E. Russian station. Three contacts were observed, and over twenty measures with the heliometer secured.

21. *Tschita*.—Lat. $52^{\circ} 0'$, long. $7^{\text{h}} 34^{\text{m}}$ E. Russian station. All the contacts were observed, and four series of measures by the heliometer were taken.

SOUTHERN HEMISPHERE. 1. *Rodrigues*.—Lat. $19^{\circ} 4'$, long. $4^{\text{h}} 14^{\text{m}}$ E. English station. The observers were Lieutenants Neate and Hoggan, and Mr. Burton. The contacts were well observed, and a large number of photographs were taken.

2. *Mauritius*.—Lat. $20^{\circ} 20'$, long. $3^{\text{h}} 51^{\text{m}}$ E. Station of Lord Lindsay's party. Lord Lindsay was assisted in his observations by Mr. Gill, Mr. Davis, and Dr. R. Copeland. The sun was entirely obscured by clouds until 1^{h} and 2^{m} after the first contact. The clouds broke away, however, at eight o'clock in the morning, and the state of the atmosphere remained favorable till the end of the transit. About one hundred good photographs were secured, and "Mr. Gill obtained five complete determinations of greatest and least distances of the centres of the sun and Venus, besides nine measures of cusps and two separate determinations of the diameter of Venus near the end of the transit." The last internal and external contacts were both seen, and other val-

able observations were obtained by Dr. Copeland.

3. *Réunion*.—Lat. $20^{\circ} 51'$, long. $3^{\text{h}} 42^{\text{m}}$ E. Dutch station. The third contact was observed, and a few photographs were taken.

4. *New Caledonia*.—Lat. 21° , long. 11^{h} E. French station. The first and second contacts were observed, and 100 good photographs obtained. M. André, of the Paris Observatory, was appointed director of the expedition, while the photographic portion of the work was intrusted to M. Angot, Professor of Physics in the Normal School, Paris. "The main features in all the telescopic observations are the $3\frac{1}{2}$ minutes' difference between the estimated and observed times of first contact, the absence of the drop, and, in the case of the instruments furnished with silvered objectives, the clear tangential contact of the planet and the sun's limb, which enabled four out of the five observers to obtain the instant of a second contact with very great accuracy."

5. *Sydney*.—Lat. $33^{\circ} 51'$, long. $10^{\text{h}} 5^{\text{m}}$ E. English observatory. Mr. Russell, the Government astronomer at Sydney, reported favorable weather and successful observations. No black drop was seen. A beautiful halo was visible around Venus immediately before ingress—a phenomenon doubtless due to the atmosphere of the planet.

6. *Cape Town*.—Lat. $33^{\circ} 56'$, long. $1^{\text{h}} 14^{\text{m}}$ E. Fourteen photographs were taken.

7. *Adelaide*.—Lat. $34^{\circ} 40'$, long. $9^{\text{h}} 15^{\text{m}}$ E. English observatory. The last two contacts were satisfactorily observed. The third occurred one minute and three seconds, and the fourth, one minute and thirty-two seconds, before the time computed by the American commission. Mr. C. Todd, observing with an eight-inch refractor, remarked: "For some time after internal contact at egress the portion of the planet which had moved off the sun was distinctly visible, appearing as though seen through a nebulous and luminous haze of a purplish hue, extending beyond and around the edge of the planet, and inclining to violet toward the sun."

8. *Beechworth, Victoria*.—Lat. $36^{\circ} 21' 40''$, long. $9^{\text{h}} 46^{\text{m}} 5^{\text{s}}$ 2 E. American station. Some account of the observations at Beechworth is given in the *American Journal of Science* for December, 1875, by Dr. Henry J. Anderson, of Columbia College, New York. The exact time of the first contact was not obtained; the second, however, was well observed. As the planet's ingress became complete its cusps approached each other with surprising geometrical precision. No "black drop," nor any thing resembling it, was at any time noticed.

9. *Melbourne*.—Lat. $37^{\circ} 49'$, long. $9^{\text{h}} 40^{\text{m}}$ E. English observatory. The observations at Melbourne were in a good degree successful. The second and third contacts were observed, and, as at several other stations, the surface of Venus was seen outside the sun. Mr. Ellery, Director of the Melbourne Observatory, re-

mains: "With respect to an atmosphere surrounding Venus and the presence of a satellite, some of the observers had noticed toward the centre of Venus a light which condensed almost to a bright spot; and the Rev. Mr. Clarke, of Williamstown, observed a brownish-orange halo surrounding Venus, and some others had observed a colored light, though the difference of the tint was no doubt due to the eye-pieces used."

10. *Campbelltown, Tasmania*.—Lat. $41^{\circ} 56' 5$, long. $9^{\text{h}} 50^{\text{m}}$ E. American station. At the commencement of the transit the sun was wholly obscured by clouds. They broke away, however, before twelve o'clock, so that more than 100 pictures were taken, the third contact was observed, and a number of micrometer measures secured. This party was under the direction of Captain Raymond.

11. *Hobart Town*.—Lat. $43^{\circ} 0'$, long. $9^{\text{h}} 49^{\text{m}}$ E. American station. The party, under Prof. Harkness, had but partial success. Clouds and rain interfered with the observation, but a large number of photographs were secured during the intervals of clearness.

12. *Burnham, near Christchurch, New Zealand*.—Lat. $43^{\circ} 30'$, long. $11^{\text{h}} 31^{\text{m}}$ E. English station. Dense clouds prevented observations.

13. *Queenstown, New Zealand*.—Lat. $45^{\circ} 1'$, long. $11^{\text{h}} 15^{\text{m}}$ E. American station. The expedition to Queenstown was under the direction of Dr. C. H. F. Peters, of Hamilton College, New York. The sun was entirely concealed by clouds till within two minutes of the first contact, when, just in time, they broke away, affording the opportunity for successful observations. All the contacts were observed; the apparent diameter of Venus was carefully measured; the distance of the planet from the sun's limb was repeatedly determined; and 237 photographs were taken.

14. *Kerguelen Islands*.—Lat. $49^{\circ} 54'$, long. $5^{\text{h}} 41^{\text{m}}$ E. American, English, and German station. The observations were partly successful.

15. *Auckland Islands*.—Lat. $50^{\circ} 48'$, lon. $11^{\text{h}} 7^{\text{m}}$ E. German station. Photographs were obtained, and the contacts were observed at egress.

The foregoing list of stations is by no means complete; it is believed, however, to contain most of those at which the observations were successful. To discuss and collate the materials furnished by some forty expeditions, must be the work of time. The result will probably be made known, however, at no very distant day.

Incidental Results of the Transit Observations.—1. The question in regard to the existence of a satellite of Venus may now be regarded as decided in the negative. No such body was seen by any of the observers.

2. The accuracy of former measures of the apparent diameter of Venus had been vitiated by the brilliant glare of the planet. The measurement, therefore, while on the sun's disk will afford a more exact determination of the true diameter.

3. The observations by Watson and others afford data for determining the extent of Venus's atmosphere; while the spectroscopic observations indicate that on that planet, as well as on the earth, the atmosphere contains a considerable quantity of aqueous vapor.

Prof. Alexander's Hypothesis of the Zodiacal Light.—In an interesting "Statement and Exposition of Certain Harmonies of the Solar System," recently published by the Smithsonian Institution, Prof. Stephen Alexander, of Princeton, New Jersey, proposes a new theory of the zodiacal light. This mysterious phenomenon, the explanation of which has perplexed astronomers since the time of Cassini, is regarded by Prof. Alexander as a *terrestrial* girdle, so situated that its time of revolution around the earth is equal to, and in the same direction with, that of the moon. The author, after stating numerous objections to the commonly accepted hypothesis of a *solar* ring, and presenting a mathematical exposition of the mode in which the girdle, if a terrestrial appendage, may be sustained, gives the following summary of special coincidences of phenomena with the requirements of his theory:

1. That it provides a conservative force for the maintenance of such an appendage.
2. It will account for the phenomena common to all the appearances of the zodiacal light, *broad base* and all.
3. It accounts for certain periodical changes in form and intensity, etc., of the same, which seem to be completed in a synodical revolution of the moon.
4. It provides for the *gegenchein* in form and position; and possibly also for "a lunar zodiacal light."
5. It renders a plausible account of the fading, at times, and total disappearance of the zodiacal light.
6. It accounts for the absence of a determinate parallax of the girdle.
7. It shows why, when east and west zodiacal lights are visible at the same time, the middle, even, of the zodiacal arch need not be wholly obscured by the earth's shadow.
8. It provides for the "pulsations."

Asteroids.—At the close of 1874 the number of known asteroids was 140. In 1875 no less than 17 were added to the group, bringing the number up to 157. In the interesting search for these diminutive planets, Dr. C. H. F. Peters, of Hamilton College, New York, is now in advance of all competitors. This distinguished observer has detected 22, while the numbers found by his industrious rivals, Luther and Watson, are 20 and 17 respectively. At the present rate of discovery not only must the list of mythological names be exhausted at an early day, but the labor of calculating the elements and preparing ephemerides must become a serious tax upon the time and energy of computing astronomers. The larger bodies of the cluster have doubtless nearly all been observed, as those recently found are mostly of the twelfth or thirteenth magnitude. It is not improbable, however, in view of recent discoveries, that many more within telescopic reach still remain to be detected. The magnitudes,

dates of discovery, etc., of those found during the year are as follows:

No. 141, Lumen, was discovered on the 13th of January by M. Paul Henry, of the Paris Observatory. It is a very faint object, little brighter than a star of the thirteenth magnitude. There is a remarkable similarity between the elements of this asteroid and those of the 55th, Alexandra; the computed difference of their periods being only four hours, while their inclinations and eccentricities, as well as the longitudes of their nodes, are also nearly the same.

No. 142, Polana, was first seen by Palisa, of Pola, Austria, on the 28th of January. The position and form of its orbit have not yet been determined. Its brightness is equal to that of a star of the twelfth magnitude.

No. 143, Adria, was discovered at the same place and by the same observer on the 23d of February. This asteroid is also of the twelfth magnitude. Its period, distance, eccentricity, and inclination, are nearly equal to those of Ceres, the first discovered of the group.

Nos. 144 and 145, Vibilia and Adeona, were both detected by Dr. Peters, at Clinton, New York, on the 4th of June. The former is of the eleventh, the latter of the twelfth magnitude. The period of Vibilia is 1,509 days; that of Adeona, 1,615.

No. 146, Lucina, was first observed by Borely, at Marseilles, on the 8th of June. It resembles a star of the twelfth magnitude, and has a period of 1,627 days.

No. 147, which was named Protogeneia by the discoverer, was first seen by Dr. Schulhof, at Vienna, on the night of July 10th. This minor planet is in the outer section of the zone, its period being over 2,000 days, or about 5½ years. Its orbit is very nearly circular, and has an inclination of less than 2° to the ecliptic.

No. 148 was discovered at Paris, August 7th, by M. Prosper Henry. This minor planet has the extraordinary inclination of 26°. It resembles a star of the thirteenth magnitude.

Nos. 149-157 have not yet been named, nor have their elements been computed. The names of the finders, together with the dates and places of discovery, and also the apparent magnitudes, are as follows:

No.	Date of Discovery.	Discovered by	Discovered at	Magnitude.
149...	September 21.	Perrotin.....	Toulouse....	13
150...	October 19....	Watson.....	Ann Arbor....	11
151...	November 1....	Palisa.....	Pola.....	12
152...	November 2....	Paul Henry....	Paris.....	12
153...	November 2....	Palisa.....	Pola.....	12
154...	November 6....	Prosper Henry..	Paris.....	12
155...	November 8....	Palisa.....	Pola.....	12
156...	November 22..	Palisa.....	Pola.....	12
157...	December 1....	Borely.....	Marseilles....	13

Comets.—The first comet observed in 1875 was that of Encke, detected at Washington by Prof. Holden and Paymaster Tuttle, United States Navy, on the 26th of January. It was also found on the following night by M. Stephan, at Marseilles. An ephemeris of the comet, calculated by Dr. von Asten, had been circulated among astronomers, and the position of the body when first observed was but 15" of arc from its predicted place. When first seen, the comet's distance from the sun was 142,000,000 miles, and from the earth, 182,000,000. Its appearance was that of an extremely faint nebulosity, less than 2' in di-

ameter, and without either nucleus or well-defined boundary.

The observed acceleration of this comet's motion has generally been ascribed to the resistance of an ethereal medium. This hypothesis, however, has not been confirmed by recent researches. According to Prof. Otto Struve—

Dr. von Asten's calculations show that the last three revolutions of this comet can be perfectly represented by a uniform mean motion, without the hypothesis of a resisting medium, and even with greater precision than all the previous observed returns with that hypothesis. At the same time, during more than one revolution, something like acceleration has been indicated, and nearly to the same amount as Encke had supposed. This was the case between 1862 and 1865. Again, in other revolutions, as between 1845 and 1848, the acceleration has been subjected to very considerable changes. In the actual state of his researches, Dr. von Asten is inclined to conclude that the existence of a resisting medium is not proved by the motion of Encke's comet, and that the observed acceleration in several returns ought to be attributed to the action of other forces; for instance, repulsive power produced by the approach of the comet to the sun, the effect of which might vary considerably, according to the conditions in which the return to the perihelion takes place.

Winnecke's comet of short period, which had last been visible in 1869, was detected by M. Borelly, at Marseilles, on the morning of February 2d. This is the third return of this body since the discovery of its periodicity in 1838. It passed its perihelion on the 12th of March.

Meteors.—At the instance of M. Leverrier, the French Association for the Advancement of Science not long since adopted a systematic plan of observation at the principal meteoric epochs. This plan was attended with marked success on the occasion of the August shower in 1875. At a majority of the observing stations in France the condition of the atmosphere was highly favorable from the 9th to the 11th of the month. At Rouen and Rochefort the Perseids were seen in considerable numbers on the 9th, though the maximum did not occur till the night of the 10th. At Avignon 858 meteors were recorded between 8^h 35^m P. M. and 3^h 40^m A. M. The greatest number, however, was counted at Lisbon, Portugal, where 1,227 were recorded in five hours and twenty-five minutes, commencing at ten o'clock. It seems highly probable, as M. Wolf has remarked, that the August shower is rapidly advancing toward a maximum. The phenomenon will therefore be looked for with more than ordinary interest in 1876.

Meteors in unusual numbers—some as bright as stars of the first magnitude—were observed in England on the night of August 6th. Their radiant was near Omicron Andromedæ.

The Iowa Meteorite of February 12th.—The *American Journal of Science*, for November, 1875, contains a paper by Prof. N. R. Leonard, on an extraordinary shower of meteoric stones which fell a few miles east of Marengo, Iowa County, Iowa, at about 10½ o'clock, on

the evening of February 12, 1875. In the States of Missouri and Iowa the meteor was seen throughout a region extending at least 400 miles in length and 250 in breadth. Rev. E. B. Taggart, of Washington, Iowa, describes the body before its explosion as of a "horse-shoe shape, greatly elongated; the outer edge very bright, then a narrow dark space, with a cone of intense brilliancy, so vivid as to blind the eyes for a moment. It had not a comet-like train, but a sort of flowing jacket of flame. Detonations were heard, so violent as to shake the earth, and to jar the windows like the shock of an earthquake."

The products of the meteor's explosion were scattered over a tract about seven miles long and from two to four miles wide. The fragments varied in weight "from a few ounces to 74 pounds, aggregating, so far as found, 500 pounds weight," of which Prof. Leonard secured more than 800. The specific gravity of the *aërolite* was found by Prof. J. Lawrence Smith to be 3.57.

Diameters of the Planets.—The following values of the apparent diameters of the planets, reduced to the earth's mean distance from the sun, and of their true diameters in English miles, are given in *Nature* for June 24, 1875:

They are founded, in every case, upon the measures which, from observational circumstances, appear to deserve the greatest weight, and in the reduction to true values the solar parallax is taken 8".875, and Clarke's diameter of the earth's equator is adopted. It would, of course, be idle to attempt to offer final numbers, where the difficulties attending observations and the differences between the results of the most experienced and favorably-circumstanced observers are so considerable:

PLANETS.	Seconds.	Miles.
Mercury.....	6.35	2,850
Venus.....	16.95	7,560
Mars.....	9.235	4,150
Jupiter, equatorial.....	197.47	83,200
" polar.....	184.76	82,500
Saturn, equatorial.....	166.83	74,500
" polar.....	143.50	64,800
Uranus.....	68.57	30,600
Neptune.....	67.26	30,050

In fixing upon the apparent diameters of the bright planets it has been desired to adopt values which shall represent the actual arc values that are presented by the true diameters at the earth's mean distance. Many observations would assign larger values, but undoubtedly less trustworthy for computing real dimensions.

Prof. Newcomb's Researches on the Uranian and Neptunian Systems.—The great 26-inch telescope of the Naval Observatory, Washington, has been successfully used by Prof. Simon Newcomb in observing the satellites of Uranus and Neptune, and thus obtaining more trustworthy elements of these remote planetary systems. The satellites of Uranus all move in the same plane, and their orbits are very nearly circular. Their distances and periods are:

SATELLITE.	Rad. of Orbit.	Period.
Ariel.....	13.778	2.52088 days.
Umbriel.....	19.20	4.14418 "
Titanis.....	81.48	8.70590 "
Oberon.....	42.110	13.40327 "

With the most probable values of the earth's equatorial radius and the sun's mean horizontal parallax, the distances of the satellites from the centre of the primary, expressed in English miles, are:

Ariel.....	118,100
Umbriel.....	164,550
Titanis.....	269,800
Oberon.....	360,800

The masses of the satellites, according to Prof. Newcomb, are probably less than $\frac{1}{1000}$ of that of the planet. Their mutual perturbations must therefore be feeble. The distance of Neptune's satellite from the centre of the primary is found to be 218,550 miles, and its period of revolution, 5.8769 days. No other satellite has been seen, though carefully looked for. The doubtful observation by Lassell in 1850 was therefore probably an illusion.

It is a remarkable fact that the orbits of all the satellites of Uranus and Neptune are less eccentric than those of Saturn, Jupiter, and the earth, and that, so far as observations have yet shown, they may be perfect circles.

The masses of Uranus and Neptune, obtained by Prof. Newcomb from satellite observations, are $\frac{1}{1000}$ and $\frac{1}{1000}$ respectively.

Color of Uranus.—In the monthly notices of the Royal Astronomical Society for March, 1875, Captain W. Noble calls the attention of observers to what he regards as a change of color in the planet Uranus. This astronomer for a number of years had always embodied his impressions as to the color of the planet in the words "a pale-blue disk." The first change observed was on the night of March 9, 1875, when he was "at once struck with the apparent alteration in the character of its light, which was much whiter and brighter" than he had ever seen it. "Nay, there was even the faintest suspicion of yellow in it, so thoroughly had every vestige of blueness vanished." As seen through the 26-inch refractor at Washington, the planet, according to Prof. Newcomb, has always presented a sea-green color.

Binary Stars.—The elements of the following binary systems have been recently determined; those of the first by Dr. Duner, of the Observatory of Lund, Sweden; those of the others by Dr. W. Doberck, of Markree Observatory, Ireland. We give the periods and eccentricities:

STAR.	Period.	Eccentricity.
Eta Cassiopeæ.....	176.87 years.	0.6268
Tau Ophiuchi.....	217.87 "	0.6055
44 Bootis.....	261.12 "	0.7100
μ_2 Bootis.....	290.07 "	0.6174
36 Andromedæ.....	849.10 "	0.6537
Gamma Leonis.....	402.62 "	0.7390
Sigma Coronæ.....	848.20 "	0.7402

Burnham's Sixth Catalogue of New Double Stars.—We referred, in our last volume, to the important researches in sidereal astronomy by S. W. Burnham, Esq., of Chicago. In the *Astronomisches Nachrichten* of November 5, 1875 (No. 2,062), a sixth catalogue, containing ninety new double stars discovered by a 6-inch refractor, is given by the same distinguished observer. No. 21 of this catalogue is a very interesting system. It is known as 3,780 in Herschel's "Cape Observations," where it is described as quintuple, two of the components being of the seventh, and three of the eighth magnitude. Mr. Burnham's examination of these objects, with a view to supply further details, showed the group to consist really of *six* stars, two of which, on still closer scrutiny, were themselves found to be double, the companions being close and very minute. This remarkable system, consisting of eight members, is just visible to the naked eye as a sixth-magnitude star. It is generally designated as 45 Leporis.

Gold Medal of the Royal Astronomical Society.—The council of the Royal Astronomical Society of London, in their annual report of February 12, 1875, awarded the gold medal of the society to Prof. Heinrich L. D'Arrest, Director of the Observatory of Copenhagen, for his observations of nebulae, contained in his great work "Siderum Nebulosorum Observationes Havniensis," as well as for other important labors and discoveries. In 1851 Prof. D'Arrest discovered the periodic comet which bears his name, and in 1862 he detected the minor planet Freia, the seventy-sixth of the group between Mars and Jupiter. It has been his chief work, however, to determine, with as much accuracy as possible, the positions of nebulae discovered by the Herschels, Lord Rosse, and other observers. His labors in this department of research will enable future astronomers to determine the proper motions of those interesting objects, if indeed such motions shall be susceptible of measurement.

AUSTRALIA AND POLYNESIA. The area and population of Australia and Polynesia were, according to the latest accounts, as shown in the table on page 55.

The principal occupations in Australia are agriculture, stock-raising, and mining. The climate, almost throughout the continent, is favorable to the products of the soil. Wheat, maize, barley, oats, and potatoes, are the articles most largely cultivated, while tobacco and sugar also flourish. The vine has of late years been extensively introduced, for wine-making.

In *New South Wales* 454,635 acres of land were under cultivation in 1872, of which wheat, with 177,552 acres, and maize, with 116,745 acres, occupied the larger part. From this land 2,898,463 bushels of wheat and 3,984,958 bushels of maize were obtained. The total number of acres of land occupied was 9,788,728 acres, of which 454,635 acres are under culti-

vation, 5,134,390 acres are inclosed but not tilled, and 4,199,703 acres are not inclosed.

In *Victoria*, in 1873, the extent of inclosed lands was 10,284,439 acres, the area under tillage being 964,996 acres, of which 849,976 acres were devoted to the cultivation of wheat, and 110,991 acres to that of oats, which yielded 4,752,289 bushels of wheat and 1,741,451 bushels of oats.

In *South Australia* the extent of land under cultivation in 1872 was 1,164,846 acres, of which 759,811 acres were devoted to wheat, and 12,608 acres to barley. The total wheat yield in 1872 was 8,735,912 bushels. In 1873, 784,784 acres were under wheat-crop, and the produce was 6,178,816 bushels.

In *West Australia* the returns for the year 1872 show that there were 53,240 acres under crop, of which 31,619 acres were used for wheat.

In *Tasmania* the leading crops are wheat, oats, and barley. Fruit-preserving forms an important branch of industry. The export of jams and preserved fruits in 1873 amounted to 2,263,266 lbs., valued at £61,252. The number of acres under cultivation in 1872 was 324,105, of which 58,610 were wheat, 6,040 barley, and 26,750 oats. The yield of the principal crops for 1873 was as follows: wheat, 947,813 bushels; barley, 124,459 bushels; and oats, 561,247 bushels.

In *Queensland* the total extent of land under crop in 1872 was 62,491 acres. The crops grown were as follows: wheat, 3,842 acres; maize, 21,377 acres; cotton, 12,002 acres; and sugar-cane, 11,757 acres.

In *New Zealand* 1,296,900 acres of land were under cultivation in 1873. Of these, 131,797

acres were wheat, and 122,472 oats. The yield was 3,188,696 bushels of wheat and 2,618,084 of oats.

The live-stock statistics of the different colonies are as follows: In *New South Wales* there were, in 1872, 328,408 horses, 2,287,660 horned cattle, 17,560,048 sheep, and 218,904 hogs. *Victoria* had on March 31, 1873, 185,796 horses, 222,432 milch-cows, 589,857 other cattle, 10,575,219 sheep, 193,722 hogs, and 122,164 goats. *South Australia* returned for the same date 82,215 horses, 151,662 cattle, 4,900,687 sheep, 98,436 hogs, and 17,492 goats. The number of live-stock in 1873 in *West Australia* was—horses, 26,290; cattle, 47,640; sheep, 743,536; and hogs, 20,948. In *Tasmania*, in 1873, there were 22,334 horses, 106,308 horned cattle, 1,490,738 sheep, 2,201 goats, and 59,628 hogs. *Queensland* had, in 1872, 92,798 horses, 1,200,992 cattle, 6,687,907 sheep, and 35,732 hogs. In *New Zealand* the stock returned at the end of 1871 was 81,023 horses, 436,592 horned cattle, 9,700,626 sheep, and 151,460 hogs.

The mineral resources of Australia are also very great. Gold and tin are found in large quantities, while silver, lead, copper, cinnabar, iron, and coal, are also pretty generally found. In *New South Wales* 9,908,946 ounces of gold, to the value of £38,231,121, had been exported up to December 31, 1871, exclusive of the amount coined in the mint. In 1872, there were exported 186,781 ozs., valued at £731,120, and coin to the amount of £1,656,151. In the same year, 718 tons 12 cwt. of tin were raised, worth £48,832. Diamonds have also been found in considerable number, the estimated number for 1872 being 5,000, the largest weighing 54 carats. In the same year, 1,012,426 tons of coal, of the value of £396,198, were mined, being the product of about twenty-five mines. In *Victoria*, there had been produced up to December 31, 1873, 43,258,205 ozs. of gold, valued at £173,032,821; 24,719 ozs. of silver, valued at £6,798; tin-ore mined, smelted, and exported, in all £305,886, besides various other metals and minerals. In 1873 the amount of gold was 1,170,397 ozs. In *South Australia* very little mining is done. The exports of minerals for the year 1872 were—copper, 149,050 tons, valued at £680,714; copper-ore, 26,964 tons, valued at £122,020. In the return for copper-ore, 22 tons of bismuth-ore, valued at £1,168, and 8 tons of spelter are included. The number of mines reported at the close of 1872 was seventy. In *West Australia* the mineral resources are as yet not fully known. In *Tasmania* there are large deposits of tin-ore, the yield of which is, however, not yet known. In 1873, 3,920 ozs., of gold, valued at £15,309, were exported. About 10,000 tons of coal were mined in the same year. *Queensland*, like *Victoria* and *New South Wales*, is rich in gold-fields. From 1860 to 1872, 928,198 ozs. of gold, valued at £3,870,626, had been exported. In 1872, 2,427 tons of refined copper,

valued at £194,320, had been produced. Tin has also been found in considerable quantities. The total amount of tin brought down, up to 1873, was 3,945 tons, valued at £825,000. In *New Zealand* the yield of gold in 1873 was

505,387 ozs., valued at £1,987,425. From 1857 to 1873 the total quantity of gold exported was 7,223,575 ozs., valued at £28,071,685. During the four years ending December 31, 1873, silver to the amount of 190,646 ozs., valued at £54,-

AUCKLAND, NEW ZEALAND.

275, had been exported from Auckland. Tin, iron, and coal, have also been found, but are not as yet regularly worked.

The following table shows the revenue, the imports, and the exports for 1873, and the pub-

lic debt on December 31, 1873, for each of the Australian colonies, to wit: Victoria, New South Wales, South Australia, Queensland, Tasmania, West Australia, New Zealand, and the total of all.

NAME OF COLONY.	Revenue.	Debt.	Imports.	Exports.
Victoria.....	£3,948,691	£12,445,772	£16,538,856	£15,802,454
New South Wales.....	3,324,118	10,842,415	11,058,888	11,915,829
South Australia.....	937,643	2,174,900	3,829,890	4,539,859
Queensland.....	1,120,084	4,785,850	2,881,726	3,042,513
Tasmania.....	293,758	1,477,600	1,107,167	893,556
West Australia.....	194,582	35,000	297,828	265,917
New Zealand.....	1,420,216	12,509,546	7,241,063	5,521,900
Total.....	£11,174,887	£44,272,088	£42,979,357	£41,929,293

The chief articles of export are precious metals and wool. The amount exported of each from the different colonies during the year 1873 was as follows:

COLONIES.	Precious Metals.	Wool, in lbs.
New South Wales.....	£2,952,000	40,462,000
Victoria.....	6,291,000	74,594,000
South Australia.....	2,000	85,978,000
West Australia.....	784,000	1,761,000
Tasmania.....	2,000	4,243,000
New Zealand.....	21,000	41,557,000
Queensland.....	2,000,000	19,763,000
Total.....	£12,061,000	218,685,000

The following is a summary of miles of railroads for 1874: New South Wales, 403; Victoria, 539; South Australia, 134; Queensland,

263; Tasmania, 45; New Zealand, 238—making a total of 1,621 miles.

The telegraph statistics for 1873 were as follows (figures marked with a * are for 1872):

COLONIES.	Miles of Wires.	Offices.	Telegrams.
New South Wales.....	6,571	105	865,860
Victoria.....	3,570	181	718,167
South Australia.....	3,307	86*	170,902*
Queensland.....	3,365*	74	156,26*
West Australia.....	473	...	22,774
Tasmania.....	480	24	82,251
New Zealand.....	4,009	98	637,941
Total.....	28,177	518	2,111,000

In the following table is given the commercial marine of the different colonies in 1873:

COLONIES.	Vessels.	Tonnage.
New South Wales.....	579	74,687
Victoria.....	490	56,792
New Zealand.....	810	99,843
South Australia.....	146	19,542
Tasmania.....	136	18,118
West Australia.....	70	8,870
Queensland.....	117	2,240
Total.....	1,811	205,047

The following table contains the latest postal statistics for the colonies:

COLONIES.	Post-Offices.	Letters sent and received.	Newspapers.
New South Wales (1873)....	622	8,654,000	4,841,200
South Australia (1873).....	805	3,421,870	2,296,019
Victoria (1871).....	706	11,718,166	5,172,970
New Zealand (1872).....	92	6,958,548	4,411,091
Tasmania (1873).....	154	2,148,578	1,654,780
Queensland (1872).....	181	2,208,040	1,388,748
West Australia (1874).....	35		

A novel immigration scheme has been adopted by Western Australia. Acting upon the principle that it is easier to obtain fresh population from its neighbors than from the other end of the world, the Western Australian Government offers to pay the passage-money, not exceeding 25s per head, of suitable male adults from Victoria and the Australasian colonies generally, and to afford assistance in the like ratio to their

The Government of New South Wales prepared a cabinet minute for the Governor for transmission to the Secretary of State for the Colonies on the subject of the proposed annexation of New Guinea. It contained the following passages:

My colleagues and myself venture respectfully to offer the opinion that on many grounds it would be desirable in the highest interests of civilization that Great Britain should, with as little delay as possible, take possession not only of the magnificent island of New Guinea but of the islands of New Britain, New Ireland, and the chain of islands to the north-east and east of New Guinea, from Beaugainville Island to San Christoval, the southeasternmost of the Solomon group. The group of New Hebrides, including Esprit Santo, Malicolo, and Sandwich, with the smaller adjoining islands; and Marshal Gilbert and Ellice Islands, to all of which the traffic from Sydney extends. It appears to us that more extended dominion over these waters on the part of the British Empire would not only be consistent with the maritime supremacy of England, but conduce much to the tranquillity and peace of the Australian colonies, while the occupation by foreign governments of large islands in the immediate neighborhood of our coast, and on the very tracks of our ocean communication with the mother-country, might and would be in time of war fatal to our free navigation of the sea which adjoins our territory, whose coast-line, stretching from our capital northward to within sight of New Guinea, is 1,700 miles in extent. The extension of British sovereignty over Polynesia would not only, as it seems to my colleagues and myself, open up new and rich fields for the employment of British capital and enterprise, but tend to the immediate mitigation of many evils which naturally follow from the lawless condition of some of these islands, and to the early extinction of the greatest of all those, unlawful traffic in labor. Of the possibility of any one or more of the Australian colonies undertaking, with imperial sanction, and by means of powers specially conferred, the annexation of these islands, or any one of them, my colleagues and myself desire to express our concurrence in the view taken by Sir James Martin on this subject in a letter addressed to the Earl of Belmore on the 8th of August, 1871. We are of opinion that no such scheme is possible. Even if the inhabitants of these colonies, the resources of which are so largely drawn upon for the construction of great public works and the opening up of improved means of internal communication, were able or disposed to bear the necessary expenditure (which we do not believe would be the case), it would be impossible for any colony, or group of colonies, to exercise the powers and authority, and inspire the obedience which belong to a great empire.

AUSTRALIAN MAN AND WOMAN.

wives and families. After two years' residence each adult immigrant will be entitled to select fifty acres for himself and twenty-five acres for every member of his family between the ages of sixteen and twenty-one, provided no family obtains more than one hundred and fifty acres in the whole, and at the expiration of three years, if certain conditions of fencing and cultivation have been complied with, they will receive a free crown grant of their allotments.

The first English Governor of the Feejee Islands, Sir Arthur Gordon, arrived in that colony during the month of September. He was heartily welcomed by the British residents, and, after making several excursions around the coast-line, he decided that Levaka was to continue as the seat of government. The planters, who, since the failure of cotton as a remunerative crop, had been undecided in their pursuits, have turned their attention to sugar; but, although a large amount of cane had been grown, the measure of success was small, owing to want of experience in its cultivation. During the past year the islands were visited by the measles. It is estimated that 40,000 natives died during the plague.

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I., on December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858. Area of the monarchy, 240,348 square miles; population, according to the census of 1869, 35,901,435. The area of cis-Leithan Austria (the lands represented in the Reichsrath) is 115,908 square miles; population at the end of 1874, officially estimated at 21,169,341. The estimate is based upon the census of December 31, 1869, by adding the average percentage of increase. It was distributed among the different crown-lands as follows:

COUNTRIES.	Inhabitants in 1874.
Austria below the Enns	2,087,980
Austria above the Enns	741,918
Salsburg	158,886
Styria	1,104,612
Carinthia	383,045
Carniola	468,065
Trieste	192,274
Görzitz and Gradisca	212,349
Istria	266,808
Tyrol	787,494
Vorarlberg	103,341
Bohemia	5,237,244
Moravia	2,036,081
Silesia	544,459
Gallcia	5,827,798
Bukowina	537,815
Dalmatia	490,827
Total	21,169,341

Of the total population, 10,303,437 were of the male, and 10,865,904 of the female sex. The number of marriages in 1873 was 193,836, of births 829,947 (429,324 males, 400,623 females). Of the children born alive, 712,109 were legitimate, and 98,727 illegitimate; of those still-born, 15,420 were legitimate, and 3,691 illegitimate. The number of twins was 18,530. The number of deaths was 679,396 (354,833 male, and 325,063 female).

The ministry for the common affairs of the empire consisted, at the beginning of the year, of Count Andrassy, Minister of Foreign Affairs and of the Imperial House (appointed 1871); Baron von Holzgethan, Minister of the Finances of the Empire (appointed January, 1872); and Baron von Koller, Minister of War (appointed June 14, 1874).

The ministry of cis-Leithan Austria was composed of Prince Adolf von Auersperg, President (appointed November, 1871); J. Lasser Baron von Zollheim, Interior (November, 1871); C. von Stremayr, Public Works and Instruction (November, 1871); Glaser, Justice (November, 1871); J. Ritter von Chlumecky, Commerce and Political Economy (appointed in November, 1871, Minister of Agriculture; transferred to the Ministry of Commerce in May, 1875); Baron von Pretis-Cagnado, Finances (January, 1872); Colonel Horst, Defense of the Country (appointed *pro tem.*, November, 1871, definitely March, 1871); Count Colloredo-Mannsfeld, Agriculture (May, 1875); J. Unger (November, 1871) and Fl. Ziemiałkowski (April, 1873), ministers without portfolio.

The common debt in December, 1874, amounted to 411,999,796 florins; the debt of cis-Leithan Austria to 2,668,990,937 florins. The army on the peace-footing numbered, in October, 1875, 284,435, and on the war-footing 785,649 men. The navy numbered 69 vessels; tonnage, 115,380.

The commerce of the Austro-Hungarian monarchy, in 1874, was as follows:

COMMERCE.	Imports.	Exports.
	Florins.	Florins.
Austro-Hungarian Customs Union without precious metals ..	565,600,000	452,300,000
Austro-Hungarian Customs Union—precious metals	19,800,000	19,500,000
Customs, Territory of Dalmatia.	9,600,000	6,600,000

The First Danube Steam Navigation Company had, in 1872, 156 steamers and 574 towing-boats; income, 13,261,918 florins; expenditures, 12,697,746 florins; surplus, 564,172 florins. The Steam Navigation Company of the Austrian Lloyds had, in 1872, 69 steamers; income, 10,551,014 florins; expenditures, 9,287,579 florins; surplus, 1,263,417 florins.

The commercial navy, at the beginning of the year 1874, was composed as follows:

CLASS.	Number.	Tonnage.	Men.
Ocean-vessels	617	290,941	7,918
Coasting-vessels	2,017	88,238	6,323
Fishing-boats, light-boats, etc.	4,573	12,298	13,323
Total	7,207	341,467	27,564

The movement of shipping in the Austrian ports, during the year 1872, was as follows:

No. of Ports.	PROVINCES.	ENTERED.		CLEARED.	
		Vessels.	Tons.	Vessels.	Tons.
2	Trieste and Territory ..	9,208	1,001,789	9,090	966,540
4	Görzitz and Gradisca ..	1,179	22,998	1,199	19,409
53	Istria	18,905	1,623,467	19,186	1,618,016
86	Dalmatia	12,988	1,120,195	12,984	1,124,232

The number of post-offices, at the end of the year 1873, was 4,191; the number of private and official letters, 219,600,000; of newspapers sent, 60,300,000; of postal-cards, 21,300,000.

The aggregate length of railroads, on January 1, 1875, was 9,823 kilometres (1 kilometre = 0.62 mile). The number of telegraph-stations 2,067; the aggregate length of telegraph-lines 31,731 kilometres, and of telegraph-wires 82,718, divided as follows:

TELEGRAPHS.	State Tele-graphs.	Railroad Tele-graphs.	Private Tele-graphs.
Length of { lines	21,404.7 kil.	9,944.1 kil.	883.0 kil.
{ wires	53,571.8 "	23,122.3 "	724.2 "
Number of stations ...	899	1,074	94

On January 10th the two Houses of the Austrian Reichsrath resumed their labors after a four weeks' vacation. After remaining in session for about two months, they were adjourned on March 23d. Their attention dur-

ing this session was chiefly given to financial and railroad bills. The House of Deputies disposed of forty bills introduced by the Government and of eleven introduced by its own members. One of the last measures discussed and adopted by the House of Deputies was a bill for the regulation of the relations of the Old Catholics. The draft of this bill, prepared by a committee of the House, avoids the expression "Old Catholics" altogether, and designates them as "those Catholics who recognize all the doctrines of the Catholic Church, with the exception of the doctrines proclaimed in the Papal bull 'Pastor Æternus' of July 18, 1870, relative to the infallibility and the supreme and immediate jurisdiction of the Roman Pope." The draft limits itself to demanding for those Catholics the right to organize independent congregations. The ministry observed a complete silence in regard to the bill, but all its members voted against it. The President of the Herrenhaus, Prince Carlos Auersberg, promised to a deputation of the Old Catholics of Vienna that their relations would be fully regulated in the fall. The government bill providing for the organization of a court of administration (*Verwaltungsgerichtshof*) was adopted after a brilliant speech of Minister Unger.

The fall session of the Reichsrath was opened on October 18th. The Czechic deputies of Bohemia adhered to their determination not to attend. The representatives of the other dissatisfied Slavic nationalities, the Czechs of Moravia, the Poles, and the Slovaks, were again present, and the deputies belonging to the Catholic party of the Tyrol also resolved not to absent themselves. On October 19th the Minister of Finance presented the budget for 1876. The expenditures were estimated at 403,869,876 florins, 21,587,827 florins more than in 1875; the public revenue at 378,941,453 florins, or 5,852,054 florins more than in 1875; the deficit at 24,927,923, exceeding that of the preceding year by 15,735,773 florins. On November 9th the House of Deputies adopted a bill introduced by Dr. Wildauer relative to school legislation, after striking out those sections of the bill which related to Galicia. The Minister of Public Instruction disapproved of the bill, which he designated as neither opportune nor necessary, as all its provisions were contained in the present laws, and as the provisions relative to the superintendence of the schools were everywhere carried out, even in the Tyrol. He recognized, however, the competency of the Reichsrath to legislate on the subject. The Emperor appointed four new members of the Herrenhaus during life, who are believed to be all favorable to the present constitution. Two of them are abbots. Among the questions that are rising to greater importance are those of protection and free trade. On November 14th forty-two deputies drew up a scheme of commercial polity which, in their opinion,

would cover the entire deficit of the Government estimates. The first Austrian Imperial Diet (*Gewerbetag*), which met on November 12th at Reichenbach in Bohemia, passed resolutions in favor of discontinuing the commercial treaties of the empire existing at present.

The joint annual meeting of the delegations of the legislatures of *cis-Leithan* Austria and Hungary met in September, at Vienna. The Austrian delegation elected the ex-minister Herr von Schmerling, the Hungarian Herr von Szögyenyi as President. The Emperor, in his replies to the addresses presented to him by the presidents of the deputations, spoke of the peaceable tendencies of Austria and the perfect understanding with the two neighboring empires. The Chancellor of the Empire, Count Andrássy, stated that Austria was aiming, in the Oriental question, at three things: protection of the Austro-Hungarian interests, preservation of the European peace, and removal of the serious grievances of the rayahs in Bosnia and Herzegovina. The financial condition of the two countries was represented by the two Ministers of Finances as being not brilliant, but at the same time as not desperate. The meeting of the delegations was closed on October 17th. The amount allowed by the delegations for the common expenditures of the empire is 115,845,331 florins, of which 71,237,817 florins are to be paid by *cis-Leithan* Austria, and 30,530,527 florins by Hungary. Both delegations passed resolutions expressing their confidence in the ministry for the Common Affairs of the Empire, and the Chancellor of the Empire specially thanked them, in the name of the Emperor, for their readiness to grant the increased amounts needed for maintaining the efficiency of the army. The reasons for the material increase of this year's army estimates were, according to an official paper, as follows: 1. The manufacture of new steel ordnance, with which the entire artillery-force is to be provided. The amount will be heavy, but the material costs only about a quarter of what would be required for cast-steel guns. 2. The military schools and officers' colleges stand in need of a radical reform. 3. It has been found necessary to raise the scale of pensions paid to retiring officers, who are henceforth to be more generally employed in the administrative service of the empire. 4. A great number of officers are henceforth to be mounted. 5. The material condition of the rank and file urgently requires improvement, though the War Ministry finds itself compelled, by financial considerations, to rest content, for the present, with a smaller progress than it would otherwise desire. 6. An additional sum is required for the maintenance of barracks, hospitals, and magazines, and likewise for the fuller organization of the general staff. 7. In the last place, something must necessarily be done for the completion of defensive fortifications. This want is fully as urgent as

that for better weapons in the army. The comments of the Austrian and Hungarian papers on the proceedings of the delegations were not generally favorable. The Austrians were dissatisfied with the unequal distribution of the amounts to be raised by the two countries, and many Hungarians say that they might well get along without the institution of delegations.

On April 4th the monument of the late Emperor Maximilian, in Trieste, was unveiled in the presence of the Emperor and Arch-dukes of Austria, who were loudly cheered by an immense crowd. Signor Porenta, the President of the Memorial Committee, made a speech in Italian, in which he extolled the Emperor Maximilian and expressed the devotion of Trieste to the house of Austria. The Emperor made a suitable reply in the same language, in which he thanked M. Porenta and the town of Trieste. The Emperor subsequently addressed an autograph letter to the Governor of Trieste, expressing lively satisfaction at the evidence he has received of the unalterable affection and loyal sentiments entertained toward him by the population.

The relations of Austria to foreign powers were of a friendly character. On April 5th the Emperor visited the King of Italy in Venice, and before his departure congratulated him upon the consolidation of Italy. At a grand public dinner given in his honor, the Emperor, in reply to a toast from the King of Italy, drank to the well-being and prosperity of Italy. The semi-official papers declared the object of their visit to be the establishment of closer connections between Italy and the three European empires for the purpose of securing the continuance of peace. The reception of the Emperor in Italy was quite enthusiastic; only the organs of the Catholic Church expressed their decided dissatisfaction with the exchange of friendly sentiments between the two Governments. On June 28th an interview between the Emperors of Austria and Russia took place at Eger, Bohemia.

From Venice, the Emperor set out for a long-intended journey through Dalmatia, where he met with an enthusiastic reception. The five days' stay at Zara, the capital of Dalmatia, was one continuous succession of rejoicings. The Italian population of the town as well as the Slavonic population, which had come in large numbers and with its picturesque costume, vied with each other in their loyal manifestations. Generally opposed to each other in everything else, they met on common ground on this occasion. On an excursion made from Zara on the fine imperial road which runs along the coast to Bentovay, the Emperor was greeted by the immense concourse of the population, for from the remotest villages on the mountainsides people had come down, and there was not a hamlet which did not send at least a deputation. A great feature was the numerous troops of men who received the Emperor with

salvos, firing off their pistols. Nearly every man in that country is armed and has hitherto belonged to a sort of irregular militia. Now the militia law for the whole empire is being introduced into Dalmatia, and several companies of these new troops could already be inspected, but the majority of the male population remains in its old organization by villages and clans, and wears its own picturesque costume, in which red is predominant and which shows off that powerful race to the greatest advantage. In Cattaro, the Emperor received a visit from the Prince of Montenegro. He returned to Vienna on May 15th.

On April 6th sixteen of the seventeen provincial Diets of cis-Leithan Austria were opened. The complexion of several of these Diets, which are, not less than the Reichsrath, the battleground of the different religious, political, and national parties of the empire, was in some respects materially different from that of last year. In the Diet of the Tyrol, the delegates of the Italian portion took their seats for the first time since 1861, and added considerably to the strength of the Liberal party. In the Diet of Carniola, in which province the Slovans constitute more than 90 per cent. of the population, the result of the elections of the Chambers of Commerce gave this year to the Constitutional party in union with the Liberal party of the Young Slovans a majority in all questions relating to church and school, while last year the Catholic party in union with the Old Slovans controlled the majority. The Bohemian Diet is but little changed, the Liberal party of Young Czechs numbering this year nine, instead of seven members. To all the Diets the Government made communications concerning the introduction of the metrical system of weights and measures. In Bohemia and Moravia, the improvement of the salaries and positions of school-teachers formed a prominent subject of discussion. It seems that the functions and powers of the provincial Diets are not yet fully understood. In the Diet of Styria, the commissioner of the Government replied to an interpellation which had been directed to him soon after the opening of the Diet, that the right of making interpellations did not at all belong to a provincial Diet, while in the Diet of Lower Austria the commissioner of the Government replied, in a similar case, that the particular interpellations addressed to him exceeded the jurisdiction of the provincial Diet, thus not denying to the Diets the right of interpellating in general. Most of the Diets were closed on May 14th; that of Galicia was continued to the end of May, and that of Dalmatia did not open until May 19th.

Austria is still suffering severely from the great financial crisis which began in 1873, and put an end to the swindling operations of many of the numerous stock companies. One of the most interesting episodes in the history of the financial distress which followed the outbreak of the crisis is the trial of the Director-Gen-

eral of the Lemberg-Czernowitz road, Ofenheim, which began at Vienna in January, 1875. The indictment charges Ofenheim with ten separate frauds, and maintains that all the affairs of the company were in his hands; that he was absolute master, and that, therefore, nothing occurred without his knowledge. His personal influence is, moreover, traced by the indictment in every particular on which the charges are founded. Ofenheim, in his defense, stated that by assisting Brassey's financial operations he acted in the company's interest. By hurrying on the construction of the line on Roumanian territory during the French and German War he obeyed the express wishes of the highest quarters in Vienna. The accused was subjected to a general examination, in the course of which he gave an account of his former life. He stated that previous to the financial crisis he was possessed of 2,250,000 florins, his fortune now amounted to 850,000 florins, and this he owed to the reputation he had gained by the manner in which he had accomplished the difficult task of the construction of the Lemberg-Czernowitz Railway. Through this he was brought into connection with lucrative undertakings. The accused alleged that he only obtained the commission to construct the railway in 1864, after he had succeeded in interesting the English firm of Brassey in the undertaking, and he was appointed director-general after the formation of the joint-stock company, with a salary of 150,000 florins. In the interest of a speedy completion of the line, he supported Mr. Brassey by advice and acts in connection with difficulties occurring respecting the laying of the foundation of the work, the supplies, and certain financial operations. He did so also at the construction of the Czernowitz-Suczawa line, yet he asked as builder from the contractors only strictly what he was entitled to. The conflict with the Government the accused stated to have been of a purely personal character, because he did not agree with the railway policy of the Minister of Commerce, and he declared that at the time of his resignation the company held the best possible position. Replying to an observation of the President of the Tribunal, that the company had been compelled, notwithstanding, to issue a preference loan, the accused said that was done under brilliant conditions. He showed that £190,000 had been really paid to Messrs. Brassey. He could, however, give no explanation as to what was done with this sum. He received a present of £5,000 for his trouble. With regard to another question of the president, the accused said that the shareholders did not suffer by the transactions, since they knew the burdens that had to be undertaken previous to subscribing. On January 28th the Minister of Commerce Banhaus was called to give an account on his relations to several railroad and banking companies previous to his entering the cabinet. The counsel for Ofenheim threatened to prove by means of a receipt

that Banhaus was as deeply involved in railroad speculations as Ofenheim. The proof was not conclusive, but nevertheless an impression very unfavorable to the Minister of Commerce was produced. The trial was brought to a conclusion on February 27th, and ended in the acquittal of Ofenheim. The result was partly ascribed to the superior intelligence of Ofenheim, who produced a powerful impression upon the jury and public opinion when he declared that by his enterprises he had drawn to Austria more than 176,000,000 florins, that he was giving steady employment and regular pay to thousands of working-men, and in case of his acquittal he would give 100,000 florins to the poor of Vienna. The Minister of Commerce deemed it best to leave Vienna "for reasons of health," and a few months later the resignation offered by him was accepted by the Emperor.

The centenary of the incorporation of the Bukowina with the Austrian dominions was solemnly celebrated at Czernowitz October 4th. Deputations from all the towns and rural communities, numbering in all about 1,200 persons, were in attendance, and all the nationalities represented in this province indulged in their peculiar popular festivities. The centenary celebration began with a procession of all the deputies of the town and communities to the residence of the Governor, to whom a committee of deputies, headed by the President of the Provincial Diet, officially rendered the homage of the province. The Governor read to the deputies an imperial rescript which was received with great enthusiasm. Then followed the unveiling of the Austria monument, the work of Prof. Peckary, in Czernowitz, on the Austria place, with an address by the Burgomaster of Czernowitz, Dr. Ambros von Rechtenberg. The opening of the new university, which has been founded by the Austrian Government in honor of the centenary, began with a speech by the Minister of Public Instruction, Dr. Stremayr, which was followed by addresses from the first rector of the university, Dr. Tomaszczuk and Prof. Schuler-Libloy. All the Austrian universities, as well as Strasburg and Göttingen, had sent special deputies to this celebration, and numerous letters of gratulation were received from learned institutions in all parts of Europe. The new university is the only one in Austria which has a theological faculty of the Orthodox Oriental (non-united Greek) Church. Besides the theological faculty, it has for the present only two others, one of law and political economy and one of philosophy. Most of the lectures will be given in the German language. In Roumania, the festivities of Czernowitz gave great offense to all classes of the population. The Roumanians look upon the Bukowina as a province which, being chiefly inhabited by Roumanians and torn from them by violence, should be reunited with them in course of time. A member of the Roumanian House of

Deputies proposed that the Diet of Roumania issue a protest against the Austrian celebration, declaring that the Roumanian nation did not submit to the affronts offered to it, but that it awaited a Napoleon to avenge and indemnify them. The National Liberal party in Jassy resolved to make the 13th of October, on which a hundred years ago Prince Ghika, of Moldavia, was beheaded by the Turks because he refused his consent to the cession of the Bukowina to Austria, a national day of mourning.

In June fearful inundations took place in Bohemia, Moravia, Carinthia, the Tyrol, and the Banat, with some loss of life and great destruction of property. Many bridges were carried away, thousands of cattle drowned, and crops in several districts were totally ruined.

The Danube, in April, took possession of its new bed, which had been prepared for it by the Danube Regulation Commission. It did not do so quite in the way meant by the engineers. The new bed was dug out in three sections, separated from each other by two dikes which were left, and over which the roads led to the old bed. The embankment had been raised all along the line and partially revetted with stone, but there remained still a good deal of the stone revetting to do in the portion between the two dikes. In order to do this more cheaply and expeditiously, it was determined to make an opening in the upper dike, so as to allow the stone-barges to pass through. The news excited some misgivings, and there were warning voices which predicted that the lower dike would scarcely be able to resist the pressure of the water; but the engineers were confident in their power of regulating the inflow of the stream, and to stop up the gap if necessary. Events proved that they had been too confident, for scarcely was the channel opened when the stream rushed in, widening the gap soon from 12 feet to 100 feet, and carrying away the bridge which had been constructed. The dike being in an oblique direction, the gap was toward the right bank, the consequence of which was that the force of the stream rushed in that direction, carrying away the masonry and stone revetment for a considerable distance. In less than twelve hours the basin filled, and the current seemed to have stopped, but the workmen had scarcely retired to rest when the news came that it had set in again, indicating that the water had made its way through the lower dike. In order to obviate further mishap to the embankment, which would have followed had the river broken through, an opening was made in the centre of the dike when the same thing occurred as at the upper dike, the water rushing through and carrying away the dike right and left, without doing any further mischief to the embankments. The Danube thus virtually took possession of its new bed, anticipating the ceremony which had been fixed for the 15th of May.

The solemn opening of navigation in the new channel of the Danube took place on May 29th, in the presence of the Emperor, the archdukes, and all the ministers. Minister Lasser made an address, in which he referred to the great advantages which the commerce and industry of Vienna would receive from the successful completion of the work which was begun on May 14, 1870.

A profound sensation was produced early in the year by the publication of a pamphlet entitled "Considerations on the Organization of the Austrian Artillery," and written by a member of the imperial family, Archduke John Salvator, youngest brother of the former Grand-duke of Tuscany. The author makes the following remarks on the relations between Austria and Germany:

When the conclusion was arrived at that the interests of Russia and Austria do not collide, and that friendly advances had removed all misunderstandings, the fortification of Przemyśl was stopped, to the joy of all Austrian patriots. It is now hoped that the advance toward Russia may lead to an alliance based on the recognition of the mutual advantages, for in that alone can be found a guarantee for a happy future of the monarchy. In a military view the alliance with Russia is equivalent to security in our back; our strategical front has been definitely determined. In spite of all protestations of friendship, it must be clear to us that the expansive movements of the neighboring Prusso-German Empire threaten the integrity of the monarchy. National union and national annexation have become the principle of the present formation of states, and have unmistakably given the impulse to the great wars of modern times. Who, in face of these facts, could be without well-founded fears with regard to our dear and unfortunate fatherland? Although everything is done to destroy those agencies which tend to paralyze the attraction of our neighboring country, and to bring about the desired ends in a peaceable, that is, in a not forcible manner, the success of these efforts cannot be thought of. For, in spite of all demoralization and systematic undermining, there still lives in the peoples of Austria a sense of their homogeneity, and the interests which have kept them together for centuries are still too strong to encourage the belief prevailing abroad that the dissolution of Austria is only a question of time, and will be accomplished without a war. A war is necessary, and it must come, as our neighbors have cast their eye on the fine country on the Danube, and Germany's boundaries need an enlargement in the east. As Austria has always stood up for its right, so will she at the time fight for her existence; then will come the last and deciding battle. May the time left us be used to procure the requisites for a successful defense!

The Austrian Government took an early occasion to disapprove the sentiments expressed by the archduke.

AVELLANEDA, NICOLÁS, lately elevated, by the almost unanimous vote of his countrymen, to the office of chief magistrate of the Argentine Republic, though not having yet completed the fortieth year of his age, is alike distinguished for his talents and acquirements, and conspicuous for his rectitude of character and conduct. In his career he has been markedly successful, leaving the stamp of his genius in the various positions occupied by him, as a

journalist, political economist, and statesman. He first came into public notice as editor of the *Nacional*, a leading journal of Buenos Ayres; afterward he received the appointment of Professor of Political Economy in the university of that city; and then became successively legislator, Minister of the Interior in the province of Buenos Ayres, and Minister of Public Instruction. In this last capacity, during the Sarmiento administration, he revealed in a peculiar manner those brilliant merits which have since been rewarded by his election to the presidency.

Among the many monuments of his zeal, as Minister of Public Instruction, are the 150 public libraries distributed throughout the country; national colleges in each of the provinces; special scientific institutes, with professors brought expressly from Europe for the different chairs therein; the National Observatory, under the direction of Dr. Gould, the learned American astronomer, etc., etc.

Dr. Avellaneda had already gained considerable fame by the radical reform achieved by him in the system of division of public lands; and he is the author of an important work on that subject, entitled "Estudios sobre tierras públicas."

AVEZAC-MACAYA, MARIE ARMAND PAS-

OAL DE, a French geographer, was born at Bagnères de Bigorre in 1799; died January 14, 1875. He was admitted to the bar in Paris, and subsequently entered the ministry of the navy, where he soon rose to the position of a chief of bureau. He soon turned his attention to geography, and particularly to the explorations of Africa. In 1834 he became secretary of the Geographical Society. Besides the general reports of this Society, he wrote numerous other learned essays, and many articles for the bulletin of the Society, of which he was a director. He was one of the founders of the Ethnological Society of Paris, and a member of the principal geographical and ethnological societies of the world. He has also written "Essais historiques sur le Bigorre" (2 vols., 1823); "Esquisse générale de l'Afrique;" "Études de Géographie critique sur l'Afrique septentrionale;" "Notice sur le Pays et le Peuple de Yébous" (1845); "Notice des Découvertes faites au moyen Âge dans l'Océan atlantique;" "Les Îles fantastiques de l'Océan occidentale au moyen Âge" (1845); and has also contributed numerous articles to the *Revue des Deux Mondes*, "Annales des Voyages," "Encyclopédie nouvelle," *Le Globe*, "Encyclopédie des Gens du Monde," etc.

B

BABCOCK, RUFUS, D. D., clergyman and author, was born at North Colebrook, Conn., September 18, 1798; died at Salem, Mass., May 4, 1875, aged 76. He was graduated at Brown University in 1821, and acted as tutor in Columbian College (now University), D. C., two years. He was ordained pastor of the Baptist Church in Poughkeepsie in 1823, and became associate pastor, with Dr. Bolles, of the First Baptist Church in Salem, Mass., in 1826. He was, in 1833, elected President of Waterville College, Me. (now Colby University). After three years, he returned to pastoral duties: first as pastor of the Spruce Street Church, in Philadelphia; then of his former charge in Poughkeepsie; and, finally, as pastor of the First Baptist Church in Paterson, N. J. For many years he took a leading part in the great movements of the Baptist denomination in the United States. He was three times elected Corresponding Secretary of the American and Foreign Bible Society. He was also Corresponding Secretary of the Sunday-School Union of Philadelphia, and of the American Colonization Society, and District Secretary of the Baptist Publication Society, Philadelphia. Dr. Babcock founded, and for five years edited, the *Baptist Memorial*, a monthly magazine of biography and current religious intelligence. He published "Claims of Educational Societies" (1829); "Review of Beckwith on Baptism" (1829); "Making Light of Christ

(1830); "Memoirs" of Andrew Fuller (1830); George Learned (1832); Abraham Booth, and Isaac Backus; "History of Waterville College" (1836); "Tales of Truth for the Young" (1837); "Personal Recollections of Dr. John M. Peck" (1858); and "The Emigrant's Mother" (1839). He likewise contributed many articles to "Annals of the American Pulpit," edited by Dr. Sprague. As a preacher, he was popular and instructive; as a scholar, his learning was more exact than extensive.

BALTHAZAR, CASIMIR VICTOR ALEXANDRE DE, a French artist of some note, was born at Hayange (Moselle), in 1809; died April, 1875. He went to Paris about the year 1827, and studied under Delaroche until 1832. He sent his first picture to the annual exhibition in 1833. Worthy of notice are: "The Head of John the Baptist offered to Herodias;" "Tobias led by the Angel;" "Lara and Kaled;" "Götz von Berlichingen" (1837); "The Vision of Joan of Arc;" "Joan of Arc in Prison" (1838); "The Baptism of Clovis;" "The Devotion of a Trumpeter;" "Diana in Repose;" "The Pious Mother." Besides historical subjects, he painted some portraits, among which are those of Colonel Handy, of the Bishop of Gap, and of Cardinal Donnet; "The Death of Lara" (already exhibited in 1840), "Christ and the Good Samaritan," and a portrait, appeared at the Universal Exposition of 1855. He exhibited, in 1859, a picture entitled "At

the Side of a Fountain." This artist obtained a third medal in 1837, a second medal in 1838, and a first medal in 1840.

BAPTISTS. I. REGULAR BAPTISTS IN THE UNITED STATES.—The following are the statistics of the Baptist churches in the United States, as given in the *American Baptist Year-Book* for 1875:

STATES AND TERRITORIES.	Associations.	Churches.	Ordained Ministers.	Members.
Alabama.....	44	1,120	566	72,010
Arkansas.....	81	880	432	39,444
California.....	6	98	81	8,936
Colorado.....	2	13	12	647
Connecticut.....	6	120	126	19,528
Dakota.....	1	14	10	278

Nevada.....	1	1	1	20
New Hampshire.....	7	85	91	8,096
New Jersey.....	5	162	169	26,570
New Mexico.....	1	1	1	20
New York.....	46	847	753	101,947
North Carolina.....	56	1,298	648	112,899
Ohio.....	33	626	400	45,160
Oregon.....	5	58	46	2,003
Pennsylvania.....	19	530	400	52,675
Rhode Island.....	3	60	69	9,848
South Carolina.....	25	642	371	78,685
Tennessee.....	45	1,186	686	96,942
Texas.....	39	927	562	49,666
Utah.....	1	1	1	22
Vermont.....	7	106	79	8,757
Virginia.....	80	1,107	544	141,608
Washington.....	2	11	8	351
West Virginia.....	14	324	157	20,510
Wisconsin.....	12	170	114	11,838
Wyoming.....	1	2	1	154
Total.....	890	20,520	12,598	1,638,989

The number of additions by baptism during the year was 70,162; number of Sunday-schools, 9,222; of officers and teachers in the same, 78,819; of scholars in the same, 623,383; total amount of benevolent contributions by the churches, \$3,988,909.31.

The Baptist educational institutions in the United States include ten theological institutions, with 45 instructors, 441 students, property valued at \$1,125,000, and endowment funds amounting in all to \$1,001,000; 35 colleges and universities, with 291 instructors, 5,056 students, \$5,519,688 worth of property, and \$3,012,000 of endowment funds; and 60 academies, seminaries, institutes, and female colleges, with 339 instructors, 5,478 students, \$2,029,000 worth of property, and \$262,135 of endowment funds.

The *Year-Book* gives the following statistics of the Baptist churches throughout the world:

COUNTRIES.	Associations.	Churches.	Ordained Ministers.	Members.
NORTH AMERICA:

The anniversary of the *American Baptist Missionary Union* was held at Philadelphia May 25th. The total receipts of the Society for the year were reported to have been \$241,770.64. The total amount of liabilities accruing during the year was estimated at \$267,148.56, showing a deficiency in the receipts to meet the current expenses of the year, of \$25,177.92. Adding the balance of the old debt not paid the previous year, \$27,778.80, the balance against the treasury on the 1st day of April, 1875, was found to be \$52,856.72. In sixteen states, the average of contributions for foreign missionary purposes was found to have been thirty-nine cents for each member of the church.

The following is a summary of the report of the number and condition of the missions:

ASIATIC MISSIONS.

MISSIONS.	Missionaries.	Native Preachers.	Churches.	Members.

It was resolved to attempt to raise \$275,000 for the prosecution of the work during the coming year. Rigid economy was counseled in all departments of management.

The triennial meeting of the *American Baptist Educational Commission* was held at Philadelphia, May 25th. The report of the executive committee recommended that the colleges or other institutions to be aided should be selected with a view to building up strong institutions for large districts; especially should schemes contemplating two or more colleges in one State be discouraged. It advised that appeals for help should be made literally to the masses and not to a few rich men, and that all help should be supplemental, given only to the enterprises of those States or sections which had first helped themselves to the utmost. The committee had determined to postpone further indorsements of applications for help for local institutions till after January 1, 1877. The proposition to celebrate the centennial anniversary of American Independence by efforts to strengthen and endow the denominational institutions of learning had met with

increasing favor in all parts of the country. The committee had adopted a plan for raising funds which contemplated the subscription of one dollar by each person connected with the Baptist congregations, and of larger sums by persons of means according to their ability. Two additional advisory committees were appointed, one with its centre at Galveston, Texas, the other with its centre at San Francisco.

The anniversary of the *American Baptist Home Mission Society* was held in Philadelphia, May 27th; messengers, officially appointed, were in attendance from the Southern Baptist Convention. The treasurer reported the receipts for the year to have been \$236,204.10, and the expenditures \$213,542.69. The debt of the society had been reduced during the year from \$45,237.40 to \$10,841.20. Twenty-four churches had been helped with loans from the church-edifice fund, and applications had been received from eighty churches, asking for \$90,000. The Board had assisted in the support of 338 missionaries, who had organized 92 churches. Seven schools were in operation among the freedmen, which reported an increased attendance of students. The present number was 800. The Rev. J. B. Jones had entered upon his labors as a missionary in the Indian Territory, aided by five native laborers.

The fifty-first anniversary of the *American Baptist Publication Society* was held in Philadelphia, May 28th. The receipts for the year were reported to have been: in the missionary department, \$66,832.91; in the business department, \$310,343.84; on account of the new building, \$44,805.04; making in all, \$421,981.79. Since 1867 the society had been giving its attention largely to the Sunday-school cause. It had now on its list 435 volumes of books for Sunday-school libraries, and was publishing large editions of "Aids to Scholars" and "Helps to Teachers." Its Sunday-school missionaries had during the year distributed 29,703 Bibles, Testaments, and books, and 182,483 pages of tracts. The enterprise of organizing Sunday-schools among the freedmen of the South had been begun. A Bible and Sunday-school mission had been established at Rome under the oversight of the society. The number of publications on the society's catalogue March 1, 1875, was 1,156. The corner-stone of a new building for the publishing-house was laid, with the usual ceremonies, in connection with the anniversary.

The anniversary of the *American Baptist Historical Society* was held in Philadelphia, May 28th. The library, it was reported, contained 7,185 volumes, which were represented to be all of real value, many of them costly and very rare. Among them were 2,165 books written by Baptists in the Latin, German, Swedish, French, and English languages. The list of works by Baptists and others included 1,250 names. A very interesting collection was being made of the likenesses and autograph

letters of eminent Baptists of past generations. The number of likenesses was 594, and of letters 653. The library also contained 258 views of Baptist colleges, many of which were no longer in existence. A suggestion was made to the "American Baptist Publication Society" with reference to the republication of the "Materials toward Baptist History," published by Morgan Edwards in the last century. It was resolved to endeavor to commemorate the centennial anniversary of American Independence by the erection and purchase of a building to be especially devoted to the uses of the society.

The fourth annual meeting of the *Woman's Baptist Missionary Society* was held in Boston, April 21st. The receipts of the society were reported to have been, including the balance from the previous year of \$424.64, \$30,241.29; the expenditures had been \$27,700.07. Of the balance, \$2,541.22, left in the treasury, \$729.75 was to be invested as a permanent fund, and \$1,155.75 had been appropriated for schools; 187 churches, or auxiliaries, had been added during the year, making 707 auxiliaries in coöperation with the society in raising funds and supporting missionary laborers. In foreign fields, fifteen missionaries and sixteen Bible women had been employed, and seventeen schools sustained. Of 980 pupils enrolled in these schools, one-half were girls.

The fourth annual meeting of the *Woman's Baptist Missionary Society of the West* was held in Chicago, Ill., May 6th and 7th. The receipts of the society for the year ending March 31st were reported to have been \$11,505.52, and its expenses \$11,175.80. Of the expenses, \$9,576.38 were devoted to the outfit of missionaries, and to the support of missionary work in Burmah, Assam, India, and China, and \$1,598.92 to "home expenses." Regarding the "home field" of operations, reports were made of labors performed in Ohio, Indiana, Michigan, Illinois, Missouri, Wisconsin, Minnesota, and Iowa. It was resolved to endeavor to secure special funds toward the erection of a suitable schoolhouse at Gowa-hati; also, to seek out seven young ladies for the work of the coming year, three of whom should be appointed to Assam, and three to China. A resolution was adopted requesting the American Baptist Educational Commission to recommend the Baptist churches throughout the country to take up a collection Sunday, July 4, 1875, to form an educational fund for the schools of the Baptist missionary societies in foreign lands.

The twenty-fifth annual meeting of the *Eastern German Baptist Conference* was held at Albany, N. Y., September 15th. Forty-two churches, embracing more than 4,000 members, were represented. The Rev. H. Trump was appointed general missionary for the field of the Conference, to seek out new openings for labor. The Rev. H. Schneider was ap-

pointed general agent of the publication and colporteur work.

The *Western German Baptist Conference* met at Concordia, Missouri, October 6th. Fifty-three churches reported 156 baptisms, 3,164 members. Six churches failed to report, which in 1874 had reported 405 members. Adding these as they reported then, the Conference would have 59 churches, 156 baptisms, and 3,569 members. The expenditures during the year had been \$3,553. The sum of \$5,100 was granted for the support of missionaries during the ensuing year.

The *American and Foreign Bible Society*, at its meeting October 11th, determined, in view of the obstacles which stood in the way, to abandon the effort to unite with the American Bible Union. It made provision for sending out Bible readers and colporteurs to labor among the colored people.

The twenty-sixth annual meeting of the *American Bible Union* was held October 18th. The Rev. Thomas Armitage, D. D., who had been president of the society for nineteen years, resigned that office. The Rev. A. C. Osborn, D. D., was elected president in his stead. The report of the treasurer showed that the total expenses of the Union for the year had been \$22,622.51, and that its present liabilities were \$40,927.13. The sum of \$21,000 had been raised within a few days toward the payment of the debts. The assets of the society were estimated at \$170,000, but most of the property was needed in business, and could not be applied to the extinction of the debt. The annual report stated that the union of this society with the American and Foreign Bible Society had been prevented during the year by the veto by the Governor of the State of New York of the bill passed by the Legislature to authorize it. The translation of the Book of Isaiah by Dr. Conant had been finished, and was ready for the printer.

The ninth annual meeting of the *Burmah Baptist Missionary Convention* was held at Henthader, November 7, 1874. It was attended by 14 missionaries, 16 woman missionaries, 29 ordained native preachers, 44 unordained native preachers, 16 delegates, and 272 persons described as "other disciples." The sessions of the convention lasted five days. Statistics were received from the stations at Rangoon, Maulmain, Tavoy, Barsein, Henthader, Thongzai, Toungoo, Shnayzyen, and Prome, of which the following are the totals: number of members, 19,662; of churches, 396; of ordained preachers, 85; of unordained preachers, 283; of Sunday-schools, 164; of pupils in the same, 5,964; amount of contributions, \$64,132.15.

The first *Baptist Association of Garo Christian Churches* was organized at a meeting held in the Gawalpara Chapel, Assam, April 3d. Eight churches responded to the call by letter, and 43 delegates were enrolled. The Association voted to support a preacher as its own

missionary to the heathen during the ensuing year. One minister was ordained.

The *Southern Baptist Convention* met at Charleston, S. C., May 6th. The Rev. James P. Boyce, D. D., of Kentucky, was chosen President. The "Home Mission Board" reported its receipts for the year to have been \$33,360.54. The Board had employed during the year fifty-one missionaries and agents, including the native preachers. Under its direction 150 Sunday-schools had been organized during the year, with 2,466 pupils and teachers, twenty churches had been organized and thirteen meeting-houses built, 204 stations had been supplied by its missionaries, and 1,045 baptisms had been administered. During thirty years of the operations of this board, the aggregate receipts had amounted to \$925,255.71, and 34,970 baptisms had been administered, 1,940 Sunday-schools organized, and 4,650 churches and stations supplied. The indebtedness of the Board amounted to \$20,727.94. The contributions for the Indian missions had fallen off. The receipts of the Board of Foreign Missions for the year had been \$33,218.35. Reports were made of the condition of the missions in China and Italy. In China, churches were established at Canton, Shin Hing, Tung Chow, and Shanghai, with a total of 203 members. Fifty baptisms had been administered. The native converts had been liberal in contributions. A chapel had been built at Shanghai by the Rev. M. Yates, and presented to the convention. Forty-four persons had been baptized in connection with the Italian mission at Rome. The fund for the chapel at Rome amounted to \$21,794.88, and had been invested in United States securities. It was announced that a legacy of \$5,000 had been left the convention by Eugene Levering, Esq., of Baltimore, Md., to be divided equally between the Boards of Home and Foreign Missions. The Woman's Foreign Missionary Society was commended. The Rev. Dr. E. Lathrop, of Connecticut, addressed the convention in behalf of the American Baptist (Northern) Home Mission Society, offering Christian salutations and presenting the resolutions which were adopted by that society at its meeting in 1874, proposing a regular fraternal intercourse, and interchange of messengers with the Southern Convention. In response, ten messengers were appointed to attend the next meeting of the American Baptist Home Missionary Society, and a resolution was adopted, declaring that

inasmuch as the convention have cordially received the messengers of the Home Mission Society, and appointed a committee to nominate corresponding messengers to meet them at their approaching anniversary, and inasmuch as this convention has always received similar overtures from their Northern brethren in the same fraternal spirit, it is scarcely necessary to declare again that we cherish for this and all other evangelical societies of our Northern brethren the kindest feelings, and bid them the heartiest "God speed in their noble work."

And inasmuch as the wide extent of our territory and other causes (not necessary to enumerate)

render it neither probable nor desirable that our Northern and Southern organizations should be merged into one, we are all the more solicitous that we should preserve the most fraternal relations, while each strives to do the work of the common Master in its own appointed sphere.

The Rev. Dr. Cutting, of New York, Secretary of the American Baptist Educational Commission, explained to the convention the purpose of the work of that society, and invited attention to its effort to raise, in connection with the celebration of the centennial of American Independence, a large fund in aid of the several Baptist institutions of learning. A resolution was adopted recommending this project, and the plans of the Educational Commission in connection with it, to the favor and active coöperation of the ministry and members of the churches throughout the Southern States. In reference to the education of the colored people, the Convention adopted a report declaring that "the emancipation and enfranchisement of the colored people, without adequate preparation for the responsible duties of citizenship, devolved an imperative obligation on those who precipitated this change, to take effective measures for preventing what was intended as a boon from becoming a curse Northern Christians have a duty to perform requiring patient labor, comprehensive and far-reaching plans, and a beneficence far beyond what has yet been evoked for the elevation and salvation of the colored people. The solemn duties of Northern Christians should not be pleaded as an excuse for our neglect of a personal duty and privilege. Every consideration of interest, humanity, and love of the Gospel, should impel us to energetic and prudent measures for the religious instruction of this class of our people." The convention having, in the lack of schools of its own for this purpose, adopted the policy of sustaining its students at the institutions controlled by the American Baptist Home Missionary Society, the report declared large contributions for this purpose to be desirable. It recommended, in addition to this method of instruction, that ministers' institutes be held at convenient points in the different States, under the direction of the Home Mission Board, at which suitable instruction should be given to colored ministers and the more intelligent colored brethren on the rudimental doctrines of the Gospel, and in the faith and practice of the primitive Church; that missionaries be appointed, whenever the means were afforded, to labor among the colored people; and that help should be given the colored churches in organizing and conducting Sunday-schools.

II. FREE-WILL BAPTISTS.—In the following table is given a summary of the statistics of the Free-Will Baptist churches, as they are found in the *Free-Will Baptist Register* for 1876. The returns show an increase from the previous year of one quarterly meeting, twelve ministers, and 1,499 members, and a decrease of seventy-two churches.

There are, says the *Register*, a number of associations of Baptists in America, which, in doctrine and polity, are in general agreement with the Free-Will Baptists. No specific reports have been received from these associations, but, from the best information received, the inference is that they number, in the aggregate, not less than 25,000 members.

The *Register* enumerates, among the benevolent institutions of the Free-Will Baptists, the *Foreign Mission Society*, the *Home Mission Society*, the *Education Society*, the *Sabbath-School Union*, the *Temperance Society*, the *Central Association*, the *Kansas Free-Will Baptist Home Mission Society*, the *Free Baptist Woman's Mission Society*, and the *New Hampshire Charitable Society*. It also enumerates twenty literary institutions, of which four are colleges, and the others academies and seminaries of various grades.

The anniversaries of the Free Baptist benevolent societies were held at Manchester, N. H., beginning October 12th. The Treasurer of the *Foreign Mission Society* reported that its receipts had been \$16,351.11, and that its expenditures had equaled that amount. The society had a permanent fund of \$7,461.14. The principal missions of the society are in India. They have been organ-

ized into the Bengal and Orissa yearly meeting, the statistics of which are embodied in the general table given above.

The business of the *Education Society* related chiefly to the affairs of Bates College, and the effort to complete an endowment of \$200,000 for that institution.

The reports of the *Home Mission Society* stated that the total receipts of the society for the year had been \$8,496.24, and the expenditures had equaled that amount. The society had a permanent fund of \$4,744.97. An effort to raise \$1,000 for the freedmen of the South had resulted in securing \$1,300. An effort had been begun to raise \$1,000 for the needy churches of the North, and \$600 had been pledged toward this sum. Report was made of the condition of the missions at Chicago, Ill.; Jackson, Mich.; Cleveland, O.; Cairo, Ill.; and Harper's Ferry, W. Va. Attention was invited to the "opening field" in Louisiana, East Tennessee, Alabama, and Texas.

At the anniversary of the *Sunday-School Union*, report was made that returns had been received from only about one-sixth of the whole number of schools in the denomination. From these it appeared that there were, in 211 schools, 17,228 scholars and 1,445 teachers. Forty-eight schools had contributed \$1,154 for benevolent purposes. To sustain schools, there had been raised \$4,666.

The Treasurer of the *Woman's Missionary Society* reported that the contributions to the society during the year ending October 1, 1875, were \$1,053.26. This sum, with the cash on hand at the beginning of the year, made the total amount of funds at the disposition of the society \$2,077.24. The expenditures had been \$1,075.78. The society was employing one missionary in India, and was supporting several children in school in the same country.

The tenth session of the Free Baptist General Conference of Nova Scotia was held at Calcedonia, beginning September 9th. The statistical reports showed that the Conference had 32 churches, 16 ministers, and 3,500 communicants. Anniversaries were held of the Temperance, Education, Sunday-School, Home Mission, and Foreign Mission Societies. A Woman's Missionary Society was organized.

III. SEVENTH-DAY BAPTISTS.—The committee on statistics reported to the General Conference of this denomination, that the whole number of churches was 83, representing a membership of 8,308. Sixty-four of the churches had made reports to the Clerk of the Conference, leaving nineteen which failed to report. The statistics of the latter churches were taken from the Associational minutes of the year. A net increase of ninety-six members was reported from the previous year.

The sixty-first session of the *Seventh-Day Baptist General Conference* was held at Alfred Centre, N. Y., beginning September 22d. A

H. Lewis was chosen moderator. The trustees of the Seventh-Day Baptist memorial fund reported that the fund now amounted to \$67,529.33. The receipts to the fund for the year had been \$3,441.81. The executive board of the Sabbath-school department reported that there were now in their statistical tables the names of 78 schools, 893 officers and teachers, and 4,957 scholars. Numerous Sabbath-school institutes and normal classes for instruction had been held in the several associations. A committee who were appointed by the previous General Conference to prepare an exposition of the doctrines and usages of the denomination offered two reports. The majority report recommended the reaffirmation of the old *exposé*, so amended as to embody in it the amendments made at different times. The minority report recommended that the *exposé* be thoroughly revised, so as better to express the views of the denomination as now held. Both reports were recommittees, and the majority and minority of the committee were requested each to prepare a form of the *exposé* in accordance with their respective recommendations. A committee which had been appointed by the previous General Conference to address a memorial to Congress concerning the proposed so-called religious amendments to the Constitution of the United States, reported that they had addressed letters of inquiry to the committee having the subject in charge; that three members of the committee had replied that it would be best to move in the matter when the amendments were pressed by their friends; that no efforts to press the amendments had been made since the last session of the Conference; and that therefore no occasion had arisen for the committee to take further action. The canvass of the votes of the churches upon the new constitution for the General Conference submitted to them showed that 37 churches had voted in favor of it, and 14 against it. The constitution, having received the requisite majority of two-thirds of the churches represented, was declared adopted and in operation. The Committee on Denominational History reported that no books or papers, or other contributions or items of interest, had come into their charge during the year. The committee appointed to raise money for young men preparing for the ministry, reported that they had received \$242.79 and had expended \$158.26 upon seven young men. Essays, appointed by the previous General Conference, were read upon "The Scriptural Idea of the Denomination and its Relation to Individual Churches," by L. O. Rogers, and "The Scriptural Doctrine of the Future State of the Dead," by T. R. Williams.

IV. BAPTISTS IN NOVA SCOTIA, NEW BRUNSWICK, AND PRINCE EDWARD ISLAND.—The following are the statistics of the Baptist churches in Nova Scotia, New Brunswick, and Prince Edward Island, as derived from the Association minutes for 1875:

LOCALITY.	Churches.	Baptisms during the Year.	Members.
NOVA SCOTIA:			
Western Association.....	68	354	2,567
Central Association.....	48	863	6,787
Eastern Association.....	57	419	4,191
	173	1,185	20,495
NEW BRUNSWICK:			
Western Association.....	73	149	4,999
Eastern Association.....	67	598	6,376
	189	743	11,375
PRINCE EDWARD ISLAND.....	16	158	1,073
Total.....	398	2,086	32,943

The Convention of Baptists in Nova Scotia, New Brunswick, and Prince Edward Island, in 1874 decided to establish a mission among the Karens in Siam, and sent out ten missionaries to open the work there. After spending some time in examining their proposed field of labor, these missionaries reported to the Board of the Convention that the Karen population in the district assigned to them was so sparse as to render it doubtful if any effective work could be accomplished there, and asked instructions regarding the course which they should pursue. A special meeting of the convention was held in May to consider this subject. An invitation was received at this meeting from the Baptists of Ontario and Quebec, to coöperate with them in their mission among the Telooongs of Cocanada, India. This invitation was accepted, and the missionaries sent out to Siam were advised to enter Cocanada at once.

The thirtieth annual meeting of the *Baptist Convention of Nova Scotia, New Brunswick, and Prince Edward Island* was held at Hillsburg, Nova Scotia, beginning August 21st. T. H. Rand, D. O. L., was chosen president. A dispatch was received from the missionaries of the convention who had been transferred from Siam to Cocanada, stating that they had reached their new field of labor, and were "joyfully working" there. A resolution was offered declaring an organic union of all the Baptists of the Dominion in foreign mission work to be desirable, but it was afterward withdrawn because it was thought that the time had not yet come for passing such a resolution. A committee was appointed to consider the subject of extending the objects of the convention so as to embrace a union for home missions as well as for foreign missions.

V. BAPTISTS IN GREAT BRITAIN.—The *Baptist Union in Great Britain and Ireland* met for its regular annual session in London, April 26th. The Rev. Alexander Maclaren, of Manchester, was chosen president for the ensuing year. An income of 10,582 in the number of members was reported, a larger accession than had been recorded in ten years. Sixty-three young ministers had been added to the ranks of the pastorate. Twenty-five new churches had been originated, and thirty-eight new

chapels had been built during the year, at a cost of £64,185; 124 other chapels had been enlarged or improved, at a cost of £49,868; making the total outlay on churches and chapels, of £114,048. Debts on 298 churches had been diminished, and there are forty-three churches liquidated, amounting to £54,712. Adding to these amounts the sums of £14,350 contributed for home missions, £80,000 for foreign missions, and £15,987 for colleges, the entire sum raised by the denomination in the United Kingdom for the direct promotion of the Gospel appears to have been £259,097, without reckoning the amount spent by the churches in the support of their pastors, upon Sunday-schools, and for the relief of aged and infirm ministers. The report of the *Missionary Society* showed the income of the society for the year to have been £40,121. The expenditure had exceeded this sum by £1,143, but the deficiency had been made up by friends, and the society was completely out of debt. Favorable representations were given of the condition of the missions in London, among the Sonthals in Ceylon, Africa, the West Indies, Brittany, Norway, and Rome. The number of baptisms during the year in the mission-fields was 3,546. Nine missionaries had been added to the force, six laboring in India, and one each in Africa, Hayti, and Trinidad.

The *Autumnal Meeting* of the Baptist Union was held at Plymouth, beginning October 4th. The opening sermon was preached by the Rev. J. P. Choun. The Rev. Alexander Maclaren presided. The following action was taken in reference to the subject named in the preamble:

This assembly, recognizing the great need of a denominational fund for the assistance of aged or infirm ministers and of ministers' widows, hereby resolve: 1. To establish a fund, to be called the Baptist Union Annuity Fund, or as the committee shall otherwise determine. 2. To refer the scheme now before the assembly to the Committee of the Union for revision, instructing them to confer with the representatives of existing funds having similar objects, with a view to their coöperation, and to decide upon a scheme, and to appoint a Committee of Management. 3. To request the Rev. C. M. Birrell, the Rev. Dr. Brock, Sir Samuel Morton Peto, Bart., Mr. W. Middlemore, Mr. E. Cory, and W. S. Caine, of Liverpool, to solicit contributions toward a capital fund, and to hold the same until the fund shall be fully organized. 4. That the first annual report be presented to the meeting of the Union at Birmingham in October, 1876.

With reference to the circular which had been issued by the Admiralty on July 31st, directing the return of fugitive slaves escaping to British vessels, the Union declared that it could not refrain from expressing profound astonishment and sorrow that such a document should have emanated from a department of the British Government; "and because this document imperils important national rights, reverses the national policy in regard to slavery, is utterly opposed to the national feeling, makes British officers the in-

struments of upholding slavery, and, in effect, sets at naught a settled doctrine of British law, this assembly respectfully but most urgently calls on the Lords Commissioners of the Admiralty at once to cancel this ill-judged circular." A service called a "missionary designative service" was held during the session of the Union, at which four new missionaries were commissioned to their fields.

VI. SCOTTISH BAPTISTS.—The sixth annual report of the *Baptist Union of Scotland*, being that for the three months ending in October, 1874, stated that the Union consisted of 68 churches, and represented a membership of about 6,200. The churches of the so-called Scotch Baptists are not connected with the Union, and are not therefore included in the enumeration. They oppose the employment of paid pastors. The pastors, or elders, are chosen from among the members of the church by the members themselves, and discharge all the duties of their office gratuitously. These churches are represented as being in a declining condition. The "Christian Brethren," or Disciples of Christ, have established a few churches in Scotland. It is claimed that there are many Baptists scattered among the churches of other denominations, who, if gathered together, would form a considerable body.

The annual meetings in connection with the Baptist denomination in Scotland were held at Glasgow, beginning October 27th. The *Home Missionary Society* was represented as being in an efficient and prosperous state. Notwithstanding, however, the liberality of subscribers had increased, the expenditures had been in excess of the income. The English subscriptions had amounted to £1,005, the Scotch to £761. The legacy reserve fund amounted to £2,000. The number of members in the mission churches in 1870 was about 1,000; the present number was 1,850. There had been an increase of 840 members during the year. The number of stations was now 148, against about 80 in 1870. The number of young people under instruction was 1,700, against 400 in 1870.

The meeting of the *Baptist Union* was held October 28th. Statistics were presented showing that the Union had had a rapid growth since its formation in 1870. There were now 70 churches and nearly 7,000 members, against 50 churches and 3,000 members at that time. The Union had started with a revenue of between £400 and £500. Its present free income was between £700 and £800, besides which it had a Ministers' Provident Fund of more than £2,000. The number of members had increased more than 700, or an average of about ten members for every affiliated church. Three new chapels had been opened during the year, and six new chapels were in course of erection.

BARYE, ANTOINE LOUIS, a celebrated French sculptor, born September 24, 1795; died June 25, 1875. In his boyhood he was placed in the workshop of a steel engraver,

was drawn in the conscription in 1812, and at the peace of 1814 returned to his profession as a chaser, and studied drawing and modeling in the *ateliers* of M. Bosio and Baron Gros. His first exhibition at the competition of the *Ecole des Beaux Arts* was in 1819, when he gained honorable mention for an engraving representing Milo of Orotona devoured by a lion. In 1827 he began to exhibit his sculptures in the *Salon des Beaux Arts*, and continued to do so regularly until 1836, when, the jury having refused several of his works, he ceased to exhibit for fourteen years. From 1848 to 1851 he occupied the post of keeper and director of the plaster-casts at the Louvre, and in 1850 he was appointed to superintend the course of drawing relating to natural history at Versailles, and in 1854 to a similar post in the Museum of Natural History. He has attained great success in modeling wild animals. His lion crushing a boar, an animal group in bronze, is considered his finest figure. In 1833 he became chevalier and in 1855 an officer of the Legion of Honor. At the Paris Exhibition of 1855 he obtained a grand medal of honor, the only one awarded in artistic bronzes. In 1861 he was appointed a member of the jury which decided as to the claims for admission of works of art into the London Exhibition of 1861, and in 1868 became a member of the Academy of Fine Arts.

BAUER, WILHELM, a German inventor, born December 23, 1822; died June 18, 1876. He learned turning, and went to Munich as a journeyman. Here he joined the army, and took part in the Danish War of 1848. The defenseless state of the German coasts suggested to him the idea of making use of submarine navigation for naval war, and for this purpose he constructed a submarine fireship to destroy the enemy's vessels. February 1, 1851, he made an attempt with it in the harbor of Kiel, but, owing to a want of funds, he was unsuccessful. After this he occupied himself almost exclusively with the preparation of models of submarine ships, and, in 1852, went successively to Austria, France, and England, to work for the realization of his plans. But, wherever he went, he was unsuccessful, owing to a want of funds. During a stay in Russia, in 1855, he succeeded in interesting the Admiral Grand-duke Constantine in his plans, and here, at last, he was able to complete successfully his submarine fireship. He was permitted to raise the man-of-war *Lefort*, which had gone down in the Baltic in 1857, and was also ordered to build a submarine man-of-war. He continued in the service of Russia, under the title of submarine engineer, until 1858, when, in consequence of difficulties with the authorities, he left for Munich. His stay in Russia had, in more than one respect, been an excellent school for him. His "camels" for submarine operations, and other inventions, were of far-reaching importance. When the Bavarian post-packet *Ludwig* had been wrecked on

Lake Constance, in 1861, Bauer was called upon, and he undertook to raise the vessel with his "camels." Unfortunately, his apparatus proved to be insufficient, and he was forced to desist from his undertaking. But the liberality of Duke Ernest, of Saxe-Coburg-Gotha, and a subscription taken up through Germany, enabled him to complete his work, and, in 1863, he succeeded in raising it. He then went to Bremen, where he hoped to work for the dissemination and completion of his ideas, but he was interrupted by the war of 1864. This war suggested to him the possibility of constructing "fire-coasters" for the protection of the coasts. An association was formed in 1864 for the furtherance of this project. But Bauer's health now gave way, and he continued to fail, until he was relieved by death of his sufferings.

BAYARD, THOMAS FRANCIS, of Wilmington, was born at Wilmington, Del., October 29, 1828; was chiefly educated at the Flushing School, established by Rev. Dr. F. L. Hawks, and although his early training was for a mercantile life, he studied and adopted the profession of law; he came to the bar in 1851, and, excepting the years 1855 and 1856, when he resided in Philadelphia, he has always practised in his native city; in 1858 he was appointed United States District Attorney for Delaware, but resigned in 1854; was elected to the United States Senate as a Democrat to succeed James A. Bayard (his father), and took his seat March 4, 1869. His term of service expired March 3, 1875. But in January, 1875, he was reelected for a second term, which will expire on March 3, 1881. The career of any hard-working lawyer at a country bar has little or nothing to attract more than a merely local interest, or to entitle him to especial recognition, and such has been that of Mr. Bayard.

Since he came to the Senate in 1869, his political views and associations have placed him in a minority, heretofore very weak in numbers, and therefore more labor has been entailed upon it, in meeting the infinite variety of propositions brought forward by the majority in these stormy times.

His diligence in the office of Senator is manifested in the records of the debates which disclose his attitude upon the public questions. An abridgment of many of his speeches will be found in this and former volumes of this CYCLOPEDIA.

In the formation of the Government and since its establishment, the men from whom Mr. Bayard draws his name and blood have been in the public service, and in the Senate he lineally represents a fourth generation. Thus in the preservation of the principles of republican government, and the line of conduct which can alone make such a government possible, he possesses a deep inherited interest and duty, which last he has diligently endeavored to perform.

Limitation upon power was the great idea

upon which the American fathers sought to erect a government for themselves and their posterity. This limitation was to be secured by the *distribution* of governmental powers, and the entire independence of each of the various departments in its separate sphere. The idea was always carefully kept in view in arranging the lines of State and Federal jurisdictions; and therefore Mr. Bayard would conceive the *true* American republican to be one who most closely legislates by the light and guidance of this idea, as set forth and contained in the Constitution of the United States. This political creed may seem narrow in these days to the sonorous champions of indefinite human progress and expansion, but its wisdom and safety grow plainer as the difficulties thicken about the pathway of the Government.

The speeches and acts of Mr. Bayard show, in all that he has said or done in public life, that constitutional liberty—the civil and religious liberty contemplated by the Constitution—has been the object of his anxious and solicitous defense. These remarks correctly describe all that he has said and done as a public man, and therefore are descriptive of the man himself.

His father's family were originally French, and being Huguenots fled from France at the time of the massacre of St. Bartholomew (1585), first to Ireland, and soon after to New York.

The two brothers (Nicholas and Balthazar) came to New York, and one went soon to Cecil County in Maryland, and from that branch he sprang.

His mother was a Philadelphian of the Francis and Willing families, who were early colonial settlers there, of English extraction.

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, was born April 9, 1835, son of King Leopold I., former Duke of Saxe Coburg; ascended the throne at the death of his father, December 10, 1865; was married August 22, 1853, to Marie Henriette, daughter of the late Archduke Joseph of Austria, born August 23, 1836. Offspring of this union are three daughters. Heir-apparent to the throne is the brother of the King, Philip, Count of Flanders, born March 24, 1827, Lieutenant-General in the service of Belgium; married April 26, 1867, to Princess Marie of Hohenzollern-Sigmaringen, born November 17, 1845; offspring of the union is a son, Baldwin, born July 3, 1869.

The area of the kingdom is 11,373 square miles; population, according to the last census, taken in 1866, 4,737,833; according to an official calculation of December, 1873, 5,253,821. Of this population, 54 per cent. belong to the Flemish and 44 to the Walloon-French nationality. The following table exhibits the population of each province of the kingdom on December 31, 1872, as well as the number of arrondissements and communes into which each province is divided:

PROVINCES.	Number of Arrondissements.	Number of Communes.	Population, Dec. 31, 1872.
Antwerp.....	8	150	513,543
Brabant.....	3	340	922,465
Flanders, East.....	6	250	682,971
" West.....	6	295	554,366
Hainault.....	8	435	982,036
Liège.....	4	385	623,163
Limburg.....	3	206	302,922
Luxemburg.....	5	205	206,049
Namur.....	3	351	316,331
Total.....	41	2,567	5,253,821

The number of Belgian workmen who emigrate to France and thrive there is considerable. There is one class, however, who migrate there yearly, and after a few months' work return to their homes with their earnings to start again the ensuing year. They are the straw-hat makers, and every February about 8,000 start from Belgium and take up their quarters in a suburb of Paris and form a little colony there. Most are married, but all leave their wives and children at home. An experienced man can make at least eight francs a day, and therefore, by exercising a little economy, they can easily save 30 francs a week, or about 500 francs during their four months' stay.

Of the four universities of Belgium, the free Catholic University of Louvain had, in 1872, the largest number of students (901); the free (Liberal) University of Brussels had 583, the State University of Liège 436, and the State University of Ghent 210; the Royal Academy of Fine Arts at Antwerp, 1,576 students. There were, besides the Antwerp Academy, 72 other academies of design and drawing schools, with 9,447 pupils; a Conservatory of Music at Brussels, with 675, and another at Liège with 789 pupils.

Nearly the entire population of Belgium is nominally connected with the Roman Catholic Church, at the head of which is the Archbishop of Malines, and five bishops. The other ecclesiastical benefices consisted, December 31, 1872, of 156 deaneries, 232 *cures* (parishes of the first class), 2,772 *succursales* (parishes of the second class), 180 chapels, 1,730 vicariates, 110 coadjutors, 29 annexes, 706 oratories and chapels of hospitals, colleges, etc. The number of religious communities of men, in 1866, was 178, with 2,991 inmates; that of religious communities of women, 1,144, with 15,205 inmates. The number of mutual aid societies recognized by the state was 98; their aggregate revenue, 207,203 francs; expenditures, 180,447 fr.; capital, December 31, 1871, 475,895 fr.; the number of mutual aid societies not recognized by the state is larger; capital, December, 1871, 511,692 fr.

In the budget for 1874, the receipts were estimated at 229,643,000 francs; the expenditures at 236,417,402, fr.; the public debt on May 1, 1874, amounted to 1,059,446,000 fr.

The number of electors registered for the year 1874-'75 was 111,135, or 2.11 per cent. of the population. The most numerous class of

electors were the agriculturists and farmers, who numbered 25,039. The literary men and journalists were the least numerous class, numbering only 69. Of chiefs of institutions, professors, and teachers, there were 1,120, of clergymen 2,738. The number of persons who were eligible for the Senate on account of their paying the 1,000 florins of direct taxes prescribed by Art. LVI. of the constitution was 453, or 0.086 per cent. of the population. The electors for the provincial assemblies numbered 219,619, or 4.180 per cent. of the population; those for communal elections, 347,441, or 6.613 per cent.

The number of teachers in primary schools was 10,629, of whom 7,032 were laymen and 3,597 members of religious orders, or clerics. The latter class has increased since 1851 by 1,098, the former only by 624. The schools for adults numbered 199,957 pupils, 9,219 more than in 1848, being 3.98 per cent. of the population. The aggregate expenditures made for primary instruction in 1874 were as follows:

National Government.....	6,643,415	17 francs.
Provinces.....	1,584,010	45 "
Communes.....	5,868,561	87 "

Total.....14,095,986 99 francs.

Of 43,311 men who were drafted for the militia in 1874, 8,727 could neither read nor write, 1,976 could only read, 15,726 could read and write, 16,228 had a higher education, and of 654 the degree of instruction was unknown.

The standing army is formed by conscription, to which every able-bodied man who has completed his nineteenth year is liable. Substitution is allowed. The legal term of service is eight years, but two-thirds of this time are generally spent on furlough. The strength of the army is to be 100,000 men on the war footing, and 40,000 in times of peace. On June 1, 1874, the actual number of soldiers under arms amounted to 37,391 rank and file, comprising 24,409 infantry, 5,114 cavalry, 6,331 artillery, 667 engineers, and 570 train. The civic militia or national guard numbers 125,000 men without and 400,000 with the reserve. Its duty is to preserve liberty and order in times of peace, and the independence of the country in times of war. A royal decree, dated October 20, 1874, divided the kingdom into two military circumscriptions, one embracing the provinces of Antwerp and West and East Flanders, and the second the others.

The condition of the merchant marine during the time from 1843 to 1873 is shown by the following table:

YEAR.	VESSELS.		TONNAGE.	
	Sailing-Vessels.	Steamers.	Sailing-Vessels.	Steamers.
1843.....	142	5	27,005	5,084
1852.....	160	5	35,012	1,812
1859.....	97	6	27,247	2,714
1865.....	113	8	39,729	4,220
1870.....	67	13	30,149	9,501
1872.....	59	19	33,846	16,141
1873.....	60	23	46,489	30,005

The commerce of Belgium during the year 1873 was as follows:

COUNTRIES.	Imports.	Exports.
1. EUROPE.		
France.....	385,600,000	380,100,000
Zollverein.....	157,900,000	248,800,000
Netherlands.....	179,000,000	182,000,000
Other countries of Central Europe.....	13,600,000	17,800,000
England.....	268,800,000	241,900,000
Russia.....	72,500,000	12,600,000
Other countries of Northern Europe.....	30,800,000	10,400,000
Countries of South Europe.....	48,100,000	64,000,000
2. AMERICA.....	804,500,000	49,500,000
3. ASIA.....	12,500,000	
4. AFRICA.....	4,900,000	2,000,000
Total.....	1,422,700,000	1,158,600,000

The aggregate length of the railroads in operation on January 1, 1874, was 3,370 kilometres (1 kilometre = 0.62 mile), of which 1,636 were state railroads, and 1,734 belonged to private companies. The aggregate length of the lines of electric telegraph was, in 1872, 4,430 miles; that of wires, 15,802; the number of telegraph-offices was, in 1871, 478.

Sir H. Barron, secretary of the British legation at Brussels, reports that the quantity of coal raised from the Belgian coal-fields in a year advanced in 1872 to the unprecedented amount of 15,658,948 tons, and the export of the coal to 5,630,197 tons. Many cargoes of Belgian coal were shipped to England, even to Newcastle itself. Sir H. Barron states that the coal-beds of Belgium, perhaps the main source of her wealth, are being rapidly consumed; that whatever coal is left at the end of another century must be raised at a vastly-increased expenditure of labor and life, and that this must ultimately put an end to the working of the mines. In his opinion the Government should endeavor to check the waste of the national capital, and he suggests that the preferential tariff on the state railway in favor of coal for export is impolitic, and that an export duty might well be imposed. He quotes Mr. McCulloch's opinion that the retention of the export duty on British coal (abolished in 1845) would not have materially affected the export, and that it would not be easy to show how a revenue of two or three millions a year could be raised with less inconvenience.

The most important event in the history of Belgium during 1875 was the diplomatic complication with Germany. On February 3d, the German ambassador in Brussels, Count Perponcher, presented to the Belgian Government a note from Prince Bismarck, complaining of several hostile demonstrations of Belgians against Germany. The first complaint was against the pastorals of the Belgian bishops in 1872 and 1873, and against some other publications by clerical committees offensive to the German Government and calculated to encourage the resistance of the German Ultramontane clergy, but without specifying any of these publications. The second complaint referred

to the Duchesne-Poncelot plot in 1873 against the life of the German Chancellor. That individual, in a letter addressed on the 9th of September, 1873, to the Archbishop of Paris, had offered to assassinate Prince Bismarck for a sum of 60,000 francs. He sent at the same time a cipher alphabet in order that no one might be able to understand the correspondence. A second letter, undated, was sent to the same prelate, the author inclosing a photograph, said to be of himself, and giving his address, "Duchesne-Poncelot, Rue Léopold, Seraing, Belgique." On the 21st of the same month, the writer again sent a communication to Mgr. Guibert, confirming his previous letter, and declaring himself ready for action. The archbishop placed the documents at once in the hands of the French Government, which transmitted them to the Belgian administration. Duchesne admitted having written the papers, being at the time drunk, and acting under the dictation of a friend, whose name he persists in concealing, for fear, as he states, of bringing that person into trouble. The third observation touched upon the address of several members of the so-called *Société des Œuvres Pontificales* to the Bishop of Paderborn. The Prussian note added: "It is scarcely possible that the laws of Belgium cannot enable the Government to stop undertakings which might alter its relations with neighboring states. Neutral states which wish to preserve the advantage of their position should carefully avoid anything which might alter that principle of neutrality which is the basis of their existence. If Belgian laws do not contain the authority necessary to obtain the legitimate satisfaction claimed by the German Government, the latter hopes Belgium will supply the deficiency by fresh legislation."

The answer of the Belgian Government to this note is dated February 26th. It reminds the Berlin Government that the pastoral letters were published long ago, that they are forgotten, and that they were coeval with the commencement of the struggle between Germany and the Pope. As to the address to the Bishop of Paderborn, the *Comité des Œuvres Pontificales* has disavowed it. It was the work of individuals, and not of an organized society. With regard to the Duchesne plot, the Belgian Government reminds the German Government that it had thanked the Belgian authorities for what they had done in the matter, and that, moreover, investigations were still being pursued with regard to it. The Belgian answer adds that the Belgian laws suffice for the suppression of all offenses, but that offenses of intention cannot be repressed, and that no law in any country affects them. Protesting against certain attacks in the German note, the Belgian Government draws attention to the fact that the liberty which Belgium enjoys is, as it were, drawn from the very vitals of the nation, that the attitude of the Belgian people has always excited general admiration, that it

has given an example of liberty allied to order, and that it has powerfully contributed to the establishment of the *juste parlementarisme* adopted by nearly all the states in Europe. The good sense of the Belgian people had correctly gauged the theories of the International which had been openly preached to it. "Independent and neutral Belgium has never done anything, despite the incessant intercourse between two countries whose frontiers join, which could alter its relation with a nation both friendly and which guarantees its independence." The Belgian reply then concludes with some friendly formulas.

The German Government communicated its note to the cabinets of London, Vienna, Paris, St. Petersburg, and the Hague, but received an answer only from Lord Derby, intimating that Belgium would hardly be in condition to comply with the wish of Germany for a change of its legislation. An interpellation in the English House of Commons did not elicit a satisfactory reply, as the diplomatic communication was regarded as confidential.

Prince Bismarck replied to the Belgian note on April 15th. The reply cites no fresh facts. It descants on the principles of international law involved in the discussion, and expresses the hope that Belgium will seize the opportunity to dissipate the impression that Germany intended to attack the liberty of the press in Belgium. The Belgian Minister of Foreign Affairs announced the receipt of the new note to the House of Deputies on April 16th, and said that in addition to this correspondence, courteous verbal explanations had been exchanged with the German representative; and, in conclusion, he assured the Chamber that the Belgian Government sincerely desired to strengthen good relations with Germany. The answer of Belgium to the German note of April 15th was dispatched on April 30th. It is courteous in tone, merely takes notice of Germany's action in regard to the revision of the penal laws, and in no way returns to the subjects of the first reply, except to reserve for a future time the adoption of a resolution in accordance with the friendly declarations contained in that reply.

On May 7th and 8th the Chamber of Deputies debated the last vote of the Belgian Government. M. Frère-Orban, the leader of the Liberal party, was the principal speaker. He approved the terms of the last answer to Germany. He considered that all grounds for apprehension respecting the independence of the country, the integrity of its institutions, and the liberty of the press, had disappeared. At the same time the neutral position of Belgium did not exonerate her from obligations to her neighbors. It was a question whether the Government had done its duty to Germany in the Duchesne affair. The Minister of Justice denied that the Government had been inactive in prosecuting the investigation. After a protracted debate, the Chamber adopted a resolu-

tion, expressing entire approval of the declarations of the ministry, and concurrence in the regret expressed by the ministers in regard to the occurrences complained of by Germany.

On May 21st, the tribunal at Liège, which had the alleged plot to assassinate Prince Bismarck under investigation, dismissed the charges against Duchesne. All the papers in this case were, on May 23d, handed to the German ambassador, with a note explaining that the investigation was exhaustive and nothing had been discovered beyond the letters which had already been published, and which did not bring Duchesne within the scope of any penal codes. The note added that the Government would propose an amendment to the law, by which proposals of murder would be made punishable the same as threats.

On May 25th the Senate had a long debate on the diplomatic correspondence between Belgium and Germany. A resolution was proposed declaring that the House completely approved of the explanations given by the Government, and passed to the order of the day. This resolution was unanimously adopted. In the course of the debate a Liberal member expressed the opinion that the charges put forth by Germany were not of a serious nature. He regretted, at the same time, the language used by the Belgian bishops, and protested against the statement that Belgium felt more sympathy for France than for Germany. M. Malou, the Minister of Finance, announced that a bill would be presented, rendering penal such acts as those with which Duchesne was charged.

On June 23d the Count d'Aspremont Lynden, Minister for Foreign Affairs, read in the Chamber of Deputies the note communicated by Count Perponcher, the German minister at Brussels, in which Prince Bismarck replies to the Belgian note of the 23d May. The prince expressed his thanks for the careful investigation made by the Belgian Government in the Duchesne affair, and for the intimation that it proposed to complete its penal legislation. "This," continues Prince Bismarck, "has given great satisfaction to the Emperor, who anticipates that the simultaneous discussion of similar legislative measures in Germany and Belgium will have a salutary effect upon the public conscience. His Majesty also hopes that, should there be any renewal of attempts on the part of Belgian subjects to intervene in German internal questions, they will be dealt with in the same conciliatory spirit of which the Belgian Government in the Duchesne affair has given proof so strongly meriting our gratitude." The bill authorizing the punishment of mere proposals for the commission of crime was then discussed. The bill was supported by some deputies, while others advocated various amendments. M. Guillery moved an amendment restricting its provisions to attempts at assassination. The Minister of Justice, M. d'Antheure, made a speech, in which he dwelt upon the necessity for passing the

bill, and cited a case now pending before the Assizes of Hainault which would have necessitated the introduction of the present measure even if occasion had not been furnished for it by the Duchesne affair. M. Bara argued that the bill was due to political circumstances, and he opposed the extension the Government proposed to give to the measure. On June 23d the Chamber passed the bill by 75 yeas against 6 nays.

The Minister of Foreign Affairs, though, like all the members of the cabinet belonging to the Catholic party, gave, in January, deep offense to one section of his party. The question was raised in Parliament as to the desirableness of retaining the Belgian embassy to the Pope. The minister argued in favor of retaining it, but one of his reasons was that the legation offered an opportunity of letting the Pope know that "the opinions of Belgium are not those of all the persons who repair to Rome." Some of the provincial Catholic papers in Belgium and France severely criticised the remark of the minister.

An animated debate was caused in the Chamber of Deputies on April 19th by an interpellation relative to the military honors which, it was announced, would be rendered to the newly-appointed cardinal, Archbishop Deschamps, of Malines, on the occasion of his solemn entrance into the city of Malines. The author of the interpellation, H. Jottrand, a member of the Left, warned the Government against the continuance of this relic of French legislation, as the archbishop, by such an act, would be recognized as an officer of the State, and the Government would become responsible for all his acts, a responsibility which, in view of the diplomatic complication with Germany, involved great danger. The Minister of War and the Prime-Minister defended their conduct by referring to several precedents.

The official subornation of the press was made, in May, the subject of an interpellation by M. Bara. He produced in the Chamber of Deputies a receipt for two hundred francs paid to M. Coomans, a prominent member of the Right, and editor of an influential journal, for the insertion of an article strongly attacking the opposition, accompanied by a ministerial *résumé* of the financial situation. He demanded an explanation. The Minister of Finance, M. Malou, candidly admitted that the transaction was indefensible, and had been sanctioned without sufficient consideration. He added that he had reimbursed the Treasury. M. Coomans attempted an explanation, which was received with shouts of laughter. He said he believed a similar statement and payment had been received by all journals. M. Bara made some severe remarks upon the transaction, and hinted that this was not the only charge of the same description he might have to make. The incident excited the greatest interest, and thousands of the public were unable to gain admission to the galleries set

apart for their use. The session of the Chambers closed on July 3d.

In October, elections were held throughout the country, for half the members of the communal councils. The Liberal majority was overthrown at Bruges, Malines, Audenarde, and Spa, and the Catholics suffered similar reverses at Namur. In the other communes, the elections caused no change in the composition of the councils. The Catholic candidates were reelected in Aerschot, and the Liberals in Brussels, Louvain, Verviers, Mons, Ostend, and Diest.

The Belgian Chambers were opened, on November 9th, without a speech from the throne. On November 17th the Government was asked, in the Chamber of Deputies, for information on the sale of arms and war-material by the military authorities at Charlevoix, and the fear was expressed that these sales might lead to diplomatic difficulties. The Minister of Finance, Malou, admitted that the subject deserved to be taken into consideration, though he did not believe that the arms had been purchased for any unlawful purposes. The laws contained no provision relative to the subject, but the Government had resolved to submit to the Chamber a bill for regulating such sales in future.

At a supplementary election of a member of the Chamber of Deputies, held at Ghent on November 23d, the candidate of the Liberal party, Burgomaster de Kerckhove, of Ghent, was elected by a majority of two hundred votes. His predecessors belonged to the Catholic party.

The Brussels Court of Appeals, in May, gave judgment in an important lawsuit. The late Mademoiselle Deneef had been induced to bequeath her immense fortune to the Jesuits. The court decided that the will was not valid, and that the fortune must go to the legitimate heirs. It was reported that the Jesuits had offered the sum of three million francs to some of the legitimate heirs if they would not go to law.

Another interesting trial involved the question, "What constitutes an insult to religion?" The authorities prosecuted the student at the training college at Huy who, after receiving the consecrated wafer, took it out of his mouth, pocketed it, and, after discussing with his comrades what should be done with it, ate it in a cake. His counsel contended that the constitution recognized no state religion, the supernatural character of the wafer could not be acknowledged, and that such an act did not come within the terms of the law on insults to religion. The public prosecutor called for a sentence of eight days' imprisonment, but the court inflicted fifteen days' imprisonment, together with a fine, and the costs of the prosecution.

The bitter feeling which exists between the Catholic and Liberal parties on religious questions led to several disturbances of the peace.

On May 23d the ranks of a religious procession in Brussels were broken up *en route* by the populace, and the police charged the crowd with drawn swords. About ten arrests were effected. The persons composing the procession took refuge in the adjoining houses, and subsequently dispersed. The burgomaster was present. Some further slight demonstrations on the part of a small number of students occurred in connection with the intended pilgrimage, which was not held as contemplated. Shouts were raised in front of the various monasteries. The month of May, or the month of Mary, as it is called in the Roman Catholic Church, is that usually selected for the religious processions which, since the defeat of M. Frère-Orban's administration, and the entry of the Catholic party into power, have obtained a sort of semi-official recognition. In the days of the Liberals they were tolerated only, but during the last four or five years they have frequently demanded, and received, the support of the civil authorities, to the great disgust of a large portion of the population of the great towns. This year this feeling was intensified by the incident of the recent diplomatic correspondence with Germany, produced, in the opinion of the Liberals, by the fiery zeal of some of the Ultramontane champions; and, while the Catholics seemed bent on increasing the number and importance of their demonstrations, their adversaries were inclined to meet them at least half-way, possibly in the hope of bringing discredit upon the movement.

Similar disturbances occurred at Ghent. A wealthy lady at Oostacker, near Ghent, had constructed on her property a sort of aquarium in cement, imitating the grotto of Lourdes. This aquarium became at once the resort of many pilgrims, as the water was believed to possess miraculous properties. A pilgrimage on a very large scale was organized to visit the aquarium, but its real object the Liberals believed to be to make a manifestation in the town of Ghent. The Burgomaster of Ghent had taken the precaution to forbid the entry of the pilgrims into the interior of the town. They were, after their arrival at the respective termini, to take the outer boulevards to go to Oostacker. On the return of the pilgrims in the evening their total number was estimated at 20,000. A great *mêlée* occurred between them and the people not believing in the miraculous aquarium, and one of the Ghent journals estimates the number of people who were more or less seriously hurt at about 1,000.

Another religious disturbance was caused in Brussels on June 1st, by some students of the Athenæum who blew out the candles which were lit at the windows of several houses in honor of the passage of the *viaticum*, borne by priests to the sick. A number of women, who witnessed this proceeding, attacked the students and the latter fled. The police inter-

ferred, and the scuffle was unattended by any important consequences. Throughout the day, however, there were large assemblages of people in the streets, and the crowd took up a threatening attitude, standing armed with sticks in front of the Athenæum. The students, on leaving, had to be escorted by the police. In the evening the crowd was immense. The streets were guarded and barred by detachments of police. The windows of the Athenæum were broken, and there were individual fights in different places. The burgomaster and sheriffs were present on the scene, and it was reported that several arrests were made.

On May 24th an International Conference between Great Britain, France, Holland, and Belgium, was opened at Brussels, with the view to the abolition of bounties on the exportation of sugar. The representative of the French Government, who was called upon first, declared the intention of France to sustain the system of excise in the refineries as being the surest protection against frauds. He presented a scheme upholding this view. The Dutch and Belgian representatives next gave their opinions. Holland, although disposed to accept the French plan, would alter some of the conditions, and reserved the right of pointing out certain measures which, without interfering with the industry of the country, would be equally useful in protecting the Government against fraud. The Belgian Government peremptorily rejected the excise system, as much from a political as from an economical point of view; but at the same time it pointed out several plans which, in its opinion, would be just as efficacious against fraudulent practices. England, having abolished the sugar duties, supported the excise system, which is energetically demanded by British sugar-refiners, who hope to find in it the best remedy against the export bounties, to which practice the increased competition of foreign refiners is mainly due. The differences of opinion expressed at the conference bear upon the means of control to be employed in order to make competition among the four countries as fair as possible. There was a unanimous feeling in favor of coming to an international understanding on the subject. The Governments have shown themselves ready to examine all systems likely to lead to this result.

Belgium lost, in 1875, one of her most distinguished men, by the death of M. d'Omalino d'Halloy. He was born at Liège on the 16th of February, 1783, and was already, in 1815, governor of a province, and afterward a counselor of state under the Dutch Government. In 1848 he entered the Belgian Senate, of which he was for many years a vice-president. Politically he belonged to the Liberal Catholics of the old school, who believed the dogmas of their Church to be reconcilable with modern civilization. As a man of science he acquired, however, much greater eminence than as a

politician. By his numerous works on geology, of which the first was a remarkable "Geological Description of the Countries situated between the Pas-de-Calais and the Rhine," published in 1808, he became one of the founders of that science. Many other works relating to statistics, physics, ethnography, and other branches of science, testify to his unceasing labor and wide range of knowledge. At the Anthropological Congress held at Brussels in 1872, he acted as president, and the members of that Congress were surprised at the astonishing activity of mind and body which he then still possessed. He was a member of the Belgian Royal Academy, a correspondent of the French Academy of Sciences, a member of the Geological Society of Paris, and a grand-officer of the Order of Leopold. His death leaves a void in the ranks of Belgian men of science, of whom, next to the late M. Quetelet, he was probably the most eminent and most widely known.

BELOOCHISTAN, a country of Asia, bounded north by Afghanistan, east by British India, south by the Indian Ocean, and west by Persia. The government is under several rulers, of whom the Khan of Kelat is the most prominent. After deducting the territory in the west, which has been ceded to Persia, the area amounts, according to the latest calculations, to 106,750 square miles. The population was estimated by Dieterici in 1859, under the supposition of a density of twelve inhabitants to the square mile, and an area of 165,800 square miles, at about 2,000,000. For an area of 106,750 square miles the same density would give a population of only 1,250,000. Major-General Obruches, however, estimates the total population in 1868 at only 1,000,000, which gives a density of about nine to the square mile. According to Major Ross ("Proceedings of the Royal Geographical Society," vol. xvi., 1871-'72, p. 139), the most densely populated part of Beloochistan seems to be a strip of land extending twelve miles through Mekran from east to west, and including Kedj. Kedj, with an area of thirty-six square miles, has 10,000 inhabitants. In Saharawan (five to one square mile), Dsh'halawan (1.5 to the square mile), in Lus, and on the coast, the density of population is very low. Since 1843, the year in which the province of Sind was annexed to British India, the security of the border toward Beloochistan could only be gained by the erection of numerous strong outposts, on the narrow strip of land near the border, which for miles was covered with low underbrush. The troops for these posts were partly obtained from the police force, and partly by the formation of a body of irregular cavalry, called the Sindriders. Among the strongest of these outposts are Sunri and Guranari. After the conquest of the Sikhs in 1849, each tribe was held strictly responsible for any robberies committed by any one of the tribes. The chiefs were forced to appoint guards for the frontier, which

were supplied with arms and were paid by the Indian Government. To make sure of their faithfulness, detachments of Indian troops and former non-commissioned officers of the Indian army were distributed among them, who were rewarded with patents as officers in the militia. This mixture with Indian troops, however, did not work well. The princes regarded the matter more as a form, and appointed old men or faithful servants to the militia, who were anything but soldiers. An improvement was made in 1871. Instead of the princes of the entire tribe the chiefs of the border tribes are now the leaders, and the entire population able to bear arms are enrolled in the militia. Inspections are held, and an English general with his staff has command. Several regiments of Indians specially enlisted for this purpose, with five batteries and sixteen guns, are added to the militia. In 1873 these troops numbered 12,416 men, 146 Europeans held officers' positions, and the expenses amounted to about \$1,800,000.

The latest differences between the Khan of Kelat and the Indian Government are explained as follows: In November, 1872, the Khan was called before the Viceroy, Lord Northbrook, when he was traveling through the province of Sind. But in spite of the brilliant reception which was given him by the English officers, the Khan retained the impression that it was only the first step toward his deposal. In this opinion he was strengthened when, in February, 1873, he was forced to pay \$30,000 as an indemnification for the robbery of some Indian merchants in the Bolan Pass, and still more so when at a personal interview with the Governor of Sind he was demanded of him to dismiss his chief counselor, who was hostile to the British. This demand the Khan did not accede to, but on the contrary treated Major Harrison, the British agent at his court, with such marked rudeness, that the Indian Government recalled its agents, and withheld the annuity of \$25,000 regularly paid since 1854. They furthermore ordered the authorities on the border to observe a strict neutrality, while formerly they assisted the Khan with advice and even with troops, if a subordinate chief had collected a large retinue around him. In consequence of these measures, the anarchy increased, but, contrary to expectations, produced disorders in the British territory. In February, 1874, a band of 200 Brahni rushed with such impetuosity into the middle of Sind in pursuit of fugitive slaves, that they had taken their slaves, with their families and their property, across the border, before the guards had been alarmed or ready for pursuit. The Indian Government demanded of Kelat the extradition or the punishment of the robbers, but in answer to repeated demands received only evasive replies. The reason for this the British agent who returned last sees in the impotence of the Khan. His report is as follows: "The prince is actually not able to call the robbers to ac-

count, and the country must in a very short time become a prey to the worst kind of anarchy. Even now we can hardly speak of a government in Kelat or in any part of Beloochistan; the body-guard of the prince have for some time been in arrears with their pay, and are in consequence arrogant toward the taxpayers, and mutinous toward the Khan. The high dignitaries of the country are everywhere ready to fight for or against their sovereign, but like him want the means for any larger undertaking. The prince is surrounded by bad counselors, and is neither able nor willing to bring back any tribe to order or obedience." In Indian governmental circles it is very deeply felt that the robbers of the previous year still boast of their impunity, and at the same time incite others to like deeds. The border police had all along been considered excellent, and a few regiments of native cavalry were deemed sufficient to protect the border as long as the neighboring prince could control his subjects; but recently it has proved itself decidedly insufficient. The border is becoming more unsafe, inroads of armed bands are increasing, and commerce has ceased entirely. According to the official report of 1873-'74, for the province of Bombay, the number of the military police has been increased on the border, but the concentration of troops announced some time ago has not yet taken place.

BERNARD, WILLIAM BAYLE, dramatist, born in Boston, Mass., in 1808; died in London, in August, 1875. He was the son of a popular English comedian, and prepared for the press his father's "Recollections of the Stage." He was the author of many popular plays, the best known of which are, "The Nervous Man and the Man of Nerve," "The Irish Attorney," "His Last Legs," "The Boarding School," and "Life's Trials."

BERNHARDY, GOTTFRIED, an eminent German philologist, born March 20, 1800; died May 18, 1875. He received his education in the Joachimsthal Gymnasium in Berlin, and the university of the same city, which he entered at seventeen years of age. From 1823 to 1829 he was professor in Berlin, and in the latter year he went as professor to the University of Halle, where he remained up to his death. In 1844 he was appointed chief librarian of the University Library, and in 1862 was created "Geheimer Regierungsrath." During his stay in Berlin he published two of his larger works, "Geographi Græci minores" (Leipzig, 1828), of which, however, only the first volume has ever been issued; and "Wissenschaftliche Syntax der griechischen Sprache" (Berlin, 1829). Among his later works the most important are: "Grundriss der römischen Literatur" (Halle, 1830); "Grundriss der griechischen Literatur" (2 vols., Halle, 1836-'45), and an edition of "Suidas" (4 vols., Halle, 1834-'53). These three works principally have raised him to the foremost ranks of modern philologists.

BINNEY, HORACE, born in Philadelphia, January 4, 1780; died August 12, 1875, at the age of 97. He received his education at Harvard University, where he was graduated in 1797, at the age of seventeen, and where he divided the first honors with the late Judge White, of Salem, Mass. He studied law in the office of Jared Ingersoll, Esq., and was admitted to the bar in 1800, after three years' study, and before he was of age. Devoting himself to the hard work of his profession, he soon gained a foothold in the courts, and gradually rose to the head of the Philadelphia bar. Several times he was offered a position on the bench, but always declined such honors. He took a leading part in nearly all the most important cases. In 1843 he made his last appearance in court in the celebrated case of *"Vidal vs. The Mayor of Philadelphia,"* before the United States Supreme Court. The issue involved the validity of the will of the famous Stephen Girard. Mr. Binney's argument in favor of the validity of the will is often cited as an authority by American and British jurists. He took a prominent part in politics, and was, as early as 1806, elected a member of the Legislature. In 1832 he was elected a member of Congress from Philadelphia, as an opponent to the Democratic Administration. He only served from 1833 to 1835, and declined a reelection. About this time he also figured in connection with the old United States Bank, as a director of which he served many years; and when its affairs were wound up he was one of the trustees to whom the task was intrusted. He took an early and heroic part in the antislavery agitation. His most important published work was his "Reports of Cases in the Supreme Court of Pennsylvania," in six volumes, from 1799 to 1814. It was begun in 1809 and ended in 1815. His celebrated argument in the Vidal case was published in 1844. He also gave to the public his "Eulogium on Chief-Justice Tilghman" (1827), and on "Chief-Justice Marshall" (1836); "An Inquiry into the Formation of Washington's Farewell Address" (1859); and "The Leaders of the Old Bar of Philadelphia" (1859). This last work included sketches of the professional character and career of only three persons—Lewis, Tilghman, and Ingersoll. At the time of his death, Mr. Binney was the oldest member of the bar of Philadelphia. Horace Binney, Jr., whose career as a lawyer and a man almost rivaled that of his father, died in February, 1870, at the age of sixty-two.

BLAINE, JAMES GILLESPIE, was born on January 31, 1830, in Washington County, Pa. His mother was a member of the Catholic Church, to which his father also became a convert. They had five sons and two daughters who were reared in the faith of their parents. James, the eldest, was for a short time a teacher at the South, and afterward became an editor and removed to Maine, where he conducted the *Kennebec Journal* and *Portland*

Advertiser, for several years. He was a member of the State Legislature for four years, two of which he was Speaker of the Lower House. In 1862, he was elected to Congress as a Representative from Maine, and has been reelected at every subsequent term. He has served on various important committees, as those of Post-Office and Post-Roads, Military Affairs, on the death of President Lincoln, war debts of the States, Appropriations and Rules. In the Forty-first, the Forty-second, and the Forty-third Congresses he served as Speaker of the House of Representatives. He was re-elected to Congress at the last congressional election in his State, by a majority of 2,830 votes. During this year Mr. Blaine took the occasion of the election in Ohio to express his views on an amendment to the Federal Constitution relative to religion and public schools, in a letter to a prominent citizen of Ohio, as follows:

AUGUSTA, ME., October 20, 1875.

MY DEAR SIR: The public-school agitation in your late campaign is liable to break out elsewhere; and, occurring first in one State and then in another, may keep the whole country in a ferment for years to come. This inevitably arouses sectarian feeling and leads to that bitterest and most deplorable of all strifes, the strife between religious denominations. It seems to me that this question ought to be settled in some definite and comprehensive way, and the only settlement that can be final is the complete victory for non-sectarian schools. I am sure this will be demanded by the American people at all hazards and at any cost.

The dread of sectarian legislation in this country has been felt many times in the past. It began very early. The first amendment to the Constitution, the joint product of Jefferson and Madison, proposed in 1789, declared that "Congress shall make no law respecting an establishment of religion, nor prohibiting the free exercise thereof." At that time, when the powers of the Federal Government were untried and undeveloped, the fear was that Congress might be the source of danger to perfect religious liberty, and hence all power was taken away from it. At the same time the States were left free to do as they pleased in regard to "an establishment of religion," for the tenth amendment, proposed by that eminent jurist, Theophilus Parsons, and adopted contemporaneously with the first, declared that "all powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

A majority of the people in any State in this Union can, therefore, if they desire it, have an established Church, under which the minority may be taxed for the erection of church-edifices which they never enter and for the support of which they do not believe. This power was actually exercised in some of the States long after the adoption of the Federal Constitution, and, although there may be no positive danger of its revival in the future, the possibility of it should not be permitted. The auspicious time to guard against an evil is when all will unite in preventing it.

And in curing this constitutional defect all possibility of hurtful agitation on the school question should be ended also. Just let the old Jefferson-Madison amendment be applied to the States by adding the following to the inhibitory clauses in section 10, Article I, of the Federal Constitution, viz.:

No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof; and no money raised by taxation in any

State, for the support of the public schools or derived from any public fund therefor, shall ever be under the control of any religious sect, nor shall any money so raised ever be divided between religious sects or denominations.

This, you will observe, does not interfere with any State having just such a school system as its citizens may prefer, subject to the single and simple restriction that the schools shall not be made the arena for sectarian controversy or theological disputation. This adjustment, it seems to me, would be comprehensive and conclusive, and would be fair alike to Protestant and Catholic, to Jew and Gentile, leaving the religious faith and the conscience of every man free and unmolested. Very sincerely yours,

J. G. BLAINE.

The journal formerly conducted by Mr. Blaine, in the State of Maine, in commenting upon this letter, makes the following statement:

The form and substance of Mr. Blaine's proposition seem to be comprehensive and satisfactory. Its terms do not require the States to modify their public school systems, nor make them conform to any stated model; it simply forbids the introduction of sectarian controversy of every nature by providing that no part of the public funds for school purposes shall be used for sectarian purposes or divided among religious sects. The issue is now before the country. There is no question about that. It is better that it should not be a party issue, and the Democratic Congress can keep it out of politics by adopting and acting upon the suggestion which Mr. Blaine has made. If the Democratic Congress, with the full nature of the controversy confronting it, fails to show a sufficient patriotism to propose an amendment making a final disposition of the danger, then the Republican party will no longer hesitate to add this to the other boons it has conferred upon the American people, and it will be a conspicuous issue of the presidential campaign of 1876.

BLEEK, WILHELM HEINRICH EMMANUEL, an eminent philologist, born March 8, 1827; died August 17, 1875, in Cape Town. He attended the gymnasium at Bonn, entered the university at the same place in 1845, and in 1848 that of Berlin. Having been led by various circumstances to a particular study of the South African languages, he wrote a dissertation in 1851 in which he attempted to show the northern origin of the Hottentot language. In 1855 he went in company with Bishop Colenso to Natal, and during his stay there he explored the interior of the colony as well as the adjoining country of the Kaffres, in order to study the language and customs of the natives. In the fall of 1856 he went to Cape Town, where he received an appointment from the Governor, Sir George Grey, which enabled him to continue his studies on the languages of Africa, Australia, and Polynesia. When Sir George Grey left for New Zealand, he presented his valuable library to the colony, and Dr. Bleek was appointed librarian of it. His most important works are, a "Comparative Grammar of South African Languages," of which the first volume appeared in 1862, but which he did not finish; a "Vocabulary of the Bushmen Language," which he also left unfinished; "De nominum generibus linguarum Africæ Australis;" "Reynard the Fox in South Af-

rica; or, Hottentot Fables and Tales" (London, 1864); and a "Handbook of African, Australian, and Polynesian Philology" (3 vols., London, 1858-1863).

BOKHARA, a khanate in Central Asia. In virtue of the treaty concluded between the Khan of Bokhara and the Emperor of Russia on September 28, 1873, a portion of the territory on the right bank of the Amoo Daria which the Khan of Khiva had to cede to Russia, was transferred to Bokhara. According to the latest dates (Behm and Wagner, "Bevölkerung der Erde," vol. iii., 1875, p. 99) the area of the khanate was estimated at 83,980 square miles, and the population at 2,286,000.

The following is the text of the treaty between Bokhara and Russia, which virtually establishes a Russian protectorate over Bokhara:

CLAUSE I. The frontiers between the possessions of his Imperial Majesty the Emperor of all the Russias and his Worship the Amir of Bokhara remain unchanged.

The Khivese territory on the right bank of the Amoo, having been embodied with the Russian Empire, the former frontier between Khiva and Bokhara, from the Oasis of Kholat to Gugertli, is altered in this wise: The possessions of the Amir of Bokhara are augmented by the addition to them of the land between the former Khiva-Bokhara frontier on the right bank of the Amoo, from Gugertli to Meschekli, and from Meschekli to the point where the former Khiva-Bokhara frontier met the frontier of the Russian Empire.

CLAUSE II. In consequence of the right bank of the Amoo being severed from Khiva, the caravan roads going from Bokhara north to the Russian possessions traverse Bokharese and Russian territory exclusively. The Russian and Bokharese Governments, each in its own territory, will watch over the safety of these caravan roads and the commerce along them.

CLAUSE III. Russian steamers and other vessels, whether belonging to the Government or to private persons, will have the right to navigate, without let or hindrance, the Bokharese portion of the Amoo, equally with Bokharese ships.

CLAUSE IV. Any locality on the Bokharese banks of the Amoo, which the Russians may select for the construction of piers or storehouses, may be used by them for this purpose, the Bokharese Government being responsible for the safety of the erections thus established. The final and definite selection of these erections depends upon the supreme Russian authorities in Central Asia.

CLAUSE V. All the towns and villages of the khanate of Bokhara will be open to Russian commerce. Russian merchants and caravans will be allowed to travel freely in the whole khanate, and will enjoy the special protection of the local authorities. The safety of the Russian caravans on Bokharese territory is expressly guaranteed by the Bokhara Government.

CLAUSE VI. On all merchandise belonging to Russian traders, whether imported from Russia to Bokhara, or from Bokhara to Russia, an *ad valorem* tax of 2½ per cent. will be levied in Bokhara. In the Russian province of Toorkistan the goods mentioned in the preceding sentence are to pay a tax amounting to one-fortieth of their value. No other tax, duty, or impost, whatsoever, will be levied upon merchandise of the description mentioned.

CLAUSE VII. Russian merchants will be entitled to send their goods through Bokhara free of transit dues.

CLAUSE VIII. Russian merchants will be entitled to have caravansaries for the storing of merchandise

all Bokharese towns. The same right is accorded to the Bokharese merchants in the towns of the province of Toorkistan.

CLAUSE IX. The better to direct the course of commerce, insure the levying of the above tax, and regulate their relations with the local authorities in mercantile matters, Russian merchants are accorded the right of keeping commercial agents in all towns of the khanate. The same right is accorded to the Bokharese merchants in the towns of the province of Toorkistan.

CLAUSE X. Commercial engagements between Russians and Bokharese must be considered as sacred, and be unconditionally carried out by both parties. The Bokhara Government promises to look after the honest fulfillment of commercial engagements, and the fair and conscientious conduct of commercial affairs generally.

CLAUSE XI. Russian subjects will enjoy an equality of right with Bokharese subjects in carrying on Bokharese territory all branches of industry and handicraft allowed by the law of Sharikat. A corresponding right is accorded to Bokharese subjects in Russian territory, with regard to the exercise of trades and handicrafts permitted by the Russian

CLAUSE XII. Russian subjects are permitted to possess houses, gardens, arable land, and every species of real property in the khanate, such property being subject to the land-tax assessed on Bokharese property. A corresponding privilege is accorded to Bokharese subjects in the whole territory of the Russian Empire.

CLAUSE XIII. Russian subjects are admitted to the Bokharese territory when provided with permits issued by the Russian authorities. They may travel freely in the whole khanate, and are placed under the special protection of the Bokharese authorities.

CLAUSE XIV. In no case will the Bokharese Government receive on Bokhara territory persons arriving from Russian territory, whatever nationality they may belong to, unless provided with a special permit duly and satisfactorily signed by the Russian authorities. If criminals who are Russian subjects would take refuge on Bokharese territory, they will be arrested by the Bokharese authorities, and delivered to the nearest Russian authorities.

CLAUSE XV. With a view to the maintenance of direct and permanent relations with the supreme Russian authorities in Central Asia, the Amir of Bokhara will appoint one of his intimate counsellors to be his resident envoy and plenipotentiary at Tashkent. This plenipotentiary will live at Tashkent in the house and at the expense of the Amir.

CLAUSE XVI. If it chooses to do so, the Russian Government may keep a permanent representative at Bokhara, attached to the person of his Worship the Amir. As the Amir's representative at Tashkent, so the Russian plenipotentiary at Bokhara will live in the house and at the expense of the Russian Government.

CLAUSE XVII. To please the Emperor of all the Russias and enhance the future glory of his Imperial Majesty, his Worship the Amir Seid Mustafar, of Bokhara, has determined as follows: The traffic in human beings, being contrary to the law which commands man to love his neighbor, is abolished forever in the territory of the khanate. In accordance with this resolve, the strictest injunctions will be given by the Amir to all his beys to enforce the new law, and special orders will be sent to all border towns where slaves are transported for sale from neighboring countries that, should any such slaves be brought there, they shall be taken from their owners and set at liberty without loss of time.

CLAUSE XVIII. His Worship the Amir Seid Mustafar, being sincerely desirous to strengthen and develop the amicable relations established five years ago for the benefit of Bokhara, approves and accepts for his constant guidance the above seventeen

clauses, constituting an agreement relative to the friendship between Russia and Bokhara. This agreement has been made out in two copies, each copy in the two languages, Russian and Turkish. In proof of his having sanctioned this agreement and accepted it for his own guidance, as well as for the guidance of his successor, the Amir Seid Mustafar has affixed to it his seal.

Done at Shaar on the 28th of September, 1873, A. D., being the 19th day of the month of Shayban of the year 1290, A. H.

LADY AND GENTLEMAN OF BOKHARA.

On the relations of Bokhara with Russia Sir H. Rawlinson, in his new work on "England and Russia in the East" (London, 1875), makes the following remarks:

No one questions but that the general feeling at Bokhara is intensely hostile to Russia, and that the Amir has had, and still has, the utmost difficulty in preventing his subjects from breaking out and declaring a holy war against the infidels. Repeated rumors, indeed, have been circulated of the intention of Muzaffer-ed-din to abdicate in favor of his son—wearied of the perpetual conflict between his feelings and his interests, and despairing of the future of his country; and it is not at all improbable that such may be the result of the pending troubles at Bokhara; but a revolution of this nature, unless accompanied with direct outrage upon the Russians, will hardly precipitate their occupation of the khanate. It is indeed so manifestly to their advantage to procrastinate until their lines of communication are completed that no amount of mere provocation will probably induce them at present to interfere. By retaining in their hands a complete command of the water-supply of Bokhara as well as by exhibiting an imposing military force upon the Samarcand frontier, they are enabled to control the Government almost as effectively as if they maintained a garrison in the capital city, while at the same time they avoid the expense as well as the dangers of occupation. But it is well understood that this vicarious government cannot be permanent. As soon as there is rapid and direct communication between the Caucasus and Toorkistan, a Russian governor-general will take the place of the Amir, and then, if we may judge by our own Afghan experience, the Russian

difficulties will commence. On one side the military expenses will be prodigious, with a very poor set-off from trade or revenue; on another side the friction and irritation which must arise from the Russian soldiery being brought into daily contact with a fanatical Mohammedan population will neutralize all efforts at improvement, and finally Russia will find the mountaineers of Hissar and Dehinion and Shahz-i-Sebz at least as impatient of control as her old enemies the Lesghians and Daghestanees, and insurrection will thus be chronic along the southern frontier.

BOLIVIA (REPÚBLICA DE BOLIVIA), an independent state of South America, extending from latitude 10° to 24° south, and from longitude 57° 25' to 70° 30' west. Its boundaries are, on the north and northeast, Brazil; on the south, the Argentine Republic and Chili; and on the west, the Pacific Ocean and Peru. (For the territorial divisions, area, population, etc., see the *ANNUAL CYCLOPEDIA* for 1872, as no official statistics on these points have been published since that time.)

A treaty of limits, concluded with Chili in 1874, met, while under discussion in Congress, with determined opposition, especially in certain articles relating to the cession of a portion of territory to that republic; and in Cobiya a numerously-signed protest was made against it as "binding Bolivia to surrender a part of her liberty and her wealth to a foreign country." This protest had the effect of causing certain modifications to be proposed in the objectionable articles.

Serious disagreements were reported to have occurred in the second half of the year, between Brazilian commissioners and General Mejía, the Bolivian commissioner, appointed to dispose of the boundary question between the empire and the republic.

Señor Serapio Reyes Ortiz, President of the Council of State, was named, in August, to negotiate with the Argentine special envoy, then in Sucre, on the boundary question still pending with the Argentine Republic, but he refused to accept the appointment.

The President of Bolivia is Dr. Tomás Frias, who was installed on February 14, 1874. The ministers of the various departments were as follows: Interior and Foreign Affairs, Dr. M. Baptista; Finance and Public Works, Dr. Prudencio Carvajal; Justice and Public Worship, Calvo (resigned in April); and War, General Hilario Daza.

The metropolitan archbishop is Dr. P. J. Puch y Solona (elevated 1861), with the following bishops: of La Paz, Dr. Juan de Dios Bosque (1874); of Santa Cruz de la Sierra, F. X. Rodriguez (1870); and of Cochabamba, F. M. del Granado, titular Bishop of Troy *in part*.

The Bolivian consul-general in New York is Señor Don T. Pol.

The standing army comprises eight generals, some 400 superior and 700 subaltern officers, with not over 2,000 men. Nevertheless, the annual expenditure for the army seldom falls below \$2,000,000.

The national revenue, though set down in

official reports at about \$3,000,000, has been reported to amount to about \$7,500,000.

The expenditure was given at \$4,505,504 in the estimated budget for 1873-'74, and the revenue at \$2,929,574.

In the national debt is included an item—Colonel Church's loan of £1,700,000, negotiated in London in 1872—which is at present a subject of warm discussion in British financial circles, and the details of which are as follows: The loan is designated as the "Bolivian six per cent. of 1872;" the nominal amount was £1,700,000; the issue price, 68; interest, and sinking-fund, 8 per cent. per annum; and number of years to run, twenty-four. The net produce* to the borrower is set down at £1,156,000; the annual charge throughout, at £188,000; and the total cost to borrower, including capital repaid at redemption, at £2,235,440.

The following remarks formed a part of the second report of the "Corporation of Foreign Bondholders on South American States," published in 1875:

The events of the past year have brought no satisfaction to the holders of Bolivian bonds.

The committee, who act independently of the council, having thought it desirable to institute proceedings in chancery, the judgment of the *Master of the Rolls* was rendered on the 11th December, 1874; he decided that the National Bolivian Navigation Company and the Madeira & Mamoré Railway Company, Limited, were entitled to apply the United States bonds vested in the name of trustees, and the interest accruing thereon, in payment for the works of the railway referred to in the prospectus in proportion to the progress of such works.

This decree left the question of the claims of the Government of Bolivia to these funds still open.

The dividends were met at maturity, but the drawn bonds, payable in January, were only paid to the extent of thirty-three and one-third per cent., leaving the remainder undischarged. The sum set apart for the dividend and sinking-fund was thereby exhausted, and that portion of the loan only remains which is reserved by the recent decree of the court for the construction of the railway, pending any other decision on the bill filed by the Government.

The commissioners of the Government thereupon annulled the concession for the railway, claiming at the same time the balance of the eighty-three per cent. of the loan deposited in the Bank of England, as the property of the Government.

Meanwhile, the Government of Bolivia have enacted a law to the effect that the eighty-three per cent. of the proceeds of the loan of 1872 shall be destined to the construction of the Madeira & Mamoré Railway, that the co-operation of the empire of Brazil be forthwith solicited for the raising of the requisite further funds for the completion of the said railway, failing which, the present *concessionaires* were to supply them on their own account. A diplomatic agent in London was to be appointed, charged with the special duty of terminating the lawsuits and of making arrangements for the construction of the railway.

As it has been persistently stated by friends of Bolivia, that, spite of her misfortunes, she

* "Net produce," that is to say, inclusive of commissions paid by the borrower to the loan agent, and which, from two per cent. in the case of good securities, often reach as high as ten per cent. when security is indifferent and agents scrupulous.

has never allowed her honor to be impugned, is but just, before quitting this subject, to transcribe a few extracts from a letter published in London on July 9th, over the signature, "A Bondholder Two Years resident in Bolivia." They tend not only to corroborate the statement referred to, but would seem to show that Bolivian credit still stands high in Europe:

I do not wish to speak harshly of the Bolivian Government. Assuredly it has been more sinned against than sinning. To class this case with that of Honduras, Costa Rica, etc., would be obviously unjust in the highest degree. The Bolivian Government has neither required money for any other purpose than that of the construction of the railway, nor has it appropriated any of the money raised. The contractors for the railway have failed to carry out the undertaking. They are in default. As between the bondholders and the Government, however, the latter no doubt feels that the last dividend not having been met, and the undertaking for the moment abandoned, the bondholder has a perfect right to the remains of the money, viz., the £260,000 in the bank, and it will place no obstacle in the way of a *pro rata* distribution thereof, should such be the wish of the creditors. Bolivia is a country teeming with wealth, with a population of three to four millions (!), hardly taxed at all, and yet showing a surplus revenue; * and it is quite within her power to provide for the service of this small and only loan that she has ever contracted, and that with the greatest ease. Furthermore, I am of opinion that, after sending this money to the bondholders, she will have no difficulty whatever in raising, in conjunction with Brazil, all that is required for the railway, at one or two millions sterling, and on far less onerous terms than the last. The railway will be of the greatest possible benefit to both countries, and sooner or later it is sure to be made, as the people of Bolivia call aloud on their government for this aid to the Atlantic.

The heavy extraordinary expenses, necessitated by the rebellion hereafter to be referred to, so depleted the Treasury that, almost throughout the year, government employes received only small sums on account of their salary. Among the laws passed by the last Bolivian Congress of 1874 were those empowering the Executive to call in all light money (very abundant of late), and replace it with gold of full weight, the state receiving but eight per cent. for coinage.

One more subject may here properly be referred to, as appertaining, though indirectly, to the department of finance. This subject is a long-pending and repeatedly-acknowledged claim against Bolivia of Mr. J. H. Colton, of New York City; a subject deriving peculiar interest from the fact that the means taken by the claimant for the protection of his interests have led to the solution of the question whether a nation can intervene to enforce the payment of a debt acknowledged to be owed to one of its citizens by a foreign government.

From the report on the claim submitted to the United States Senate by the Committee on Foreign Relations, it appears that, in 1858, Mr. Colton contracted with an authorized agent

of the Bolivian Government, to engrave on copperplate a map of the republic, and to deliver 10,000 copies thereof for an agreed sum of \$25,000, of which \$2,000 were to be paid on the commencement of the work, and the remainder on or soon after the delivering of the maps. The map was duly completed and the 10,000 copies delivered; but, although it appears that 2,000 maps were sold by the Bolivian Government at \$12 each, and 3,000 at \$5, or a profit of \$14,000 upon the whole stipulated cost, the \$23,000 remaining due to Mr. Colton were not paid. It should be stated that this indebtedness has never been repudiated by the Bolivian Government; on the contrary, it has been recognized repeatedly, and payment frequently promised; and on one occasion President Morales issued a decree for its payment "out of the first funds from the loan sanctioned by Congress in 1872." Weary of waiting, Mr. Colton at last laid his grievance before the United States Congress, and the following act, on the recommendation of the Committee on Foreign Relations, was passed, in March, 1875:

AN ACT FOR THE RELIEF OF JOSEPH H. COLTON.
—Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled: That the President of the United States is hereby requested to call upon the Government of Bolivia to make payment of the money admitted by itself to be due, with interest thereon,* according to the decree of the said Government of Bolivia of February 1, 1872, to Joseph H. Colton, for maps engraved for that Government under a contract made in 1858.

As usual, no official returns of the foreign trade were published in the last year; but it may safely be conjectured that, owing to the troubled condition of the country, there has been no increase in the imports over the value estimated for 1874, namely, \$7,500,000, of which \$5,500,000 through the Peruvian ports of Tacna and Arica, and the remainder through Cobija or Lamar.

Mining industry has entered upon an era of great prosperity in Bolivia. It is estimated that 340,000 marks of silver are annually produced in the whole republic, which at the rate of \$10 per mark, gives \$3,400,000. In a well-known cutting called *La Virgen*, in Oruro, where the principal lode, proving to be nearly nine yards in width, had not yet been reached, the yield for the year 1875 was computed at 60,000 marks (\$600,000).

In the matter of railways, the two most important events were the renewed decision on the part of the Government to rescind Colonel Church's concession,† and a proposal made, in reference to the Caracoles Railway, by Mr. J. M. Braun, representative of Mr. Henry Meiggs, the chief clauses of which are as follows:

The Government permits the Mejillones & Caracoles Railway Company to transfer their contract to Don Enrique Meiggs; the Government, with the consent of Don Enrique Meiggs, will appoint a financial

* See ANNUAL CYCLOPEDIA for 1874, pp. 92, 98, where a *surplus* deficit, rather than a surplus, appears evident.

* \$41,588, principal and interest.

† See ANNUAL CYCLOPEDIA for 1874, 1875, and 1873.

also to succeed the National Bank of Enrique Meiggs is authorized to appoint representatives in all the custom-houses on the coast, for the collection of the whole of the export duties on ores and metals, in order to apply them to the defraying of the expense of constructing the railway. The Government admits its indebtedness of \$276,894.76, besides the export tax of 60,000 marks of silver, giving a total of \$276,894.76. The Government undertakes to pay Don Enrique Meiggs this sum, together with interest at the rate of seven and a half per cent., from the surplus which remains of the export tax on ores and metals, after the service of the bonds has been attended to, and with the first profits obtained from the railway.

A tender was accepted from Señor Marzo for the construction of a narrow-gauge line to the Peruvian frontier, at an estimated cost of about \$4,250,000, with a government guarantee of eight per cent. on the extension of the railway to La Paz.

An important concession was granted to Mr. Daniel Yoachman, formerly of Santiago, for the canalization of the Rio Desaguadero (connecting Lakes Titicaca and Aullagas). The privilege is for fifty years; and Oruro, if the project be carried out, will thereby be placed in communication, by water and rail, with the sea.

A proposal made by Señor Suarez Arana to open two roads from the city of Santa Cruz to the lake of Cáceres, on the right margin of the river Paraguay, was accepted. The undertaking does not promise to be an easy one, owing to the immense deserts of Otuquis and the obstacles presented by the plains of Izozo.

A cart-road is to be made from La Paz to Carapata, the port on Lake Titicaca.

The commencement of 1875 found this distracted country still a prey to political violence. On December 24, 1874, a revolution broke out, headed by General Quintín Quevedo, already famous for the numerous attempts to overthrow the existing government, and now leagued with Dr. Corral against the Frias administration. Though repeatedly repressed, the rebellion was not finally crushed until April. The following extract of a private letter dated Cochabamba, February 11th, will give an idea of the state of affairs at that city:

Cochabamba has been converted into a perfect desert. The forced evacuation of all the houses within eight blocks of the principal square, and the abandonment of the city by all those who are not friendly to the revolutionary party, have reduced the city to a most miserable plight. The anxiety and terror of the people on seeing the town in the hands of Miguel Aguirre and his followers, can be easily imagined. His first step, on taking possession of the town, was to take forcibly from the National Bank \$20,000 belonging to the funds for public instruction, and five days afterward he seized \$50,000 belonging to the bank itself. He has with him six hundred men, only one hundred of whom are armed with rifles, and these of all kinds and calibres. By-to-morrow the barricades erecting on one block of the square will be terminated. They run parallel to one another in pairs, and are very high. Communication is kept up between them by narrow passages. Those most liable to capture will be mined. A great many of the populace, who are Corralists, assist the movement, although not with much decision; but the majority follow Aguirre and the Prefect Galdo, be-

cause these treat them with great liberality. Aguirre is said to have told a friend of his that his only fear was that the Government troops would not leave Oruro at once to attack him, as, in case of delay, his men would disband of themselves, their supplies being rapidly consumed, and they have no means to replenish them. The bank officials refused to deliver their specie and that of private persons intrusted to them for safe-keeping, and declare they will allow themselves to be killed rather than surrender any money. The city was laid in ruins, and nevertheless many of the inhabitants, who had fled, returned on peace being restored.

In May the department of Cochabamba was reported to be perfectly quiet, the legal authorities having been reinstated, with the exception of General Carlos Villegas, commander of the troops, who was accused of disloyalty during the rebellion.

Quevedo, Corral, and nine other rebels of lesser note, were tried and condemned to death; but the punishment was afterward commuted to ten years of penal servitude, and finally to ten years' banishment from the country.

A revolutionary movement took place at Santa Cruz de la Sierra on April 26th, but was promptly put down. The leader there was Deputy Andrés Ibañez.

In the second half of the year the approaching elections for President constituted the almost exclusive preoccupation of political circles. Of the four candidates proposed at the beginning of the campaign—Dr. Belisario Salinas, civil candidate; General Daza (Minister of War), military candidate; Dr. George Oblitas, Quevedist candidate; and Vasquez, the representative of the Corral party—two only were regarded as truly national, Salinas and Daza.

BOYCE, Rev. JAMES P., D. D., LL. D., President of the Southern Baptist Convention, was born in Charleston, S. C., in 1827. He studied at the Theological Seminary at Princeton, N. J., from 1849 till April, 1851. He was ordained to the ministry in December of the same year, and was settled over the Baptist Church at Columbia, S. C. In 1855 he became Professor of Theology in Furman University. He was elected a professor in the Southern Baptist Theological Seminary at Greenville, S. C., in February, 1858, and entered upon the duties of that office on October 1, 1859. The operations of the seminary having been practically suspended during the war, he entered the Confederate army as a chaplain, and served in that capacity for six months. He was elected to the Legislature of South Carolina in 1862, and was reelected in 1864. In 1863 he was appointed by the Confederate Government a special commissioner to secure the adoption by the States of a plan for the relief of the Confederate debt, which he had himself brought forward in the South Carolina Legislature in 1862. Since the close of the war, he has given his attention to the resuscitating and reestablishing the Southern Baptist Theological Seminary, lately removed to Kentucky. His labors in this work are spoken of as having been very successful. In 1874 he secured pledges to the

amount of \$90,000 for the support of the seminary. Dr. Boyce received the degree of D. D. from Columbian College, Washington, D. C., and that of LL. D. from Union University, Tennessee, in 1872. He has been chosen president of the convention for several years in succession.

BRAZIL (**IMPERIO DO BRAZIL**), an empire of South America, the only country under a monarchical government in the New World. It lies between latitude 4° 3' north and 33° south, and longitude 35° and 73° west, and is bounded as follows: North, by the United States of Colombia, Venezuela, the Guianas, and the Atlantic; east, by the same ocean; south, by Paraguay, Uruguay, and the Argentine Republic; and west, by Bolivia, Peru, Ecuador, and the United States of Colombia.

The boundary questions, so long pending with the Argentine Republic and Bolivia, have not yet been settled, notwithstanding the presence of a special envoy at Rio de Janeiro from the first state, and of a special Brazilian commissioner at the Bolivian capital for the purpose of terminating negotiations.*

The territory of the empire is divided into twenty provinces and one neutral municipality (*município neutro*), which, with their population, according to the census of 1874, were given in the *ANNUAL CYCLOPEDIA* for that year.

The annexed table shows the number of slaves in the provinces, etc., therein enumerated, according to the official returns published by the Minister of the Interior, in April, 1874:

PROVINCES.	No. of Slaves.
Alagoas.....	85,741
Amapá.....	979
Bahia.....	162,295
Ceará.....	81,913
Espírito Santo.....	22,659
Goiás.....	74,999
Paraná.....	29,914
Paraná.....	10,540
Paraná.....	90,028
Pernambuco.....	28,795
Piauí.....	270,726
Rio de Janeiro.....	43,999
Rio de Janeiro (municipality).....	13,020
Rio Grande do Norte.....	156,612
São Paulo.....	21,495
Sergipe.....	1,013,615
Total.....	1,013,615

The number of slaves in the six other provinces is comparatively insignificant.

From the report of the Minister of Agriculture, in which considerable space was devoted to the matter of immigration, it appears that the Imperial Government has expended, in the twenty-five years immediately preceding, no less a sum than \$10,000,000 (?).

The number of inhabitants of the several colonies was set down as follows:

	Population.
Imperial colonies (Leopoldina, Blumenau, etc.).....	16,880
Provincial colonies of Santa Catarina, etc.....	28,000
Independent colonies (São Leopoldo, Santa Isabel, etc.).....	22,640
Total.....	67,520

In the foregoing figures are included immigrants drawn to the country by special effort

on the part of the Government; and the total shows each immigrant to have cost, on the average, somewhat over \$160.

The spontaneous immigration, for the most part from Portugal, varies from 4,000 to 5,000 annually.

Here follows a transcript of an important colonization bill, which was laid before the Provincial Assembly of Rio de Janeiro:

ARTICLE I. Any planter, or owner of any agricultural establishment, in the province, desiring to obtain from Europe or the United States colonists to cultivate his lands, may receive from the provincial treasury, as aid, an advance of not over \$5,000.

SECTION 1. This advance will be made only upon full security, the farmer binding himself to reimburse the sum received, and to pay a fourth part of it as fine, should the immigrants not have arrived in the province within one year.

Sec. 2. The number of colonists which the planter must import in this case will be proportionate to the advance received in the ratio fixed in Art. III.

Sec. 3. Any farmer who thus obtains an advance from the provincial treasury will be subject to the following conditions: 1. To prove the arrival of the colonists on his land. 2. To present documents setting forth the nationality, name, and social condition of each. 3. To present the contracts made by himself or his agent with the colonists.

Sec. 4. For the concession of this aid, the president of the province will accept applications within the term of three months from the advertisement to be made. When one term ends, another will commence, until the sum fixed by this law is exhausted.

ART. II. The president of the province is hereby empowered to guarantee, during the term of thirty years, seven per cent. interest to any company or companies organized, at home or abroad, for the exclusive purpose of assisting colonization and settling immigrants within the province.

Sec. 1. Among such companies will be considered those who deal in lands and farms for sale or to lease to immigrants, or for advancing money on loan, at not over eight per cent. per annum, to planters and establishers of agricultural colonies.

Sec. 2. The companies may not give dividends over ten per cent., the rest being applied to form a reserve fund which will be destined to cover such losses as shall be proved at the time of liquidation.

Sec. 3. The capital guaranteed to all companies formed in virtue of this law, may not exceed \$10,000,000.

ART. III. Any farmer having brought from Europe or the United States, directly or by his agents, colonists for the cultivation of his lands, may receive from the public treasury half of the cost of passage of each one, from embarkation in his country to arrival at the farmer's establishment; but not over \$50 per able-bodied person under fourteen years, and \$100 per able-bodied over fourteen and under forty-five years.

Sec. 1. Persons over forty-five years will be ranked as those under fourteen, provided they bring a family of over five persons.

ART. IV. Immigrants from Europe or the United States coming to this province and buying or leasing for more than ten years lands to farm, may receive from the provincial treasury the amount of their passage, from embarkation in the country they emigrate from to the place wherein the lands bought or leased by them are situated, and, in addition, for their first expenses, three hundred francs each, if single and over eighteen years, and six hundred francs if having a family.

Sec. 1. To have right to this aid, the immigrant must first declare to the provincial government his social condition, the place whence he emigrated, and the date of his arrival in Brazil, and the province,

* See the articles "Argentine Republic" and "Bolivia" in this volume.

and present the contracts of purchase or lease of the lands.

Sec. 2. This aid will be given to every immigrant applying for it, on the conditions expressed in Sec. 1, and may not be denied to any one, on any pretext.

Art. V. The aids referred to in Arts. I. and III. will, when granted for the payment of the passages for colonists or immigrants, be deducted for their benefit from their debts to the farmers who have engaged them.

Art. VI. Farmers favored by this law may not charge upon the advances for passages or other expenses of the colonists more than six per cent. simple interest.

Art. VII. The guarantee of interest referred to in Art. II., and the aids granted by Arts. I., III., and IV., do not affect any rights of the companies, farmers, colonists, and immigrants, to any favors and aids from the Imperial Government in accordance with the laws.

Art. IX. The president of the province will effect the credit operations required for the execution of this law.

The government is a constitutional and hereditary monarchy, based upon the fundamental law of March 25, 1824, modified by amend-

ments, under date of August 12, 1834, and May 12, 1840.

The Emperor, Dom Pedro II. d'Alcântara, John Charles Leopold Salvador Bibiano Francis Xavier de Paule Leocadio Michael Gabriel Raphael Gonzague, born December 2, 1825, son of Dom Pedro I. d'Alcântara, is the present sovereign. He reigned under tutelage, by virtue of the act of abdication of his father, from April 7, 1831, until July 23, 1840, when he was declared by law to have attained his majority; was crowned on July 18, 1841; and married on September 4, 1843, to Theresa Christina Maria, born March 14, 1822, daughter of the late King Francis I. of the Two Sicilies.

The new cabinet, formed June 25, 1875, is composed as follows: Interior, Councilor J. B. da Cunha Figueiredo, Senator; Justice, Councilor Diego Velho, Deputy; Foreign Affairs, Baron de Cotegipe, Senator; War, Duke de Caxias, Senator, and President of the Council of State; Navy, Councilor L. A. Pereira

BAHIA.

Franco; Finance, Baron de Cotegipe (*ad interim*); and Public Works, Commerce, and Agriculture, T. J. Coelho de Almeida, Deputy.

The Council of State is made up of the following members in ordinary: Duke de Caxias, President; Princess Imperial Donna Isabel; Prince Gaston d'Orléans, Count d'Eu; Senators, Viscount d'Abaeté; Marquis de São Vicente; Viscount do Rio Branco; J. T. Nabuco d'Arango; Viscount de Muritiba; and of the seven members extraordinary: Viscount d'Inhomirim; Senator, Viscount de Bom Retiro; Viscount de Araxá; Senators, Viscount de Jaguar; Viscount de Caravellas; Duke de Caxias; and Viscount de Nietheroy.

The President of the Senate, which is com-

posed of eight members elected for life, is Viscount de Jaguar; Vice-President, Viscount de Camaragibe.

The Chamber of Deputies, with 122 members elected for four years, has now for President Councilor M. F. Corrêa; Councilor A. J. Henriques; J. P. M. Portella; A. G. de Paula Fonseca.

The Archbishop of Bahia is Primate of all Brazil, and there are 11 bishops: those of Pará, São Luiz, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá.

The regular army (peace footing) comprises special corps (staff, 29 men; engineers, 56; states, 118; almoners, 79; sanitary corps, 145)

of 437 men; twenty-one battalions of infantry, 9,864 men; five regiments and two battalions of horse, 2,484; and three regiments and four battalions of artillery, with one battalion of engineers, 3,280; total, 16,055 men.

The strength of the army in time of war is fixed at 32,000 men.

The police force consists of 9,900 men, of whom 1,200 are in Rio de Janeiro.

The National Guard has been disbanded, to be reorganized in accordance with the results of a new census.

The sum appropriated by the Legislative Chambers for the army expenses was \$7,901,960; but the actual expenditure amounted to \$9,936,670.

The new law governing military conscription went into force on August 1st.

On March 8th were issued new disciplinary regulations, abolishing corporal punishment, and depriving officers of the power to inflict arbitrary punishment. The employment of soldiers as servants, with the appellation of *comrades*, is strictly forbidden, officers now receiving an additional sum for the hire of civilians as servants.

The chief chaplain has the title of colonel; one of his assistants, that of lieutenant-colonel; and the other, that of major. There are, besides these, 16 other chaplains, and 60 lieutenant-chaplains.

Decisions of courts-martial are to be submitted to the Supreme Tribunal of War and Justice, which has the power to enhance or diminish the severity of, or confirm or annul, the sentences.

"In the matter of military jurisprudence," says the Minister of War, in his report, "there seems to be a want of proper organization." In 1865 a special commission was appointed, with his Highness the Count d'Eu as president, to prepare the projects for the military, penal, and other codes now before the Legislative Chambers. The same commission was engaged in the preparation of regulations for victimizing the army, for fortresses, and for the internal discipline of each corps. Another commission was inquiring into the improvement of arms for the troops. A new rocket, the invention of Lieutenant C. A. Martins, of the National Guard, was pronounced superior to any other of the kind. It is shot from a gun, requiring no stick, has a range of 3,000 yards as an ordinary projectile, beyond which distance the rocket effect is developed, and may be projected with the utmost precision of aim. New plans for army transport and the telegraphic systems, suited to Brazilian necessities, were also recommended.

In the *Deposito de Aprendizes Artilheiros* there were, in December, 1874, 535 apprentices (the age for admission being between twelve and eighteen); and in the Rio de Janeiro war arsenal 248 apprentices were employed in the different workshops: these 783 youths, for the most part destitute orphans,

are fed, clothed, and educated by the War Department.

Brazil possesses two gunpowder-mills, that of Rio de Janeiro, capable of turning out 170 tons annually, and that of Matto Grosso.

Down to December 31, 1874, \$2,308,650 had been paid to, and 506,385 acres (about 12,600 acres) of public lands distributed among, 15,391 volunteers returned from Paraguay.

According to the report of the Minister of Foreign Affairs, Brazil has 22 diplomatic and 322 consular agents in foreign countries.

The navy of the empire in 1875 consisted of 19 iron-clad steamers, 1 steam frigate, 8 steam corvettes, 23 steam gunboats, 7 steam transports, and 3 sail-of-the-line; the total armament is 230 guns, and the aggregate horse-power of the steamers 12,027. There were, besides, one school-ship, and one brig for midshipmen, both without armament. In process of construction, one steam iron-clad, and four steam corvettes. There were in the navy 15 general staff officers, 384 first-class, and 159 second-class officers, a sanitary corps 65 strong, 24 almoners, 215 accountants, 78 guardians, 33 engineers, 3,178 imperial marines, a naval battalion 913 strong, and 3,129 apprentices—total, 7,875.

The year 1873-'74 was marked by a sensible diminution in the chief branch of the foreign trade of the empire, the exports, while the imports varied but little in value from the year immediately preceding, as is set forth in the following comparative tables:

EXPORTS.	
1872-'73.....	\$107,510,868
1873-'74.....	94,949,000
Decrease.....	\$12,461,868
IMPORTS.	
1872-'73.....	\$75,500,000
1873-'74.....	76,371,000
Increase.....	\$871,000

The falling off of nearly \$12,500,000 in the exports was pretty regularly distributed among the various articles, each one of the prominent commodities, save India-rubber alone, contributing to enhance the depression, as is shown in the subjoined table of some of the principal export staples, with their values, for 1872-'73 and 1873-'74:

COMMODITIES.	VALUE.	
	1872-'73.	1873-'74.
Coffee.....	\$57,643,000	\$55,084,250
Cotton.....	18,412,000	11,815,700
Sugar.....	18,868,000	8,379,250
Mate.....	1,668,800	1,164,700
Hides.....	7,443,000	5,779,450
Tobacco.....	8,417,400	2,685,500
India-rubber.....	5,088,000	5,816,800
Diamonds.....	795,757	611,500

But, however meagre, comparatively, the exports for 1873-'74, the revenue reports for the first half alone of 1874-'75, showing the duties on exports to have been nearly one million (\$880,781) in advance of those of the corre-

sponding period of the year immediately preceding it, indicate such recuperation as might well compensate for more than one bad year.

Brazil sent to foreign countries in 1872-'73 fully 25 per cent. more coffee than was harvested in the great coffee-producing regions, Java, Sumatra, Ceylon, Venezuela, and Hayti, together. Compare as follows:

1872-'73.	Pounds.
Java and Sumatra (whole crop).....	184,400,000
Ceylon.....	100,800,000
Venezuela.....	58,240,000
Hayti.....	51,968,000
Total of crops.....	345,408,000
Exported from Brazil.....	461,510,886
	116,102,886

ENTERED.....	{ Sea-going vessels.....	{ Foreign.....	9,734	{ 10,494, with an aggregate of 6,436,000 tons.
			760	
CLEARED.....	{ Coasting-vessels.....	{ Foreign.....	7,244	{ 9,581, with an aggregate of 6,538,000 tons.
			587	
	{ Coasting-vessels.....		19,548	{ 19,548, with an aggregate of 4,914,000 tons.

Mr. Barlow, Jr., of the engineering firm who built the Tower Subway Tunnel under the Thames at London, visited Rio de Janeiro to inquire into the practicability of the projected tunnel from Rio to São Domingos. In case the soundings in that part of the bay should prove favorable, and the underlying rock easily pierced, it was regarded as probable that the project would be realized at no very distant day. The tunnel would pass beneath the bay of Guanabara, and be three miles in length.

The number of letters which passed through the post-office in 1873-'74 was 12,059,681, of which 6,502,684 were by way of Rio de Janeiro.

"The public revenue again shows its ordinary rate of progress, notwithstanding the decrease in the customs receipts and the unfavorable aspect of production and commerce in some provinces."* The following tables show the national revenue and expenditure for the fiscal year 1872-'73:

REVENUE.	
Import duties.....	\$80,140,523
Shipping duties.....	284,355
Export duties.....	9,668,826
Interest on railway shares.....	74,470
Receipts of Dom Pedro II. Railway.....	8,399,912
Post-office.....	423,804
Telegraphs.....	68,760
Stamp-duties.....	2,018,824
Mutation duties.....	2,050,544
Taxes on industries, trade, etc.....	1,517,591
Income-tax.....	255,550
Real-estate tax.....	1,123,460
Licenses.....	228,825
Lottery-tax.....	774,055
Mines.....	35,186
Receipts extraordinary.....	1,795,687
Deposits.....	708,947
Slave liberation fund.....	766,578
Sundries.....	784,676
Total.....	\$56,065,547
From the provinces.....	10,756,078
Municipal receipts.....	2,275,959
Total revenue.....	\$69,097,584
Estimated revenue for same year.....	58,406,161
Surplus.....	\$10,691,423

* Emperor's speech, 1875.

Yet coffee-culture in the empire at the present time is far inferior to the capabilities of the country. Here is a statistical fact, at once interesting now, and full of cheering significance for the future of Brazil. Coffee can be produced throughout the whole country, and its culture requires comparatively little labor and skill. The average price per pound of the coffee shipped from the empire in 1872-'73 was about 12½ cents.

Cotton and sugar are most extensively shipped from Pernambuco, although Bahia likewise exports large quantities of sugar.

The subjoined table exhibits the shipping movements at the various ports in the year 1873-'74:

EXPENDITURE.	
Ministry of the Interior*.....	\$5,607,439
Ministry of Justice.....	1,997,281
Ministry of Foreign Affairs.....	523,242
Ministry of the Navy.....	8,945,723
Ministry of War.....	12,073,763
Ministry of Finance.....	21,111,675
Ministry of Commerce.....	12,676,085
Total.....	\$60,986,638
Estimated expenditure for same year.....	54,561,437
Deficit.....	\$6,075,233
In the estimated budget for 1876-'77, the revenue figures at.....	\$53,566,585
The expenditure at.....	52,600,437
Surplus.....	\$871,673

Thus the effective revenue continues to show a large advance from year to year, as compared with the estimated revenue.

The national debt stood as follows, on March 31, 1875:

Foreign debt, at 5 per cent. interest, payable in gold.....	\$68,563,111
Home debt, payable in paper money, \$123,536,850 (Of this, \$127,787,550 at 6 per cent., the remainder at 5 per cent.) Payable in gold, at 6 per cent.....	\$13,958,750
Floating debt—debt prior to 1827.....	100,554
Orphans' fund and deposits.....	16,448,950
Treasury-notes, two, four, and six months.....	9,621,800
Paper-money (Government notes) †.....	74,750,649
Total.....	\$382,370,134

The national assets on March 31, 1875, consisted, besides tax arrearages (= \$1,680,762), and the indebtedness from railways (= \$4,543,257), of a debt owed by the Platine States, amounting in aggregate to \$6,495,852, of which \$6,425,218 by the Argentine Republic.

Here follows a list of the schools (with the attendance thereat) in the various provinces of the empire:

* For the several branches of expenditure in this department, see ANNUAL CYCLOPEDIA for 1874.

† Exclusive of the notes of the Bank of Brazil, and of the Banks of Maranhão, Pernambuco, and Bahia, the amount of which in circulation was \$16,500,000, at 5 per cent. interest.

PROVINCES.	SCHOOLS.			PUPILS.		
	Public.	Private.	Total.	Public Schools.	Private Schools.	Total.

Total	4,490	939	5,529	141,885	24,287	156,422

There are in Rio de Janeiro five daily newspapers, but the aggregate circulation thereof is presumed not to exceed 50,000.

The Brazilian Chambers were summoned to meet in session extraordinary, on March 15, 1875, for the purpose set forth in the subjoined extract from the speech from the throne on that occasion:

The urgency of the budget proposals and of the bills upon electoral reform, the discussion of which could not be terminated in your last session, has necessitated the present session extraordinary. Public order has been disturbed at various points in the interior. In four of the northern provinces, seditions bands, excited by religious fanaticism and by prejudice against the use of the new metrical system of weights and measures, have destroyed the administrative archives and the standards of weight and measure. This criminal movement was promptly repressed, good citizens supporting the authorities. The public health has improved as compared with last year. Nothing has disturbed our international relations. Postal treaties have been concluded with France, Germany, Italy, and Belgium. Ever confiding in the Divine protection and in your zeal, I rely upon your coöperation in order to assure the continuance of the national prosperity. I declare the session extraordinary of the Chambers to be opened.

Here follows a transcript of some of the leading points of the Emperor's speech of May 2d, closing the session extraordinary and opening the regular session:

The sanitary condition of the empire has sensibly improved, and the government will do its utmost to remove the causes affecting the natural state of the salubrity of the climate. Public order has been completely restored. The negotiations with the Argentine Republic and Paraguay continue. The good-will and prudence of the negotiators inspire us with confidence in an early and satisfactory result.

The zeal manifested in the discussion of the electoral reform bill is a guarantee that you will see day bestow upon the nation this indispensable reform, which will aid in correcting the generally acknowledged defects of the present system. The want of hands and capital, and of the technical knowledge necessary for fertilizing the country, presents a serious obstacle to the progress of agriculture, the chief source of public and private wealth. I am confident that our efforts will succeed in main-

taining and increasing the prosperity of the nation. The abnormal condition of the dioceses of Olinda and Pará has, unfortunately, compelled the Government to employ repressive measures. I believe the Pope, thoroughly appreciating the painful circumstances of the case, will do his utmost to restore the harmony which formerly existed; if not, I rely upon your assistance for enacting the laws which the circumstances require. The public revenue is again showing its ordinary rate of progress, notwithstanding the reduction of the customs dues, and the unfavorable aspect of production and commerce in some provinces. The ordinary expenditure does not exceed the revenue, but the important loans to be contracted for primary, secondary, and technical education, and the establishment of credit institutions in aid of labor, are urgent measures, worthy of your consideration.

August and honored representatives of the nation: A young country like Brazil, possessing wealth and territorial patrimony, requires great and constant efforts in order to attain to the future reserved for it, but at the same time it affords powerful elements with which to overcome the difficulties of the undertaking. We shall always most ardently pursue this honorable task, invariably showing ourselves worthy of the Divine protection, which has never failed Brazil.

I hereby close the session extraordinary and open the regular session, the last of the present Legislature.

PEDRO II.,

Constitutional Emperor and Perpetual Defender of Brazil.

Among the important bills laid before the Chambers, besides those already referred to, was one for the appropriation of government funds for a farmers' aid fund; and another on trade-marks.

On September 14th, an imperial decree was issued granting the pardon of the Bishops of Olinda and Pará.

Permission for an eighteen months' tour for the Emperor through Europe and the United States was solicited and obtained of the Government during the regular session. His Majesty will first accompany the Empress to Europe, and then visit the United States during the Centennial Exhibition at Philadelphia.

BRECKENRIDGE, JOHN CABELL, Vice-President of the United States in 1857, born

near Lexington, Ky., January 21, 1821; died in Lexington, Ky., May 17, 1875, aged 53 years. He was a grandson of John Breckenridge, United States Senator and Attorney-General. He was educated at Centre College, Danville, studied law at Transylvania Institute, and, after a short residence in Iowa, settled at Lexington. At the breaking out of the war with Mexico, in 1847, he was elected major in a regiment of Kentucky volunteers. While on duty in Mexico, he was employed by General Pillow as his counsel in his litigation with his associates and superiors. On his return, he was elected to the Kentucky House of Representatives. In 1851 he was elected to Congress, and reelected in 1853. At the election in 1856 he was chosen Vice-President, with Mr. Buchanan as President. In 1860 he was the candidate for President chosen by the Southern delegates of the Democratic Convention who separated from those who supported Stephen A. Douglas. In the same year he was elected United States Senator as the successor of John J. Crittenden. At the outbreak of the civil war he defended the Southern Confederacy in the Senate, soon after went South, entered the Confederate army, and was voted expelled from the Senate in December, 1861. The following summer (August 5th) he was appointed a major-general. He commanded the Confederate reserve at Shiloh, April 6, 1862; was repulsed in the attack on Baton Rouge in August, 1862; commanded a division in General Polk's corps at Murfreesboro, December 31, 1862; at Chickamauga, November 25, 1863; defeated General Sigel near Newmarket, May 13, 1864; then joined General Lee's army, and was at the battle of Cold Harbor, June 3, 1864; was defeated by General Sheridan in the Shenandoah Valley, September, 1864; defeated General Gillem in East Tennessee, November 12, 1864; and was in the battle near Nashville, December 15, 1864. He was Secretary of War in Jefferson Davis's cabinet from February, 1865, till the surrender of General J. E. Johnston, when he went to Europe by way of Cuba. He returned in 1868 with a determination to take no further part in politics, and to devote himself entirely to his profession. As Vice-President he was the youngest officer who had ever held that position. For several years he had suffered from pulmonary disease. A short time before his death his physicians, suspecting disease of the liver, performed two surgical operations, which afforded him no relief.

BRITISH COLUMBIA is bounded north by the parallel of 60° north latitude, east by the Rocky Mountains, south by the United States, and west by the Pacific Ocean and Alaska. It includes Vancouver Island and the Queen Charlotte Islands. The population in 1871, exclusive of Indians, consisted of 8,576 whites, 462 negroes, and 1,548 Chinese; total, 10,586. The chief towns are Victoria (the capital) on Vancouver Island, having about 4,500 inhab-

itants, and New Westminster on the north bank of the Fraser River, fifteen miles from its mouth, with about 2,000 inhabitants. The province is chiefly noted for its gold mines. The amount known to be exported from 1862 to 1871 was \$16,650,000. The government of the province is vested in a Lieutenant-Governor, an Executive Council of four members, and a Legislative Assembly of twenty-five members. The chief judicial functions are exercised by a Supreme Court, consisting of a chief-justice and two puisne judges.

BRUNNOW, BARON PHILIP DE, a Russian statesman, was born August 31, 1797, at Dresden, Saxony; and died April 12, 1875, at Darmstadt. He entered the service of Russia in 1818, when he received an appointment in the Foreign Department. In 1839 he was sent as ambassador to the courts of Stuttgart and Darmstadt, and in the fall of the same year he received a special mission to London, to bring about a better understanding between the British and Russian courts on the Oriental question. Having been appointed ambassador to England in 1840, he brought about the treaty of July 15, 1840, by which France and Great Britain were separated while the agreement of the Northern powers with England brought about a temporary settlement. Baron de Brunnow also sought by the navigation treaty of 1849 to bind the British merchants to Russia, while the interests in the north of Europe of the two countries were to be united by the agreement at London of 1852. In spite of all, however, he was unable to prevent the Oriental crisis. After the Crimean War he took part in the treaty of peace at Paris as the representative of Russia. In 1858 he was again sent to London, where he took part in the conference of 1864 as the representative of Russia. In 1874 he was forced to ask for his discharge on account of his old age, and he retired to Darmstadt, where he remained up to his death.

BUCHANAN, Rev. Dr. ROBERT, one of the leaders of the Free Church of Scotland, was born about the year 1800, near Stirling, and died at Rome, March 30, 1875. He was ordained a minister of the Established Church of Scotland in 1827, and was settled first at Gargunnoch, next in Salton, and in 1834 he was transferred to Glasgow, where he labored for forty years. His first charge in that city was the "Tron." At the "Disruption" in 1843 he kept the Establishment with most of his people. There were four movements with which he was connected: first, the non-intrusion controversy. Along with Chalmers and other distinguished ministers, he opposed patronage, and demanded that the people have a voice in the selection of their own pastors. Thus the struggle began. Dr. Buchanan has written an account of this and kindred events in his "Ten Years' Conflict." The next movement was called "Church Extension," the result of which is the gathering of six additional congregations

in Glasgow. Another scheme of his was the increase of the Sustentation Fund. Under his management it was augmented £70,000 a year. The fourth enterprise of which Dr. Buchanan was the leader was to bring the non-conforming churches in Scotland into more intimate relations. In pursuance of this object he had since 1864 acted as "Convener of the Free Church Union Committee." He was one of the founders of the Free Church Colleges of Edinburgh, Glasgow, and Aberdeen. Had he lived till the Assembly in May, 1875, he could have been appointed Principal of the college in Glasgow, as the successor of Dr. Fairbairn. He went to Rome at the beginning of March, to take temporary charge of the Free Church Mission there. As an author he wrote the work above mentioned in 2 vols., 8vo (1840); also the "Book of Ecclesiastes," a commentary (1859); a volume of travels entitled "A Clerical Furlough in the Holy Land;" and several articles in the "Imperial Bible Dictionary," edited by Dr. Fairbairn.

BUCKINGHAM, WILLIAM A., was born in Lebanon, Conn., May 28, 1804, and died at Norwich, Conn., February 3, 1875. He was educated in the public schools and trained as a farmer, but at the age of twenty-one he engaged in mercantile business at Norwich, and was for many years connected with manufactures. He was Mayor of Norwich in 1849, 1850, 1856, and 1857. He was Governor of Connecticut from 1858 to 1866, being reelected seven times. He refused renomination in 1866, and remained in private life until 1868, when he was elected to the United States Senate for the term of six years, which ended on the 3d of March, 1875. As Governor during the civil war he gave to President Lincoln full and prompt cooperation. In the most perilous days of the strife he showed an industry, a resolution, and a spirit of personal sacrifice, which extorted the praise of his political opponents, by the vigor of his administration and by the energy with which he sustained the General Government with all the resources of the State.

BURMAH, a country in Farther India. Its present area is estimated by Behm and Wagner ("Bevölkerung der Erde," vol. iii., 1875) at 190,517 square miles; the population at 4,000,000. The latest trustworthy information on the subject of population is contained in a report from Count Bethlen, who visited this country in 1874, to the Chamber of Commerce of Trieste. He states that he was allowed to see, at the house of a high dignitary of the court, a register of all the houses of the empire. This register is kept with great accuracy, because every house must pay a tax to the King. The total number of houses was about 800,000, and it is believed that, on an average, a house is inhabited by five persons. This would indicate a population of about 3,500,000. The Shan provinces, this side of the Sälween, were not included in this estimate.

At the beginning of the year, serious diffi-

culties arose between the King of Burmah and the British Government of India. The latter suspected the King of having instigated an attack by the Chinese upon the commercial expedition of the British Colonel Browne, near the frontier of Burmah. It also disputed the claim of the King to a territory inhabited by Karen tribes.

The expedition of Colonel Browne was to resume the unsuccessful efforts made in 1869 by Major Sladen to establish a commercial road between British India and the Chinese province of Yun-nan, through Northern Burmah. The British Government appointed, after the return of Sladen, toward the close of the year 1869, a diplomatic agent at Bhamo, on the Irrawaddy, in Northern Burmah, who was to look after the interests of British commerce, and to establish firm and friendly relations with the savage tribes of Yun-nan. The Burmese Government complained that the relations between the English and the tribes of Yun-nan induced the latter to make plundering inroads into the Burmese territory, to which, so far as the region around Bhamo was concerned, the Burmese Governor of Bhamo put an end toward the close of 1872. The overthrow of the Mohammedan Panthays in Yun-nan, and the reestablishment of the Chinese rule in that province, did not change the relations of the English with the savage tribes, which were reported to be under chieftains who did not hold an appointment from the Emperor of China. The reports of the British resident at Bhamo were sufficiently favorable to induce the Government of India to fit out the new expedition under Colonel Browne, who, on December 12, 1874, sailed up the Irrawaddy as far as Bhamo, accompanied by an armed escort of more than one hundred native infantry. From Bhamo he attempted to penetrate into Yun-nan, but his first attempt did not succeed, and he had to return to Bhamo. He started again about the 17th of February, 1875, and is believed to have been only four marches from Bhamo, where he heard of disturbances at Momein. The British consul, Margary, who had come from Shanghai, and who, encouraged by the good treatment he had received throughout his journey from that city, had gone on with only his Chinese followers, had fallen into a snare and had been murdered near a small frontier town of Manwyne. Hardly had the news of this event reached Colonel Browne, when he was himself attacked by a body of some 500 or 600 Chinese and tributary hill-tribes. His small escort of Sikhs, however, were fully equal to the emergency, and repulsed their assailants with a loss of seventy killed, without losing a man themselves. Mr. Elias, who had started by another route, and had proceeded two marches into the tributary states, was ordered back by the Chinese, and returned to Bhamo. The English at once suspected the machinations of the court of Burmah as the cause of the

sudden change in the behavior of the tribes and Chinese—a change, they thought, not otherwise to be accounted for. It was argued that the Chinese Government at Peking could not have had time to be communicated with between the time Margary passed through Manwyne and his return to that place; and if the Chinese Government had meant treachery they might have had Margary murdered on his way to Bhamo, when he was unescorted and friendless, and not have waited until he returned with the expedition. But the Chinese Governor of the frontier district is half a Burman, and his wife lives at Mandalay, and is a frequenter of the palace. This half Burman was the prime mover in the *émeute* against Margary and Colonel Browne. This, with the fact that the hostility shown by the Chinese to Margary (whom they had before so cordially welcomed) arose immediately in the wake of the Burmese embassy, was believed to point strongly to the King of Burmah as the instigator of all the opposition to the expedition and the subsequent murder of Margary.

The disputed territory which is claimed by the King of Burmah consists of a mountain-chain which runs from north to south, and is surrounded in the south and east by the Karens, and in the north and west by the Burmans. A part of the southernmost mountains borders in the west upon British territory. The general name of this mountain-chain is Nwai-Core Tsai-huit-tun (the Twelve Mountains). In fact there are, however, more than twelve mountains. They are inhabited by the tribes ruled by one chieftain each, all of whom are subject to one Tsanlewah, who recognizes the King of Burmah as his sovereign, and pays him tribute. On an average, each of the tribes numbers from 4,000 to 5,000 persons, thus comprising an aggregate population of about 50,000 persons. The majority of them are Karens, with whom some Toongos are mixed. They have priests and a written alphabet, differing herein from the Karens of British Burmah, who had no priests and no alphabet when the Baptist missionaries, who have since given them an alphabet and the beginning of a literature, became acquainted with them.

Another difficulty between the two Governments arose when, early in 1875, about one hundred Panthays or Mohammedan rebels of Yun-nan, who, after the overthrow of their empire, had taken refuge in the woods near the Burmese frontier, sought refuge from their Chinese pursuers with the English resident of Bhamo, Captain Cooke. Among them was a son of Tah-si-kun, who had been Mohammedan Governor of Momein, and had been slain by the Chinese. Captain Cooke consented to give them an asylum in his residence after they had, in compliance with his request, laid down their arms. As soon as the Burmese Governor (Wun) of Bhamo heard of their arrival, he demanded their surrender. Captain Cooke decidedly refused to comply with this request,

and took the fugitives on board an English steamer to Rangoon. For a time the relations between the two countries assumed a very warlike character. The British papers in India represented the King of Burmah as their implacable enemy. One of the British papers in India gives this account of the proceedings of the British Government against Burmah since 1852:

In 1852 its western seaboard was annexed to the British dominions. The King would not consent to treat, so Lord Dalhousie, after inflicting sufficient punishment, simply annexed a large slice of territory, broke off military operations, and withdrew a portion of the expeditionary force. The Burmese sullenly acquiesced in the will of the Governor-General, and accepted the situation. Every possible endeavor was made by us to conciliate them, but without much effect. They have respected while hating us, and have, whenever they could in an underhand way, injured us. On one or two occasions the King even went so far as to try and induce foreign officers "to help him to recover Rangoon." In 1867 he threw every possible obstacle in the way of Captain Sladen's mission, and there are grounds for believing that he went even further in respect to Colonel Browne's expedition. It is said that a letter from the King of Burmah to the Chief of Bhamo, recommending him to prevent Colonel Browne from proceeding, is in the hands of Government, which is also in possession of other evidence to the same effect. It is also, at least, a singular coincidence that Mr. Margary should have been murdered immediately after the passage of a Burmese mission in a city where, a few weeks before, he had been extremely well received.

The Burmese Government emphatically denied the accuracy of these British statements, and an article, apparently official, in a Burmese journal gives the following account of the relations between the present King and the English:

During the Burmese War of 1852 and 1853 the present King used his influence in behalf of peace, and in opposition to the ministers of the King ruling at that time, advised the establishment of friendly relations with England. The Viceroy of India, Lord Dalhousie, never found a word of acknowledgment for this attitude. The new boundary between the two countries was determined by England alone without even conferring on the subject with Burmah. When Colonel Phayre and General Fyfe visited Mandalay, the King received them very graciously, and ratified every article of the treaty proposed to him, among others the provision that money could be exported from his country. This was done in the expectation that the treaty would lead to an extension of commerce in Upper Burmah and to the enrichment of his treasury. As this result was to a large extent realized, the King loved the English as his brothers, and has given orders to buy all his steamers from English firms. The King has always been courteous toward English subjects, he has overwhelmed them with presents, he has bestowed houses for the English residents of Mandalay at Bhamo, and permitted them to hoist the English flag. He also established a special court of justice at Mandalay for the protection of English subjects. For all these favors, the Indian Government has rewarded him with treachery. The Karens, who, for time immemorial, have been subjects of the King of Burmah, have been seduced, by British influence to rebellion, and have been persuaded to place themselves under British protection. When the expedition of Major Sladen passed through Burmah, it

King did all that was in his power to aid it. Major Sladen, in return, took several chieftains of Kaohyens and Shans with him to Rangoon, and tried to persuade them to place themselves under English rule. But recently the commanders of the English steamers which ply between Rangoon and Mandalay were instructed to promise to subjects of the King of Burmah favorable settlements in British Burmah, and a gratuitous transport. The King believes that the Queen of England is ignorant of this and of other unjust measures taken by the Indian Government.

The Anglo-Indian Government made all the preparations necessary for carrying on a decisive war. Troops already in British Burmah were pushed forward to the frontier, and other troops from India took their places. A commissariat officer went to look after the victualing department; doctors and apothecaries were "called in" to Madras; heavy guns and warlike stores were shipped, transport ordered, and the men ready; even the "general orders" were supposed to be in print. All ranks were strictly forbidden, under heavy penalties, to buy or eat anything, especially fruit, from the Burmese, except under medical supervision; country liquors were on no account to be dealt in, and for that reason the commissariat supply would be largely increased if not unlimited, etc. The commander-in-chief, Lord Napier, was summoned to Simlah, to consult with Lord Northbrook on the military measures advisable in the event of war being declared.

The King of Burmah, on the other hand, was also diligently arming, laying in warlike stores, and collecting a force of about 40,000 undrilled and undisciplined men. He mounted guns on his river steamers, and was building forts to guard the approaches to Mandalay. The King, notwithstanding his being so shut up within his palace, and being unable to mix with the outer world, is believed to possess a large amount of knowledge, and to be one of the astutest princes of the East.

On May 17th the following telegraphic dispatch was sent to Indian, English, and American newspapers:

I had a long interview with his Majesty the King of Burmah, yesterday. He is most anxious to settle matters with the British and Chinese Governments amicably. Loetahoe, the Chinese general, who is supposed to have arrested Colonel Browne's advance on his march for territorial exploration, arrested here three days ago, the bearer of dispatches from the court of Peking. The King denies all complicity in the failure of Colonel Browne's expedition, a position which is confirmed by careful private inquiry. No serious difficulty is anticipated regarding the Karennee question. The opinion which prevails in the public mind with regard to the King's treatment of foreigners is quite unfounded. The rumors regarding a concentration of troops toward the frontiers are incorrect. Trade is depressed and almost at a stand-still, pending a settlement of the question in dispute.

It was subsequently ascertained that the author of this dispatch was the American Colonel Wyndham, who, after living for several years in British India, and being for some time edi-

tor of the *Indian Charivari*, went, in March, 1875, to Mandalay to offer his strategic services to the King of Burmah.

In May, Lieutenant Adamson was sent to Mandalay, the capital of Burmah, to carry to the Burmese court the official announcement of the approach of the British envoy, Sir Douglas Forsyth, who was charged with presenting to the King of Burmah the British ultimatum. Sir Douglas Forsyth arrived on Burmese territory, at Menhla, on July 3d, and was received with due honors by a deputation of Burmese officials. On July 10th he reached the capital. The first messages which were exchanged between the British envoy and the royal Government had particular reference to the course of procedure to be adopted by the mission when attending their first audience. A member of the mission published the following account of the first audience:

Sir Douglas Forsyth had been expressly forbidden to raise the question of taking off the shoes on being admitted to the palace, but he felt himself free to insist upon some modification of the plan which necessitates a barefooted promenade through dirt. The route to the audience-hall lies up a flight of steps, and through a colonnade which is not sufficiently protected from the weather. At the time of Colonel Yule's visit, the carpet in the palace was sacred, and the mission had to seat themselves on matting outside the sacred limits, after having walked over the dirty floor of the surface. After two days' hard fighting and rejection of any attempt at compromise, Sir Douglas carried the point of having a carpet laid down from the very foot of the steps where he took off his boots to the spot where he was to sit. The first audience was given by the King yesterday. It was entirely ceremonial. The envoy and party, accompanied by an escort of Burmese cavalry and infantry, left the residency at 7.30 A. M., riding on elephants. A few minutes' ride took them to the city gate, but they had to pursue a circuitous course through the principal streets before they were allowed at 8.50 to dismount at the outer gate of the palace. The city is about a mile square, surrounded by a brick wall about twenty feet in height, and backed by an earth embankment, the most external means of defense being a moat forty yards wide and 12 feet deep. The whole of the city, which is of recent construction, is laid out in squares, and the streets are of considerable breadth. The route by which the envoy proceeded was lined with troops, and swept and garnished, so that the sight was much pleasanter than one expected. The troops were little better than an armed rabble—in fact the man who drills them was a French sailor, and soldiering is by no means their only vocation. They are called upon to work in saw-mills, cotton-mills, iron-foundries, or wherever else the King may require work done. They sat at ease on the ground, resting their muskets on forked sticks, in front of and behind the procession itself, but standing up while it was in the act of passing.

The palace is surrounded in the first instance by a high wooden palisading, in which are two or three gates. The procession halted at the principal entrance, and while the British troops remained outside, Sir Douglas and the members of the mission, accompanied by the officers of the escort, entered the palace through two other gates. There is a colonnade of some twenty feet high, with pillars and ceiling covered with gold-leaf. In the centre of this, and facing the throne, which was at the end of a hall leading out of the colonnade, were seated Sir Douglas and his party, while the rest of the colon-

* In the *New York Herald* the telegram is dated, "Mandalay, May 23d."

nade was filled with court officials, princes, heralds, judges, and ministers, clothed in rich velvet dresses, fringed with gold-thread. The King's body-guard lined the sides of the audience-hall. While we were waiting, the sounds of sweet music, played inside the palace, were heard, and after a delay of seven minutes the gold doors at the back of the throne were opened, and the King appeared. He seemed to support with difficulty the weight of his clothes and solid gold crown. As he took his seat a number of Brahmans inside the palace set up a chant in his honor, and then a herald read out a list of his Majesty's titles and a thanksgiving for the many benefits that he daily confers on his people. Another herald then read the Viceroy's letter introducing Sir Douglas Forsyth, and asking the King to use all dispatch in settling the Karennee question on an amicable basis. The list of the presents sent by the Calcutta Toshia-Khana was next read, and then an official, seated near the foot of the throne, and the herald at Sir Douglas's right, held the following conversation, the questions and answers having been previously prepared: "How is the Queen and all the royal family?" "They are quite well." "How long have you been on the journey?" "Fifteen days." "How is the paddy-crop this year, and are the rains favorable, and the people contented and prosperous?" "The paddy-crop is good, and the country prosperous."

The presents from the palace, consisting of a number of gold cups, a sword in gold-covered sheath, and a number of silk cloths, were then brought to Sir Douglas, and the King retired. Walking, as he did, oppressed by the weight of a dress which is laden with thick gold embroidery, and with a heavy crown on his head, the King looked very feeble and worn. He was too far off for his features to be clearly visible, but he has a grave and almost a refined face. His eyes are small and bright, and his hands are very small—by no means a rare feature among the Burmans. The mission returned to the residency by the route it had pursued on coming, and an appointment was then made for Sir Douglas to breakfast with the Kenwoon Mengyee, or prime-minister, and to call upon the other two Mengyees, or chief officials, afterward.

After Sir Douglas Forsyth had set out for his mission, the Government of India received information that the King had openly and ostentatiously received in a friendly manner Lesetahee, the Chinese commander of Momein and the neighboring stations, who had sent out the troops which attacked the expedition of Colonel Browne and compelled it to return. His own nephew was at the head of this Chinese force. It was stated by the English papers that Lesetahee had promised to King to send him, in case of war, 60,000 auxiliaries. The Government of India inferred from the friendly reception of Lesetahee that the King was careless whether he offended the British Government or not, and that he was in league with the Chinese, who had already murdered Mr. Margary and attacked Colonel Browne's expedition, and who had always thrown obstacles in the way of British exploration of the upper Burman frontier. The Government of India felt so decided on this matter that it sent Sir D. Forsyth an order to insist upon an explanation of the King of Burmah's relations with the Chinese before entering upon the consideration of boundaries or any other subject.

After completing his negotiations with the Government of Burmah, Sir Douglas Forsyth

returned to Simlah to report to the Viceroy. The latter officially informed the Council of India of the negotiations with the King, giving also the text of a new treaty concluded between the two countries. According to this treaty, the King of Burmah recognizes the independence of the disputed Karen country. A British officer would be dispatched to the frontier, after the rains, to mark out the boundary between the Karen country and Burmah. With reference to the refusal of passage of an escort, it is stated that a fresh communication to the King has become necessary. The Viceroy entertains confident expectation that such further communication may be so received by the King as to maintain the friendship between the two Governments intact. The impression produced by this official publication was unfavorable, and a large portion of the Indian press looked upon the special mission of Sir Douglas Forsyth as a failure.

In regard to the murder of Margary, the Government of Burmah persisted in denying any complicity. A Chinese journal published about this time a series of important letters which seemed to show that the Burmans, instead of being implicated in the treacherous attack on the expedition, were themselves objects of suspicion on the part of the Chinese.

The complication between Burmah and British India, and the disastrous influence which it had upon commerce, raised again in the Indian press a clamor for the annexation of Burmah. In view of this event, which they thought must certainly come sooner or later, an Indian paper urged upon the attention of the British Government the importance of establishing the shortest and speediest means of throwing troops into the country. "During the war of 1872," it says, "Lord Dalhousie found the difficulty of this, and when it was over took steps for the construction of a road by which troops could be marched from Calcutta to Burmah. A difficulty such as the present shows the benefit that would have been gained had his plans and orders been carried out. At present, British Burmah is garrisoned from the forces under the commander-in-chief of the Madras Presidency, from which troops are sent by steamer across the bay of Bengal to Rangoon. This voyage generally occupies five days. The time occupied going up the Irrawaddy from Rangoon to Mandalay varies according to the season of the year. Sir Douglas Forsyth went up when there is least downward current, and he took fourteen days, so that, allowing the shortest time *en route*, including transport of baggage, troops from Madras could not reach Mandalay under three weeks, and most likely would require a month. Now, Lord Dalhousie's plan was to send them from Calcutta via Dacca, Chittagong, and Aracan, and, were the Eastern Bengal Railway extended in that direction, there is no doubt that would be the most expeditious route. But there being little chance of such extension for many years

to come, owing to the difficulties met with in crossing the deltas of the Ganges, Brahmaputra, and the Megna, it seems necessary to look for the next shortest sea and land route combined, and this we have in the sea voyage from Calcutta to Akyab, which only takes two days, and the land route from Akyab to Mandalay, which, as the crow flies, is only 260 miles, as against 380 from Rangoon to Mandalay. By this route troops could be conveyed from Calcutta to Mandalay in less than half the time occupied from Madras *via* Rangoon. It is thought a formidable obstacle to this route would be found in the Yomadoung range of hills, but this is a mere idea, as the country is as yet a *terra incognita* to us, never having been explored, while we have the opinion of officers who have served in the hill tracts that 'they are not aware of any difficulties that would surpass the skill of our railway engineers.'

The Burmese population in British Burmah seemed generally to take sides with the Government of Burmah against the British. A

correspondent from Mandalay, in a communication to the *Rangoon Times*, called upon the British Government to watch closely the Burmese priests, as all of them were in correspondence with the King and encouraged him in every possible way to persist in his opposition to the English. The Dacoits or freebooters of British Burmah became very daring. Colonel Hamilton, who marched against them, was shot through the heart, and the superintendent of the police of Rangoon, Mr. Davidson, was wounded in the right arm. In June, Nya-poung, the notorious leader of the Dacoits, was captured near Rangoon. Another Burmese implicated in the murder of Colonel Hamilton surrendered himself to the authorities. He was wounded at the time. Three men were also captured, charged with complicity in the attempted assassination of Mr. Davidson. In November, a conspiracy to seize the arsenal, and to burn the town of Rangoon, was discovered by the authorities. A great many Burmese have been arrested on suspicion of complicity in the affair.

C

CALIFORNIA is bounded north by Oregon; east by Nevada and Arizona, following the Sierra Nevada on the line of longitude 120° west to latitude 39°, thence southeast to Colorado River on the thirty-fifth parallel, thence by the river; south by Lower California; and west by the Pacific Ocean. The aggregate assessed value of property in the State of California is \$611,495,197, on which State and county taxes were levied, for the year ending June 30th, amounting to \$11,608,314.92. The rate of taxation for the fiscal year 1873-'74 was 50 cents, and for 1874-'75 64 $\frac{1}{10}$ cents, on each \$100, of which, for the latter year, 35 $\frac{1}{10}$ was apportioned to the general fund, 22 $\frac{1}{10}$ to the school fund, and 6 $\frac{1}{10}$ to the interest and sinking funds. The receipts of the State Treasury for the two years ending June 30th, after deducting \$1,479,694.85 paid by the Board of Loan Commissioners for the sale of bonds of 1873, and \$252,445 received for interest on bonds held in trust for school and university funds, amounted to \$7,427,006.28. The expenditures, after deducting \$1,434,641.64 paid for the redemption of bonds, were \$7,112,318.18; excess of receipts over expenditures, \$314,788.10. The receipts from the school funds, apportioned among the several counties, amounted to \$430,158.03 in 1873-'74, and \$1,213,397.01 in 1874-'75. Of the latter amount \$22,916.96 was derived from the income of school lands, \$96,360 from interest on bonds held in trust, and \$1,034,120.05 from property-tax. The amount apportioned for each scholar in 1874-'75 was \$7.59 against \$3.05 in the preceding year. The total funded debt of the State on the 30th of June was as follows:

SERIES.	Rate of Interest.	Amount.
State Capitol bonds of 1870	7	\$250,000 00
State Capitol bonds of 1872	7	250,000 00
Bonds of 1873	6	2,501,000 00
Soldiers' relief bonds	7	95,500 00
Bonds of 1857	7	170,500 00
Bonds of 1860	7	87,500 00
Total		\$3,651,500 00

The bonds of 1857 and 1860 had been called in, and interest was to cease July 31st, which reduced the interest-bearing debt to \$3,896,500, on which the annual interest amounted to \$209,745, a reduction in the interest account of \$16,640 in two years. The assets and liabilities of the State on the 30th of June were as follows:

ASSETS.	
State Capitol and Governor's mansion	\$2,645,514 47
State-prison at San Quentin	261,190 56
State-prison at Folsom	63,182 92
Insane Asylum at Stockton	623,968 45
Insane Asylum at Napa	541,047 70
State Normal-School building	270,385 66
Bonds held by State Treasurer in trust for school and university funds	2,549,000 00
Bonds held by Regents of State University	116,000 00
State loan to Calaveras County	55,916 27
Cash on hand	1,105,578 97
Total assets	\$3,287,880 00
LIABILITIES.	
Outstanding bonds	\$3,654,500 00
Outstanding warrants	187,884 54
Total liabilities	\$3,842,384 54
Excess of assets over liabilities	\$4,394,995 46

There were delinquent taxes due the State at the end of the year amounting to \$478,897.46 for the year 1872-'73, \$131,238.18 for 1873-'74, and \$545,575.45 for 1874-'75, or

\$1,155,711.04 in all. The amount of State tax collected for the last fiscal year was \$3,243,581.34 and the cost of assessment and collection was \$201,926.04, or about 6 1/4 per cent. The percentage of delinquency and cost of assessment and collection was over 20 per cent.

The estimated expenditures of the government for the two years ending June 30, 1877, amount to \$4,987,765. The rate of taxation to meet this estimate, based on a valuation of \$611,500,000, and allowing 18 per cent. for delinquencies and cost of collection, is placed at 46 3/8 cents on each \$100 for 1875-'76, and 51 1/10 cents for 1876-'77. The balances in the several funds of the State on the 30th of June amounted to \$917,994.43; balance in the Treasury, \$1,105,878.97.

The aggregate of the funded debt of the counties of the State on the 30th of June was \$7,780,773.83; floating debt of counties, \$3,302,283.33; value of property owned by counties, \$10,704,240; cash in hands of county treasurers, \$1,862,013.09.

The State Capitol at Sacramento is substantially completed, though a bronze statue, after Powers's "California," which was to surmount the dome and to cost \$15,000, and a flight of stone steps for the main entrance, which was to cost \$40,000, have not been added in accordance with the original design. The total cost of the structure thus far has been \$2,449,429.31. In the building designed for the Executive mansion a State armory has been completed at a cost of \$8,000, and a State printing-office, to cost \$12,000, is nearly finished. The cost of supporting the printing-office for the next two years is estimated at \$124,800, which is \$15,674.97 less than was paid for the State printing in the single year ending with the 30th of last June.

The number of fire and marine insurance companies doing business in the State is eighty:

Amount of cash capital represented.....	\$40,861,089
Amount of insurance written during the year....	253,544,359
Amount of premiums received.....	4,448,033
Amount of losses paid.....	1,098,306
Amount of insurance in force at the end of the year.....	178,675,950

Seventeen of the life-insurance companies, including those which did the largest business, withdrew their agencies from the State shortly after the session of the last Legislature. Eleven remain, only four of which do a general business, the others being authorized to collect renewal premiums only.

At the beginning of the year the savings-banks of the State held \$69,023,603 in deposits belonging to 84,284 depositors, or an average of \$818 each, all in gold. In the savings-banks of San Francisco alone there were 60,660 accounts, aggregating \$55,021,177, or \$907 for each depositor; and in the institutions of the rest of the State there were 23,194 accounts, aggregating \$14,002,426, or \$593 each. The increase in six months in San Francisco had

been 4,949 depositors and \$4,178,018 in deposits, and in the rest of the State 1,391 depositors and \$1,912,531 in deposits. These banks all paid dividends varying from 6 to 10 per cent.

The cost of supporting the State-prison at San Quentin for the two years ending June 30th was \$348,523.27, or, exclusive of discount, interest, and expenditures for permanent improvements, \$318,288.79. The receipts from labor and for the board of United States prisoners were \$155,490.23; expenses in excess of receipts, \$162,798.56; cost of supporting each prisoner per day, 44 cents, or 23 1/2 cents greater than income for each prisoner per day. There were in the prison on the 1st of July, 1873, 931 convicts, and 951 were received and 802 discharged during the two years, leaving the number at 1,088. Of these San Francisco County furnished 431, Sacramento 86, Los Angeles 46, Alameda 45, and other counties smaller numbers. Two hundred and twenty-three were incarcerated for grand larceny, 188 for burglary, 135 for robbery, 100 for murder in the second degree, 20 for murder in the first degree. The ages of the prisoners ranged from fourteen to seventy-eight, the largest number being from twenty-two to forty-two. Of the whole number 148 were natives of California, 137 of New York; 568 were natives of the United States, 181 of China, 109 of Ireland, 47 of Germany, 36 of England, 31 of Mexico, 19 of Canada, 14 of France, 11 of Scotland, 10 of Sweden and Norway, 6 of Spain; 198 were Indians and Mexicans born in California; 290 could neither read nor write. In 1874 49 1/2 per cent. of the prisoners, and in 1875 42 1/2 per cent., were let out to contractors; 201 were employed in the prison and 69 outside, and 250 were wholly unemployed. The accommodations of the prison are reported to be altogether insufficient. Forty-five men are assigned to each four of the rooms. An appropriation of \$175,000 has been made for the branch prison at Folsom, but it has not yet furnished any relief for the crowded institution at San Quentin. The subject of a reformatory institution for the younger criminals has been discussed.

Work was begun on the branch prison at Folsom in November, 1874, but it was abandoned by the contractor in September last. Of the \$175,000 appropriated for this structure, \$88,583.36 has been expended, and for other liabilities incurred amounting to \$18,782.03. It is estimated that a further appropriation of \$350,000 will be needed to finish it.

Since the law of 1874 took effect, giving juries the right to affix the penalty of death or imprisonment for life at their discretion in cases of capital crimes, there have been twenty-nine convictions for murder. In eighteen of these cases, sentences of imprisonment for life in eleven, sentences of death, were passed.

The Deaf, Dumb, and Blind Asylum contained 94 inmates on the 1st of July, an in-

crease of 18 in two years. Of these, 40 males and 24 females were deaf and dumb, and 21 males and 9 females blind. The total receipts of the institution from all sources amounted to \$101,928.22; current expenses, \$71,247.51; expenses for improvement of the grounds, \$5,672.70; for new building, furniture, etc., \$27,003.01. The average yearly cost of supporting and instructing each pupil was \$419.10.

The north wing of the Insane Asylum at Stockton, intended for female patients, has been completed. Of the \$113,000 appropriated for the purpose, only \$88,511.33 was expended. On the 1st of July, there were 1,302 patients in this institution, of whom 615 were received during the year preceding. The cost of maintenance for the last two years had been 43 cents per day for each patient. The new Insane Asylum at Napa is well advanced toward completion, the north wing, which is capable of accommodating 180 patients, being ready for their reception.

During the last two years there has been an increase of 29,953 in the number of children of school-age in the State, but the increase of the average daily attendance at the schools was only 8,566. Three hundred and twenty new schools have been organized in 117 new districts; \$618,746.61 were expended in building and furnishing 274 schoolhouses. The school expenditures had increased \$544,885.09, and school property had enhanced in value \$1,011,262.85. The average length of school terms had increased 1.33 months in the year. The State Normal-School building is substantially completed, and the institution is expected to be in successful operation the coming year.

The University of California, at Berkeley, has been in operation six years. The first year there were 40 students; the second year, 78; the third, 143; the fourth, 185; the fifth, 291; the sixth, 231; and the number at present is 312. The staff of instructors numbers 20, besides graduate and student assistants. The institution consists of six colleges—a college of letters, and colleges of agriculture, mechanics, mining, engineering, and chemistry. At the close of the last fiscal year, the whole amount that had been drawn from the State Treasury for its support and endowment was \$1,555,426.35. It receives \$50,000 a year from State endowment, and has a grant of 150,000 acres of land, which will produce a capital of \$50,000, yielding an annual income of \$45,000. This will make its total revenue \$95,000, but the expenses of the current year are estimated at \$128,000.

The State lands of California have consisted of three classes—swamp and overflowed lands, marsh and tide lands, and various other grants from the United States. Of swamp and overflowed lands, 1,524,655.18 acres have been ceded to the State, but have passed into private hands, never being a source of revenue, but rather of expense, to the State. The marsh

and tide lands have been mainly disposed of, and a fund created from the proceeds to endow the University of California with an annual income of \$50,000. The Tide-Land Commission has paid into the State Treasury the sum of \$1,418,219.76. Of a grant of 500,000 acres of other lands originally made for purposes of internal improvement, but diverted by the State constitution for the support of common schools, the selection of 471,418.75 acres has been approved, and the remainder of the grant has been sold. Other grants of 72 sections and 10 sections have been disposed of, and 46,604 acres of the former and 3,203 of the latter have been approved at Washington. The University of California has been vested with complete charge and control of another grant of 150,000 acres. There remains the grant of the 16th and 36th sections of each township, which has been only partly disposed of. These were covered in many cases with private grants, and the State was authorized to select others in lieu of them. A good deal of complication has arisen on account of conflicting and disputed claims, and a conflict of authority between the State and the General Government as to the right to dispose of lands containing minerals. Further legislation and negotiations will be necessary to settle these, and enable the State to dispose of the remainder of its public domain.

The commission appointed in 1874 to determine the value of the property claimed by private parties in the Yosemite Valley, made majority and minority reports on the subject, neither of which was approved by the State Board of Examiners. That board, however, after a thorough examination into the subject, made awards and expended \$55,000 in satisfying claims. The Yosemite Valley and Mariposa Big-Tree Grove were granted to the State of California and accepted by her in 1864, to be preserved as public property for purposes of general resort and curiosity. They are in the charge of commissioners who ask for \$26,500 to be used during the next two years, for purposes of preservation and improvement.

Immigration into the State continues to increase from year to year. The arrivals and departures at San Francisco by the Pacific Railroad for the six years that it has been in operation, ending with the 1st of May, were as follows:

YEARS.	Arrived.	Departed.
1869-'70	27,200	15,100
1870-'71	30,600	24,900
1871-'72	23,700	20,700
1872-'73	23,100	22,900
1873-'74	52,900	26,100
1874-'75	68,900	25,700
Totals	240,800	134,700

The arrivals by both sea and land for the first four months of the year 1875 were as follows:

MONTHS.	BY SEA.		OVERLAND.	
	Arrived.	Departed.	Arrived.	Departed.
January	1,109	765	2,698	1,088
February	2,412	586	2,977	1,343
March	2,567	571	6,081	1,955
April	4,994	892	8,206	2,443
Totals	11,075	2,814	19,852	6,714
Same time 1874	6,889	2,375	12,057	5,794
Same time 1873	7,424	2,516	10,613	5,545
Same time 1872	4,519	3,053	6,517	4,403

The immigration from China for thirteen years ending July has been as follows:

YEARS.	Males.	Females.	Totals.
1862-'63	5,407	87	5,494
1863-'64	5,182	...	5,182
1864-'65	8,302	175	8,454
1865-'66	1,495	1	1,496
1866-'67	3,262	...	3,262
1867-'68	6,607	48	6,650
1868-'69	11,124	951	12,075
1869-'70	13,023	1,085	14,108
1870-'71	6,063	339	6,407
1871-'72	6,422	146	6,568
1872-'73	18,529	339	19,368
1873-'74	12,941	182	13,073
1874-'75	15,438	374	15,807
Totals	108,902	4,172	113,074

The political canvass of the year in California was quite active, and attended with some excitement, but it was conducted almost wholly on local issues. The leading questions of discussion were those relating to irrigation, transportation "monopolies," tax reform, and reform in municipal government. The first State Convention of the year was that of the Republicans, held at Sacramento on the 10th of June. T. G. Phelps was nominated for Governor, Joseph M. Cavis for Lieutenant-Governor, Edward Hallett for Secretary of State, J. J. Green for Controller, Robert Gardner for Surveyor-General, William Beekman for Treasurer, E. D. Sawyer for Attorney-General, Ezra S. Carr for Superintendent of Public Instruction, and Grant I. Taggart for Clerk of the Supreme Court. The declaration of principles was as follows:

The Republican party of California, in State Convention assembled, makes the following additional declaration of principles, reaffirming the State platform of 1871 and the national platform of 1872:

Resolved, That we have undiminished confidence in the wisdom, patriotism, and integrity of the present Chief Magistrate of the United States, Ulysses S. Grant, and join our political brethren throughout the Union in the cordial and earnest support of his administration, in the fullest recognition of his illustrious career in the military and civil service, and in condemnation of that rancorous party spirit which prompts his and our enemies to as unconsidered and unjust attacks on him as those to which his great predecessors, Washington, Jackson, and Lincoln, were subjected during their administrations.

Resolved, That the letter addressed by the President to the chairman of the Pennsylvania Republican State Convention upon the subject of his succession is a full refutation of the slanders of those who charged him with intriguing for reelection; that we accept it as explicit to a final settlement of the third-term agitation created by our enemies solely to arouse jealousies and dissensions in the Republican party.

Resolved, That the thirteenth, fourteenth, and fifteenth amendments to the Constitution of the United States, added to that instrument by the votes of the requisite three-fourths of the States of the Union, are as sacred and binding as any of its provisions; that they are to be maintained by the enforcement of all congressional enactments, notwithstanding the opposition, secret or avowed, of the Democratic party or hostile White Leagues in the Southern States.

Resolved, That the conduct of that portion of the people in the South who defy the fifteenth amendment and seek, by intimidation or force, to prevent the lawful exercise of the elective franchise by the great body of colored citizens resident therein, is a rebellious defiance of the national authority, and an attempt to prevent the election of the next President by the people, calculated to arouse the worst passions of men, and to disturb the peace of the nation, and should be met with by all law-abiding citizens, North and South, as an effort to revive the flames of civil war. While admitting that differences of opinion exist as to the extent of the conspiracy against the constitutional election of the President in 1876, we deem it well to caution the people against slumbering in the face of danger.

Resolved, That, with all our countrymen, of whatever section, who yield obedience to the Constitution and laws and who do not defend or justify those who disobey them, we desire to cultivate fraternal relations, without regard to mere party difference; we will at all times unite with them to promote justice and good order and public tranquility.

Resolved, That the cost of the State and several county governments can and ought to be reduced one-half, and to that work the next Legislature should address itself. This can be done by a readjustment of public business, curtailment of the large list of officers, employees, and such reduction of the salaries and fees as will place the public servants on a footing as to compensation with persons in private business and immediately abate the almost universal preference for public over private employment; honesty and economy in the maintenance of the various institutions of the State; total abandonment of the practice of voting the people's money to institutions which were called into existence without State action, and by additional checks and safeguards to render official peculation difficult of concealment and surer of punishment when discovered.

The next resolution demands the punishment of citizens guilty of corrupt practices:

Resolved, That the Republican party will aid in the development of the resources of the State by all legitimate means. As it appears that the agricultural capability of large sections cannot be fully shown unless some practicable system of irrigation is adopted, the Republican party demands of the Legislature that it assume control of the various lakes and rivers, subject only to mining and mechanical rights, and provide for its distribution over the largest possible area of irrigable land by the adoption of a comprehensive system that shall make the irrigation works, to be constructed for this purpose, part and portion of the realty of the various districts, and be wholly subject to the control and management of the owners of the irrigable lands therein.

Resolved, That the freedom of the State from ecclesiastical control is of equal importance with the maintenance of religious freedom from State control; that the common schools and institutions of the State were established as a preventive of crime and poverty which attend ignorance, and will tolerate no interference with it from any quarter; and that any effort to divide the school fund for the purpose of supporting sectarian schools with portions thereof shall be met with all the resistance of our power.

Resolved, 1. That the Central Pacific Railroad is a State corporation, and as such amenable to the laws of the State concerning corporations.

2. That the relations of that company to the nation are simply those of agent and principal and debtor and creditor, so far as their property within this State is concerned.

3. The power of the State over said corporation is far from having been surrendered by the act of the Legislature in April, as claimed by that company. It was rather affirmed thereby in these words: "Said company is to be subject to all laws of the State concerning railroad and telegraph lines."

4. That the right to regulate fares and freights whenever it exists is a condition annexed to the franchise, and is necessarily vested in the government by which the franchise has been granted. The right to collect tolls is one of the essential franchises of railroad corporations, and the power to regulate these is simply a power to regulate the franchise under which they are collected, and the power must be exercised by the authority creating the corporation.

5. That the existence of the Central Pacific corporation and its right to operate roads in California rest exclusively upon the authority of the State law; that its natural character is limited to retain the functions which it derived by the State's consent from Congress, such as the right to operate its road outside of the State and to create liens upon its entire line in favor of the national Government and other creditors.

6. That as a necessary result of the foregoing, while Congress has the right to regulate tolls over the road on through and inter-State traffic, the State Legislature has absolute and exclusive power to regulate the rates of freight and fares between all points within this State.

7. That experience has shown that the railroad companies, where left uncontrolled, naturally look exclusively to their own interest; often disregard the interest and convenience of the public they were created to serve, whereby unreasonable rates for freight and fare have been and are still imposed, and unjust discrimination made against communities and classes of merchandise, and many settlements and towns put to inconvenience, and even seriously injured, for the building up of localities in which members of the company are interested.

8. That we recommend that the people should exact in advance from candidates for the Legislature an unequivocal pledge—first, that they will, if elected, vote for such reductions in the rates of freights and fares as will leave to the railroad companies fair incomes on the actual cost of construction of their roads and allow for maintaining and operating the same to enable them to meet their just obligations; second, that they will to that end institute a thorough investigation into the affairs of corporations, as they have ample power to do, in order to ascertain the actual cost of construction of their roads, and the annual outlays for maintaining and operating the same; and third, that they will, in adjusting a tariff of freights and fares, abolish all unfair discrimination between some classes of merchandise and equalize rates between different localities, having due regard to grades and curves.

Resolved, That the Republican party disclaim any sympathy with indiscriminate war upon associated capital with blind disregard of its rights; it is entirely independent of all corporate power, and it is opposed to all schemes in State, county, and city, whereby under pretense of providing gas and water for communities, or irrigation for farming, a few men seek to enrich themselves by imposing heavy burdens on the people. It repels all attempts of corporations to force into office through Republican conventions men who will guard their own interests rather than those of the republic, and it expects to be judged by its acts and the character of its candi-

dates, rather than by the false accusations of its enemies, who, after having had the Executive power of the State for the past eight years divided equally between them, can present no better claim to public confidence than loud and empty professions and horror at the alleged corruptions and profligacy in public affairs which they themselves have managed and controlled.

The eleventh resolution invites the coöperation of the farming interests in carrying out the measures of the platform.

The twelfth resolution decries disunion in the Republican ranks, and invites unity of action in the approaching presidential election.

The platform and nominations did not meet the approval of the organization known as the Peoples' Independent party, which was originally formed in 1873, under the lead of Governor Booth, largely from the Republican ranks; and it was charged that Mr. George G. Gorham, Secretary of the United States Senate, and ex-Senator A. A. Sargent, had controlled the convention in the interest of the Administration wing of the party, and the so-called railroad monopolies. Accordingly, the Independents held a convention of their own at Sacramento, on the 22d of June, and nominated the following ticket: For Governor, John Bidwell; for Lieutenant - Governor, Romaldo Pacheco; for Secretary of State, William Rousch; for Controller, Lauren E. Crane; for Surveyor - General, E. Twitchell; for Attorney-General, Peter Van Clief; for Superintendent of Public Instruction, J. M. Guinn; for Treasurer, Ferdinand Baer; for Clerk of the Supreme Court, Paul Morrill. A very long platform, consisting of thirty-six resolutions, was adopted. The general purposes of the party are declared as follows:

1. *Whereas*, The bitter dissensions that have divided citizens of California into opposite parties, on purely national questions, for so many years, having passed away with the Civil War, and the reconstruction measures growing out of this war, it has become obvious that serious local evils are weighing heavily upon the people of this State, requiring our earnest and thorough attention, lest they become, through carelessness, perpetual;

2. *Whereas*, The so-called national parties in California have fallen into the control, in a large measure, of the more worthless elements of society, in the interest of certain powerful corporations and associations of individuals, who systematically seek to accumulate wealth at the public expense through and by means of the machinery of government, until affairs have reached a point where the people can no longer safely trust the political control of the State to either of them: therefore—

3. *Resolved*, That the "People's Independent party" seeks to unite together honest and law-abiding citizens of all colors, irrespective of class, local or business distinctions, and regardless of religious or previous political opinion, for the purpose of bringing about a thorough reform in the State, court, and municipal government generally, and especially with the view of securing retrenchment in public affairs, consequent reduction of taxation, regulation and control of all corporations, exercising franchises of a public nature; the reduction, to a reasonable rate, of the fares and freights on railroads as well as steamboats, operated on junc-

tion railroads; in the prevention and punishment of unjust discriminations by railroads, and other corporations, against localities and individuals; the securing from the power or possibility of monopoly the natural water of the rivers, streams, and lakes of the State, revising them once more in the people; the rescue of the inhabitants of cities and towns from the oppressive power of water and gas corporations and other kindred monopolies; the purification of the administration of justice throughout the State by reforming the grand-jury system, so that powerful criminals may be punished as well as the weak; and generally to secure such improved legislation in the interest of good government as wisdom and an honest purpose of reform may suggest.

4. *Resolved*, That for the more perfect accomplishment of the foregoing, this convention, composed of delegates representing all parties of California, pledge the People's Independent party, and its nominees for office throughout the State, to support and carry out, by all lawful and proper means, the policy and purposes of the party as set forth in this platform.

5. *Resolved*, That to this end the agricultural and mining companies of the interior hereby enter into a solemn league and covenant to aid with the cities, the cities pledge themselves as solemnly to the counties of the interior, that all officers, executive, legislative, and judicial, elected by this party, in all parts of California, shall, in good faith, endeavor, in their official capacity, lawfully to remedy the grievances of the people, not only such as are peculiar to their own special constituencies or locality, but of the State as well.

Several resolutions are then devoted to the subject of railroad and transportation companies. In the preamble to these it is stated that, "through improvident and inconsiderate legislation, the funds generously appropriated by the nation, and materially increased by California, its cities and counties, to aid in constructing the Pacific Railroad, have been so employed that small numbers of individuals, acting in corporate capacity, now own and control the only trans-continental railroad in the country, together with almost the entire railroad system of the State, as well as river steamers and ferry-boats plying upon our interior waters, thereby practically monopolizing, not only the entire overland traffic, but likewise the general carrying-trade of the State and coast."

It is also declared that the corporations fix their own rates for freight and passage fare, and enforce their own regulations without restraint; that they make excessive charges and unjust discriminations; and that they have controlled and corrupted the politics of the State, "until the domination of the railroad and other corporations in our politics and government has become an intolerable evil." It is then resolved that these corporations should be placed under legal restrictions; that their charges should be fixed and adjusted by an equitable standard; that unjust discriminations against individuals and localities should be punished, and in general that they should be reduced "to the supervision and control of the laws of the land." The construction of competing lines is favored "provided they be built and operated in the interest of the people, and not solely in that of the monopolists,

as is the way with railroads now existing in California."

The subject of irrigation is then taken up, and it is declared that "the waters of the lakes and rivers of the State should be and remain forever in the ownership and control of the public, and never allowed on any pretense to become the subject of private monopoly;" and that the Legislature should speedily "enact proper laws to encourage and favor irrigation in agricultural districts of the State wherever needed, and to prevent monopoly by speculators of natural waters necessary thereto, at the same time having due regard for the wants of mining localities and fostering and protecting the just rights of those engaged in mining pursuits." Several resolutions are next devoted to the subject of the water-supply of San Francisco, condemning the monopoly held by the Spring Valley Water Company and its exorbitant charges, and declaring in favor of placing this corporation "under a just control of law," and fixing reasonable rates, so that "in no event shall said corporation levy or collect any rate on water beyond what shall be necessary to pay the interest on the actual capital invested in the construction of said works and the purchase of land, disregarding all watered stock or all pretended outlays of money." Opposition is also pledged to all "attempts on the part of any water company or individual to sell any water-works, scheme, or pretended water-works, to the city of San Francisco, or to any town or city of this State, at a price in excess to the money or capital actually expended by such company or individual in the land and works, exclusive of the supposed value of any water right disconnected from ownership in fee simple of the land, it being the cardinal principle with the People's Independent party that the fresh water in the rivers and lakes of this State, as well as the rivers that descend from the clouds, belong of right to the whole people, and any ownership or monopoly of it by a corporation or person beyond what they shall put to some beneficial use is wrong to the entire community."

Next, regulation of the quality and price of gas in San Francisco is demanded, the San Francisco Gas Company being condemned as a grasping monopoly. Declarations were also made on the subject of retrenchment of expenses and reform in the assessment of taxes.

Revision of the grand jury system and enforcement of the criminal laws are demanded; and the platform ends with this declaration:

36. *Resolved*, That the sole purpose of the People's Independent party in placing candidates before the people of California for election this year is the much-needed reforms in this State, and the objects sought to be attained in this movement for better local government are in no wise dependent on the question whether there will or will not be an Independent National party, or an independent nomination for President in 1876, and that the vote of any citizen for the nominees of the People's Independent party of California, in 1875, does not fore-shadow or have any manner of significance or bear-

ing on the question of national politics or the contest for President, but each citizen will be free to vote and act when that time shall arrive as his conscience may dictate.

The success of the independent movement in 1878 was due largely to its support by Democrats; but this year that party made nominations of its own, and largely withdrew its aid from the Independents. Its convention was held in San Francisco, on the 29th of June. The candidates put in nomination were: For Governor, William Irwin; Lieutenant-Governor, James A. Johnson; Secretary of State, Thomas Beck; Controller, J. W. Mandeville; Surveyor-General, William Minis; Attorney-General, Joseph Hamilton; Superintendent of Public Instruction, O. P. Fitzgerald; Treasurer, J. G. Eshidillo; Clerk of the Supreme Court, B. D. Woolff. The platform adopted was in substance as follows:

1. We are opposed to the unconstitutional interference of the Federal Administration in the domestic affairs of the States, by which one portion of the Union is ground with taxation to keep another portion of the Union in bankruptcy and servitude.

2. We condemn the Republican party for contempt of constitutional obligations; for extravagant, partisan, and corrupt administration of the Federal Government; the perversion of the functions of the latter to enrich great corporators at the expense of the public; for jobbery and frauds, which have brought reproach upon democratic institutions; for the Sanborn and Jayne frauds; for the infamous Washington ring; for the back-pay steal, the iniquities of the protective system, the curse of inconvertible paper money, the nepotism of the President; for the disgraceful diplomatic service and unfit appointments; for the attempts to pass the unconstitutional force bill, which was fortunately frustrated by the determined front of the Democratic minority in both Houses of Congress; and for the catalogue of other enormities, which have rendered that organization offensive even to the mass of those who were its supporters.

3. We are in favor of a strict construction of the Constitution, and against the exercise of doubtful powers; favor the limiting of the power of legislative bodies, the tariff for revenue only, and a currency convertible into gold and silver at the will of the holder; against profligate and wasteful systems of local improvements by the Federal Government, and in favor of reducing the expenditures of the State government and of counties and towns.

4. Opposes the diversion of the school fund to other than legal purposes.

5. We assert the traditional policy of the Democratic party in declaring it the right and duty of the legislature to regulate corporations, whether railway, gas, telegraph, water, or otherwise; to limit their charges in the interest of the public; compel them to serve all citizens without discrimination and at reasonable rates. We further assert it to be the duty of the government to preserve the waters of the State for irrigation and other public uses, instead of permitting them to be made the means of extortion and monopoly.

6. The Democratic party has no occasion to make a new departure or a declaration of opposition to the system of subsidies when we recall the fact that it is to a Democratic State administration that this State owes its deliverance from this oppressive, unjust, and corrupting system.

7. We are in favor of calling a convention of delegates elected by the people to amend the constitution of the State.

8. That local self-government is sufficient to afford

an effective remedy for the evils caused by Chinese labor and the presence of an inferior race; and we demand such amendments to the Burlingame treaty as shall reduce it to a mere commercial treaty.

9. We condemn the doctrine whereby the power of the State to prevent the importation of degraded persons for immoral purposes has been denied.

10. We favor the speedy completion of the transcontinental railway on the thirty-second parallel, subject to such limitations by the Federal and State Governments as shall protect the rights of the people.

11. Favors equal taxation, and opposes double taxation as unconstitutional.

12. We oppose all legislation known by the name of prohibitory law.

13. We invite all persons, whatever may have been their political offenses, to unite with us in carrying out the principles herein enumerated.

14. We condemn the folly of permitting the lands of the State to become the monopoly of a few. The Democratic party will correct this great evil.

The Temperance Reform Convention was held at San Francisco, and, after adopting declarations in favor of the prohibition of the sale of intoxicating liquors, nominated a State ticket in which some changes were afterward made. It finally stood as follows: For Governor, Wm. E. Lovett; Lieutenant-Governor, W. D. Hobson; Controller, Joel Russell; Treasurer, C. P. Thompson.

The election occurred on the 1st of September, and resulted in the choice of the Democratic candidates. The total vote for Governor was 122,939, of which Irwin received 61,509, Phelps 31,322, Bidwell 29,752, and Lovett 356, making Irwin's plurality over Phelps 30,187, over Bidwell 31,757, and his majority over all 70. The highest Democratic vote was that of Irwin, the lowest that of Mandeville for Controller, which was 57,064. The highest Republican vote was 36,901 for Green, the candidate for Controller; the lowest was 30,982 for Cavis for Lieutenant-Governor. The highest Independent vote was 33,335 for Pacheco for Lieutenant-Governor, the lowest 27,760 for Van Clief for Attorney-General. Four members of Congress were chosen at the same election. In the first district, comprising the city of San Francisco, William A. Piper, Democrat, received 12,417 votes to 6,791 for Ira P. Rankin, Republican, and 6,103 for John F. Swift, Independent. In the second district H. F. Page, Republican, received 13,624 votes, to 12,154 for Henry Larkin, Democrat, and 5,589 for C. A. Tuttle, Independent. In the third district J. K. Luttrell, Democrat, received 18,468 votes, to 14,284 for — Denio, Republican, and 6,770 for C. F. Reed, Independent. In the fourth district P. D. Wigginton, Democrat, received 15,649 votes, to 11,090 for G. O. Houghton, Republican, and 5,343 for — Thompson, Independent.

The Superintendent of Public Instruction was chosen at the judicial election on the 11th of October. The Independent candidate was practically withdrawn, and the contest was between Ezra S. Carr, Republican, and O. P. Fitzgerald, Democrat. Mr. Carr was elected,

receiving 45,257 votes, to 39,630 for his opponent.

In accordance with a proposition submitted by the Legislature of 1873-'74, a vote was taken at the regular State election on the question of holding a convention for the purpose of revising the constitution of the State. There were 34,374 votes cast for the convention and 24,552 against it. The provision of the constitution providing for its revision declares that if a Legislature deems it expedient, and shall recommend to the electors to vote for or against a constitutional convention, and it shall appear upon such voting that a majority of the electors voting have voted in favor of calling a convention, then the next Legislature shall provide for the convention to be held within six months after the passage of the law so providing. As the vote for the convention was considerably less than a majority of the votes cast for State officers, it is maintained that the next Legislature is not authorized to call such convention. The law of 1873-'74 submitting the question provides that "a majority of the aggregate votes of the State cast for members of the Legislature" should form the basis for ascertaining the wishes of the people on the subject of revising the constitution. At the opening of the Legislature in December, the retiring Secretary of State submitted the following communication on the subject:

To the Honorable the Senate and Assembly of the State of California: In accordance with the provision of section 2 of an act of the Legislature of the State of California, entitled "An act recommending to the electors of the State to vote for or against a convention to revise and change the constitution of the State," approved March 27, 1874, I herewith transmit a certified abstract of the vote cast for and against a constitutional convention at the general State election held on the first day of September, A. D. 1875; also a certified statement of the votes cast for members of the Legislature.

The same section provided that a majority of the aggregate vote of the State cast for members of the Legislature being in favor of a convention, said convention shall be deemed to be called. If it were the intention of the framers of this act to have the aggregate vote cast for members of the Legislature certified to your honorable body, and the majority vote also ascertained by the Secretary of State, I beg to say that such is difficult of accomplishment, if not practically impossible. For instance, in the single county of Sacramento sixteen members of the Legislature were voted for, while but four could be elected. How is the average to be arrived at or the majority vote determined? I am free to confess—after consulting excellent authority on the subject—my inability to arrive at anything like a satisfactory solution of the question; and while it appears evident that the voters voting at said election were more than treble the vote in favor of a convention, I submit to your honorable body, or some one better versed in political mathematics than myself, to determine what the majority vote, as cast for the members of the Legislature, amounts to. Very respectfully,

DRURY MELONE,

Secretary of State.

A number of amendments of the constitution were also prepared by the Legislature of 1873-'74. It was necessary for these to be acted upon by the Legislature of 1875-'76 be-

fore being submitted to a vote of the people for their approval, but by some misunderstanding a vote was taken on them at the election of this year. This, however, is wholly non-effective.

The State Grange of the Patrons of Husbandry held its third annual session at San Francisco on the 15th of October and the following days. The subordinate granges of the State number two hundred and fifty-two, with an aggregate membership of twenty thousand. Thirteen granges in Nevada are also under the jurisdiction of the State Grange of California. During the sessions of the order, irrigation and other topics relating to agriculture were discussed, numerous amendments were made to its constitution, and various resolutions were adopted, among which were the following:

In view of the many land-swindles that have been perpetrated in this and other States, and to check so far as it may be in our power, a continuation of such wrong-doing—

Resolved, That the Executive Committee of the National Grange be requested to take measures to have investigated, whenever such action is asked of them, the land-stealing operations carried on under the so-called Spanish grants, bogus railroad grants, and other similar methods of monopolizing the arable lands of the State, and preventing its occupation by actual settlers.

Resolved, That the Secretary of the California State Grange is hereby directed to communicate with the Executive Committees of our sister State Granges, and secure their coöperation.

The subject of irrigation for the benefit of agriculture is receiving a large degree of attention in California. Governor Pacheco, in his message to the Legislature of 1875-'76, says:

It is apparent that irrigation is of paramount importance in California. Agriculture, which has become our leading industry, has met with a serious check on the very threshold of a vast expansion. Experiments, partial successes, and disastrous failures in husbandry, have demonstrated the peculiarities of our soil and climate. Millions of acres of arable land must lie idle until a lavish natural waste has been checked by art. Large tracts of fertile territory, capable of conversion into countless homes, are measurably worthless, and will remain so until they are redeemed by baptism. The elements of wealth, in extensive areas of country, are held in bondage under natural laws, that must be broken to create a taxable property of immense value and enduring character. In the winter our system of inland waters, converging mainly to one point, is heavily taxed to drain its great area; in the summer, we easily realize the loss of the untold wealth it poured into the sea. How to properly equalize the moisture and merge the value of the seasons, is a problem of great magnitude. No effective solution of it is possible except through legislation, and no subject will demand your attention that is at once so important and so difficult. . . . If the State, indeed, should enter upon the great work, justice and safety should demand that all questions of property between herself and individuals be settled by a commission; that a series of exhaustive surveys be made as the preliminary step; and that the aid of the best engineering skill be invoked, both in planning the work and in its progress. But it is probable that private capital alone will be relied upon, and will be invited and encouraged by appropriate enactments to embark in the enterprise. Such legis-

lation may be generous without neglecting to be wise. No franchise in perpetuity should be granted; none that cannot be always regulated in terms and retired at any time by equitable process. Under the provisions of any scheme the separate ownership of land and water must often be the case, and may become the rule. It never should be in the power of either to dictate terms to the other. The right of every section to its natural *pro rata* of water, and to participate in the benefits of any plan that may diminish or increase it, should be recognized, and, if possible, guarded.

Governor Irwin, in his inaugural address, speaking on the same subject, says:

In providing a system of irrigation it would seem necessary that the Legislature should provide—

1. For the division of the portions of the State which need irrigation into districts, in such a manner that all the lands which must be irrigated, if at all, from the same source of supply, shall form a single district. It will devolve on the Legislature to adopt the plan which shall offer the best guarantees for having this work done in a proper manner, and the most economically.

2. For the appropriation by irrigation districts of such unappropriated waters as they may require for irrigation purposes; and for the acquisition, by such districts, by purchase or condemnation, of such waters held by adverse right as they may require. Irrigation will be impossible, unless irrigation districts are clothed with these rights.

3. That each separate portion of land forming an irrigation district shall have an indefeasible right to its *pro rata* share of the water belonging to the district. The right of each portion of the land of a district to a *pro rata* share of the water appropriated to such district results, as a necessary corollary, from the power assumed, first, to form all the lands susceptible of irrigation from the same source into a district; and, second, to give such district the right to appropriate, purchase, or condemn, the water necessary for its irrigation.

In addition to all this, the Legislature must determine the financial basis on which irrigation shall rest. The financial problem is likely to prove the most difficult of solution of any connected with irrigation. There would be a manifest injustice in making the cost of irrigation a charge either on the State or on counties. The justice of making each district bear the expense of its own irrigation seems so clear that I hardly think there can be any difference of opinion on that point. But there may be some question whether this expense should be borne by the whole property of the district, or only by the land. A very little reflection, however, will, I think, suffice to show that only the land, and not the whole property of the district, should be taxed to provide irrigation. Irrigation is a process of fertilization, the water being the fertilizer. Its effects on land are analogous to those of guano, or any other substance used to increase its productiveness. By increasing the productiveness of land, it adds to its value. And as the owners of the land are the persons chiefly benefited by the additional value given to it by irrigation, they should bear the expense of irrigation. In other words, the cost of bringing water upon land should be paid out of the increased value given to the land.

Considerable excitement was caused throughout the State, on the 27th of August, by the suspension of the Bank of California in San Francisco. This was one of the largest and most powerful financial institutions on the Pacific coast, and its embarrassment was said to have been caused by its heavy advances to various enterprises, some of which were of a

speculative character. Mr. Wm. C. Ralston, its president, was a very active business-man, who had engaged in a multiplicity of enterprises, and the agency of the bank had been largely used in forwarding these. It was found that the liabilities of the institution amounted to about \$14,000,000, while its available assets were little more than \$7,000,000. At a meeting of the directors on the day of the suspension Mr. Ralston was asked to resign, which he did. He then went immediately to a bathing establishment at what was called the North Beach, and while in an excited and heated condition plunged into the water and swam a considerable distance. He then sank and was drowned. An inquest was held, but it was left in doubt whether his death was the result of accident or a purpose to commit suicide. Mr. Ralston was born in Pennsylvania in 1830, and in early life was a shoemaker. He afterward went to California and became a clerk in a bank. Subsequently he acted as agent at Panama for Garrison's steamship line. In 1852 he returned to San Francisco and became a partner in the banking-house of Garrison, Fritz & Ralston, and afterward in that of Donahue, Kelly & Co. In 1864 he organized the Bank of California, and became its cashier and soon after its president. He was at one time regarded as very wealthy, and built a house at Belmont at a cost of \$1,000,000, supporting his establishment at an expense of about \$350,000 a year and entertaining with great munificence. His house would accommodate one hundred and fifty guests, and he not unfrequently entertained nearly that number. His salary as president of the bank was \$50,000 a year, but formed only a small part of his income. The bank resumed business early in September, its stockholders making up its losses from their private resources.

It was decided in the Fifteenth District Court, in September, that the tax levy of 1872-'73 was in certain of its features illegal, and that taxes paid under protest must be refunded with interest. It appears that the Board of Equalization reduced the assessments in Marin County 25 per cent., and in Alameda and Monterey Counties 10 per cent., making an aggregate reduction of \$2,000,000 in the valuation in those counties. The board also added from 18 to 20 per cent. to the rate of taxation in the city and county of San Francisco and certain other counties as an allowance for delinquencies. Besides this, the reduction made in the above-mentioned counties added considerably to the taxation for the rest of the State. Suit was brought in San Francisco against the tax-collector for the recovery of \$1,500 paid under protest, and judgment was obtained for the amount with interest. Judge Dwinelle decided that the Board of Equalization had no power under the constitution to impose an additional rate of taxation to cover delinquencies, or to reduce or add to the valuation of property made officially by

county assessors. He also decided that an act of the Legislature legalizing "the several void acts of the State Board of Equalization and of the Board of Supervisors" was of no effect, as "the Legislature cannot by a curative or other act legalize a void or unconstitutional act."

It was decided in another case that the Legislature cannot, while providing a system of education for the youth of the State, exclude from its benefit certain children merely because of their African descent, and that the law providing for the education of children of African descent in separate schools, to be provided at the public expense the same as other schools, is not in conflict with the constitution of the State, or that of the nation.

The Legislature met at Sacramento on the 6th of December. The new Governor, William Irwin, was inaugurated on the 9th, and delivered an address, made up chiefly of recommendations on subjects for legislation. The business of the session was hardly under way before the close of the year.

CARPEAUX, JEAN BAPTISTE, the well-known French sculptor, was born at Valenciennes in 1827, and died near Paris, October 23, 1875. He studied first in his native town, and was then sent to Paris to study at the expense of the Département du Nord. He then went to Rome. His earlier works evince lack of invention. His bass-relief of "Flora," in the new Pavillon de Flore, is considered a masterpiece. His group of "La Danse," at the top of the staircase of the new Opera-House, exhibits indeed great technical skill, and a bold nudity, such as is characteristic of later French art. One night some one threw a bottle of ink upon this group. His less noticeable works are the bronze fountain "Quatre Parties du Monde" near the Observatoire, a bust of the Princess Mathilde, a statue of the young Prince Imperial, and a bust of Alexandre Dumas, *fil.* During the last two years he had been a great sufferer. Going to Nice, he there made the acquaintance of a Wallachian, Prince Stirbey, who received him into his château at Ansières, at the gates of Paris, where he received every attention until the day of his death. His native town claims the honor of raising a monument to his memory.

CENTRAL AMERICA (AMÉRICA CENTRAL), the tortuous isthmian strip of territory connecting North and South America, extending from Mexico, about latitude 7°, to Colombia, latitude 18° north. It varies in breadth from 30 to 300 miles, and its shores are washed respectively by the Caribbean Sea and the Pacific Ocean. It comprises the five independent republics of Guatemala, Honduras, Nicaragua, San Salvador, and Costa Rica, with an aggregate area of some 175,000 square miles, and a population of about 3,000,000.

The east coast of Central America was visited by Columbus in 1502; and Pedro Alvarado, sent in 1523 by Hernan Cortes, then in Mexico, to subdue the country, completed this

mission in 1525. The whole region remained under Spanish colonial rule until 1823, when, becoming independent, the five colonies united to form a federal republic, which was dissolved in 1839. Since that time several short-lived federations have been established, and in February, 1872, four of the States were represented at an international conference held at La Union, San Salvador, for the purpose of deliberating upon the terms of a new treaty of confederation. Owing, however, to the languid indifference of Nicaragua, this new attempt at restoration proved ineffectual. But the project has by no means been abandoned, and strenuous efforts for its realization are spoken of, in which Guatemala would appear to be the active and ruling spirit.

We subjoin a translation of the circular submitted by the government of General Barrios to the sister states, and containing the bases proposed for the foundation of the new consolidated Republic of Central America:

1. That the five republics should maintain their independence and the territory of Central America intact.
2. That they should likewise adopt the democratic form of government, and the liberal institutions thereto appertaining.
3. That peace should be maintained between the five republics, and that, in the event of internal discord, pacific means should be adopted for the re-establishment of harmony.
4. A uniform system of diplomatic and consular representation abroad should be organized.
5. That the five republics should unite in urging the claims of any one of them against a foreign power.
6. That they should unite in making contracts for lines of steamships and telegraphs, for the purchase of vessels to guard the coasts, and for any other enterprise of mutual benefit.
7. That the five republics should be united by roads and telegraphs.
8. That a postal system at once expeditious, safe, and cheap, should be established.
9. International rights should be uniform, and treaties with foreign powers of equal effect in the five republics.
10. That in the five republics the same civil, penal, commercial, and customs laws should obtain in the matter of exports, imports, and weights and measures.
11. That public instruction should be similarly organized in all of them, and a mutual-aid system observed in regard to text-books, etc.
12. That literary and professional titles be equally recognized in the five republics, proof of the authenticity thereof being the only requisite thereto.
13. That the natives of each one of the republics enjoy the rights of citizenship in all of them.
14. That the extradition of criminals be extended to a larger number of crimes than in treaties with foreign powers.

CHEMISTRY. *Salicylic Acid*.—Though long known to chemists, and described in many of the text-books, this substance has during the past year acquired new interest and importance from the discovery by Prof. H. Kolbe, of the University of Leipsic, that it possesses valuable antiseptic and disinfecting powers; equaling carbolic acid in these respects, and having in addition the very decided

advantages of being tasteless, inodorous, and non-poisonous.

Salicylic acid exists ready formed in the flowers of *Spiraea ulmaria* (meadow-sweet), and as methyl-salicylic acid in oil of winter-green. It may also be prepared from indigo, and from *salicine*, a substance found in the bark of several species of willow and poplar. Kolbe's mode of preparing it is thus described by himself.

After many months' trial, I have at last succeeded in gaining the clew which has led me to the discovery of a new, simple, and productive method of making salicylic acid. In dissolving sodium in hot phenol in the presence of a stream of carbonic acid there is always found, besides sodic salicylate, more or less sodic carbonate and phenylate. And I observed that the more of the former salt there was, the less was found of the two latter. I further observed that a product rich in sodic phenylate and relatively poor in sodic salicylate yielded richly of the latter salt when further heated in a stream of carbonic acid.

The method of manufacturing salicylic acid, upon which I finally settled and by which I have already prepared about fifty pounds, is the following: procure exactly commercial crude soda lye of known strength with crystallized carbolic acid previously freed, and evaporate in a shallow iron vessel. The thick, dough-like mass is now heated moderately, with constant stirring, being finally powdered with heavy pestle. This dried product is sodic phenylate. It is always reddish-yellow in color, perhaps in account of partial decomposition by the oxygen of the air during the evaporation, is very hygroscopic, and must while yet hot be bottled and kept well stoppered. If the sodic phenylate is moist, or contains either free alkali or carbolic acid, the results are not good.

The sodic phenylate thus prepared is heated slowly in a metal retort in an oil or air bath. When the contents of the retort are about 100° C., begin to lead into the mass a moderate stream of carbonic acid. Let the temperature slowly rise, till after some hours it stands at 180°. After further action of the carbolic acid, phenol begins to distill over, toward the end in greater abundance. Finally raise the temperature to from 220° to 250°. The operation is finished when at this temperature, under the continued absence of carbonic acid, no more phenol distills over.

When the reaction is finished the residue in the retort is (if the operation has been conducted properly) a grayish-white mass of sodic sodium-salicylate. The following equation represents the reaction:

The salt dissolves easily in water, to a dark-brown liquid. Upon the addition of hydrochloric acid the whole forms a thick paste of salicylic acid, which contains only traces of phenol. It may be perfected by the usual methods. Curiously enough, upon repeating the experiment with potassic hydrate, not salicylic acid, but its isomer, peroxybenzoic acid, was formed.

Knowing that salicylic acid may be easily made from phenol and carbonic acid, and on the other hand that it is decomposed into phenol and carbonic acid on heating it above its boiling-point, I came to suppose that like carbolic acid it would retard or entirely prevent fermentation and putrefaction. Prof. Thiersch and myself, having experimented in this direction, find surprising confirmation of my conjecture.

The crude acid is a yellowish powder, and in this state it may be used for many of the coarser forms of disinfection. For other purposes it re-

quires to be purified, and this Rautert accomplishes in the following way:

The salicylic acid is heated, in a retort, to 170° C., and a current of superheated steam of the same temperature is then thrown in. The acid distills at once in a colorless state, leaving behind it in the retort, at the end of the operation, a small quantity of blackish impurities. The apparatus must be arranged in such a way that the neck of the retort may be kept free from crystals, which may be done by inserting a movable wire.

The valuable properties of this substance as an antiseptic and disinfectant have been demonstrated by numerous experiments, made by different investigators. A few will suffice for illustration:

Brewer's yeast, which causes alcoholic fermentation of sugar, was found to have no effect on a solution of glucose containing the one-thousandth part of salicylic acid. Half a gramme of the acid suffices to check the fermentation produced by five grammes of beer-yeast acting upon 120 grammes of sugar in a litre of water. Neubauer showed that 100 grammes of salicylic acid is sufficient to absolutely prevent fermentation in 1,000 litres of *must*, or fresh-pressed juice of grapes. Flour of mustard, which, when mixed with lukewarm water, gives out the pungent oil of mustard, is perfectly odorless when a small quantity of salicylic acid is added. So, too, this acid prevents the action of emulsine (the ferment contained in almonds) upon amygdaline, and the conversion of the latter into the oil of bitter almonds. Milk treated with 0.09 per cent. of salicylic acid remained uncoagulated for thirty-six hours longer than milk not so treated. In like manner a litre of beer containing one gramme of the acid, and exposed to the air, did not become sour after standing a considerable time, nor was there the slightest trace of movement. Godeffroy, in a series of careful experiments, has proved that, as an anti-ferment, salicylic acid is three times as powerful as carbolic acid. Eggs immersed for an hour in a solution of salicylic acid were at the end of three months as fresh as at first. Flesh-meat dusted over with the acid keeps its freshness for weeks. When about to be used, the meat may be dipped into water, to remove the acid.

Dr. Thiersch, of the Leipzig Hospital, has used this substance "with very favorable results" in his surgical practice. Kolbe has employed it as a wash for the teeth and mouth, and asserts that it is very effectual in purifying the breath. In a communication published in the *Journal für praktische Chemie*, he says:

As a medicine for internal use salicylic acid does not seem to have been much employed hitherto, and yet, owing to its antiseptic properties, it is indicated in all diseases of the blood, especially in those which are developed by contagion.

Dr. Karl Fontheim, writing to the same journal, says:

This new remedy has been found of very special benefit in treating diphtheria; I have employed it in thirty-two cases; of these none have proved fatal, and the worst case recovered in eight days.

Dr. Ogilvie Will, writing in the *Lancet*, speaks of it in the very highest terms as an antiseptic in surgical practice. He relates several cases where, by reason of its non-irritant action, it was possible to apply it directly to the surface of wounds, with, in each case, most excellent results. Prof. Zörn, of Leipzig, has employed salicylic acid in veterinary practice,

both medical and surgical, and it is his opinion that—

For internal and external use in domestic animals, as an antiseptic and destroyer of living contagia, it is destined to occupy as honorable a position in veterinary practice as it does in human medicine.

Kolbe has experimented on his own person, to determine whether or not salicylic acid is injurious to the animal economy. For several days in succession he took daily, in four parts, one-half gramme (solution in water 1 : 1,000), without the slightest bad effect. After an interval of eight days, he for five successive days took double the former dose, and for two successive days he took one and a half gramme. In the mean time his digestion was entirely normal; there was no feeling of oppression in the stomach, nor did he experience any inconvenience whatever. Other physicians who, at his request, made the same experiments, confirm these results.

Some experiments have been made by Knop to ascertain the action of salicylic acid on vegetation. The following account, which is taken from the *American Journal of Science and Arts*, proves that it exerts a marked influence on the vegetative activity of cells, whether these be the chlorophyll cells of the higher or the non-chlorophyll cells of the lower orders of plants, provided only the acid remain free in the liquid. "Two vigorous maize-plants, four or five decimetres high, grown in his well-known solution and well rooted, were immersed in 500 c.c. of this solution, to which had been added 100 c.c. of a solution of salicylic acid containing 0.4 per cent. of the acid. A third, fourth, and fifth plant was similarly treated, using tartaric, citric, and lactic acids respectively, in place of salicylic. In the salicylic solution, the roots were killed. The new roots put out during the duration of the experiment became dark upon their ends, and under the microscope their cells were seen to be markedly affected, the protoplasm separating from the cell-walls. A second crop of roots fared similarly; but the third was more successful, and the plant continued to live in the solution for a long time. No mould, however, formed on the surface of the liquid even after three weeks. The other acid solutions killed the maize-plants in three weeks, but the surfaces were covered with a thick layer of mould. Neither maize nor buckwheat grains germinate after soaking in water to which an equal volume of a saturated solution of salicylic acid has been added, not even by planting in earth. Fifteen grains of corn were soaked in water containing $\frac{1}{10000}$ of salicylic acid, and then placed in a germinating fluid consisting of 50 c.c. gypsum solution, 50 c.c. solution salicylic acid of 0.1 per cent., in a litre of water; 14 failed to germinate. The same fact appeared with buckwheat, wheat, rye, and oats. A similar depression of vegetative activity was observed in the case of mould; the difficulty of germinating seeds in solutions in

June and July, owing to the rapid production of mould, being entirely obviated by the use of a highly dilute solution of salicylic acid."

New Process for purifying Illuminating Gas.—An improved process for freeing illuminating gas from ammoniacal impurities, and at the same time preserving the ammonia from waste, has lately been invented and patented by Prof. Benjamin Silliman, of New Haven, Conn. According to the specification published in the *American Chemist* for January, 1875, the process "consists in the use of certain acid salts placed in the path of the gas for the purpose of removing the ammonia and other impurities." It is well known that the complete removal of ammoniacal compounds has hitherto been attended with serious difficulty, as it required the use of water, and thus impaired the illuminating power of the gas by washing out some of its more valuable constituents. In the new process water is not employed, the ammonia is entirely removed, and the illuminating power of the gas thereby much increased. The separation is said to be so perfect, that not a trace of ammonia can be detected with either turmeric or litmus paper after the gas has passed the purifiers.

The material employed as the purifying agent in this method is the salt-cake of acid and alkali works. This is broken up into a coarse powder and placed in layers of convenient thickness in boxes or trays similar to those used in "dry-lime purification" or "oxide-iron purification." Owing to the greater firmness and porosity of the salt-cake it may be employed in thicker layers than are used where lime is the purifying material.

The gas as it comes from the hydraulic machine is made to pass through these layers of salt-cake, which immediately and completely remove all ammoniacal compounds; holding them in chemical combination in a dry state, and thereby acquiring increased value in proportion to the amount of ammonia absorbed and combined. The power of the salt-cake to extract the ammonia from the gas depends upon the degree of acidity, which may be readily determined beforehand. Salt-cake from the hydrochloric-acid process in the United States usually contains about twenty-five per cent. of pure hydrochloric acid, together with some sulphuric acid. Nitric acid salt-cake contains here from twelve to fifteen per cent. of nitric acid; but if desired the chemical manufacturer may readily prepare the salt-cake of any degree of acidity considered requisite for the process.

The product resulting from the union of ammonia with the salt-cake is much more valuable than the raw material employed, as the ammonia may be readily separated, when it finds a ready market, while the soda-salt left in a state fit for the soda process.

Briefly summed up, the advantages claimed are, a great reduction in the amount of waste required in gas-manufacture, increased illum-

nating power of the gas, preservation of the ammonia from waste, and avoidance of the nuisance occasioned by the escape of ammonia and other noxious vapors from the spent lime or iron-oxide now used as purifiers.

In certain processes, such as the destructive distillation of animal matters for producing boneblack, and the like, or for the production of ammonia, bone-boiling, rendering, the sweating of hides, etc., large quantities of ammonia are given off, combined with other offensive gases and vapors, that are a source of much annoyance, and injurious to public health. Such nuisances, it is claimed, may be readily and effectually abated by employing suitable means for carrying the emanations through trays of salt-cake, when all the ammoniacal compounds will be arrested and retained.

Researches on the Coloring Principles of Madder.—It has been generally held that madder contains four distinct coloring principles, viz.: alizarine, purpurine, pseudo-purpurine, and hydrated purpurine; but the part which each plays in producing the color has not been well ascertained. Recent investigations of Rondestiühl's, the results of which are published in *Annales de Chimie et de Physique*, tend to show that pseudo-purpurine, although itself playing no direct part in dyeing, readily gives rise to the formation of purpurine and hydrated purpurine, and is probably to be regarded as the source whence these bodies are derived. This is true, then the number of distinct coloring principles in madder is only two, namely, alizarine and pseudo-purpurine.

M. de Lalande, according to the *Bulletin de Mulhouse*, has succeeded in artificially forming purpurine by the oxidation of alizarine. A mixture of concentrated sulphuric acid and artificial alizarine, with arsenic acid, or other oxidizing agent, is heated to 150° or 160° C., and the product thrown into a large volume of water; the precipitate, when well washed, is dissolved in a solution of alum, and on addition of an acid the purpurine separates in dense flakes.

Improved Process for preparing Sulphate of Nickel.—An improved process for the preparation of pure sulphate of nickel, for use in the electro-deposition of that metal (nickel plating), has been recently invented by M. Terpil. This and other salts for the same purpose, are prepared from commercial nickel, which is an alloy of nickel, copper, and iron, with traces of arsenic. The inventor's process is get rid of these and obtain a pure sulphate, consists of four operations:

1. The nickel is dissolved in seven or eight times its weight of nitro-muriatic acid, the solution is evaporated nearly to dryness, and the residue is re-dissolved in water, using about four times the weight of the nickel employed. A little arseniate of iron remains undissolved, and is removed by filtration. Metallic iron in the shape of small nails, equal in weight the nickel present, is now put into the solution, and by stirring from time to time the copper is precipitated. When a piece of bright iron is placed in the liquid is no longer coated with copper,

this part of the process is complete. The whole is now placed on a filter and repeatedly washed. The copper is then collected by sifting it under water in a sieve coarse enough to let pass the coppery metallic powder, but retain the iron. The copper is dried and is then marketable. The filtrate now contains only nickel and iron. 3. The iron is peroxidized either by means of chlorine or nitric acid. Sulphuric acid of 66° B. is then added, in the proportion of two parts to one of nickel, and the whole is evaporated to dryness in order to expel the nitric and hydrochloric acids. The dry residue is redissolved in water, a little subsulphate of iron sometimes remaining undissolved. 4. From this solution the iron is precipitated by means of carbonate of baryta. This separates the iron as sesquioxide, and forms at the same time insoluble sulphate of baryta—without, however, acting upon the sulphate of nickel. The last traces of arsenic are carried down with the sesquioxide of iron. The precipitation is effected by gradually adding a small excess of carbonate of baryta to the liquid, slightly heated, but not to exceed 50° to 60°. It is complete when a further addition of carbonate of baryta causes no effervescence. Pure sulphate of nickel then remains in solution. It is separated from the precipitate by filtration, and the filtrate is evaporated till a pellicle appears on the surface, when it is set aside to crystallize.

Water-Analysis.—The estimation of color in water having become an important part of water-analysis, Prof. J. Falconer King, in the absence of any but rough and uncertain methods, has devised the following process for its determination:

To a known quantity of pure distilled water in a glass tube an aqueous solution of caramel of certain strength is added from a burette until the tint imparted to the distilled water is found to equal that of the water under examination. Preparing the standard solution of caramel is the only difficult part of the operation. This is done by adding caramel to distilled water until the proper depth of tint is obtained. The depth of color it should possess is ascertained as follows: To eight ounces of pure water, perfectly free from ammonia, contained in a glass tube, and forming a column twelve inches long, add 10 grains by volume of solution of ammonium chloride, containing 8.17 grains of the salt in 10,000 grains of water (or 0.0001 grain of ammonia in 1 grain of solution). To this mixture, after proper agitation, add 25 grains by volume of Nessler's solution, of the usual strength; allow this, after mixing, to repose for ten minutes, at a temperature of 60° Fahr., when the color produced will equal 30° on my scale. That is, 300 grains by volume, or 80° (a degree being equal to 10 grains by volume) of caramel solution, if of proper strength, will produce exactly the same depth of color when added to the same amount of distilled water (eight ounces) in a column twelve inches long.

The tubes employed are made of glass as free from color as possible; they should be fifteen inches long, and of such diameter that when filled to within three inches of the top, they will contain eight ounces of water exactly. The caramel solution as thus prepared may be kept for a considerable time without change. To use it in estimating the color of water, fill two tubes of the dimensions given above to within three inches off the top, one with distilled water, and the other with the water to be tested; and having placed them side by side on a white slab, in a good light, add the caramel solution from a burette to the distilled water until that is found to equal in depth of color the water in the other tube. The burette being graduated in grains, every ten grains consumed will represent one degree of color.

Influence on Vegetation of Arsenical Poisons in the Soil.—The use of Paris-green as an in-

secticide on growing plants has made the question of its effects on the soil and through this on vegetation an interesting and important one. Some experiments on the subject made by Mr. Wm. McMurtrie, and reported in the monthly bulletin of the Agricultural Department, would seem to show that, from the quantities commonly employed, no bad effects need be apprehended, but that larger quantities diffused through the soil would be decidedly injurious. The points to be determined were:

1. If applied to the soil, are arsenical compounds absorbed and assimilated by the plant?
2. If so absorbed and assimilated, can a sufficient quantity be taken up to injure the health of the consumer?
3. If not taken up by the plant, is the latter injured by the presence of the arsenic in the soil?
4. If injurious to the plant, how much may the soil contain before the injury is apparent?

The experiments consisted in mixing with equal quantities of garden-soil contained in pots a regularly-increasing quantity of some soluble arsenical compound, and then planting peas therein and noting the results. Each of fifteen pots received 91.5 cubic inches of soil. One pot was left uncontaminated and marked 0; with the soil of another pot marked 0.1, one-tenth of a gramme of Paris-green was thoroughly intermixed; another pot marked 0.2 received two-tenths of a gramme of the same poison, and so on, until the soil in the tenth pot contained one gramme of the Paris-green. Pots 11, 12, 13, 14, contained respectively 2, 3, 4, and 5 grammes of the poison. A second series containing arsenic in the form of arsenite of potash, and a third poisoned with arseniate of potash, were prepared in a similar way. Peas, carefully selected, were now planted in each one of the pots, and each series in its proper order set by itself in a place suitable for the growth of the plants. When sufficient time had elapsed to obtain a comparison of effects, it was found that in the case of the Paris-green series of pots the plants in 1, 2, 3, and 4, were about equal in size and appearance to the plant standing in the non-poisoned soil, or in the pot marked 0. On the other hand, in 5, 6, 7, 8, 9, 10, and 11, there was a distinct though gradual falling off in size and vigor, while in 12, 13, and 14, nothing appeared above the surface of the soil. In the series poisoned with arsenite of potash the effect appeared to be more immediate, the apparent falling off beginning in pot 3, while in the four pots containing the larger quantities of poison nothing came up. The effect was more marked still in the series in which arseniate of potash was present, pot 1 as compared with that marked 0 showing distinctly the influence of the poison, yet the plants came up in all but the three containing the larger proportions of the arseniate.

All the plants were subsequently examined for arsenic, in the ordinary way, but not a trace was found. The author thus sums up the results of the investigation.

With these facts before us, and without consider-

ing what might be the result of a series of experiments continued through a number of years, we must conclude that plants have not the power to absorb and assimilate from the soil compounds of arsenic, and that though arsenical compounds exert an injurious influence upon vegetation, yet this is without effect until the quantity present reaches—for Paris-green about 900 pounds per acre; for arsenite of potash, about 400 pounds per acre; for arseniate of potash, about 150 pounds per acre.

Improved Manufacture of Sulphuric Acid.—Since the adoption of Gay Lussac's method, which apparently left little to be desired, either in point of accuracy or economy, but slight advance has been made in the manufacture of sulphuric acid until quite recently. In order the better to understand the character of the later improvements, it will be necessary to give the main features of the process now in general use. This, as commonly carried on, is as follows:

A sulphur mineral is burnt upon the hearth of a furnace in the presence of a sufficient supply of air; the sulphurous acid so formed is sent forward into a large leaden chamber, being made to carry with it in its passage a quantity of nitrous fumes, which fumes, in the chamber, act as the vehicle or carrier for the transference of the oxygen from the air to the sulphurous acid, the latter, consequently, becoming oxidized to form sulphuric acid. At different points of the chamber jets of steam are introduced for two purposes: first, to supply the proper amount of water for the hydration of the sulphuric acid compound; and, second, to cause the precipitation of the so-formed acid on the floor of the chamber, whence it may be run off. For a long time it was considered that a certain heat in the chamber should be maintained, and that the steam thus introduced also effected this result; this has since, however, been proved to be erroneous. In every 2,000 tons of acid formed in the chamber there are contained about 1,000 of water, which water, seeing that none is introduced in any other form, must have been obtained by the condensation of steam.

The improvements referred to consist in the use, in the place of steam, of what has been called "pulverized" or "atomized" water or spray, this spray being injected into the chambers in the place of the steam-jets. Dr. Sprengel, whose invention this is, has been working at the matter for a considerable time, and has demonstrated the perfect success of the improved arrangement at the Lawes Chemical Manure Company's works, Barking, England. It would seem that, beyond the chief advantage, that of the saving of fuel, there are other advantages to be obtained by this method of working. The chamber, for example, is much cooler without the use of the steam, and it is found that the yield of acid is better under such circumstances, while at the same time the chambers can be made to do more work, as a greater quantity of the gases will be contained in them at a given time, owing to such gases occupying a less volume at the reduced temperature. The water-spray is produced by the use of a small quantity of steam, which is made to escape from a platinum jet, under a pressure of about two atmospheres, into the centre of a flow of water.

Twenty pounds of steam used in this way will convert 80 lbs. of water into a fine mist, the actual weight of which, issuing from a jet of the above size, amounts to about one-third of a ton in twenty-four hours. These jets are placed in the sides of the chambers about forty feet apart, being supplied with water from a tank above. The saving of coal by this arrangement amounts to about two-thirds of that formerly burnt, and from statements made by Messrs. Lawes it would appear that they have al-

ready saved by this means during the past year upward of 1,000 tons of coal. The amount of pyrites, and also of nitre used, is also reduced for the production of the same amount of acid.

A New Coloring-Matter.—Eosine is the name given to a new coloring-matter, first produced commercially by Caro, at the Baden Aniline-Works, and by him introduced to the trade. Baeyer, several years ago, showed that when phthalic oxide obtained by the oxidation of naphthaline, and resorcline, are heated together, a highly-fluorescent substance, fluorescein, is formed, from which, by treatment with reducing agents, fluoresceine, a colorless base, is derived. By treatment with bromine, and combination with potash, the new dye-stuff is obtained. Its name is derived from a Greek word signifying *the red of the morning dawn*. Hofmann has examined it, and finds it to possess the following properties:

It has a beautiful red color, recalling that of rosaniline, but inclining more to garnet-red. The powder here and there shows facets with a metallic lustre. It is soluble in water and alcohol, and its solutions are strongly fluorescent. It contains no nitrogen, and evolves hydrogen bromide when heated, leaving a residue containing potassium bromide. Distilled with zinc-dust it afforded benzole. Its aqueous solution, treated with an acid, threw down a brick-red powder, which, recrystallized from glacial acetic acid, appeared as yellow prisms, having the composition $C_{20}H_8Br_2O_5$, a formula confirmed by the analysis of the barium salt, $C_{20}H_8Br_2BaO_5$. The solutions of this substance in alcohol and water appear of a delicate rose-color in transmitted light, and of a pure yellow color in reflected light. The shades produced on wool and silk resemble cochineal. On silk fibre the dye retains its remarkable dichroism showing red or yellow according to the direction in which it is viewed.

Detection of Lead in the Tin Lining of Vessels.—In a paper read before the French Academy (March 29, 1875), M. Fordos gives a new and rapid process for detecting lead in the tin lining of vessels. He says:

Place, with a tube plunged in pure nitric acid, a slight layer of acid upon any part of the tinning, selecting by preference the thickest parts. Both metals are attacked, forming stannic oxide and nitrate of lead. After a few minutes, heat slightly to expel the last traces of acid, and allow to cool; then touch the pulverulent spot produced by the acid with a tube dipped in a solution five parts of iodide of potassium in one hundred of water. The iodide has no action upon the oxide of tin, but with the nitrate of lead it reacts, forming yellow iodide of lead, and showing the presence of even a small quantity of this metal. The surface of the tinning must be carefully cleansed before applying the nitric acid, and the acid should not penetrate to the iron or copper which forms the body of the vessel, as the reaction might thus be complicated.

Action of Light on Silver Salts.—In a paper on "The Action of the Less Refrangible Rays of Light on Silver Iodide and Silver Bromide," published in the *American Journal of Science and Arts* for April, 1875, M. Carey Lea gives an account of some investigations of his own which go to establish the following propositions, viz.:

1. That these two salts of silver are sensitive to

all the visible rays of the spectrum; 2. That silver iodide is more sensitive than silver bromide to all the less refrangible rays, and also to white light; 3. That the sensitiveness of the bromide to the green rays is materially increased by the presence of free silver nitrate; 4. That bromide and iodide of silver together are more sensitive to both the green and the red rays, and probably to all the rays, than either the bromide or iodide separately; 5. That, contrary to Becquerel's theory, there do not exist any rays with a special exciting or special continuing power, but that all the colored rays are capable both of commencing and continuing the impression on silver iodide and bromide.

In the same journal for the previous month, Mr. Lea, in opposition to the views of Vogel, maintains that the power of heightening the sensitiveness of silver bromide and silver iodide to particular rays is in no way connected with the color of the sensitizing body; indeed, that perfectly colorless bodies, or bodies having very pale neutral colors, may also exercise the functions of heightening sensitiveness to particular colored rays.

Action of Light on Cane-Sugar.—The results of some experiments by Kreusler, made to test the assertion of Raoult, that pure cane-sugar in aqueous solution, both air and ferments being completely absent, underwent an inversion solely under the influence of light, are thus described in the same journal:

While Raoult used only a solution containing ten grammes of white sugar to fifty grammes of water, Kreusler employed solutions of various strengths. These were sealed up in glass tubes, after careful exhaustion, and, with the exception of one, were exposed, in a window facing the southeast, to the direct sunlight for eleven months; more than twice the time given by Raoult. On opening the tubes, they still showed a good vacuum, and the liquid was clear and free from microscopic vegetation of any sort. But when tested with Fehling's solution, neither the liquid exposed to the light nor that preserved in darkness gave the slightest reaction. Upon repeating the experiment, however, taking care to introduce a small quantity of air into the tubes before sealing, organic ferments were found present, and the liquid reduced strongly the copper test; that exposed to light being the more active. The author believes, therefore, that an imperfect exhaustion in Raoult's tubes was the cause of the results he describes.

New Test for the Detection of Prussic Acid.—A new and exceedingly delicate test for prussic acid, devised by M. Carey Lea, of Philadelphia, is thus described by him in the *American Journal of Science and Arts*:

If a little pure protosalt of iron (I have used ferrous ammonia sulphate) be dissolved together with a little uranic nitrate, we have a solution which, with a soluble cyanide, gives a purple precipitate, or, in very dilute solutions of the cyanide, a grayish purple.

This test is very delicate. Used in the manner to be presently described, a solution of potassic cyanide, containing $\frac{1}{100}$ of a grain of anhydrous hydrocyanic acid, gives a perfectly distinct reaction. It is, therefore, not exceeded in delicacy by any known test for that substance.

The solution of iron and uranium must not be acidulated, but, on the contrary, should be quite neutral, and so dilute as to be nearly colorless. A grain or two of each salt may be dissolved in a half-ounce of water. Two or three drops of the mixed solution are to be placed in a clean, white porcelain capsule,

and a drop or two of the liquid to be tested should be made to slip slowly down, that the reaction at the point of contact may be carefully noted.

Cobaltous nitrate may be substituted for the uranium salt, and gives an almost equally delicate reaction, but the color of the cobalt salt is an objection.

Explosiveness of Methyl-Nitrate.—This substance, the explosion of a sample of which caused the unfortunate death of the promising young chemist, E. T. Chapman, during the past year, may be rendered non-explosive, according to Girard, by mixing it with other liquids, such as methyl ethyl or amyl alcohol, acetone, benzol, or toluol. One part of methyl-nitrate diluted with two or three parts of either of these liquids, does not explode either on heating its vapor or by a blow. In such solutions, therefore, it is best kept for use.

Hydrogen in the Metals.—It is stated by MM. Troost and Hautefeuille that potassium, sodium, and palladium, combine with hydrogen, while a considerable number of other metals merely dissolve this gas. Iron, nickel, cobalt, and manganese, offer striking analogies in the manner in which they behave with hydrogen at different temperatures. The facility with which they absorb or give off hydrogen gas depends greatly on their physical condition. An ingot of pure nickel gave out, in a vacuum, at a red heat, one-sixth of its volume of hydrogen. Laminæ of nickel, obtained electrolytically, gave out forty times their volume. Pulverulent nickel gave out one hundred times its volume, and remained pyrophoric after the escape of the hydrogen. An ingot of cobalt gave out one-tenth of its volume, electrolytic laminæ of cobalt thirty-five times their volume, and pyrophoric cobalt powder one hundred times. It also remained pyrophoric after the loss of the hydrogen. Soft iron in ingots gives off one-sixth of its volume, and gray cast-iron more than the half. Electrolytic laminæ of iron gave off two hundred and sixty volumes. In fine, it may be said that iron, nickel, and cobalt absorb directly hydrogen gas, but it cannot be said that combination ensues, just as has been already shown in the case of lithium and thallium.

Maltose.—The statement of O'Sullivan that the action of malt-extract upon starch produces not dextrose, as had been supposed, but a compound sugar having the formula $C_{12}H_{22}O_{11}$, and which he named *maltose*, has been reinvestigated by Schulze, and confirmed. This sugar reduces the copper test less actively than dextrose, but possesses a much greater rotatory power. Schulze's experiments were conducted with diastase precipitated from malt-extract by alcohol. Starch-paste treated with this at a temperature of 60° was rapidly saccharified. After concentration and precipitation of the dextrine by alcohol, the solution was evaporated to a sirup, treated with alcohol, the clear solution poured off and evaporated over sulphuric acid. Crystals first appeared on the walls of the vessel, and finally the whole solidified to a

crystalline mass. Recrystallized from water or alcohol, maltose contains crystal water, which is readily given up at 100° . In appearance maltose resembles dextrose, but is distinguished from it by its composition, its reducing power, and its action on a polarized ray. By boiling with dilute acids it is converted into dextrose. It is, therefore, an intermediate product between dextrine and dextrose.

New Process for determining the Extraneous Alcohol in Wines.—In a paper on this subject, published in *Les Mondes*, M. Maumene describes a new method for getting at the amount of alcohol added in the adulteration of wine. He takes the ground that the quantity of glycerine and succinic acid in wine, as produced by the fermentation of glucose simultaneously with alcohol, will be proportionate to the latter; the exact knowledge of their amount will therefore serve to indicate the quantity of extraneous alcohol added to the wine. He estimates these substances in the following way:

To half a litre of wine, concentrated by evaporation to 335 c.c., he adds oxide of lead enough to cause every trace of color to disappear. A gray precipitate is formed. Filter, wash the precipitate, and evaporate to dryness in the water-bath. Treat the evaporated residue with absolute alcohol, holding a little hydrated oxide of lead in suspension. Stir, leaving the mixture to stand for some hours, and filter. The liquid thus obtained is colorless. If submitted to a current of carbonic acid it grows turbid, but becomes clear again on filtration. It is dried at $110^\circ C.$, and weighed as pure glycerine. To determine succinic acid, treat a litre of wine with albumen, or raw-hide, in sufficient quantity to remove all the tannin. Mix with hydrated oxide of lead (after concentration) till the color is entirely removed, and preserve the filtrate for the determination of glycerine. The precipitate is kept for a long time in contact with boiling water, containing about ten per cent. of nitrate of ammonia. The clear liquid, obtained on fresh filtration, contains all the succinic acid in the state of succinate of lead, besides other salts of the same base. It is treated with sulphuric acid, and filtered again, when we have a perfectly colorless liquid containing free succinic acid. After having heated to expel the excess of sulphuric acid, the liquid is concentrated to about 100 c.c., and neutralized with ammonia. Heat sufficiently to expel any excess of ammonia, and add a few drops of ferric chloride, which has been previously kept for a long time in contact with sesquioxide of iron, so as to insure the absence of free hydrochloric acid. Finally, collect the deposit of succinate of iron which forms, wash it well, ignite, and weigh the residual sesquioxide. This weight, $\times 1.978$, gives the quantity of succinic acid existing in the quantity of wine analyzed.

Non-Arsenical Green Paints.—Owing to the poisonous qualities of arsenical paints many attempts have been made to find some suitable substitute that should not only possess equal advantages of color and body, but that might be cheaply manufactured. Several have been produced possessing every desirable quality but cheapness, and this drawback appears now to have been overcome by an Italian chemist named Casali. He states:

That the existing chrome greens, such as Guignet's green (hydrated sesquioxide of chrome), called also

emerald green, and Pannetier's green; green ultramarine (anhydrous chromic oxide), Leune and Casselhar's green (hydrated chromic oxide), Arnaudon's green (chromic metaphosphate?), Matthieu Plessey's green (phosphate), leave little to be desired in point of beauty, and are free from injurious properties, but are too expensive to compete with the arsenical greens. I propose, in their stead, to calcine strongly an intimate mixture of one part of bichromate of potash and three parts of baked gypsum, of the variety commonly known as scagliola. The result is a grass-green mass, which, on boiling with water, or mixing with dilute hydrochloric acid, leaves a fine powder of an intense and beautiful green, and possessing a very high coloring power.

Action of Saline Solutions on Tin.—Mr. Edward J. Hallock publishes in the *American Chemist* an account of some recent investigations of his own on the action of neutral saline solutions on tin. His first experiment was made with a saturated solution of commercial sodic chloride. A piece of block-tin, free from lead, was placed in the solution April 7, 1875, and on May 6th, the solution meantime having acquired a turbid, milky appearance, it gave a distinct and characteristic reaction for tin with the gold test. It was again tested on July 2d, and the reaction found still more marked. A similar experiment with granulated tin gave similar results.

Two experiments with saturated solutions of calcic chloride gave distinct reactions for tin in twenty days with the gold test. An experiment with a solution of fused ammonic nitrate showed that this salt attacked the tin more quickly than any other tested, yielding the tin-reaction in four days.

Solution of ammonic chloride gave only a slight reaction for tin, after long exposure. A solution of a mixture of ammonic chloride and potassic nitrite, in equivalent proportions, and holding about one per cent. of ammonic nitrate, gave a very faint reaction for tin at the end of fifteen days. A solution of artificially-prepared calcic bicarbonate also showed but a faint trace of tin at the end of two months. Block-tin placed in a solution of calcic sulphate soon became covered with an incrustation, and was unacted upon.

Formation of Nitrogen Compounds in Nature.—How nitric acid, and other oxygen compounds of nitrogen, can be formed in Nature, is a question that has been lately studied by Prof. Carius, who has contributed a memoir on the subject to Liebig's *Annalen der Chemie*. It has been asserted that oxides of nitrogen may be produced by oxidation of atmospheric nitrogen through the agency of ozone, but the results of the author's experiments are directly opposed to such a conclusion, and appear to show that free nitrogen remains unacted on in the presence of this active oxygen. Nor does Prof. Carius find that nitrate of ammonia is formed, as Schönbein asserted, by the evaporation and condensation of water in air. The author believes that the most important reaction in Nature by which nitrates and nitrites are generated is the oxidation of ammonia by

means of ozone; in this case nitrite of ammonia and peroxide of hydrogen are simultaneously formed, and the nitrite may then be oxidized to the state of a nitrate by the action of the peroxide.

Atmospheric Peroxide of Hydrogen.—The results of some late experiments by Schöne, made to determine the proportions of peroxide of hydrogen existing in the atmosphere under varying conditions, and the amounts carried down by rain, snow, etc., are thus summed up in the *American Journal of Science and Arts*:

Between the first of July and the first of December, 1874, Schöne examined one hundred and thirty specimens of rain, and twenty-nine specimens of snow, for hydrogen peroxide. These experiments were made in the vicinity of Moscow. Of the whole number of specimens of rain, only four failed to respond to the test, though, out of the twenty-nine specimens of snow, twelve gave no reaction. Having established the fact, the author continued his investigations with reference to the following points: (1.) Form of occurrence of hydrogen peroxide in the atmosphere; whether gaseous or dissolved in the fluid, or solid rain or hail; (2.) Relation to other meteoric phenomena, to time of day and to season of the year; (3.) Relation to the ozone of the atmosphere; (4.) How produced in the air; (5.) Part played by it geologically and botanically; (6.) Action upon the animal economy when breathed; and (7.) Hygienic importance. For this purpose, all the rain, hail, snow, dew, and frost, were collected and tested for hydrogen peroxide, the analysis being quantitative when possible. Further at various times, especially in clear weather, artificial dew and frost were prepared and examined. Careful meteorological records were kept during the entire interval at the adjoining observatory. The ozone was determined by a Schönbein's ozonometer. The results show: that the quantity of hydrogen peroxide in rain varies from 0.04 to 1.00 milligramme per litre; that the larger the drops, the greater the amount; that the first rain after dry weather is poorer in peroxide than that which falls later; that the peroxide is greatest when the wind is south and southwest, that in the rain brought by the equatorial current being greater than that which falls in the rain produced by the conflict of this with the polar current, or brought by the latter current itself; that the relative quantity of peroxide in rain increases from the summer solstice to the autumnal equinox, and then diminishes; that the quantity is not greater in rain which falls during a thunder-shower; and that, during the four months, the absolute quantity of hydrogen peroxide contained in 221 litres of rain which fell upon each square metre was only 62.9 milligrammes. In snow there was only 0.05 mgr. peroxide to the litre, the amount diminishing toward the winter solstice. Natural dew and frost contain no peroxide, or, at least, less than one twenty-five millionth of this substance. In artificial dew and frost, the amount of peroxide varied from 0.04 to 0.05 mgr. per litre, reaching on a bright moonlight night in summer 0.09 mgr. The amount increased with the altitude of the sun. The daily maximum was reached between 12 and 4 o'clock p. m., and the annual in the month of August. The amount is greater the higher the temperature, the clearer the sky, the higher the absolute and the lower the relative humidity of the air. The author concludes that the peroxide is contained in the air both free and in solution, to the extent, as a maximum, of 0.000000268 c.c. in a litre. He also believes that sunlight plays an important part in its production.

Chemical Changes attending the Growth and Ripening of Fruits.—The following, taken

from the *Chemical News*, are the results of some recent researches by M. Mercadante concerning the chemical changes that take place in fruits during the processes of growth and ripening:

In the first period of their existence fruits behave like leaves, decomposing carbonic acid under the influence of the sun's rays, and giving out oxygen. In the second period they absorb oxygen and give off carbonic acid. In the third the sugar which they contain passes into the alcoholic fermentation. On the 20th of May the author began to determine the acidity and the sugar in green plums. The acidity and the sugar were found to increase very sensibly. The branches contained no other acid than the malic, accompanied by pectic and gummy matters. The fruit behaved exactly like leaves with respect to the air, giving out oxygen by day and absorbing carbonic acid. Continuing his analyses he found that the maximum acidity was when the fruit began to give off carbonic acid by day. It contained then 2.76 of malic acid in 100 of pulp. The sugar is derived from the prolonged action of the malic acid upon the gummy matter which in the earlier analyses amounted to 6.21 per cent. of pulp, but in the second to 3.84, at which quantity it remained nearly constant, 3.27 per cent. of gum being still found on July 18th. The successive changes in the amounts of sugar and malic acid are shown in the following table:

CHANGES.	Sugar.	Malic Acid.
June 20.....	16.52	2.76
" 24.....	16.64	2.46
" 30.....	16.75	2.16
July 4.....	17.043	1.57
" 13.....	17.88	0.83

The acids themselves thus appear to be transformed into sugar.

Detection of Arsenic in Organic Matter.—Dr. Armand Gautier proposes a new method for separating arsenic from animal matters, and for detecting its presence. By combining the sulphuric acid and nitric acid processes he has obtained very satisfactory results, both as regards the rapidity of the operation and the exactness of the determination. He first treats the matter supposed to contain arsenic with nitric acid, then with sulphuric acid, and again with nitric acid. By the first operation the organic substances are disaggregated; by the second they are destroyed very rapidly; and by the third, the addition of more nitric acid, the last traces of organic matter are eliminated. The solution is then evaporated and the residue heated to incipient carbonization. The matter thus obtained is powdered, and exhausted in a capsule with boiling water, the filtrate is treated with a few drops of sodium bisulphite, and the arsenic is then thrown down as sulphide by a prolonged current of sulphuretted hydrogen. This sulphide is converted into arsenic acid by ordinary methods and then submitted to Marsh's apparatus.

Detection of Artificially-Colored Wine.—The following simple tests for detecting artificially-colored red wine are given in the *American Chemist*, from *Reimann's Färbereizung*:

Dilute the wine with twenty times its volume of water. On addition of plumbic acetate solution

(1:10) the color of genuine wine will then disappear, the solution becomes turbid, and, on heating, small silver-gray flocks with a reddish cast separate out. Artificially-colored wine, under these circumstances, gives large curdy flocks of a dark-violet color. Solution of cupric sulphate (1:10) with unadulterated wine destroys the color without causing turbidity. With artificial wine the color becomes violet-blue, and a slight turbidity appears. Barium water (1:10) destroys almost completely the color of unadulterated wine, showing at the same time a trifling turbidity. With colored wines the solution becomes violet-blue to bluish-green, and at the same time the wine is rendered turbid. Soaking filter-paper in the reagents above mentioned, and placing a drop of the wine on the paper, is mentioned as a mode of applying this test.

New Method of preparing Vermilion.—A new and convenient preparation of this beautiful compound of mercury and sulphur is proposed by O. Hausmann, who has recently been studying the subject anew. A solution of corrosive sublimate is forced into an excess of dilute ammonia, forming a white precipitate of ammonio-mercuric chloride. This precipitate settles in flakes to the bottom of the vessel, and the supernatant fluid contains chloride of ammonium and the excess of ammonia. The precipitate is stirred up with this fluid, and a little more than enough of a concentrated solution of hyposulphite of soda is added to dissolve the precipitate. On warming the solution in a capsule, vermilion at once begins to separate; the heating is continued until a thin pasty mass is obtained. Vermilion produced at a temperature of 120° to 140° Fahr. is of a lighter color.

Improvements in Chemical Apparatus.—Having experienced considerable difficulty from the tendency of the flame in the ordinary Bunsen burner to retreat within the tube, under a low pressure of gas, President Henry Morton has devised a modification of the old burner which entirely removes this drawback. In an article on the subject published in the *American Chemist*, he says:

It is well known that to secure a jet of water or of any other fluid whose particles shall move with equal velocities in all parts, and thus avoid currents and eddies, it is only necessary to make the orifice of efflux an aperture in a thin wall.

Following out the idea above indicated, I made a burner of a bore rather large compared with its height, and then drew in its upper edge into the form of an open-ended thimble, so contracting the orifice of escape to about two-thirds the area of the tube, and rendering this orifice practically an opening in a thin horizontal wall or plate.

The results of this modification far surpassed my anticipations. A burner thus constructed gives a perfectly non-luminous flame with gas pressures varying between 1.5 and 0.1 inch of water, and with the lowest of these pressures cannot be made to retreat by the most violent handling in the way of sudden movement or waving about in the air, even when this violence is carried to the extent of extinguishing the flame altogether.

Under like conditions of pressure, a burner of the ordinary construction is made to retreat by a slight draught of air, or a very moderate amount of motion.

An important apparatus for the determination of the melting-point has been invented by

fr. Martin Waldstein. It consists of a wide-mouthed bottle, fitted with a leaden stopper to which a brass rod is soldered, and on this slides a clamp used to hold a thermometer. The stopper has four perforations, one to admit the thermometer, two near this and on opposite sides to admit the glass tubes containing the substance to be examined, and a fourth through which one limb of a bent glass tube is passed. This tube is connected at the other end, by means of a perforated cork, with a test-tube. The cork of the test-tube is channeled so as to permit the free escape of any gases that do not condense, and thus keep the pressure on the liquid equal to the atmosphere. The boiling-point of the substance under examination is wished to be determined in the same apparatus. The advantages claimed for his contrivance are, that by using a lead stopper the sulphuric acid employed is not so easily discolored as if common corks are used, and also that two operations can be performed at the same time.

Valuable improvements in the apparatus for decomposing salt in chemical works, the invention of Messrs. Jones & Walsh, of the Middleboro Chemical Works, England, have been brought into use during the year. In place of the common decomposing pan and finishing-furnace, a flat-bottomed circular pan, fourteen feet in diameter, and having a rim about six inches deep, is employed. In this, the process of decomposition by sulphuric acid is begun and finished. The pan is provided with a mechanical stirrer, and is inclosed in brickwork. The heat is derived from a coke-fire, and passes over the batch, the products of combustion passing on with the evolved hydrochloric acid to the condenser. No heat at all is applied to the bottom of the pan. Forty hundred-weight of common salt and the necessary quantity of sulphuric acid constitute a batch, one of which is finished every six hours. The product is very uniform in quality, and is left in a fine, powdery condition, quite free from lumps. The advantages are, a large reduction in the cost of the furnace, a saving of half in the cost of labor, consumption of less fuel, no "fluxings," and complete control over the composition of the batch.

A new apparatus for concentrating sulphuric acid has been devised by Faure & Kessler, in France, which is said to have advantages over the old processes in point of cheapness of first cost and economy of working. The concentration is conducted in flat, shallow, dish-shaped vessels, made either of platinum or porcelain. The dishes are covered by a leaden dome, or chamber, which is contrived to condense the acid-fumes evolved, and to conduct them into the leaden chamber. It is claimed that the cost of evaporation is lessened by one half.

Dr. Neumayer recently exhibited to the Berlin Geographical Society a new form of thermometer for the determination of the tempera-

ture, and the direction of the currents at great depths in the ocean. The apparatus consists of an hermetically-sealed copper box, with an external appendage resembling a rudder. In the interior are a mercury-thermometer and a compass, each inclosed in a glass receptacle, in which are admitted traces of nitrogen gas. A small electric battery completes the apparatus. When it is allowed to descend, attached to a sounding-line, the action of the current on the rudder causes the apparatus to take an horizontal direction, thus indicating the set of the flow by the relative positions of compass-needle and rudder, while the thermometer indicates the temperature. To fix these indications, a piece of photographic paper is suitably disposed near the glass cases containing the instruments. Then, at the proper time, a current of electricity is established through the gas in the receptacles, causing an intense violet light, capable of acting chemically on the paper for a sufficient length of time to photograph the shadows of the compass-needle and the mercury-column. Within three minutes the operation is complete, and then the apparatus is hoisted and the paper removed.

Cotton Gunpowder.—This is the name given to a new preparation of gun-cotton, which, by the use of certain chemicals, is rendered perfectly safe for storage or carriage, though possessing enormous explosive power. The following account of some experiments made with it is taken from the *Journal of the Society of Arts*:

Cartridges were held in the hand, lit with fuses, and burned with a steady blaze, while, when ignited by detonators, they exploded with a loud report. Ten pounds of the substance was placed on an anvil, and an iron pile-driver weighing one-half ton was allowed to fall fifteen feet upon it, without causing an explosion. Two barrels, each containing forty pounds, were placed in a pile of fagots. Upon these being fired, the powder burned with a steady but intense flame, and without any tendency to explosion. A solid block of steel, about one-half ton in weight, was bored to the depth of six inches, and a 6-ounce cartridge was inserted in the hole. It was split into two pieces. But the greatest exhibition of force was made in two experiments with steel ingots. In the first experiment, four ingots of eight inches square and three feet long were used. In the centre of these four masses of steel as laid together, two pound cartridges of the powder were placed, and kept in their place with a few handfuls of clay. In the second experiment, the four ingots were each eleven inches square, and the charge used two and a half pounds. The eight ingots were all broken in halves; some of these massive pieces of steel were sent flying high in the air, falling thirty, thirty-five, and, in one case, forty-five yards away. At the close of the experiment, a torpedo of fifty pounds of this powder, sunk ten feet in the river Swale, but not resting on the bottom, was fired. An immense body of water was projected high in the air, and any vessel which might at the time have been passing over it would have suffered severely.

Influence of Ammonia on the Colors of Flowers.—This subject has lately been investigated by Gabba, an Italian chemist. His method was to put a weak ammoniacal solution in a basin, and place over it a receiver containing

the flower. In this way blue, violet, and purple flowers were changed to green, carmine-red flowers to black, white to yellow, etc. The most singular changes were presented by flowers in which several tints are combined; the red lines changed to green, the white to yellow, and so on. After the flowers have undergone these changes, if they are placed in pure water, they retain their new coloration several hours, and then gradually resume their original hues. Gabba has further observed that the flowers of aster, which are naturally inodorous, acquire an agreeable aromatic odor under the influence of ammonia. When moistened with dilute nitric acid they change from violet to red. If inclosed in a wooden case, and exposed to hydrochloric acid vapor, they in six hours assume a beautiful carmine-red.

Source of Ammonia in the Air.—This question has been reinvestigated by Schlösseng, who gives his results in a communication to the French Academy of Sciences. Among the points enumerated in his research are, the origin of the ammonia diffused on the surface of the soil, its circulation, its variations in the atmosphere, and its distribution between the sea, the continents, and the air. It is a well-known fact that, in the course of the transformations of organic matter, a certain amount of nitrogen is set free; also that this gaseous nitrogen is not assimilable by organisms. Hence the necessity of some agency which shall take this free nitrogen and cause it to reënter into combination. The author, after criticising the various opinions put forth on this subject, assents to the theory of Boussingault, who holds that, under the influence of atmospheric electricity, nitric acid is produced in the air. Further, he says that the surface of the continents is essentially an oxidizing medium; that nitrification is there abundantly developed; and that a portion of the nitrates thus formed enters again into the cycle of life, while the rest is carried into the sea. Experience also shows that if the decomposition of organisms produces nitre on the continents, it produces ammonia in a medium so little oxidized as is the sea. Hence the author recognizes on the surface of the globe a regular circulation of nitric acid and of ammonia, taking place in this way, viz., nitrous production in the air, nitrous gains from the air to the continents, transfer of nitrates to the sea, formation of ammonia in the saline medium; finally, disengagement and passage of the alkali into the air, to be given back again to the continents.

CHILI (REPÚBLICA DE CHILE), an independent state of South America, extending from the 24th to the 56th parallel of south latitude, and from 70° to 74° west longitude. It is bounded on the north by Bolivia; on the east by the Argentine Republic and Patagonia, from both of which it is separated by the great chain of the Andes; on the south by Cape Horn; and on the west by the Pacific Ocean. These, it should be observed, are the boundaries

claimed by the Chilians, but still warmly protested against by the Argentines.*

A Santiago journal published the following remarks on this subject, about the month of August:

Our boundary question with the Argentine Republic is still very far from a satisfactory settlement. Señor Avellaneda's determination to carry out to the letter the law passed by the Argentine Congress, providing for the establishment of a line of sailing-vessels to Patagonia, has called forth a fresh protest from the Chilean minister at Buenos Ayres, and a reply from the other side. A portion of the newspaper press has urged on our Government to recall its representative, on the ground that, after what has occurred, his longer stay there is uncalled for. Still, despite the critical state of relations between the two republics, we hope that the Argentine Government will ultimately accept the long-standing proposal of Chili, namely, that the matter be submitted to arbitration.

The Argentine Government, however, satisfied of the justice of its claim to the Patagonian territory, commissioned, in 1873, Dr. Quevada, director of the National Library, to proceed to Spain, for the purpose of examining as many books and manuscript documents as he could find in the Government archives at Madrid, bearing upon the colonial history of La Plata; and the result of his labors has been published, under the auspices of the provincial Government of Buenos Ayres, in an 8vo volume of 800 pages, the contents of which may be enumerated as follows:

1. Discovery and conquest of La Plata. Instructions to the Adelantados Mendoza, Cabeza de Vaca, Sanabria, Zárate, and Vera. Foundation and limits of Buenos Ayres.
2. Establishment of Paraguay. Separate province marked out for Buenos Ayres.
3. Governors and Viceroyalty of Buenos Ayres exercising jurisdiction over Patagonia, the Straits of Magellan, and Cape Horn. Explorations and missions. Towns founded on the coast. Maritime company and fishing.
4. Provinces of La Plata erected into viceroyalty of Buenos Ayres. Limits marked out by the King for Viceroy Vertiz.
5. Royal audiencia established at Buenos Ayres. Its jurisdiction and limits defined by the Government of Madrid.
6. Argentine and Chilean documents on the subject of *uti possidetis*, based on the state of things in 1810.

At the end of the book are an appendix of 200 pages, containing extracts from the various decrees issued by the home Government constituting Patagonia a dependency of Buenos Ayres, and a list of 191 writers, from Ovalle, author of a "Description of Chili," published at Rome, in 1646, down to the Messrs. Mulhall, the compilers of the excellent "Hand-book of the River Plate Republics" (London, 1873), by all of whom Patagonia is uniformly assigned to the country now called the Argentine Republic. The list just referred to is not confined to Spaniards and Argentines; it presents well-known German, English, French, and even Chilean names, and among them many noted, those of Balbi, Cantù, Stewart, Bouillet, Malte-

* See ANNUAL CYCLOPEDIA for 1873, et seq.

Brun, Keith Johnston, Blackie, Wappäus, Trosard, Guevara, Molina, and that of Carreon Lastai Ferretti, now Pope Pius IX., as the author of a book of travels in Chili, a Spanish translation of which was published in Santiago in 1848.

The line of sailing-vessels referred to in the notation from the Chilian journal was the subject of a bill sanctioned, in June last, by the Argentine Legislature, and the four articles of which were as follows:

ARTICLE I. The Executive is hereby empowered to subsidize a line of sailing-vessels between the port of Buenos Ayres and the coast of Patagonia, touching at the settlements on the Chubut River, and to the south of River Santa Cruz.

ART. II. The Executive may grant as much as ten leagues of territory to the company or companies performing the service stipulated in Article I.

ART. III. The consequent expenses will be borne by the company itself.

ART. IV. Let the above be communicated to the Executive.

The Chilian minister at Buenos Ayres, Señor Est Gana, immediately presented a protest to Señor Pardo, the Argentine Minister of Foreign Affairs, declaring that his Government would not allow the law to be carried into execution in the disputed portion of the Patagonian territory extending southward from the southern banks of the Santa Cruz River.

The protest called forth a lengthy and elaborate note, of the more important points of which a translation is here given:

MINISTRY OF FOREIGN AFFAIRS, }
BUENOS AYRES, June 30, 1875. }

To his Excellency Señor Est Gana.

SEROR MINISTER: I have the honor to acknowledge receipt of your favor of the 16th inst., containing your protest against the law for a line of vessels from Buenos Ayres to Santa Cruz River, with a land grant in favor of the company.

The Argentine Government is displeased and surprised at the inaccuracy of your Excellency's note, and the unusual tone in which it is written. And, as your Excellency apprehends that our lawful acts may lead to grave emergencies and danger of a rupture, I am directed by the President of the Republic to answer your Excellency's note at length, so that friendly powers may learn how unjust and unfounded are the charges of the Chilian legation, and who will be the real aggressor in the event of the conflict your Excellency predicts.

History bears witness to our sincere friendship, since the independence, toward all the other republics of South America, and especially Chili.

Up to 1872, when this question arose, your Excellency's Government did not inform us that Eastern Patagonia was comprised in the dispute, which then turned on the Straits of Magellan and Tierra del Fuego. Quite the contrary, it excluded the said territory, on the basis that the Andes were the eastern boundary of Chili, as shown in the following documents:

1. The deed of foundation of Sandy Point colony.
2. The first article of all Chilian constitutions down to 1872, expressing the limits of Chili.

3. All laws based on said constitutions, especially that affecting the far south of Chili separated by the Andes from Eastern Patagonia.

4. The declarations contained in the messages of Chilian Presidents, the Blue-books of Chilian cabinet-ministers, the official maps of Chili, and finally the admission of the Chilian envoy, Lastarria, in

his official note, that Patagonia belonged to us and was not claimed by Chili, which note was never called in question before 1872.

Your Excellency's statement, therefore, that the Argentine Government has broken a solemn engagement of *status quo*, is unfounded. The treaty you allude to was made in 1872, and, as I have shown, Chili had not claimed Patagonia in the disputed territory.

Our acts of jurisdiction on Patagonian coasts are all anterior to 1872. Even the official organ of Chili commented favorably upon our acts, and upon documents produced by us, in 1838, showing our title to Patagonia, on the occasion of the seizure of the Falkland Islands by a foreign power. We were not, therefore, under any obligation to suspend the exercise of our jurisdiction over a territory undisputedly our own.

Moreover, when the discussion of limits began in May, 1872, it was solemnly agreed by Chili not to impede our jurisdiction on the Atlantic seaboard, and this was in view of our acts of Congress of 1868 and 1871, exercising authority on the Patagonian coast as far south as Staten Island. And two months later the Chilian Government agreed not to advance farther than Sandy Point, or to sell the guano in the adjacent islands.

The paragraphs immediately following recapitulate, the violation of the *status quo*, in 1856, "not by us, but by Chili;" successive aggressions on the part of Chili at Gallegos and Santa Cruz; the declaration of the Chilian Government that it would neither occupy Patagonia, nor allow Argentine jurisdiction to extend south of the Santa Cruz River; and, lastly, the documentary proofs (already alluded to, as collected by Dr. Quesada) of the justice of the Argentine claim. Señor Pardo then continues:

When these proofs appeared to us beyond all question, we were called upon to show that the documents were not apocryphal; and we are now ready to show them to your Excellency or to any other Chilian envoy, as well as numberless other papers proving the constant jurisdiction of this country over Eastern Patagonia during the colonial period.

Your Excellency's Government requires us to abandon a territory which you dispute without any title, and, in language more menacing than becomes the representative of a country so closely bound to us, you say Chili will not permit Argentine laws to be enforced in that part of our republic.

The Argentine Government, Sr. Minister, is not accustomed, and never will be accustomed, to implore the consent of other countries for the fulfillment of its laws.

On a former occasion your Excellency put our moderation to a severe trial, in a note which we refrained from preserving in the archives of this department, and in which, interfering in a manner at once unusual and incomprehensible, in a matter foreign to the attributes of a diplomatic agent, you declared your resolution to retire from Buenos Ayres if the citizen chosen as Minister of Foreign Affairs should enter the cabinet.

But our moderation has a limit, and now, in obedience to the President's directions, I reject your Excellency's protest, as unfounded in fact and unfriendly in form; and hereby declare that my Government is resolved to carry out the laws of the national Congress in all parts of the Argentine territory.

I have the honor to remain,

PEDRO ANTONIO PARDO.

Previous to the occurrence of the incidents which gave rise to this interchange of notes, people began to expect that the pending ques-

tion would soon be settled upon amicable terms; but since that time it would seem to be apprehended, in both republics, that, unless the Chilean Government tempers the arrogance with which it has of late urged a claim apparently so unfounded, a solution can only be arrived at by appeal to arms.

In the article "Bolivia," in the present volume, allusion has been made to the boundary question between that republic and Chili.

The population of Chili, according to the census of 1875, is as follows:

Provinces.	Population.	Provinces.	Population.
Aconcagua.....	182,799	Nuble.....	186,880
Arauca.....	140,896	Santiago.....	362,712
Atacama.....	71,802	Talca.....	110,859
Chiloé.....	64,586	Valdivia.....	37,481
Colchagua.....	146,889	Valparaíso.....	178,682
Concepcion.....	151,865	Magellan Colony.....	1,144
Cochilmo.....	157,463		
Curicó.....	92,110	Total.....	2,068,447
Llanquihue.....	48,492	Against, 1865.....	1,510,223
Linares.....	118,880		
Maule.....	118,457	Increase in 10 years.....	240,224

The population of the chief towns, in 1875, is given in the annexed table:

Towns.	Population.	Towns.	Population.
Santiago.....	143,264	Quillota.....	11,347
Valparaíso.....	97,575	San Felipe.....	9,422
Chillan.....	19,044	Curicó.....	9,090
Concepcion.....	18,277	Constitucion.....	6,542
Talca.....	17,442	Linares.....	6,482
La Serena.....	12,265	Cauquenes.....	6,013
Copiapó.....	11,482	Valdivia.....	4,054

The number of foreign residents and citizens of foreign birth, in 1875, was 26,528.

The President of the Republic is Señor F. Errázuriz, inaugurated September 18, 1871.

The ministry is composed as follows: Interior, E. Altamirano; Foreign Affairs and Colonization, J. Alfonso (April 4, 1875); Justice, Public Worship, and Public Instruction, J. A. Barceló; Finance, R. Barros Luco; and War and the Navy, H. Sanchez Pontecilla (April 4, 1875).

The Council of State, presided over by the President of the Republic, is composed of the cabinet ministry, three senators, three deputies, one member of the courts of Justice, one ecclesiastical dignitary, one general, the director of one of the Departments of Finance, and an ex-minister or ex-intendant.

The president of the Supreme Court of Santiago is Señor Montt. There is a Court of Appeals at Santiago, Concepcion, and La Serena.

The Postmaster-General is R. L. Irrarazabal.

The Archbishop of Santiago is the Rt. Rev. R. N. Valdivieso; and the Bishops of La Serena, Concepcion, and Ancud, or San Carlos de Chiloé, M. Orrego, J. H. Salas (1854), and Dr. de Paula Solar (1857), respectively.

The Chilean *chargé d'affaires ad interim*, at Washington, is Señor F. G. Errázuriz; and the Chilean consul at New York, Dr. Stephen Rogers.

The army comprised, in 1875, 10 generals, 10 colonels, 29 lieutenant-colonels, 57 majors, 134 captains, and 249 lieutenants: total, 489 officers; 2,000 foot soldiers, 712 horse, and 804 artillery: total, 3,516 men.

The National Guard was made up as exhibited in the table below:

NATIONAL GUARD.	Horse.	Infantry.	Artillery.	Total.
Commanding officers....	4	32	5	41
Subalterns.....	47	895	80	922
Men.....	1,215	21,147	1,925	24,287
Total.....	1,266	21,987	2,080	25,333

The navy was composed of 10 vessels, with an aggregate of 1,520 horse-power, 34 guns and 698 sailors.

To the foregoing may be added two iron-clad steam-corvettes built in England, and arrived at Valparaíso in 1875.

There were in the navy 1 vice-admiral, rear-admirals, 3 first-class, 8 second-class, and 11 third-class captains, 40 lieutenants, 27 midshipmen, and 18 cadets; 1 battalion of marine artillery with 440 men, commanded by 1 colonel, 1 lieutenant-colonel, 4 captains, and 1 lieutenants.

There is besides a battalion of marine artillery at Valparaíso, of 808 men, forming a part of the *guardia civil* (public force), under the command of 1 colonel, 1 lieutenant-colonel, captains, and 24 lieutenants.

The foreign commerce of Chili, like that of the Argentine Republic and Brazil, was considerably less, in the export branch, in 1875 than 1873:

	EXPORTS.
1873.....	\$88,510,271
1874.....	36,541,960
Decrease.....	\$2,269,271

The total value of the imports in the same two years was as follows:

	IMPORTS.
1873.....	\$87,928,657
1874.....	38,810,000
Increase.....	\$881,570

The total value of the Chilean trade for 1875 was.

Exports.....	\$36,541,960
Imports.....	38,810,000
In transitu.....	8,182,000
Coasting.....	38,914,000
Total.....	\$167,447,960

An official report gave the exports and imports for 1874 at \$36,550,659 and \$38,417,750 respectively.*

About two-thirds of the Chilean exports are for Great Britain.

The extensive coal-fields of the republic are fast rising into importance. The quantity of that article exported in 1874 was 50 per cent greater than that shipped in 1873, and the importation of foreign coal had declined 25 per cent. The number of vessels entered at the various ports of the republic in 1874 was 5,832 with an aggregate of 3,851,000 tons.

In 1875 there were 619 miles of railway.

* For extensive commercial statistics, see ANNUAL CYCLOPEDIA for 1874.

operation, 393 miles of which belonged to the state; and there were in process of construction for the state, 193 miles.

In an official publication for 1875, the length of the telegraph-wires throughout the republic was set down at 1,650, a figure which would seem incorrect, as compared with former reports. (*See ANNUAL CYCLOPEDIA for 1874.*)

On February 3, 1875, were received the first direct telegraphic dispatches from Liverpool and London to Valparaiso.

The national revenue for 1873 amounted to \$15,255,531, of which no less than \$8,145,853 proceeded from the custom-house; and the expenditures for the same year, to \$17,066,481, out of which \$2,035,412 went toward public instruction.

The estimated budget for 1874 was: Revenue, \$16,569,482; expenditure, \$16,609,183; and that for 1875: Revenue, \$16,440,000; expenditure, \$16,474,890.

The total national debt in 1874 stood at \$48,149,850.

The particulars of the 5-per cent. bonds of 1875 are as follows: Issue price, 88½; interest and sinking-fund, 7 per cent. per annum; nominal amount of loan, £1,000,000; years to run, twenty-six; net produce to borrower, £882,000; annual charge throughout, £70,000; total cost to borrower, including capital repaid at redemption, £1,797,600.

The following table exhibits the amount of duties collected at Valparaiso in the twelve months of 1874:

Months.	Amounts.	Months.	Amounts.
January.....	\$416,880	August.....	715,045
February.....	493,274	September.....	559,248
March.....	691,865	October.....	571,757
April.....	508,823	November.....	617,519
May.....	612,210	December.....	596,086
June.....	602,344		
July.....	563,917	Total.....	\$7,249,058
Amount in 1873.....			5,981,939

Increase in 1874.....\$1,267,081

Among the more important measures which were adopted by the Chilean Congress in 1875, are the following:

SANTIAGO, November 2, 1874.

The President of the Republic is hereby empowered, for the period of two years, to contract a loan of the amount of \$9,500,000, of which \$4,500,000 will be applied to the liquidation of the 7-per cent. loan issued in London in 1867, and \$5,000,000 to the conversion into the foreign debt of all the bonds to be issued in Chili by authority of Congress, such authority being revoked.

FEDERICO ERRÁZURIZ.
R. BARROS LUCO.

The loan of 1867 pays 7 per cent. interest, which is too much for countries whose credit is high, as does that of Chili, and as it is a hard matter to find the same quantity of money at a lower rate.

On the other hand, in order to avoid the heavy disbursements occasioned by the extensive public works now in progress, it became necessary to issue bonds, which is not advisable under present circumstances. In consequence, the Government has wished, not only

to avoid this prospective issue, but also to redeem the home debt arising from former issues. In short, it is about to convert the home into a foreign debt, thus bringing into circulation gold and silver coin, of which there is a deficiency, instead of paper, of which there is a superfluity.

The decision of the Hon. Mr. Logan, appointed arbitrator in the questions pending between Peru and Chili, with regard to the accounts of the allied squadron during the last Spanish war, has been given, and has been cordially received on both sides. He awards to Chili \$1,185,000, from which has to be deducted \$654,000 already paid by Peru. The balance is therefore only \$476,000.*

The International Exhibition was inaugurated on September 16, 1875, and the ceremony is reported to have been remarkably imposing. The extensive park and grounds of the Quinta Normal (model farm) were chosen for the site of the buildings. Italy, England, and the United States appear to be the countries most largely represented, the last being especially distinguished for the number, variety and excellence of its machinery.

Political circles were chiefly preoccupied with the approaching elections for President of the Republic. The favorite candidate, especially so far as the electors of the southern provinces are concerned, was Señor Benjamin Vicuña Mackenna, chief of the Liberal party. His address on the occasion of his nomination was spoken of as the best hitherto published in Chili. His professions may be briefly recapitulated as follows:

Religious freedom, in the fullest sense of the word; amenability of ecclesiastical, military, and civil functionaries to the law; reform, in a democratic sense, of the National Guard; civil marriage; complete occupation of Arauco by means of iron roads and the plough; opening up of the rivers and lakes of the provinces of Valdivia, Chiloé, and Llanquihue; railways over the Andes; the establishment of a Ministry of Agriculture, Public Works, and Immigration; local autonomy; new provinces of Illapel, Rancagua, and Lebu; naval ports; rural police; common schools; abolition of Government monopolies; free trade; abolition of fiscal treasuries; trial by jury; practical courses of agricultural training in colleges subsidized by the state; electoral liberty; and many other modifications of law and custom in the republic.

A petition was presented to the Chilean Government to approve the conditions of an "English Episcopal Church Society," formed in Valparaiso. One clause of the conditions authorizes the society thus organized to purchase lands and buildings, and to hold them in trust, by special permission to be obtained from the Legislature. All persons contributing twenty dollars per annum, or paying pew-rent to that amount, would be considered members.

CHINA, an empire in Asia; Emperor, Tsaeteen, formerly called Kwang-liu, born in 1872, a son of Prince Ch'un, and grandson of

* Observe that the Chilean dollar or *sol*, = 95 cents, nearly, is the only dollar referred to in this article.

the Emperor Tan-Kwang, who died in 1850, succeeded to the throne in January, 1875.

The area and population of China cannot at present be accurately stated, as parts of the western dependencies have successfully established their independence, while other portions, especially the district of Kooltsha, have been incorporated with Russia (*see ANNUAL CYCLOPÆDIA* for 1874).

In 1874 the number of foreigners in the treaty-ports was only 8,466, of whom 1,537 were British, 530 Americans, 387 Germans, 307 French, 103 Spaniards, 65 Danes, 58 Russians, and 84 Austrians. The number of European and American firms was 339. The number of Japanese in the treaty-ports was 23.

For public revenue, commerce, and shipping movements, *see ANNUAL CYCLOPÆDIA* for 1874.

The British consul at Ching-kiang, Mr. E. Colborne Baker, in his last report (1875), calls attention to the position which Ching-kiang has lately assumed as a centre of military movement and organization. When war with Japan upon the Formosa difficulty appeared imminent, numerous bodies of the Chinese militia, known as "braves," were assembled at the above-named port in expectation of the outbreak of hostilities; but it would seem that they were intended more especially for defense and to garrison the numerous forts that were constructed at the time in the immediate neighborhood of Ching-kiang. Several mud-forts, large and small, of the usual Chinese pattern, now command the approach to that port from Shanghai; but the most important works are situated on Silver Island and the two shores, being three iron-plated batteries of ten or more guns, smooth-bore, 68-pounders, which are laid to direct a converging fire on the reach immediately below Ching-kiang. The plates, placed without intermediate backing on walls of concrete, are not more than one inch in thickness, except over the embrasures, where they measure about five inches. The magazines are situated in chambers between the guns, and the whole is covered with what is intended to be a bomb-proof roof. They are all in a very backward condition, and do not promise to be formidable; but the consul observes that, were they completed and well manned, and fenced, as seems probable, with a fringe of torpedoes, the trading communities at the three river-ports would, in the event of sudden hostilities, be cut off for a time from all communication with Shanghai, and would find themselves for the moment in a position of imminent peril.

A Chinese naval reserve is in course of formation; each of the large provinces is to construct two steamers, and each of the smaller provinces one, which will make a fleet of twenty-eight steamers in all. These vessels will be used by the China merchants for steam navigation in time of peace, and turned over to the Government in time of war.

The Emperor of China, T'oung-che, died

January 12, 1875, from small-pox, which was making great ravages in Peking. The help of foreign doctors was persistently refused, and the Emperor was only attended by his chief physician, Noua-tzen. The Empress died on the 27th of March. The *China Mail* remarked, on her death: "Her fate has been indeed, an unhappy one. Wedded at the age of fifteen, she became a widow at seventeen, and since the death of her husband has, if native reports are to be believed, led a most miserable life. She is said to have refused all food for some days previous to her death, and to have sunk from exhaustion. Whether these reports be true or not, we can easily believe that her position was a most unenviable one. At best she was condemned to perpetual seclusion for many years to come, while she was exposed to intrigues which, in view of her expected confinement, might have had her death and that of the possible child as their object. Death was probably a merciful relief." The *Shanghai Courier and Gazette* said that the early death of the Empress was entirely in accordance with the national idea of what is most highly fitting for a wife so bereaved, and that her memory would possibly acquire a sanctity in Chinese eyes from the fact of her having followed her lord within so short a period; the event being already attributed to her regrets, as it was said that she suffered from no definite disease. Another report from China stated that the circumstances of her death aroused general suspicion concerning its cause, and that there was but little attempt to conceal the belief that the fear of complications in case her expected child should be a son led to the sacrifice of her life.

T'oung-che was succeeded by his cousin Tsateen, a child only three years old. The new emperor is the son of Prince Ch'un, the seventh son of the Emperor Tao-kwang, who died in 1850. He was supposed to have been selected in preference to other relatives of the late Emperor because he was younger than the late Emperor, and his youth gave to Prince Kung and the two Empress-dowagers an opportunity to retain for many more years the regency. The other princes who had been thought of as successors of T'oung-che were a son of Prince Kung, who is of about the same age as the late Emperor, and a grandson of Prince Yun. The name of the reign of the new Emperor will be Kwang-liu. His father Prince Ch'un was, at the accession of his son to the throne, commander of the Mantchoo troops in Peking, who are drilled by foreign officers; he is believed to be energetic, warlike, and opposed to the foreign policy of his brother, Prince Kung. Prime-minister of the government will be Li-hung-Chang, the governor of the metropolitan province of Pee-chee-lee. Li-hung-Chang has long been one of the prominent statesmen of China. When governor of Kiang-su, he was known under the name of Li-Futai. He then succeeded, with the aid

of the English Colonel Gordon, in expelling the Taipings from his province, and in dealing to that powerful rebellion its fatal blow. He is a Chinese, not a Mantchoo, and some believe him to be unfriendly to the continuance of the Mantchoo rule. One of his chief aims has been for many years to reorganize the Chinese army after the model of the European armies.

The new Emperor was enthroned on the 25th of February, when official mourning for the death of the late Emperor was suspended throughout China. For a few hours each city was devoted to elaborate displays, after which there was a general return to the habits and dress of conventional grief. The foreign ships in the open ports, the legations, and consulates, were decorated for the occasion.

A serious difficulty between China and Great Britain arose at the beginning of the year in consequence of the murder of Mr. Margary, an Englishman, by Chinese troops, near the border of Burmah. (*See BURMAH.*) Mr. Margary had gone from Shanghai to join an expedition under Colonel Browne, the object of which was to explore a road connecting British India with the Chinese province of Yun-nan. The murder took place at a little town called Manwyne. An English correspondent, writing from Rangoon on the 20th of March, gives the following particulars of the murder of Mr. Margary and his companions, obtained from the members of the Western China Expedition:

Manwyne is a small Shan Chinese town, and the Shan inhabitants were favorably disposed toward the British. The direct responsibility for the attack rests upon the Chinese imperial officials at Teng-yeh-shaw. During the whole of the day the little party were hotly engaged with an immensely superior force of the enemy, who had got to their rear and entirely cut off their retreat by throwing earthworks across the only road leading to the camp. The camp, which was at a height of about 4,700 feet above the sea, was surrounded by hills covered with long grass and trees. Not expecting an attack, no great attention had been paid to the defensibility of the position. Suddenly, our Government had insisted on the mission being accompanied by a small party of Sikhs, notwithstanding the objections which had been raised by the Burmese Government. Only the presence of this guard saved the entire party from certain destruction. For some time the Chinese fired from the cover of the long grass on the sides of the hills; but the distance—200 to 300 yards—was too great for their inferior weapons to do much damage, and consequently there were only three men wounded on our side. At length some of the boldest of the enemy determined to risk a charge. Issuing from their cover they advanced into the open with shouts of defiance, calling out the names of their commanders, and exhorting the Burmans who were present to desert the English. The effect of fifteen Snyder rifles, however, playing upon them in the open astonished them, and after a few discharges they took shelter in the hills, whence they kept up a constant fire. Some friendly Kakhyens managed to set fire to the grass jungle in which they were concealed. This created a diversion, and after some hours' fighting they retired toward Manwyne. Our party then retreated into Burmese territory. The exact loss to the enemy is not known, but seven dead bodies were seen by our men, and the total killed on their side is said to be about twenty, and a large number of wounded.

It is remarkable that, in a letter to Mr. Medhurst, the British consul at Shanghai, of the 28th of January, recording his safe arrival at Bhamo, Mr. Margary mentions this very town of Manwyne, where he was murdered, as a locality where he had spent a week in comparative quiet and enjoyment, while his man Liu went in advance to communicate with Colonel Browne, at Bhamo. It is odd that the inhabitants should have proved so daring and bloodthirsty on the return-journey, when he was supported by other Europeans and a considerable band of followers. The inference was natural, from this and the details, that the murder was done at official instigation. The news reached Peking in the beginning of April, and demands for satisfaction were forcibly presented to the Chinese Government by Mr. Wade, the British minister, accompanied by Vice-Admiral Ryder, representing the navy. The Chinese officials at first tried to evade responsibility on the plea that Maulmain, the scene of the murder, is close upon Burmese territory; but, when they found that the British demands were made in earnest, showed themselves willing to investigate the matter and give satisfaction. Li-hung-Chang, the Viceroy of the metropolitan province of Pee-chee-lee, appointed a man named Sung Paou-hwa, holding no territorial rank whatever, as the Chinese commissioner to inquire into the circumstances attending the murder. This man is a native of Ningpo, and was formerly in the employ of a native merchant at that place, who, during the Taiping rebellion, became in some way associated with Li-hung-Chang; and it was then that Sung Paou-hwa first attracted the notice of his present patron. When Li-hung-Chang was appointed Viceroy of Pee-chee-lee, Sung Paou-hwa followed him to Tientsin, and was rewarded by a post on his staff. He has since held several subordinate offices in the viceroyalty, and has been employed as a customs-official at a village on the Tientsin River. As he had not literary rank and did not belong to the official lawyer-class, he was regarded as unfitted to undertake the inquiry, and Mr. Wade refused to accept this nomination. The Viceroy then appointed his own brother, Le-hang-Chang, as special commissioner, to go to Yun-nan, and investigate the matter. The Chinese authorities, in their usual manner, seeming to protract the negotiations and postpone any action in the matter, Mr. Wade presented to the Peking Government an ultimatum. On October 7th Mr. Wade telegraphed to the Foreign Office in London that he had obtained from the Chinese Government the guarantees which he considered necessary. The *Chinese Gazette* published an edict, referring to Mr. Margary's murder, and declaring the right of foreigners to travel in the interior, and requiring the officials to take cognizance of treaties. Mr. Grosvenor and Mr. Baker, the British commissioners for the investigation of the murder, started for Yun-nan by land. Mr. Wade, in

notifying to the foreign legations that Mr. Grosvenor proceeded to Yun-nan, informed them that while negotiating on this subject at Peking, he took the opportunity of insisting upon a better observance of treaty obligations, especially with regard to the taxation on trade. The Chinese Government agreed to institute an inquiry and have a report prepared on the subject as a basis for further negotiations. Mr. Wade, however, stated that no new trade convention was contemplated, and that no convention could be operative if negotiated by any one minister single-handed. It must be accepted by all the foreign representatives alike.

The native population appeared to be anything but pleased with the arrangements made by the Chinese Government with Mr. Wade. Placards censuring the Government were extensively posted in Peking, but immediately removed by the Chinese authorities. About the same time trustworthy information was received in Peking, clearly implicating the Maulmain authorities in the murder, and in January, 1876, the *Peking Gazette* published an imperial decree removing the Maulmain officials, and handing them over to the imperial commissioner for trial for the murder of Mr. Margary.

On September 7th the Chinese Government appointed Kwoh Sung-tao as minister to England. The imperial decree, announcing this appointment, was as follows:

Let the expectant Vice-President Kwoh Sung-tao, and the expectant Taotai Han K'ien-shea, of the staff of the province of Chihli, invested with the button of the second rank, having been appointed as envoys extraordinary on a mission to England, confer as may be needful with Li Hung-chang respecting the selection and appointment of the staff of officials and Chinese interpreters whom they should take as their suite.

The *Foo-chow Herald* contains an interesting account of the new minister to England. Born in Hunan, he in 1845 attained the degree of Tsiu-tsz, and was soon after made a member of the Han-lin. He was thereupon made a Taotai or Intendant of Circuit, and about 1862-'63 was made governor of the Kwangtung province, a post which he held for some months. Being subsequently appointed to a similar post in the Fo-kien and Chekiang vicerealty, he, as some allege, got into disgrace with Tso, the present Viceroy of Shensi and Kansuh, on the ground of his resisting the imposition of the Lekin tax, and protesting against certain charges in the administration of the native customs. At all events, he was degraded to a Taotiship, and thereupon withdrew from public life. Upon the commencement of the present reign, however, he was, at Li-hung-Chang's recommendation, recalled to office as judicial commissioner of Fuhkien. It is highly gratifying to find that the official selected for such an important office as that to which Kwoh has just been appointed, is of antecedents which even in Chinese eyes make him a man of mark and consideration. Grave and not altogether unfounded fears were entertained, when the appoint-

ment was announced, that the Chinese Government had not even yet learned the necessity of selecting an official whose status would alike reflect credit on their own choice and accord with those unwritten courtesies of diplomacy which China has on previous occasions but too frequently violated. That the new envoy is, from a Chinese point of view, a man occupying a position analogous to that occupied by similar officials from Western countries is an unexpected evidence of good faith and sincerity. Nor are the subordinate appointments as yet made less satisfactory. Mr. Hsi, who will be Kwoh's deputy, has occupied a fairly important position, and possesses, moreover, some knowledge of English; while the appointment of native students of the English language from the Tung wen Kwan, or Peking College, is a gratifying evidence that the central Government is at length convinced of the necessity of acting like other nations.

The peaceful settlement of the difficulty between China and Japan relative to the Formosan expedition in December, 1874,* was mainly due to the intervention of Mr. Wade, the British ambassador at Peking. When it appeared that the Japanese envoys Okubo and Yanigawara insisted on their demands, and that the Chinese ministers were not disposed to grant them, both sides agreed to refer the matter to the British ambassador. M. de Gendres, who was the chief instigator of the expedition, withdrew on seeing the turn things were taking, and the peace negotiations then commenced. It is true that the Japanese gunboat *Moschin* had been ordered to Tientsin, and that it was reported that the two envoys were about to break off the negotiations; but, however disagreeable it was to the Chinese to be dictated to by a small country like Japan, they could not deny that the provincial Government of Fo-kien had not done its duty in regard to Formosa. The Japanese, on the other hand, could not fail to see that, although they might if they declared war be victorious at first, they would ultimately have to yield to the great superiority of China in population and natural resources. The pecuniary claims of Japan thus diminished by degrees until they were reduced to 500,000 taels (£150,000). After the conclusion of peace, the transfer of the districts occupied by the Japanese troops proceeded without any difficulty. The soldiers were heartily tired of their service, for their quarters had been greatly injured by the storm. The Chinese officials expressed great admiration at the discipline of the Japanese troops and the improvements they had introduced in the districts they had occupied.

After the departure of the Japanese troops from Formosa, the conflict between the southern aborigines of that island and the Chinese troops began anew. In an encounter which took place at a village called Hong-Kong, six miles north of the old Japanese camp, the

* See ANNUAL CYCLOPEDIA for 1874.

Chinese troops were defeated with a loss of several hundred. In subsequent encounters the Chinese claimed to have been victorious, but the Chinese rule over the aborigines proved to be far from being firmly established. Referring to the Japanese expedition in 1874, against the Formosan aborigines, the British vice-consul, Mr. Herbert Allen, says that, whether it is now conceded that the whole island belongs to China or not, it is very certain that the Japanese had some grounds for arguing that up to last year Chinese rule had not been established in the east and centre of the island, for the Chinese have till now been forbidden to pass certain boundaries which defined aboriginal territory, and no taxes were ever paid by the aborigines to the Chinese, and the east coast of Formosa did not even appear in the Chinese maps of the island. However, a military road down the east coast, which was commenced during the stay of the Japanese force, with a view to Chinese defensive operations, is now to be completed, and Chinese settlers are to be bribed to colonize along the line of road; the resources of the island are to be fully developed, numerous officials are to be sent to the wild districts of the interior, and all these proposed reforms are to be under the immediate supervision of the Governor of Fo-kien, who is to reside at Taiwanfoe. The vice-consul adds that the Rev. Mr. Mackay, of the Canadian Presbyterian Mission, has been alone in his missionary work in North Formosa up to the end of last year, and that to his energetic labors the establishment of a better state of feeling between the Chinese people and foreigners is mainly due. The trade of Formosa, according to the last report of the English consulate, appears to be on the increase. The imports at Tamsuy and Kelung in 1874 exceeded £300,000 in value, and the exports exceeded £200,000, making a total of more than half a million, or double the value of the trade so recently as 1869. The demand for brocades and chintzes, and for jadestone ornaments from Southern China for women's wrists and ears, is noticed as showing that the people are thriving on the profits of the sale of tea, and are able to afford luxuries which formerly they did not think of possessing. Streets of well-built Chinese houses, built with bricks and tiles, are springing up in the populous towns of the district where only mud huts formerly existed. The import of cotton and woolen goods increases. Brass buttons are imported in large quantities for sale to the aborigines in the centre of the island in exchange for deers'-horns, hides, rattans, etc. Last year's exports of tea and of camphor show a good increase. The shipment of coal shows, exceptionally, a great falling-off in 1874, chiefly attributable to an increase of local taxation, or raising the price. Tamsuy, in the northwest of that island, is on the right bank of the Tamsuy River, about a mile from its mouth; but in the hot months the mer-

chants remove to Twatutia, a settlement about twelve miles up the river, where the tea is brought for sale. Kelung, the coal port on the northeast side of the island, about thirty miles from Tamsuy, is also a small foreign settlement, where the officers of the customs staff and one or two other Europeans live.

Among the arrivals in the harbor of Kelung, in 1874, was the German bark *Hydra*, on a voyage from Hong-Kong to Newchwang. It had been wrecked in foggy weather on the island of Komi, one of the Meiasosina group; the crew, fourteen in number, remained a month on the island, were well treated by the natives, and supplied with a compass and provisions, and reached Formosa in a small boat, which they built out of their ship. On another occasion, sixteen copper-colored persons drifted into Kelung harbor in three outrigger catamarans, much exhausted. By the help of a vocabulary attached to Cheyne's sailing directions from New South Wales to China, and by signs, it was ascertained that the men were Pelew-Islanders, who had drifted from their fishing-grounds, and after a voyage of sixty days, during which time they subsisted chiefly on fish, sighted the coast of Formosa. They must have traveled 1,600 miles on a current which sweeps the northeast coast of Formosa and then runs to Japan. They were sent down to Hong-Kong, whence a vessel transported them home.

The Chinese Government has not yet given up the purpose to reconquer Kashgar. Large bodies of troops have for some time been on the march to the frontier, but no encounter with the troops of Kashgar had been reported up to the end of this year (1875). Tso, the Governor-General of Shen-si and Kan-su, has been appointed imperial commissioner of all military and civil affairs in Sin-keang (Toorkistan). He, as well as Kyling, the newly-appointed Governor of Urumsai in Soongaria, is regarded as a man of great energy. The old and celebrated fortress of Urumsai will be the centre of the military operations and the central depository of the war material, which includes several Krupp cannon. (See KASHGAR).

The country suffered less than usual from civil disturbances. A renewal of the rebellion in the province of Yun-nan was threatened. The Government announced that a reconciliatory policy would be pursued in regard to the Mohammedan population. In Tien-tar, near Ning-po, an insurrection broke out, in which 10,000 farmers were engaged. The outbreak was in consequence of an increased tax on rice. A body of 5,000 troops failed to subdue the rebellion, and the increased tax was removed. Protracted disturbances took place in Mantchooria, where large bands of robbers, after plundering the country, threatened to effect a permanent organization. The government troops were for a time held in check, but finally succeeded in dispersing the insurgents.

On January 23d a mob attacked the labor-

ers on the telegraph-line from Foo-choo to Amoy, at the town of Kwang-tao, and destroyed the poles, interrupting the work. It is generally admitted that the attack was incited by the authorities, who waited till the line reached a point where it would be at their mercy. The troubles ended by the Chinese offering to purchase the work as far as completed. This was regarded as a generous proposition, the Danish Telegraph Company having clearly begun operations without due authority or permission. The Chinese state that, if indemnity were asked for property destroyed by mobs, they would not only refuse it, but would withdraw the present offer.

The attacks upon foreigners by Chinese mobs were, in 1875, of frequent occurrence. In March, an American named C. E. Hill was attacked and severely injured by Chinese at Shanghai. Several arrests were made, and the case was investigated by the United States consul-general. On the 1st of May an attack was made upon the American Methodist Episcopal church in Ku-kiang, in consequence of a quarrel arising from a superstitious belief among the natives that children were maltreated by missionaries. The Chinese authorities promptly offered ample reparation for the outrage. In June, an attack was made upon an *attaché* of the German legation, who, while on a scientific expedition with some companions, forty miles from the capital, was severely beaten and robbed of astronomical instruments.

One of the most serious anti-foreign riots occurred at Ching-kiang, on the 11th of July. The American consul, while walking with his wife, was assailed with offensive language by a party of Chinese soldiers. The native police interfered, when a fight ensued between them and the soldiers, the Americans not being further molested. Two soldiers were arrested and taken to the British consulate for incarceration, which place was soon surrounded by a military mob demanding the release of their companions. They were soon dispersed, however, by one of their own officers. Magnified reports of the affair having reached Shanghai, Consul Seward (American) and Medhurst (British) proceeded to Ching-kiang in American and British ships-of-war, for the purpose of investigating the matter. The Chinese authorities promptly offered full reparation and inflicted ample punishment on the offenders.

In October, American missionaries and ladies were assailed by mobs in Nanking, and an English lady was attacked at Jaku. The telegraph-builders were again driven from their work near Foo-chow, and the Amoy officials protested their inability to control the populace.

Some of the most prominent governors of China have presented memorials to the Government, in which they urge the necessity of introducing reforms. A collection of these memorials has been printed by the Govern-

ment press and widely circulated throughout the empire.

Li-hung-Chang, Viceroy of the Chihli provinces, has petitioned the throne for the introduction of Western studies into the schools of China, and that candidates for public offices hereafter be examined in the sciences as taught in foreign schools. Li-hung-Chang says in this memorial: "Since the opening of our connections with foreign nations, our literary men and officers have continued to adhere to traditional ideas. In arrogant language and high-sounding phrases, they deride foreigners, and regard it as beneath their dignity to take notice of them, and they are therefore at a loss what to do when foreign affairs have to be disposed of."

Some of the memorials urge the appointment of ambassadors to the courts of the treaty-powers and consuls in the principal ports. The memorials are fully discussed by the Chinese press, which begins to be a power. Most of the papers recommend the appointment of literary men as consuls, and refer to the example of Germany.

Notwithstanding the treaty of peace concluded in December, 1874, between the Governments of China and Japan, a new difficulty between the two countries arose early in 1875 in regard to the Loo-choo Islands. An article in the treaty of peace seems to provide that in future these islands, which lie between Formosa and Japan, shall be regarded as belonging to the latter country. Formerly both China and Japan claimed supremacy over the islands, and, shortly before the treaty was concluded, the Japanese Government officially informed the representatives of the European states that the Mikado had taken the islands under his protection, and had permitted their ruler to reside in the Japanese capital with the rank of an ex-king. It appeared, however, that this announcement was premature; for the official *Peking Gazette* declared that China still regards herself as the lawful proprietor of the Loo-choo Islands. This view, according to Chinese accounts, seems also to be adopted by the inhabitants of the islands, who sent a deputation to Peking to bring the Emperor of China the usual yearly tribute. A warm diplomatic correspondence passed between the two Governments in regard to this new difficulty.

The troubles between Germany and China, relative to the plundering of the bark *Prinze Bismarck*, were satisfactorily settled.

In December the Chinese Government appointed ministers to Chili, Peru, and Japan.

The *Peking Gazette* states that the King of Burmah has offered to send tribute in acknowledgment of Chinese supremacy. This ceremony was discontinued two centuries ago.

On June 12th the steamer *Carisbrooke*, from Singapore, and owned by British subjects, was discovered landing passengers and cargo on the island of Hainan, which being closed to foreigners, the ship was boarded and seized

by the English customs officials in the Chinese service and ordered to Whampoa for investigation. The captain of the Carisbrooke promised to follow a Chinese gunboat to that port, but presently endeavored to escape to Hong-Kong. After several warnings his vessel was fired upon and disabled, and finally captured and taken to Whampoa. Several hundred passengers were on board the Carisbrooke at the time, but none of them were injured, the shots being directed at the rudder only.

In October an imperial decree, conceding free intercourse on stated occasions between foreign ministers and heads of departments at Peking, was published in the *Official Gazette*, and received with great surprise and signs of irritation by a class of illiterate and inferior mandarins.

In November the *Peking Gazette* published a decree regarding foreign travelers in the provinces, requiring them to take out passports, with proper official seals; foreigners committing unlawful acts to be turned over to the nearest consul.

The present head of the family of Confucius received in Peking the tablet from the new Emperor, which, according to custom, is bestowed by each succeeding monarch to be deposited in the Confucian temple at Kuehli.

The Dalai-Lama, the head of the Buddhists of Thibet, died about the middle of the year at Lhasa, the capital of Thibet. He was a child of only seven years old, the son of poor parents of Tadak, in Cashmere, and had been proclaimed as the thirteenth Dalai-Lama a few years ago. The selection of a successor is made by means of lot. The names of all children who seem to bear some marks of being an incorporation of Buddha are cast into an urn, and imperial commissioners draw from it by lot the name of the new Dalai-Lama. The education of the successful child is conducted by Buddhist priests, who, it appears, pay but little attention to the bodily health of their pupils, for, since 1841, no less than three Dalai-Lama have died in early youth.

CHRISTIAN ASSOCIATIONS, YOUNG MEN'S. The Twentieth Annual Convention of the Young Men's Christian Associations of the United States and British Provinces met at Richmond, Va., May 26th. Mr. Joseph Hardie, of Selma, Ala., was chosen president. Three hundred and thirty-four delegates and thirty-six corresponding members were present. The services were continued four days, during which reports were received from the several general and local committees, and the following topics were discussed: "The Work of the International Convention;" "The Work of the Executive Committees of State and Provincial Conventions;" "How can the Associations reach all Classes of Young Men?" "Association Bible Classes;" "General Evangelistic Work;" "Association Lectures; their Prevailing Abuses and Proper Objects; the Availability of Home Talent." The Executive

Committee reported that seventeen State and Provincial Conventions had been held during the year, at which 282 Associations were represented by 1,250 delegates. The General Convention been represented at all of these conventions. The organization of associations among the German citizens of the United States had been furthered, with the coöperation of the Executive Committee, by the Rev. F. von Schluembach, of Baltimore. The first meeting of the National Bund of such associations had been held at Baltimore in October, 1874. The Executive Committee were represented in it. Arrangements were there made for the visitation, in behalf of the Bund, of leading points throughout the country, and the visitation had since been completed. At the report of the State Committees of Virginia, Georgia, and Alabama, Messrs. Thomas K. Cree and G. A. Hall had been commissioned by the Executive Committee to make a visitation of the Southern States. They were engaged in this work eight days, and visited eleven States, from Virginia to Texas, and held special meetings in thirty cities.

The following is a summary of the number of associations in the several States and British Provinces, including both those which reported to the convention and those which failed to make reports:

LOCALITIES.	Reporting	Not reporting.	Total.

The reports of the convention also give lists of 22 German associations in the United States, 13 associations in France (it is stated that there are in all 40 associations in this country, with 1,200 members), five associations in Australia, one in the Hawaiian Islands, one in Japan, 198

associations and branch associations in England and Wales, 63 in Scotland, 102 in Germany, and 13 in Switzerland.

Reports were made to the convention from 555 local associations, 519 of which reported an aggregate of 69,011 members. One hundred and ninety-eight associations owned libraries, numbering 181,340 volumes, 161 of which libraries were valued at \$190,898. Two hundred and sixty-one associations kept open reading-rooms; 56 had buildings valued at \$2,434,900, with \$700,750 of incumbrances against them; and 216 had building funds, amounting to \$408,756. The total value of buildings and building funds amounted to \$2,843,656, an increase of \$355,904 from the previous year, making the value of the building property of the associations, when cleared from debts, \$2,137,706.

The seventh Conference of the Young Men's Christian Association of all lands met at Hamburg (Germany), August 16th. A social reception was held on the Saturday evening preceding, at which the delegates were formally introduced by name to their fellow-delegates. Sunday, addresses were made by several of the delegates at the English Reformed Church in Hamburg. One hundred and thirty-five delegates attended the conference from Germany, France, England, Scotland, Holland, Switzerland, and the United States. Baron G. von Oertzen, of Hamburg, was chosen president of the Conference, and Mr. George Williams, of London, and Pastor O. Jordan, of Halle, were elected vice-presidents. Three topics were discussed, with addresses on each by representatives of the several delegations, viz.: "The Christian and Social Importance of the Young Men's Christian Association;" "What has been thus far accomplished by the Young Men's Christian Association?" and "Christian Work among Young Men in the Army." Reports were made of the associations in the various countries represented, as follows: Great Britain, 350 associations, 40,000 members; Germany, 200 associations, 10,000 members; Holland, 225 associations, 4,000 members; France, 30 associations; Belgium, 18 associations; Switzerland, 100 associations. It appeared that on the Continent, particularly in Germany and Switzerland, buildings had been erected to furnish lodgings for traveling young men, particularly of the artisan class. The Conference voted that for three years, till the next Conference, the week beginning with the second Sunday in November should be observed as a special week of prayer for young men. It was also voted to hold the next meeting of the Conference (in 1878) in Brussels, or, in case some unforeseen event should occur to interfere with holding it there, in some city of England.

CHRISTIAN UNION.* UNION CHRISTIAN CHURCHES OF AMERICA.—The second * annual

convention of the Union Christian Churches of America met at Suffolk, Va., May 5th. The first convention under this name was held in Cincinnati, Ohio, in October, 1874, and was attended by members of six different Evangelical denominations. It devised a basis of union for the acceptance of such church-members, ministers, and churches, as might be willing to unite upon it for more compact Christian work; appointed a committee to report a plan of coöperation and suggestions on church organization, and fixed the meeting of the present convention. Fourteen ministers were present as delegates, four ministers were present as deliberative members, one minister as a corresponding member, and nine churches were directly represented by ministerial and lay delegates. In addition, several churches and ministers sent letters expressing sympathy with the objects of the convention. The Rev. W. C. McCune was chosen president of the convention. The basis of union adopted at Cincinnati was called up for discussion, and the subject was referred to a special committee. This committee afterward reported that they had concluded it to be inexpedient under the circumstances to suggest any change in the basis set forth by the convention at Cincinnati, but that they had prepared a supplementary document to accompany that basis. This paper was adopted as "expressive of the true intent and meaning of the basis of union adopted at Cincinnati, in October, 1874." It declares the meaning of the rule for the reception of members laid down in that paper* to be, "that we regard every one as a Christian who exercises due repentance toward God, and faith toward our Lord Jesus Christ; that the catholic or universal Church of Christ is composed of all such throughout the whole world as exercise this repentance and faith, and that every local congregation of Christ's people should make its fellowship conform to this principle, by receiving any one who applies whom it admits to be a Christian, without regard to differences of opinion in matters not considered essential to salvation, or to Christian character." It is declared, however, in this paper, that "the test of a minister should be more rigorous than the simple ones required for church-membership;" that the people of God must see to it "that ministers of the gospel are apt to teach, and will not administer the poison of pernicious doctrine to the churches instead of the breath of life," but that nothing more should be demanded of ministers than the common faith which has been held and taught by the great body of believers in all ages." "The universal consent of Christians," the supplementary paper continues, "has always been given to these grand and fundamental truths, as essential to the very existence of Christ's kingdom on earth, viz., that the Holy Scriptures are inspired of God, and a perfect and all-sufficient guide in faith and duty; that man

* See ANNUAL CYCLOPEDIA for 1874; article, CHRISTIAN UNION.

* See ANNUAL CYCLOPEDIA for 1874.

is a lost sinner, standing in need of a Saviour; that Jesus Christ is the Son of God, one with the Father, to be honored and worshiped as equal with the Father, and the Saviour of the world, tasting death for every man, dying for us, the just for the unjust, to bring us to God; that the Holy Spirit is the Divine Renewer and Sanctifier of believers; that the future life is one of endless rewards of grace for the righteous, and of endless punishments of desert for the wicked." The Cincinnati basis of union was designed to set forth such truths as form the common faith of God's people, in a few pertinent passages of Scripture, which, in the judgment of the general Church of God, affirm them. "But it is distinctly to be understood that it is the substance and not the form about which we are anxious; and therefore we hereby declare that we will recognize as genuine Union Christian ministers and churches all who assent to these principles, no matter in what manner they are expressed; that is to say, we will recognize and affiliate with all churches or ministers who believe—1. That every church of Christ should receive to its fellowship all whom Christ receives; 2. That every minister of the gospel should teach the common faith of God's people, and not heretical errors which oppose that faith. We therefore declare that we regard the basis of the Evangelical Alliance, the Principles of the Christian Churches of the South, as published by the Christian Board of Publication at Suffolk, in 1867, and the statement of doctrinal principles on page 88 of the *Christian Union Year-Book*, published in Columbus, Ohio, in 1866, as expressing these catholic principles; and that we shall regard the hearty acceptance of either of them as fully equivalent to the acceptance of the Cincinnati basis of union, and will welcome to the fraternity of the Union Christian Churches of America all who accept and hold either of these kindred bases of union."

A committee had been appointed at the convention held in Cincinnati in 1874, to prepare a plan of coöperation for the Union Christian Churches of America. The committee presented a report, embodying a review of the whole ground of the relations of churches to each other, and concluding with the outline of a plan for the definition of those of the churches entering into the Union. It considered the different systems of church organization under the three heads of Episcopal, Presbyterian, and Congregational, and decided that no one of them had been found exclusively attended with the Divine sanction, but that each had its advantages of which it was proper for the Church to avail itself. It regarded the true church of any particular place to be formed of all the believers of that place; recommended the earnest advocacy of this view; and advised the holding, wherever practicable, of ministers' meetings composed of all those who could be recognized as Christian ministers of

the place. Such a meeting would constitute the presbytery of the church in that place. It was not meant that the church in any one place should consist of only one congregation meeting in only one place for worship. Necessity or convenience would often, as it actually does in most places, require division into several congregations; but all the congregations should be united into one organization. Each congregation should be given a large measure of autonomy, or self-government; should be allowed to select its own pastors and deacons, and have an equal voice in choosing the general secretaries and other office-bearers which the general interests of the whole church in the city might require. It should be the aim to appropriate, "or rather," the report says, "to claim for the church of God all the power, the efficiency, the force there may be in each of the modes of church organization now extant—the Episcopal, the Presbyterian, the Congregational. We believe there are Scriptural and very useful elements in each." Only one form of church government was objected to—the Independent. This form, it was declared, "seems entirely destructive of all Christian unity, and so inadmissible. . . . A congregation assuming such an attitude becomes necessarily a sect by itself."

The report concluded with the following suggestions:

1. That we adopt catholic principles with regard to this whole subject of organization. That is, we should not allow ourselves to adopt prejudices against, or form partialities for, any particular style of organization; but allow all Union Christian Churches to adopt either the Episcopal, Presbyterian, or Congregational plan as they shall deem most expedient or Scriptural, provided they do not exclude from their fellowship any true believer or minister of Christ.

2. That no mode of organization adopted by any Union Christian congregation should be regarded as in the slightest degree impairing the most cordial relations between Union Christian ministers and churches.

3. That, for the present, our coöperation should find expression in annual conventions similar to the present, in which we can exchange views freely, and cultivate mutual fraternal intercourse.

4. That we should, if practicable, form a missionary society to extend our principles by tracts and other publications, and especially to give aid and support to missionaries and missionary churches upon our frontiers who are desirous of exchanging a sectarian basis for a Christian Union one, or to encourage scattered disciples to form themselves into Union Christian churches.

5. Any congregation adopting the Cincinnati basis of union, or any of the kindred bases, setting forth substantially the same principles, shall be entitled to two delegates to these conventions. Each minister of the gospel, who has signified his approval of the Cincinnati basis or either of the kindred bases, shall be also entitled to membership in our annual conventions.

The report was unanimously adopted, together with its recommendations. At the close of the year fifty-five ministers had signified their approval of the basis of union adopted at Cincinnati in 1874.

CHURCH OF GOD. The triennial meeting of the General Eldership of the Church of God in North America was held at West Salem, Wayne County, Ohio, beginning May 26th. Elder R. M. Balton was elected speaker. The Conference consisted of nearly an equal number of teaching elders and ruling elders from each eldership. The elderships from East Pennsylvania, West Pennsylvania, Maryland and Virginia, East Ohio, West Ohio, Indiana, Southern Indiana and Illinois, Michigan, Illinois, Iowa, Kansas, and Missouri, and the German eldership, had chosen eighty delegates, many of whom, however, failed to attend. A memorial was received from the missionaries and members of the Church in Nebraska, asking permission to organize themselves into an eldership. The eldership of Texas was received as a member of the General Eldership, and the names of its delegates were entered upon the journal. The general book agent reported that his receipts had been \$7,527.88, and his expenses \$3,089.72, and that the establishment had on hand money, books, and plates, to the value of \$7,821.44. The Book Depository had been established at Harrisburg, Pa. The collecting agent of the Board of Missions reported that he had spent one year in traveling among the churches, and had obtained \$4,399.31 cash, and pledges of \$761.53, at an expense, including his salary, of \$886.80. The General Eldership of 1872 had taken action toward raising an endowment fund of \$10,000 for a professorship in Hillsdale College of the Free-Will Baptists, Michigan, to be filled by a professor designated by the eldership. A professor had been elected for the proposed chair, who subsequently resigned. Only \$200 of the contemplated endowment fund had been obtained. The Board of Education, therefore, reported that they had not been able to complete the arrangement entered into by the eldership with the authorities of Hillsdale College, and asked to be relieved from the charge. The same board recommended the formation of a chartered or incorporated society to take charge of the educational interests of the Church, and of similar societies in all of the annual elderships. These recommendations were approved by the General Eldership, and action was taken for giving them effect. It was declared inexpedient to license any minister "who will openly preach and defend the dogma of the unconscious state of the dead," but it was declared the duty of the Church "to try to restore to fellowship and usefulness any who may have fallen into this error." A Board of Incorporation was established, which should constitute the Board of Trustees of the General Eldership, to hold all of its property and receive whatever may come into its possession "by way of purchase, bequest, donation, or otherwise." Persons desiring to contribute toward the establishment of a permanent fund for missions were advised to make their gifts through this board. The publication of a "Hymnal," with

hymns and music, was ordered. The condition of the German eldership received attention. This body was organized in 1854, and flourished for several years afterward. It had established a German paper, the *Christlicher Kundschafter*, and had received a bequest of \$15,000. Lately, a number of the churches had left it, and had attached themselves to the East Pennsylvania eldership, to its detriment. The General Eldership expressed a desire for the strengthening and continuance of this body, and passed a resolution declaring sympathy with the efforts of the brethren and ministers "to advance the interests of the Church of God among the German people of this country." In view of the prospective occurrence in 1876 of the Centennial celebration of the Independence of the United States, it was decided that a general convocation of the Church be held in Philadelphia, beginning on the first Wednesday of June, to continue over Sunday. A committee was appointed to consider the subject of further participation in the exercises of the celebration. This committee met and was organized on the 10th of July. It decided to publish a pamphlet containing a brief history of the rise, progress, faith, practice, and statistics of the Church of God, for gratuitous distribution during the Centennial Exposition at Philadelphia. Elders James Mackey and D. A. L. Laverty were appointed to prepare for the pamphlet the article on the "Rise and Progress of the Church," Elder A. Swartz a paper on its "Faith and Practice," and Elders O. H. Forney and R. H. Balton a paper on its "Statistics."

COLLINS, Rear-Admiral NAPOLEON, died at Callao, Peru, August 9, 1875, while in command of the South Pacific fleet. He was born in Pennsylvania, May 4, 1814, and entered the navy in 1843. He commanded the steamer *Anacosta* in the Potomac squadron in 1861, and took part in the engagement at Acquia Creek on the 31st of May in that year. He afterward received command of the gunboat *Unadilla*, and was about a year with the fleet stationed off the coast of South Carolina, Georgia, and Florida. During this period he took part in the battle of Port Royal, and in several naval enterprises. In July, 1862, he was made commander, and had charge of the steamer *Octo-rara* in the West Indian squadron. In 1863 he was transferred to the steam-sloop *Wachusett* and sent in pursuit of Confederate privateers. While thus engaged Commander Collins arrived, October 6, 1874, off the Brazilian port of Bahia, which the corsair *Florida* had just entered, anchoring amid the Brazilian fleet and directly under the guns of the principal fort. Finding that he could not provoke the *Florida* to fight him outside the harbor, Commander Collins bore down upon her early on the morning of the 7th, intending to crush in her side and sink her, but he only succeeded in damaging her. A few small-arm shots were fired on either side, but at random and without effect. Commander

Collins now demanded her surrender, and, as the captain and half his crew were ashore, the lieutenant in command deemed it best to comply. In an instant the Florida was boarded from the Wachusett, a lawser was made fast to her, and the captor, crowding all steam, put out to sea, making no reply to a challenge from the Brazilian fleet, and unharmed by three shots fired at her from the fort. The Wachusett and her prize soon appeared in Hampton Roads, where the latter was sunk by a collision a few days afterward. Brazil having complained that her neutrality had been violated in this affair, Secretary Seward disavowed the act of Commander Collins and ordered him to be tried by court-martial. Public sentiment was, however, in favor of the officer. In July, 1866, Commander Collins was commissioned captain and placed in command of the steam-sloop Sacramento. In August, 1874, he was raised to the rank of rear-admiral and placed in command of the South Pacific squadron. His death promoted Commodore Trenchard to be rear-admiral and Commodore Murray to be the head of active commodores.

COLOMBIA (ESTADOS UNIDOS DE COLOMBIA), an independent state of South America.*

The President of the republic is Señor Santiago Perez, inaugurated on April 1, 1874, for two years.

The cabinet is composed of the following ministers: of Interior and Foreign Affairs, Señor Justo Arosemena; of Finance and Public Works, Señor A. Parra; of the Treasury and of Credit, Señor N. Ezquerria; and of War and Marine, Señor R. S. Vila.

The chief magistrates of the nine States of the Union, all of whom have the title of governor, except him of Panamá, whose title is that of president, were as follows in 1875:

STATES	
Antioquia.....	Señor J. M. Berrio.
Bolívar.....	" E. Sn. D. Vila.
Bogotá.....	" V. Rueda.
Cauca.....	" T. C. Mosquera.
Cundinamarca.....	" J. Barriga.
Magdalena.....	" J. M. Campo Serrano.
Panamá.....	" G. Neira.
Santander.....	" N. Cadena.
Tolima.....	" J. N. Leiva.

The Colombian consul-general in New York is Señor Miguel Salgar.

The several branches of the national revenue are: customs, salt-works, Panamá Railway, postal service, State property, mint, telegraphs, and public lands.

The revenue for the fiscal year 1873-'74 amounted to \$5,091,605, of which \$1,177,624 constituted the balance from the previous year; and \$2,775,000, the yield of the custom-house. This last branch doubled its yield in the eight years 1865-'73, the amount thereof for the first of these having been \$1,300,000. At the same rate of increase, the Colombian custom-house would yield about \$7,500,000 in 1885.

* For full official statistics concerning territorial divisions, commerce, finances, inland communication, and public instruction, see *ANNUAL CYCLOPEDIA* for 1873 and 1874.

The public debt stood as exhibited below, on February 1, 1875:

BRANCHES.	Amounts.
Consolidated debt, at 4½ per cent., comprising those contracted during the War of Independence.....	\$10,000,000
Bonds due to Robinson & Fleming.....	105,500
British loan of 1868 (balance due at the beginning of 1875).....	600,000
Total foreign debt.....	\$10,705,500
The home debt (real value).....	5,006,674
Total national debt.....	\$15,712,174

The interest on the four and a half per cent. debt, consolidated as above in 1873, has been punctually paid since that time.

The Colombian Congress was opened on February 1, 1875.

On the subject of the contract between the Government and the National Company of the Northern Railway, we transcribe the following statement from a Bogotá journal:

The line is calculated to cost \$15,000,000, and the interest of this sum is \$1,050,000, or one-fourth of the national income. Added to this, there will be the interest guaranteed on other projected railways, the subvention to that of Antioquia, and the payment of the foreign and domestic debts, which will leave but very little to carry on the Government with.

Certain important improvements were reported to be in contemplation, such as the opening up "free communication and active commerce" between Northern Antioquia and Southern Bolívar. This once accomplished, a desirable opportunity in a convenient region would be offered for new colonists, as may be gathered from the following sketch from a national publication:

In this territory, which begins in Ituango and extends to San Jorge and the Sinu, in the State of Cauca, mines and fertile land abound, and that sufficient for all the miners and farmers of Antioquia, Cauca, and Bolívar. The mine of Ceritave, though imperfectly worked, has yielded many quintals of gold of the finest quality. There are also pasture-grounds sufficient for a million cattle. Caucho (India-rubber) and balsam of copaiba are extracted in abundance from the forests. There the vegetation is perpetually green. Flowers and fruit abound in a climate whose temperature is from 50° to 60° Fahr. The ravines are auriferous and the rivers navigable. Every foreigner who has visited those regions agrees that they form a promised land reserved for a future immigration. As it is, any one can go there and occupy land by merely fencing it in and building a house thereon, while the establishment of plantations of coffee, cacao, or sugar-cane, etc., gives a right to land double that of the plantation.

A bill was laid before the Legislature for the exploration of an interoceanic canal-route across the Isthmus of Panamá. The following extract from the report of the Minister of the Interior and of Foreign Affairs may be found interesting:

The relations of Colombia with the other American and European nations have been much improved during the past year.

The republic maintains two first-class legations—one in France and Great Britain, and the other in the United States of Venezuela. The former is at pres-

ent filled by Señor F. Zapata. Dr. Justo Arosemena held this position for the three years previous, until illness compelled him to retire. He was then offered the portfolio of Minister of Foreign Affairs in Bogotá, which he declined. Everything which Señor Arosemena did during his ministerial mission in relation to the settlement of the public debt, and other delicate commissions, gave the greatest satisfaction to the General Government.

The legation to the United States of Venezuela was indispensable, in order to reestablish friendly rela-

tions between the two Governments and peoples of Colombia and Venezuela.

As the conference at Barranquilla, proposed by Venezuela to the President of Colombia, in order to arrange international questions, could not be carried into effect, the Government thought it better to appoint Señor Murillo, who was President of this republic when the conference was proposed, as minister to Venezuela.

Until the year previous, a legation had been maintained permanently in the United States of America.

BOGOTÁ.

but the deficiency of funds, the satisfactory arrangements made by Señor Martin, and the greater necessity of having a legation at Venezuela, rendered it difficult to keep up that in Washington. Señor Zapata, the Colombian minister to Europe, has been also accredited to the American Government at Washington, should any important question require the temporary presence of a representative of the republic in that country.

It is urged that there should be four legations: in Europe, the United States, Venezuela, and the republics of the Pacific.

Important obligations bind us to the United States of America, that nation being even a guarantee for the sovereignty of Colombia over the most important part of our territory. The only interoceanic communication opened up as yet in Colombia has been done by American citizens.

The wish to have the Colombian frontiers with Brazil defined, according to the treaties adjusted with the ancient metropolis, has been resisted by the Imperial Government. The continual invasions of the territories of the republic included between the affluents of the Amazons, and other more audacious usurpations on the part of Brazil, call for the attention of the Colombian Congress. On this subject Colombia stands by the rule of the *uti possidetis*, as the only firm and legitimate base for such a transaction.

A conflict, which for some time threatened to jeopardize the commercial and industrial interests of the Union, broke out between the national Government and some of the Atlantic State governments; these were in a state of

siege during four months (until about the beginning of October), and then order was again established.

COLORADO. One of the last acts passed by Congress previous to its final adjournment in March, 1875, was to enable the Territory of Colorado to form a State government. Its Territorial government continued through the year as follows: Edward McCook, Governor; John W. Jenkins, Secretary. In May two of the judges of the Supreme Court were removed by President Grant and two others appointed in their stead.

Colorado was set off from Kansas as a Territory in 1861. It has an average extent of 273 miles north and south, and 380 miles east and west. The plains occupy about one-third of this area; the Rocky Mountains, and spurs passing through the centre, the rest.

The Territory east of the mountains is watered by the South Platte and Arkansas, their headwaters being separated by the Divide, giving the former and its tributaries to the northern and the latter to the southern part of the Territory.

The population and assessed valuation of each county in June, 1874, are given in the following table. The population was, at that time, about 125,000, and the valuation \$40,000,000. There is no Territorial debt. The

principal industrial pursuits are stock-raising, farming, and mining.

NAME OF COUNTY.	Estimated Population.	Assessed Valuation.
Arapahoe.....	25,000	\$11,871,808
Bent.....	4,000	2,000,000
Boulder.....	5,618	2,098,533
Clear Creek.....	5,500	1,394,948
Conchos.....	7,000	212,891
Costilla.....	2,500	184,291
Doeglas.....	8,500	1,500,000
Elbert.....	800	750,000
El Paso.....	4,500	2,163,045
Fremont.....	8,500	1,213,639
Gilpin.....	8,000	2,582,024
Grand.....	200	100,000
Hinsdale.....	500	150,000
Huerfano.....	8,500	509,780
Jefferson.....	8,500	2,273,116
Lake.....	800	276,540
Larimer.....	8,000	768,674
La Plata.....	250	100,000
Las Animas.....	8,500	904,465
Park.....	2,500	579,459
Pueblo.....	9,300	3,108,191
Rio Grande.....	8,000	250,000
Saguache.....	9,200	423,833
Summit.....	950	158,837
Weld.....	5,000	2,064,544

Summit District in Rio Grande. The yield in 1878 exceeded \$4,000,000.

The area of land known to be rich in coal deposits in Colorado is about 7,200 square miles, lying in various parts of the Territory, on both sides of the main range. There are twelve extensive coal-banks in operation in Northern Colorado: St. Vrain, Erie, Baker, Davidson, Barber, Marshall, Fullerton, Murphy, Mineral Land Co., Johnson's, Eulner's, and Towsland; and three in Southern Colorado: Canon, Trinidad, and Conejos.

The annual yield of coal is about 200,000 tons, value \$775,000. The Erie and Canon banks are the most extensive in the Territory.

The following is an analysis of the leading banks:

COAL-BANKS.	Fixed Carbon.	Volatile Matter.	Water.	Ash.
Murphy's, Jefferson Co..	55.81	29.07	11.70	3.92
Marshall's, Boulder Co..	59.20	26.00	12.29	2.80
Erie, Weld Co.....	57.70	19.80	20.00	2.00
Canon, Fremont Co.....	58.69	40.65		5.66

The exploration of the remarkable prehistoric ruins of Southern Colorado, glimpses of which were obtained the preceding season, was continued with great success during 1875. They were traced down the cañons to the Colorado River in New Mexico, Utah, and Arizona, and their connection established with the cliff-cities of the Moquis of the latter Territory. Hundreds of cave-dwellings, of curious architecture and many miles from water, were found in the sides of the gorges, and the ruins of extensive towns discovered in the adjacent plains, indicating the former existence of a people far more numerous and advanced in the arts of civilization than their supposed descendants of the present day. Of these ruins many interesting sketches, plans, and photographs, were made; and a valuable collection of flint weapons, earthenware, and other specimens, was gathered.

The scourge of grasshoppers visited the Territory during the spring. But the effects of their visit were not so destructive as was anticipated. One writer thus describes their appearance:

Ordinarily, the grasshoppers are not hatched out of their eggs until the first of June. Before this period the ground is so wet and cold in consequence of the spring rains that the insects are not hatched out. This year we had no spring rains to speak of, hence the ground was warm and dry, and the insects appeared about the 25th of April. At this time the wheat was just starting, and the insects ate it as fast as it grew. Our wheat is sown in February and March, and it is of a superior quality, better than the winter wheat of the Eastern States. If there had been the usual spring rains it would have been at least a foot high by the time the grasshoppers appeared.

Wheat that is starting is greatly injured by being irrigated, and usually it does not need irrigation. If the soil is light the water quickly cuts gulches which constantly deepen, and flooding the ground all over is impossible, especially if the land inclines any way. But after the grain has grown to some

The pastoral area of Northern Colorado, east of the mountains, is about 20,000 square miles, and of Southern Colorado even greater. The Pinta, Arkansas, and tributaries, and the parks, all afford splendid grazing-fields.

Experience shows that cattle can be herded, in large droves, for \$2 a head per year, and horses for \$4 per head. In the winter, sheep need some protection, but cattle generally go without shelter. One herder can take care of 800 cattle.

The soil of Colorado is generally loam, very friable, no hard sub-soil, surface soil one and a half to four feet deep. All grains do well, except in Northern Colorado, where the nights are too cool for corn. Vegetables grow abundantly and large. All shrubs, plants, and flowers thrive. The most of fruits do well. The average yield of grain in the Territory is: wheat, 35 bushels per acre; oats, 40 bushels; potatoes, 350 bushels; corn, 25 bushels; and barley, 35 bushels.

Irrigation is required in Colorado farming. The expense on large tracts does not exceed \$1.00 per acre per year. There is an irrigation law regulating the matter. There are many canals and ditches owned by private parties, who charge for the use of water \$1.50 to \$4.00 per cubic inch for the year.

The minerals most extensively produced are gold, silver, and coal.

The principal gold and silver mines lie about Central City, Black Hawk, and Nevada, in Gilpin County; Georgetown, Idaho, Argentine, and Silver Plume, in Clear Creek County; Fairplay and Mount Lincoln in Park County; Carleton, Gold Hill, Ward, in Boulder County; headwaters of the Cache à la Poudre, in Larimer; Breckenridge, Montezuma, and St. Johns, in Summit; Granite, and headwaters of the Arkansas, in Lake; Rosita and the Hardscrabble region in Fremont; Antelope Park in Hinsdale;

height its roots fill the surface earth and the water cannot cut through them, and it forces its way hither and thither among the blades of grain, much as one is obliged to do in a crowd of men. So it spreads over the field and evenly with a little aid. When wheat is in this condition, and the young grasshoppers are hatched in sandy places open to the sun, they cannot eat the wheat as fast as it grows, and besides it is an easy matter, by irrigating the fields, to drown them, or at least keep their numbers small. But even when they are eating the wheat in half a dozen fields, or in a dozen fields in one neighborhood, as fast as it grows, there will be many other fields where the wheat is not molested, and by the time the pests are grown and have wings to fly, a large breadth of wheat will be strong and vigorous, and consequently will mature. Usually, therefore, the young grasshoppers—which came to our fields only once before, two years ago—do but little damage, and the average yield of wheat during the year mentioned was as great as that of the Eastern States; while in ordinary years it is more than double. In this place and all through Colorado the gardens are as bare as in January, for no attempt has been made to plant vegetables. The grasshoppers do not touch peas, however, and these are growing fast.

We have on the northwest about 4,000 acres sowed with wheat, and owned by thirty or forty farmers. The wheat is all gone, and that region looks like a desert. It is true that there are a few fields in the midst left, but we expect to hear every day of their destruction northeast and east of the railroad and along what is called Free Church. The owners are constantly on guard. When an advance detachment of grasshoppers appears it is attacked with fire and water, and thus for the present the enemy is kept at bay. On this side of the river, all the five-acre, ten-acre, and twenty-acre lots are without vegetation. To the south there are several hundred acres of wheat where the wheat is over knee-high and growing as if in a race for its life. We may save 500 acres of wheat out of 5,000, which will give us bread, but we expected to have obtained \$150,000 from this year's crop. Meanwhile we are waiting. Corn will be planted in hundreds of fields in ten days. All kinds of garden vegetables are now growing in boxes in the houses, waiting their chance to appear with safety in the outer air.

All this is a fair description. As a people we are certainly better off than those farther east, because we have water at our command; because our stock-range is preserved, giving to those keeping cattle their usual returns, while our mines of silver and gold are unfailing. But these resources do not help our farmers at all. There are some families now utterly destitute. Every dollar they had or could borrow was put into the ground, and it will never return. Friends of such in the East should help them if possible. Probably county commissioners can give some relief; the Legislature may; Colorado is entirely out of debt. The Grangers can do nothing for each other, for all are involved.

COLORADO BEETLE, THE. This insect takes its name from the region where it was first discovered. It was known to the earlier entomologists as an insect that found its chief food in the vines of the wild-potato, then and now common to the Rocky Mountains. When population, in its progress westward, reached the base of the Rocky Mountains, and farms were opened, the Colorado beetle found in the cultivated potato a more succulent and congenial food. It made its first appearance in Nebraska in 1859, where it multiplied greatly, and thence began to move eastward, seeking new fields to ravage. Two years later it spread

over Iowa, and about the year 1865 reached the Mississippi. A description of the insect has been very well given by Mr. Dodge, the entomologist of the Department of Agriculture at Washington. He finds its presence reported, in 1872, in two counties of Pennsylvania; in 1873, in four counties in New York, thirteen of the western counties of Pennsylvania, and seven of West Virginia. It was then moving steadily eastward. In the summer of the same year, a few of these pests were recognized in the District of Columbia, and in the vicinity of Baltimore. In 1874 their presence was reported in seven counties of Maryland, and a few counties of Virginia; but they were moving eastward and northward at the same time in larger numbers. During the summer of 1874 they had overrun the eastern counties of Pennsylvania; had crossed over Delaware into New Jersey; had extended half-way across the State of New York, and they reached the Atlantic borders of Long Island in the autumn of the same year. In 1875 they were reported in large numbers in parts of Virginia and Maryland, being very numerous along the line of the Northern Central in Baltimore County; and also in Pennsylvania, New Jersey, and New York. Notwithstanding their ravages, the potato crop proved very abundant.

The following is a description of this insect and of its powers of reproduction:

The perfect insect measures about half an inch in length, is of a thick oval shape, and of a yellowish cream color, with ten dark-brown or blackish lines running lengthwise down the wing-covers. The head and thorax, or middle portion of the body, are of an orange-brown color, spotted or marked with black. It has, in addition to the wing-covers, a pair of pink wings, which lie folded beneath and hidden except when the insect is in flight. The eggs, to the number of 1,000 to 1,200 and even more, are deposited upon the young leaves of the potato in clusters, containing from one to two dozen each. These hatch in a very few days, and the young larvae go immediately to work on the foliage, and acquire their full size in less than three weeks. In color they are dark orange red, the head black and a black ring on the first segment of the body, and a double row of black dots down each side, from the head to the end of the abdomen. After arriving at maturity the larvae go into the ground and change to purple, and in about ten days or two weeks the perfect beetles appear. They begin to pair in about a week, and on the fourteenth day the female begins to deposit her eggs, so that we may consider that it takes about fifty days for the insect to go through all its changes from egg to egg, though, of course, the time may vary a little from differences in temperature, etc. A writer in the Canadian *Entomologist* estimated that if the progeny of a single pair of these insects were allowed to increase without molestation for an entire season the result would amount to over 80,000,000 of individuals, which will give some idea of their powers of reproduction. Though the potato is its particular food, it will feed upon other plants, such as the tomato, egg-plant, etc., sometimes doing considerable damage, and in one case reported, after destroying a field of potatoes, they finished up on a patch of the Jamestown weed (*Datura stramonium*).

Mr. Dodge estimates the loss sustained by the ravages of the beetle at not less than \$13,000,000 a year. He also gives statistics to

prove that the loss in the entire potato-crop of the United States has averaged thirty per cent. of the customary yield, and that the market price of this esculent has risen as a consequence pretty much in the same proportion; so that, after all, the consumer and not the farmer has suffered most from the beetle's ravages.

The means recommended to check its destructiveness are the following:

Thus far Paris-green has proved the only available and effective remedy, if we may except hand-picking, which is only reliable to the same extent that it is laborious. The Paris-green must, however, be pure, be effective, and we regret to say that tons of inferior or adulterated stuff are sold every year. It is mixed with ashes, land-plaster, or flour, in the proportion of one to twelve or fifteen, and should be dusted over the plants in the morning when the dew is on the foliage, repeating in a week or ten days, or after rains, when the insects are most plentiful, though we should advise taking them early and preventing them from becoming very numerous. A convenient way of dusting the vines evenly is to prepare a dredge, on a large scale, from an old fruit-bush, by puncturing the bottom full of holes, and securing to the side a piece of broom-handle, about two feet long. The operator fills this, and, carrying it in one hand, gently taps the handle with a similar stick held in the other hand, being careful to always keep to windward. The speed of the operator regulates the amount used. Three pounds of Paris-green is about forty pounds of the plaster or flour will cover for an acre.

Another remedy is hand-picking. But they are poisonous, and in several instances death has occurred from the attempt to destroy them by hand. Paris-green, although itself poisonous, is perfectly harmless, so far as its effect on the tuber is concerned, and is the most effective remedy thus far discovered.

COMMERCE OF THE UNITED STATES.

The fiscal year of the Federal Government ends on June 30th. The statistics of the foreign commerce of the country during the year 1874-'75 show that the total imports of goods were \$538,000,809, against \$567,406,842 in the year preceding fiscal year. In specie value, the figures showing the exports are \$518,843,428, against \$586,282,040 in 1873-'74. Including the specie movement in the exports and imports, the imports for the fiscal year were \$533,894,526, against \$595,861,248 in 1873-'74, and the exports \$605,475,760, against \$529,913,445 in 1873-'74, the decrease in imports being at the rate of about seven per cent., and the exports about eight per cent. The average yearly imports for the two years since the panic have been \$574,900,000, and the exports (specie included) \$628,700,000. Taking the five years next preceding the panic (back to the fiscal year 1868-'69), the yearly imports were \$549,000,000, and the average yearly exports were \$493,800,000.

Of the total foreign trade of the country, a little less than two-thirds of the imports are brought to the port of New York, while the exports from that port are from forty-six to fifty per cent. of the total exports of produce and merchandise, and by far the largest portion of the specie and bullion. The *Journal*

of Commerce publishes full comparative tables of the commerce of the port of New York for the year 1875. It has been comparatively a profitless year in all branches of commercial adventure. The imports for the year 1874 were not deficient in volume, but they were made on a continually-declining market, which took away all opportunity of gain. The imports for 1875 fell off so rapidly that many looked for an improvement in prices, and an increased percentage of profit; but this has not been realized. The trade has dragged throughout the year, and, in addition to low prices, the failure of debtors has contributed to the general depression, and swelled the volume of discontent.

The total imports for the year, including specie, have been \$340,628,919, or \$53,054,815 below the total for 1874. But, deducting the specie for the two years, the decrease in merchandise imports for the past year amounts to \$50,085,799. The relative total imports for the last twenty-five years are thus presented:

Foreign Imports at New York.

YEAR.	Dutiable.	Free Goods.	Specie.	Total.

Imports at the port of New York for three years are thus classified:

Classification of Imports at New York.

IMPORTS.	1872.	1874.	1875.
Dry goods.....	\$114,100,465	\$108,590,458	\$99,514,088
General merchandise	205,199,760	280,763,710	227,374,287
Specie.....	13,605,611	6,407,571	13,685,281
Total imports....	\$399,565,836	\$395,658,734	\$340,628,919

The cash duties are collected upon the total thrown on the market, and, as part of the imports are warehoused when they are first entered at the port, the receipts for customs do not represent the exact fluctuation in the imports. The total for the year is a little larger than the current estimates at the beginning of the year, owing to the fact that in consequence of the decrease of the stock in bond about seven millions more of goods have paid duty than have been landed during the year, the difference being drawn from the imports left in warehouse from former importations. The total in 1872 was \$138,215,802.69; and, notwithstanding the increase in the tariff, the total for the last year is \$33,000,000 less than that amount. The monthly record of the last three years is as follows:

Receipts of Customs at New York.

MOS.	1872.	1874.	1875.
Jan....	\$10,768,626 44	\$10,042,084 05	\$3,072,946 13

This statement shows a falling off in exports during the year amounting to \$21,143,548.

Below is a quarterly summary of the exports hence to foreign ports, exclusive of specie and bullion. It includes the reshipment of foreign products, but is chiefly made up of domestic produce and manufactures.

The exports from the port of New York, exclusive of specie, during the year 1875, amounted to \$250,462,168. The amount for each quarter of the year was as follows:

Exports from New York to Foreign Ports, exclusive of Specie.

QUAR-TER.	1872.	1873.	1874.	1875.
1st	\$58,896,192	\$63,171,761	\$67,090,467	\$56,985,580

The most complete statistics of the number and capacity of the coast and inland steam-vessels of the country to be obtained, are furnished in the annual report of the Supervising Inspector-General, William Burnett. This report embraces the fiscal year ending June 30, 1875:

The service at that date consisted of a total of 103 officers and clerks, as follows:

- 1 supervising inspector-general, resident at Washington.
- 10 supervising inspectors.
- 86 local inspectors of boilers.
- 86 local inspectors of hulls.
- 8 assistant local inspectors of boilers.
- 4 assistant local inspectors of hulls.
- 8 clerks to local inspectors.

The following table shows the number of steam-vessels inspected, their aggregate tonnage, and the officers licensed for the several divisions of navigation therein designated:

DIVISIONS.	Steamers.	Tonnage.	Officers.
Atlantic coast	1,676	486,830.98	5,423
Pacific coast	281	89,599.11	890
Western rivers, including South- ern coast	1,139	252,240.12	5,595
The great Northern lakes		189,498.66	2,656

Receipts from inspection of steam-vessels	\$188,989 75
Receipts from officers licensed	127,005 00
Total receipts	\$360,944 75
Expenditures for inspectors' and clerks' salaries ..	\$178,000 00
Expenditures for traveling and incidental expenses ..	89,892 03
Total expenditures	\$312,892 03
Total number of vessels inspected	8,885
Total tonnage of steam-vessels inspected	1,018,151.82
Total number of officers licensed	14,571
Total receipts from all sources	\$360,944 75
Total expenditures	\$312,892 03

Report of receipts not expended \$48,532 78

The number of lives lost during the last fiscal year was 405, namely: From explosions, 51; fire, 278; snags, wrecks, and sinking, 64.

The number of accidents which resulted in loss of life were:

Explosions or accidental escape of steam	14
Fires	6
Collisions	5
Snags, wrecks, and sinking	11

Total number of accidents **36**

The superintendent says: "It will be seen from the above statements that a total of 405 lives have been lost on merchant steam-vessels of the United States during the last fiscal year, but to our own citizens the loss of life for the same period has been only 201, which is an unusually small number; while there were thirty-six disasters to steam-vessels by which life was lost, yet a single one of these resulted in the loss of more than half the lives here recorded. I refer to the burning of the steamship *Japan* at sea off Swatow, China, by which the lives of two hundred Chinese and four other persons were destroyed. There were fourteen cases of explosion or accidental escape of steam, one of which resulted in the death of twenty persons, and another six, while only twenty-five persons were lost by the remaining twelve. There were six burnings of steamers by which life was lost; two hundred and four were lost by one of these, and forty-five and twenty respectively by two others, while only four persons were lost by the remaining three."

CONGREGATIONALISTS. The twenty-second annual meeting of the *American Congregational Union* was held in New York City, May 16th. The report of the Treasurer showed the amount of contributions received during the year to have been \$51,717.10. Adding the balance which remained in the treasury at the beginning of the year, the amount of available funds of the Union during the year was \$53,180.89. The expenditures were reported to have been: grants to 58 churches, \$43,635.75; grants for pastors' libraries, \$345.70; other disbursements, \$10,619.44; total, \$54,600.89, leaving a balance in the treasury of \$3,580. An amount of \$17,425 was still pledged to 38 churches. Since its organization, the Union had aided, in all, 925 churches, by sums of money not exceeding \$500 to each. The total amount expended was \$600,000, of which \$54,000 had been refunded. The report of the trustees deprecated sectarian rivalry and the building of churches as a purely denominational measure, and urged the promotion of Christian unity.

The forty-ninth anniversary of the *American Home Missionary Society* was held in the city of New York, May 12th. The receipts of the society were reported to have been \$308,-

896.82, and its expenditures \$296,789.65. The society was still liable to calls upon outstanding pledges, amounting in all to \$105,760.54. The receipts were \$18,776.48 greater than those of the year immediately preceding, and \$14,329.96 greater than those of any former year. The expenditures were \$9,126.74 greater than those of any former year. Nine hundred and fifty-two ministers had been engaged in the service of the society in thirty-three States and Territories. The number of congregations and missionary stations supplied, in whole or in part, was 2,228. The number of pupils in Sunday-schools was 80,750. Sixty-seven churches had been organized by the missionaries during the year, 83 churches had become self-supporting, 63 houses of worship had been completed, and 19 others were being built. The total number of additions to the churches reported was 6,361. Gifts of clothing, books, periodicals, and other articles, to the value of \$70,000, had been contributed through the agency of the society for the missionaries and their families who had shared in the sufferings caused by the depredations of the grasshoppers in the Western States. The report called attention to an arrangement which had been effected during the year with the Presbyterian Board of Home Missions for the promotion of harmony and the coöperation of the two societies in their work, and for the avoidance of injurious rivalry and interference between them, and to a joint declaration of principles and plans of action which had been published in connection with it. Many advantages and greater prosperity to the missions of both societies were expected to result from this arrangement.

The twenty-ninth annual meeting of the *American Missionary Association* was held at Middletown, Conn., October 27th and 28th. The Rev. Edward Hawes presided. The Treasurer made the following statement of the financial condition of the Association:

Total income for the year	\$208,599
Debt at beginning of year	73,754
Debt at close of year	96,529
Assets in lands, mortgages, stocks, etc.	67,623
Legacies now due and some of them in process of payment	67,200
Cost of administration the past year	17,813
Cost of foreign missions in Africa	12,650

The society owed a floating debt of \$25,000. It had an endowment fund of \$140,000, all given for specific work—\$100,000 of it for missions in Africa. It was well invested, and has yielded an annual income of more than \$8,000. The Treasurer stated that the receipts of the Association were formerly much larger than at present. In 1862 its resources rose to \$532,000. It had been helped by the Freedmen's Bureau, and had in a single year received \$50,000 from abroad, of contributions prompted by interest in the emancipated negro. The help from these sources had dropped off, as the questions growing out of the late civil war and the readjustment of affairs in the Southern States had been settled,

and the contributions from the regular supporters of the society had been greatly diminished on account of the financial depression. The expenditures of the Association had been \$390,335.86. The following are the general statistics of the work of the Association: Number of missionaries, 62; of teachers, 189; of matrons, 9; of persons employed in the business department, 15; total number of persons employed, 275. Number of churches, 65; of church-members, 4,222; of Sunday-school scholars, 7,981. Number of schools, 58; of pupils in the same, 9,876; of scholars taught in the South by former pupils of the Association, 64,000. Seventy theological students had been connected with the institutions of the Association during the year. The report of the Executive Committee stated several revivals among the colored people, by which 631 persons had been added to the churches.

Papers were read at the annual meeting on the "Inadequacy of Legislation to Fundamental Reconstruction" (Rev. Leonard Bacon, D. D.); "Slavery and the Slave-Trade at the Present Time" (Rev. Edward Hawes); the "Relation of the American Freedmen to the Evangelization of Africa" (Rev. M. M. G. Dana); and "The Duty of the North to the South, especially to the Colored People" (Rev. C. L. Woodworth).

Resolutions were adopted in favor of reënforsing the Mendi mission (Africa), and of establishing a mission in Central Africa. A Committee was appointed to present a memorial to the Government of the United States and urge it to express hearty sympathy with the efforts of the Khedive of Egypt to abolish slavery and the slave-trade.

The sixty-sixth annual meeting of the *American Board of Commissioners for Foreign Missions* was held at Chicago, Ill., beginning October 5th. The Rev. Mark Hopkins, D. D., presided. The financial report showed that the income for the year for the "old work" had been: from gifts, \$349,084.86; from legacies, \$39,702.38; from other sources, \$7,407.37; making a total of \$446,044.61. The disbursements on the account of the same had been \$450,338.39. The income for the work in "nominal Christian lands" had been, from gifts, \$29,833.58; from legacies, \$500; total, \$29,833.58; and the disbursements on account of the same had been \$39,672.69. The total income for both branches of the work had been \$475,878.19, and the total expenditures \$489,911.08. The year closed with a debt of \$44,323.96 against the board.

The following is a general summary of the condition of the missions:

Number of missions.....	18
Number of stations.....	78
Number of out-stations.....	498
Number of ordained missionaries (six being physicians).....	149
Number of physicians not ordained.....	12
Number of other male assistants.....	4
Number of female assistants.....	213
Whole number of laborers sent from this country.....	377

Brought forward.....	877
Number of native pastors.....	110
Number of native preachers and catechists.....	267
Number of school-teachers.....	471
Number of native helpers.....	209—1,057
Number of laborers connected with the missions.....	1,484
Pages printed, as far as reported.....	6,171,714
Number of churches.....	228
Number of church-members, so far as reported.....	11,546
Added during the year, so far as reported.....	1,504
Number of training and theological schools.....	14
Number of boarding-schools for girls.....	21
Number of common schools.....	587
Number of pupils in common schools.....	19,661
Number of pupils in training and theological schools and station classes.....	470
Number of pupils in boarding-schools for girls.....	736
Other adults under instruction.....	656
Whole number of pupils.....	31,528

Twenty new missionaries had been sent out, and two new men were under appointment. Nine new churches had been organized.

Besides the regular reports for the year, a paper was read by the Foreign Secretary giving a review of the operations of the board for the preceding ten years. During this period an amount of \$4,710,332 had been received and expended. Two hundred and seventy-two laborers had been sent forth, and 48 laborers had died. The native agency had been greatly enlarged. The field of operations of the board had been enlarged about 40 per cent., embracing now 575 towns and cities against 441 at the beginning of the period, and nearly 120,000,000 of population. The entire number of additions to the mission churches during the decade was 12,850, or more than 100 to each ordained missionary in active service. The gain in church-membership in the different fields was shown to have been as follows: "In the Zulu mission, about 100 per cent.; in Western Turkey, 110; in Central Turkey, 100; in Eastern Turkey, 340; in the Maharratta mission, 25; in the Madura mission, 53; in the Ceylon mission, 46; in the Foochow mission, from 8 churches and 45 members, to 8 churches and 144 members, or 320 per cent. In the North China mission, from a work just beginning in 1865, to 7 churches and 171 members. In Micronesia, from 4 churches and 253 members to 20 churches and over 1,200 members—470 per cent. In Japan, where the work began in 1870, there are now 3 churches and 57 members. In Western Mexico, where the work began in 1872, there is now one church and 91 members. Among the Dakotas, from 4 churches and 527 members to 9 churches (including two transferred to the Presbyterian Board) and 775 members." The aggregate result was summed up thus: "Omitting the mission to the Sandwich Islands, graduated in 1870, and the missions transferred to another board, the churches in the mission-fields now occupied by the board have increased from 136, with a membership of 5,557, to 223, with a membership of 11,546, an advance of over 100 per cent."

A subscription was taken up at the meeting of the board to obtain the means of paying its debt. About \$30,000 were subscribed.

The twelfth annual meeting of the *Hawaiian Evangelical Association* was held at Honolulu, Sandwich Islands, June 8th. Fifty-two ministers and delegates were present. There were reported as connected with the Association, five local associations and one presbytery, sixty churches, and thirty-five pastors. The number of church-members was 8,598. The receipts for the various funds of the Association, including the balance from the previous year, were reported to have been as follows: For foreign missions, \$7,174.11; for home missions, \$916.40; for the incidental fund, \$3,086.41; for the publication fund, \$1,927.18; for the Theological Seminary, \$49; for the Micronesian mission, \$4,308.10; for the Morning Star (mission-ship) \$13,752.07; for the Bible fund, \$703.03; for the Medical Fund, Micronesia (balance only), \$187.99; for the General Meeting fund (balance only), \$68.25. Total, \$31,973.34. Also, contributions of \$4,534.26 were reported to the new Female Boarding-School at Kolala, Hawaii, mostly from the island of Hawaii. The expenditures of the board had been \$26,647.57. The Association sustained a theological seminary and eight girls' boarding seminaries; helped support a colporteur among the Chinese population of the islands; had entire control of a mission in the Marquesas Islands, with six missionaries, three flourishing churches, and sixty-five church-members; and coöperated with the missions of the American Board in the Gilbert, Marshall, Caroline, and Mortlock Islands. The Association began on the 1st of January, 1875, the publication of a paper called the *Lahui Hawaii*. It was reported to be prosperous, to be doing a useful work, and to have a circulation of two thousand copies weekly.

The *Congregational Union of Ontario and Quebec* met at Hamilton, Ont., June 9th, and continued in session seven days. Large accessions to the churches were reported from various parts of the Dominion. Churches had been established in new places, and many new churches were being built. Twelve students were reported as attending the Congregational College of British North America. Much of the time of the meeting was devoted to the reading of papers on subjects relating to the interests of the Church and to religious doctrine.

The forty-fifth annual meeting of the *Congregational Union of England and Wales* was held in London, May 10th. The Rev. Alexander Thomson, of Manchester, presided. The Union met for the first time in a new hall which had been built for the use of the Congregational societies at a cost of £70,000, and which was also designed as a memorial of the courage and faithfulness of the Puritan confessors of 1662. The following resolution was adopted: "The Assembly renews its emphatic protest against the sacerdotal claims which are being asserted by a large party in the Established Church of England, as well as in the

Church of Rome; that it regards those claims as unscriptural, and as injurious to religion; and, in view of the boldness and pertinacity with which they are insisted upon, the Assembly earnestly urges the necessity of the clear and frequent teaching of Protestant Congregational principles in the families, the Sunday-schools, and the pulpits connected with the Congregational churches."

A resolution was also adopted in opposition to the bill for the increase of the episcopate, and the bill providing for the bishopric of St. Alban's, both of which were before Parliament at the time of the meeting. There were given as the grounds of the objections of the Union to the bills in question, that they proposed to give a new legislative sanction to the state Church principle, whereas the higher interests of the state as well as of the Church required that that principle be discarded; that they involved the extension, in the name of the nation, of the organization of one out of several religious communions existing in England, and that a communion from whose faith and worship a very large proportion of the people dissent; and that their enactment would aggravate the evils which have accrued to religion from the influence of political motives in the appointment of bishops, and would increase the hinderances to beneficent legislation which have arisen from the presence of bishops in the House of Lords.

The autumnal meeting of the *Congregational Union of England and Wales* was held in London, beginning October 11th. The Rev. Alexander Thomson presided, and delivered the opening address, on the subject of "Culture and Nonconformity." The committee appointed at the autumnal meeting of the Union of the preceding year to consider a scheme for the formation of a general Board of Finance presented a report. They recommended that a conference composed of ministerial and non-ministerial delegates appointed by the county associations, with a certain number of persons to be appointed by the committee, should be summoned to take up the matter anew, and deal with the whole question in the light of past discussions. The recommendation was adopted. A resolution was adopted advising that in new churches the free offerings of the people, made from week to week, should be exclusively relied upon for the maintenance of the ministry and of public worship; and that in existing churches, where a system of pew rents is established, the plan of weekly offerings should be carried as far as would be practicable. A resolution was adopted condemning the system of placing the national graveyards under the exclusive control of one ecclesiastical denomination, and protesting against either the enforcement of silence or the prescription of a form of service at the burial of Nonconformists by their own ministers in these places. The Union expressed strong disapprobation of the instructions which had been issued by the

Admiralty concerning the return of fugitive slaves to those persons who claimed to own them, but which were at the time of the meeting suspended, and declared that the only course which would satisfy the English nation would be to withdraw them absolutely. The attention of the county associations was invited to the difficulty which was felt by the Congregational churches, as well as those of other denominations, in obtaining an adequate supply of "competent and well-furnished" ministers, and they were asked to devise means of awakening increased interest on the subject. With regard to a conference of the several free churches which the Union has had under consideration for several sessions, a resolution was adopted, to this effect: "That the Assembly, having regard to the community of interests which exist between the several denominations of evangelical Protestants not under the control of the state, and to the present spiritual condition of the country, is of opinion that the cause of evangelical truth and pure religion might be greatly furthered by a conference of those bodies, held to consider questions which concern their common work; and it instructs the committee to take immediate steps to ascertain, by correspondence with the official and leading representatives of the Presbyterian, Methodist, Baptist, and other evangelical Protestant churches, whether such an understanding can be reached as shall enable them to unite in summoning such a conference, and in making arrangements for its meetings."

Discussions were held during the meeting of the Union on the doctrines and influence of the Church (Established) congresses which had been held in the two preceding years at Oxford and Brighton, and on the exposition and enforcement of Free Church principles.

The question of exchange of pulpits as between Congregational ministers and clergymen of the Church of England was discussed. The predominance of sentiment, as expressed in the debates, was, that if ministers of the Established Church were to be welcomed to Congregational pulpits, a like courtesy should be extended by them to Congregational ministers.

The eighty-first annual meeting of the *London Missionary Society* was held in London, May 13th. Mr. Alderman McArthur, M. P., presided. The directors reported the aggregate receipts for the year, including a balance of £1,847 1s. 2d. from the previous year, to have been £105,401 5s. 10d. The ordinary receipts, from subscriptions, donations, and collections, had reached a higher amount than in any previous year. For six years consecutively the income of the society had exceeded £100,000. So large had been the sum placed at their command during the past year, that the directors had not needed to draw anything from their reserves for the special outlay which had been caused by the extension of the missions in Madagascar and to New Guinea; and they felt that the time had come to enter upon

the increase of the society's missions in India and China.

The total number of missionaries in the service of the society was 156; and there were enrolled besides, 38 missionary students. The number of English missionaries was no greater than it had been ten years before; but it was remarked, in explanation of this fact, that in nine cases of English churches, formerly reckoned on the society's roll, their pastors were no longer regarded as missionaries of the society; and the Christian churches and stations had been left to fewer English missionaries and an increased number of native pastors and evangelists. In this way, 27 English missionaries had been transferred to the aggressive and evangelistic side of the work; 25 new stations had been occupied; and the range of the society's operations had been widely extended. A large part of the report was devoted to the Madagascar mission, and in the relation of the observations of the deputation (Dr. Mullens, foreign secretary of the society, and the Rev. Mr. Pillans) who had visited it the year before. This deputation had gone to ascertain the exact condition of the mission and of the native Christians, and to consult with the missionaries as to the methods by which the efficiency of the work could be improved. They spent twelve months on the island; made five extensive journeys; visited all the principal districts in the centre of the island; observed the character, resources, and population, of the villages and towns; and examined with care the religious condition of the people. They emphatically assured the Board of Directors that the religious revolution which had taken place in the island was real; that among the mass of nominal Christians were many thousands of true-hearted believers; and that they had discerned many evidences of the solidity of the Christian work accomplished among these people. During the last five years the directors had increased the number of English missionaries in this country from twelve to twenty-three. The society's printing-press at Tananarivo had done great service in the printing of the Scriptures, and the preparation of a Christian and general literature. The Friends had also established an efficient press at the capital, to which the directors had afforded aid. Favorable reports were made of the missions in South Africa, in China, in India, and in the South Seas. Complaint was made of persecutions which the converts of the society in the island of Urea had suffered through the Roman Catholic mission in New Caledonia. Representations had been made to the French Government on the subject, but so far without effect. Progress was reported in the establishment of the new mission in New Guinea. Ten islands were now occupied in the Papuan Gulf, together with two stations on the mainland, on the banks of the Katan River. Two English missionaries and over twenty native evangelists were engaged in the work at this point.

CONGRESS, UNITED STATES. The second session* of the Forty-third Congress commenced on December 7, 1874. (For the

* The following is a list of members at the second session of the Forty-third Congress.

SENATE.

Alabama—George Goldthwaite, George E. Spencer.
Arkansas—Powell Clayton, Stephen W. Dorsey.
California—John S. Hager, Aaron A. Sargent.
Connecticut—William A. Buckingham, Orris B. Ferry.
Delaware—Thomas F. Bayard, Eli Saulsbury.
Florida—Abijah Gilbert, Simon B. Conover.
Georgia—Thomas M. Norwood, John B. Gordon.
Illinois—John A. Logan, Richard J. Oglesby.
Indiana—Daniel D. Pratt, Oliver P. Morton.
Iowa—George G. Wright, William B. Allison.
Kansas—James M. Harvey, John J. Ingalls.
Kentucky—John W. Stevenson, Thomas C. McCreery.
Louisiana—J. Rodman West.
Maine—Hannibal Hamlin, Lot M. Morrill.
Maryland—William T. Hamilton, George E. Dennis.
Massachusetts—William B. Washburne, George S. Boutwell.
Michigan—Zachariah Chandler, Thomas W. Ferry.
Minnesota—Alexander Ramsey, William Windom.
Mississippi—Henry R. Pease, James L. Alcorn.
Missouri—Carl Schurz, Lewis V. Boggs.
Nebraska—Thomas W. Tipton, Phineas W. Hitchcock.
Nevada—William M. Stewart, John P. Jones.
New Hampshire—Aaron H. Cragin, Bainbridge Wadleigh.
New Jersey—John P. Stockton, Frederick T. Frelinghuysen.
New York—Reuben E. Fenton, Roscoe Conkling.
North Carolina—Matt. W. Ransom, Aug. S. Merrimon.
Ohio—Allen G. Thurman, John Sherman.
Oregon—James K. Kelly, John H. Mitchell.
Pennsylvania—John Scott, Simon Cameron.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Thos. J. Robertson, John J. Patterson.
Tennessee—William G. Brownlow, Henry Cooper.
Texas—Joseph W. Flanagan, Morgan C. Hamilton.
Vermont—George F. Edmunds, Justin S. Morrill.
Virginia—John F. Lewis, John W. Johnson.
West Virginia—Arthur E. Boreman, Henry G. Davis.
Wisconsin—Matthew H. Carpenter, Timothy O. Howe.

HOUSE.

Alabama—Frederick G. Bromberg, James T. Rapier, Charles Pelham, Charles Hays, John H. Caldwell, Joseph H. Sloes. At Large, Alexander White, Christopher C. Sheets.
Arkansas—Assa Hodges, Oliver P. Snyder, Thomas M. Gunter. At Large, William J. Hynes.
California—Charles Clayton, Horace Frank Page, John K. Luttrell, Sherman O. Houghton.
Connecticut—Joseph R. Hawley, Stephen W. Kellogg, Henry H. Starkweather, William H. Barnum.
Delaware—James R. Rodand.
Florida—Josiah T. Walls, William J. Purman.
Georgia—Andrew Sloan, Richard H. Whiteley, Philip Cook, Henry R. Harris, James C. Freeman, James H. Blount, Pierce M. B. Young, Alexander H. Stephens, Hiram P. Bell.
Illinois—John B. Rice, Jasper D. Ward, Charles B. Farwell, Stephen A. Hurlbut, Horatio C. Burchard, John B. Hawley, Franklin Corwin, Greenbury L. Fort, Granville Barrere, William H. Ray, Robert M. Knapp, James C. Robinson, John McNulta, Joseph G. Cannon, John B. Eden, James S. Martin, William R. Morrison, Isaac Clements, Samuel S. Marshall.
Indiana—William E. Niblack, Simeon K. Wolf, William S. Holman, Jeremiah M. Wilson, John Coburn, Morton C. Hunter, Thomas J. Cason, James N. Tyner, John P. C. Shanks, Henry B. Saylor, Jasper Packard. At Large, Godlove S. Orth, William Williams.
Iowa—George W. McCrary, Aylett R. Cotton, William G. Donnan, Henry O. Pratt, James Wilson, William Loughridge, John A. Kasson, James W. McDill, Jackson Orr.
Kansas—David P. Lowe, Stephen A. Cobb, William A. Phillips.
Kentucky—Edward Crossland, John Young Brown, Charles W. Millika, William B. Read, Elisha D. Standford, William E. Arthur, James B. Beck, Milton J. Durham, George M. Adams, John D. Young.
Louisiana—J. Hale Sypher, Lionel A. Sheldon, Chester B. Darrall, John L. Smith, Frank Morey. At Large (vacancy).
Maine—John H. Burleigh, William P. Frye, James G. Blaine, Samuel F. Hersey, Eugene Hale.
Maryland—Ephraim K. Wilson, Stevenson Archer, William J. O'Brien, Thomas Swann, William J. Albert, Lloyd Lowndes, Jr.

President's message *see* ANNUAL CYCLOPEDIA, 1874.) The Vice-President, Henry Wilson, of Massachusetts, presided in the Senate, and

Massachusetts—James Buffinton, Benjamin W. Harris, Henry L. Pierce, Samuel Hooper, Daniel W. Gooch, Benjamin F. Butler, Ebenezer E. Hoar, John M. S. Williams, George F. Hoar, Alvah Crocker, Henry L. Dawes.

Michigan—Moses W. Field, Henry Waldron, George W. Lard, Julius C. Burrows, William B. Williams, Josiah W. B. Gole, Omar D. Conger, Nathaniel B. Bradley, Jay A. Hubbell.
Minnesota—Mark H. Dunnell, Horace B. Straut, John T. Averill.

Mississippi—Lucius Q. C. Lamar, Albert B. Howe, Henry W. Barry, Jason Niles, George C. McKee, John E. Lynch.
Missouri—Edwin O. Stanard, Erasmus Wells, William H. Stone, Robert A. Hatcher, Richard P. Bland, Harrison E. Stevens, Thomas T. Crittenden, Abram Comings, Isaac C. Parker, Ira B. Hyde, John B. Clarke, Jr., John M. Glover, Ayres H. Buckner.

Nebraska—Lorenzo Crounse.
Nevada—Charles W. Kendall.
New Hampshire—William B. Small, Austin F. Pike, Moses W. Parker.

New Jersey—John W. Hasleton, Samuel A. Dobbins, Amos Clark, Jr., Robert Hamilton, William Walter Phelps, Mares L. Ward, Isaac W. Scudder.

New York—Henry J. Scudder, John G. Schumaker, Simon B. Chittenden, Philip S. Crooke, William R. Roberts, Samuel B. Cox, Thomas J. Creamer, John D. Lawson, Richard Schell, Fernando Wood, Clarkson N. Potter, Charles S. John, John O. Whitehouse, David M. Dewitt, Eli Perry, James S. Smart, Robert S. Hale, William A. Wheeler, Henry H. Hathorn, David Wilber, Clinton L. Merriam, Ellis H. Roberts, William E. Lansing, R. Holland Duell, Clinton D. MacDougall, William H. Larnport, Thomas C. Platt, H. Boardman Smith, Freeman Clarke, George G. Hoekba, Lyman K. Bass, Walter L. Sessions. At Large, Lyman Tremain.

North Carolina—Clinton L. Cobb, Charles R. Thomas, Alfred M. Waddell, William A. Smith, James M. Leach, Thomas S. Ashe, William M. Robbins, Robert B. Vance.

Ohio—Milton Saylor, Henry B. Banning, John Q. Smith, Lewis B. Gunkel, Charles N. Lamson, Isaac R. Sherwood, Lawrence T. Neal, William Lawrence, James W. Robinson, Charles Foster, Hezekiah S. Bundy, William E. Fink, Miles I. Southard, John Berry, William P. Sprague, Lorenzo Dufford, Laurin D. Woodworth, James Monroe, James A. Gelfield, Richard O. Parsons.

Oregon—James W. NeSmith.

Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, Alfred C. Harmer, James A. Biery, Washington Townsend, Hester Clymer, A. H. Smith, John W. Killinger, John B. Storm, Lazarus D. Shoemaker, James D. Strawbridge, John B. Packer, John A. Magee, John Cesana, R. Milton Speer, Sobieski Ross, Carlton B. Curtis, Hiram L. Richmond, Alexander W. Taylor, James S. Negley, Ebenezer McDunkin, William S. Moore. At Large, Lemuel Todd, Charles Albright, Glenn W. Scofield.

Rhode Island—Benjamin T. Barnes, James M. Pendleton.
South Carolina—Joseph H. Rainey, Alonso J. Ransom, L. Cass Carpenter, Alexander S. Wallace. At Large, Richard H. Cain.

Tennessee—Roderick B. Butler, Jacob M. Thornburgh, William Crutcheff, John M. Bright, Horace H. Harris, Washington C. Whitthorne, John D. C. Atkins, David A. Nunn, Barbour Lewis. At Large, Horace Maynard.

Texas—Wm. S. Herndon, William P. McLean, De Witt C. Giddings, John Hancock. At Large, Roger Q. Mills, Asa H. Willie.

Vermont—Charles W. Willard, Luke P. Poland, George W. Hendee.

Virginia—James B. Sener, James H. Platt, Jr., J. Amble Smith, William H. H. Stowell, Christopher Y. Thomas, Thos. Whitehead, John T. Harris, Eppe Hunton, Ross T. Bowen.

West Virginia—John J. Davis, J. Marshall Hagans, Frank Hereford.

Wisconsin—Charles G. Williams, Gerry W. Hazelton, J. Allen Barber, Alexander Mitchell, Charles A. Eldredge, Philletus Sawyer, Jeremiah M. Ruak, Alexander S. McDill.

DELEGATES FROM TERRITORIES.

Arizona—Richard C. McCormick.
Colorado—Jerome B. Chaffee.
Dakota—Moses K. Armstrong.
District of Columbia—Norton P. Chipman.
Idaho—John Hailey.
Montana—Martin Maginnis.
New Mexico—Stephen B. Elkins.
Utah—George Q. Cannon.
Washington—Obadiah B. McFadden.
Wyoming—William R. Steele.

James G. Blaine, of Maine, as Speaker in the House.

Subsequently, on December 22d, Matthew H. Carpenter was elected President of the Senate *pro tem*.

In the House, on December 8th, the bill for the improvement of the currency and the reduction of the interest on the funded debt was considered.

Mr. Maynard, of Tennessee, said: "This bill was introduced by my friend from Pennsylvania (Mr. Kelley) and was referred to the Committee on Banking and Currency, who instructed me to report it back with an adverse recommendation, and to ask that it be placed on the calendar. It has been placed there, and is the bill which is known very well by members of the House as the 3.65 convertible bond bill. That involves a question of a great deal of public interest—one that has entered very largely into the discussions of the country during the last few months. It seems to me we may as well take up this bill and consider it at this time as at any other period of the session. We probably have as much leisure now, and our minds are as little preoccupied now as they will be."

Mr. Kelley, of Pennsylvania, said: "Mr. Chairman, suppose we have the bill read. I am afraid that gentlemen are not aware of its import."

The bill was read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the amount of United States notes in circulation be limited, except as hereinafter provided, to \$400,000,000; and that any holder of said notes representing any sum not less than fifty dollars, or some multiple thereof, to the Treasury of the United States, or any of the assistant treasurers, shall receive in exchange therefor an equal amount of bonds of the United States, coupon or registered, as may be desired, bearing interest at the rate of 3.65 per cent. per annum, payable semi-annually, which the Secretary of the Treasury is hereby authorized to prepare and furnish for that purpose; and that when any person shall demand of the Treasurer of the United States, or any assistant treasurer, redemption of said bonds, it shall be the duty of said Treasurer or assistant treasurer to pay to the holder of said bonds the principal of said bond or bonds, with accrued interest, and cancel and forward the bonds thus redeemed to the Treasurer of the United States forthwith, in such manner as the Secretary may prescribe.

SECTION 2. That the Secretary of the Treasury shall cause to be prepared United States notes of the several denominations now in use to the amount of \$50,000,000, which shall be held as a reserve or redemption fund for the purpose of securing prompt payment of said bonds when demanded, and the United States notes so held in reserve shall be used only when needed for the payment of said bonds on their presentation, and shall be withdrawn and placed again in reserve out of any United States notes not otherwise appropriated, received by the Treasury Department thereafter; and the whole amount of United States notes received by the Treasury Department in exchange for said bonds bearing 3.65 per cent. interest shall be appropriated and applied by the Secretary of the Treasury, as rapidly as practicable, to the purchase or redemption

of any bonds of the United States outstanding at the passage of this act.

SEC. 3. That national banks are hereby authorized to hold said bonds bearing 3.65 per cent. interest instead of the reserve of United States notes now required by law.

Mr. Kelley: "The President's message was read to us yesterday, and it contains one short sentence that should be printed in bold letters and bright colors over the door of every dwelling and workshop in the country. No truth could be more pregnant or more instructive to the American people than the one contained in that brief sentence so pertinent to this discussion. It reads thus:

Debt—debt abroad—is the only element that can, with always a sound currency, enter into our affairs to cause any continued depression in the industries and prosperity of our people.

"Why, sir, foreign debt, carrying gold interest, is what is crushing the hearts and the hopes and undermining the morals of the laboring people of our country. It is that indebtedness which is filling our almshouses with people skilled in many industries and eager to toil for their living. It is that foreign debt, that annual gold indebtedness for interest on the principal, that is stripping the thrifty and industrious laborer of his earnings hoarded through years in savings-banks; that is compelling him to see his humble but mortgaged home pass to the capitalist at a nominal price, because he has not been permitted to earn the little stipend that would enable him to pay his monthly dues to the building association, or his semi-annual installment to the capitalist. It is that foreign debt which is causing a vast tide of emigration to flow from our shores, and repelling hundreds of thousands of immigrants who hoped and expected to find shelter, freedom, and prosperity under our republican institutions.

"And, sir, the bill just read by the Clerk is a proposition to abate this foreign indebtedness by authorizing the Government to avail itself of the resources of the American people, and to so locate a large part of the public debt immediately, and all of it ultimately, that when it shall pay its interest it will pay it to those from whom it has drawn the money by hard and heavy taxation.

"This is my sole object in proposing the issue of convertible bonds, and I stand not upon the phraseology of my bill. I am ready to accept amendments. What I ask is the inauguration of a system by which the honor of the Government may be vindicated by its acceptance of the currency it issued and which it now repudiates, and that the people may be relieved of the curse of this debt—'debt abroad'—which is the only thing that can interfere with our prosperity.

"When the Government issued greenbacks it acted with wisdom enlightened by the experience of history. Thaddeus Stevens, then the great mind of this House, knew the story of

French assignats, and knew that they had failed because they had been predicated on the revenues of property to which the government issuing them had no legal tenure, and that when the Church reclaimed her property and the returning nobility claimed its, there was no means of redeeming the paper. He knew, too, the story of our continental paper; that it had been issued with no means provided for its redemption or absorption. He knew, sir (for in 1862 he and I talked over the wise opinions pressed upon the Continental Congress by Benjamin Franklin), that that great man had urged that Congress not to increase the issues of paper, but to borrow from the people those which had already been made by offering them an interest-bearing bond; and, as I have recently had occasion to write, had Franklin's advice been taken, the story of continental money would not have become, as it now is, a snare and a delusion to many honest, well-meaning and patriotic people; because the amount issued would have been small, the excess would have flowed back upon the Treasury, the people would have held interest-bearing bonds which in time would have been paid off, the whole amount of the debt would have been nominal in comparison with the figures presented by the total issue of continental money.

"Sir, I say that when we issued Treasury notes, now known as greenbacks, these instructive lessons were present to the minds of those who created that beneficent currency; and they provided that the notes should be convertible into interest-bearing bonds of the Government, that whoever took them and found them in excess of his wants could invest them with the Government and receive compensation therefor. But, sir, evil counsels prevailed. The House determined that those notes should be full legal tender for all debts, public and private; but the Senate yielded to the evil counsels which to-day seem to control both this and that branch of our national Legislature. It amended the House bill by providing that the interest on the bonds should be paid in gold, and in that instant it in so far repudiated the instrument of exchange, the currency it was authorizing the Government to issue, for it also provided that in order to secure a sufficient supply of gold for the payment of that interest the customs duties should be collected in gold.

"Sir, when it became inevitable to him that the country must be lost or the bankers gratified, my venerable colleague in sadness of spirit consented to yield, and the Pandora's box from which all our financial evils have sprung was then created with open lid. A demand for gold was thus created beyond the means of the country to meet. Foreign bankers saw the position in which we had placed ourselves. Speculators at home united with them, and together they aggravated the wide disparity between gold and the legal-

tender notes of the Government, which these unfortunate provisions had created. France in her great trouble, taught by her own experience, and having our calamities which resulted from this partial repudiation of our legal-tender notes before her, recently made through the Bank of France an issue of irredeemable legal-tender notes to the amount of hundreds of millions; and yet the difference between gold and paper there has never exceeded 1 per cent.

"And why? Why, sir, simply because France, wiser or more honest than we, made her irredeemable bank-note a legal tender for all debts, public and private. No 'gold ring' could be formed there, no speculation was open to foreign bankers; but the artist, manufacturer, jeweler, or other person who wanted gold for mechanical or scientific uses, could buy it with the irredeemable notes of the Bank of France at a depreciation of from one-fourth of one per cent. to one per cent.

"It is impossible to estimate the loss we have sustained by this partial repudiation. For some years it was but partial, and we still recognized our greenbacks as money upon which the Government would pay interest. We maintained a system of temporary loans. They bore many names; compound-interest notes, seven-thirties, certificates of indebtedness, etc., but they were all temporary loans, in which the Government took the use of the people's money, agreeing to return it forthwith or upon short notice, and to pay interest for the time it held it.

"But, sir, the capitalists of Europe and this country succeeded in persuading Congress and the executive department of the Government that it would not be a fraud to cheat laborers, whether on the farm or in the factory or the mine, by depreciating the currency with which it paid them; that it would not be dishonest to further depreciate the medium for which the farmer sells his grain and the laborer his toil; and induced Congress to repeal all provisions under which our legal tenders could be invested in the funded debt of the Government, and which gave strength, character, and value to them. And the act of 1870 was vigorously and eloquently marshaled by the then chairman of the Banking Committee, the gentleman now a member from Ohio (Mr. Garfield, field), which required the payment and cancellation of the poor \$54,000,000 of three per cents in which the greenback might still be temporarily invested.

"How stands your greenback now? Repudiated by the Government. It will not receive it for customs. It will not accept it at par for interest-bearing loans. Yet it makes labor take it in compensation for its toil and the farmer for the produce of his acres. Is that honest? Are bankers more numerous than laborers or farmers? Can they not of their abounding wealth provide themselves with the comforts of life, while honest laborers are

compelled to seek refuge in the almshouse or commit petty crime to secure the shelter of the jail? These are the legitimate fruits of repudiation by Congress of the currency itself had created.

"I speak for the American people, and I ask the Government to be honest to its own people before it is generous to foreign bankers and bondholders.

"What does the bill propose? This: that any citizen or corporation having money lying idle, for which no present use exists, may lend it to the Government at the rate of 3.65 per cent., recalling it as he would do from a savings-bank or individual to whom it had been loaned on call when the time comes for more advantageous use. What good would that do? you say. Why, sir, in the first place, it would remove the brand of repudiation from our legal tenders, and it would give the Government immediately—and when I say immediately I mean, say, within six months from the time when the first bond should be issued—about five hundred million dollars at that low rate of interest, payable to our own people within our own limits, with which to redeem gold-bearing bonds now held by foreigners. It would relieve us of that amount of that debt abroad which so curses us. It would give increased value to the greenback, and thereby diminish the disparity between it and gold. It would diminish the demand for gold, and thereby again decrease the disparity between gold and the greenback.

"And, sir, more and better than this, it would quicken every industry in the country. How so? Why, sir, our currency no longer circulates; it has ceased to perform the function of currency; it is hoarded as capital. More than sixty millions of it lie dead in the Treasury. What is the office of currency? It is to run, to circulate, to pass from hand to hand in effecting exchanges of property and values. Why does it not run, why does it not circulate? Because capitalists know that with the cry of contraction and the threatened repeal of the legal-tender clause the production of the country must still further contract. They know that with the Government insisting on contraction and capitalists hoarding the currency as capital, the prices of all property must depreciate and vast amounts of it exchange hands by forced sales."

Mr. Butler, of Massachusetts said: "Mr. Chairman, for myself this question as a political one has passed away from all interest. Eight years ago I announced substantially the proposition contained in this bill as what I believed to be the only safety to the currency of the country. I saw that the greenback which, when it was made legal tender, was made convertible into United States 6 per cent. bonds, had, by the action of Congress, inspired by the capitalists of both hemispheres, been repudiated and set aside by having that privilege taken away, and that it had no value

except as a legal tender for certain debts of the Government and for the debts of the people. And I saw that there was nothing of value that could be predicated upon it, and I made the suggestion, now embodied in this bill, that there should be a bond of the Government authorized and prepared, which should allow the greenback to be funded in that which should bear an interest which should give it value; and I chose 3.65 as the rate of interest for two reasons: First, as I supposed that this bond would pass from hand to hand in the transactions of life largely, that there might be a convenient rate of interest in which to make the account—a mill a day for ten dollars, half a cent for fifty dollars, one cent for one hundred dollars, so that all could be reckoned without trouble and inconvenience.

"But I had a higher and more controlling motive than that. I looked abroad over the world, and I saw that the gold dollar of the world was invested, on the average, at about three per cent. Take the whole gold investments in Government securities of the world, and they do not yield over three per cent.; they would not average even that were it not for our large six per cent. gold loans. That being so, I said, let us make the greenback dollar of the United States a little better than the gold dollar of the world; that is, it shall be competent for investment at any hour at the rate of 3.65 interest, or a little better than the average gold dollar of the world. And that will bring up the greenback equal to the gold dollar of the world without shock to the business or prosperity of the country.

"I elaborated this idea in a speech to the House. Because of this simple proposition to bring up the value and utilize the greenback I was instantly attacked as a repudiator. No man ever answered the argument. It was made on this floor nearly six years ago, in February, 1869, and no man has ever answered the argument—nay, no man has ever attempted to answer the argument, and no man has attempted to show that this proposition is not feasible, and will not accomplish all that is claimed for it. The reply has always been calling hard names or insisting that nothing should be done which should save the prosperity of the country, only that all values should be forced down by contraction until the creditors, both of the people and the Government, could be paid in gold, dollar for dollar, for that which they had loaned in greenbacks, sometimes at fifty per cent. discount from gold.

"How stands the fact? You have a legal-tender dollar with which the whole business of this people is done; but you make no provision for its redemption now or hereafter. You require every man to take it in pay for all his possessions he is obliged to sell. You pay it as an equivalent for the blood and limbs of your soldiers; with it you compensate their

widows and orphans for the lives of husbands and fathers; and yet you provide no means by which to give it a standard value, even by offering to pay interest upon it.

"Now, the proposition is simply to allow the people of the United States to go to their Government and say, 'We have taken your money; we desire that you will at least pay us interest on it until you redeem it in actual value.' The answer has been made, 'Your scheme will not be effective, because no man will take the 3.65 bonds; because there are other and higher rates of interest for money in legal tenders which can be obtained.' I therefore said, in order to make it desirable for the people to take these bonds, they should be convertible into money and the money reconvertible into bonds at the pleasure of the holders. They should have this quality; so that, when men desire no longer to hold the bonds, they should have back their money. If they think they can make better use of the money than to obtain 3.65 interest for it, they should have the opportunity. But, when the money of the Government which they hold will not yield them 3.65 interest, they should have the opportunity to pay back the money and take the bonds. And with the money which the Government received for its 3.65 bonds it could either buy gold or redeem our bonds now out at 6 per cent. interest which we have pledged ourselves to redeem in gold, unwisely and unjustly, as I think and have always thought—a proposition which I almost alone contested on this floor; a decision unjust to the people and unwise in the Government. But it now being the contract of the United States, that contract must be kept in solemn faith, however unwise and however unjust. We have made it; we are bound by it. Others have acted upon it; and I never desire to go back one jot or one tittle from any obligation, public or private. But this is not the only thing in which the 3.65 bond, if adopted, will be of advantage to the country. What is all business suffering from to-day? What is it that shuts up every mill in Massachusetts, or makes it run only on partial time? Why is it that sixty thousand men in that State who desire labor to-day cannot get it; and ninety thousand men in the city of New York, as it is said? In Pennsylvania there are hundreds of thousands thrown out of employment. Why is it? Why is all business enterprise crippled?

"It is not for want of money. Oh, no; there is not a member on this floor who cannot go into New York and with Government bonds obtain at three per cent. on call as many millions as he chooses to make a deposit of collateral for. But if he goes there and asks for a loan, as a business loan, on six months' time, he cannot borrow a dollar at less than seven, eight, nine, or ten per cent. a year interest. You cannot borrow money on time for any interest at which any business can be carried on. And why? Because it is under-

stood that the Congress of the United States and the Executive of the United States are determined to reduce the currency of the country until we get to specie payments. Specie payments! There never were specie payments; there never will be specie payments. Specie value we shall get to, and all the sooner if you give specie value to your greenback.

"This contraction of the currency reduces the value of all business enterprises until they are not safe security for investments or loans.

"What is the objection to contraction? If all the property of this country would go down equally and together, I would hold up both my hands to contract it until we got to specie value, if you please. But what is the fact? Statisticians tell us, with more or less of accuracy (and I am not here to quarrel whether it is accurate or not—it is accurate enough for all my purposes), that there is \$16,000,000,000 of private property in this country. Be it so. A little more or a little less makes no difference. I think that is an under-estimate; but such is the estimate of the statisticians.

"Now, one-quarter of all the property of this country is in invested debt—bonds and mortgages, securities of various descriptions. Of this there can be no doubt. Now, then, the difficulty is that we are striving to bring down the property of this country to a specie valuation; and already we have brought down real estate in New York thirty-three per cent.; in Massachusetts at least twenty-five per cent.; and the case is the same all over the country except in the granaries of the farmers of the West. How is it in Chicago? That city, after the fire had swept over it and left it desolate, was largely rebuilt upon money obtained on mortgage; and those mortgages are now coming home. The property upon which such securities rest has therefore already been brought down something like thirty per cent.; but invested debt never comes down—never, never—not one dollar. We are bringing down 30 per cent. the value of the active productive property of this country—for what purpose? For the purpose of getting at 'specie payment.' What does 'specie payment' mean? The payment of this invested debt the other quarter in a currency worth ten or twelve per cent. more than the money in which it was contracted, and in some cases forty per cent. more if the debt was contracted when gold was at a high premium. You are thus bringing down the value of three-fourths of the property of this country to raise the other quarter—the invested capital, the property of the men who live on usury—ten per cent. higher. Is there anybody who can deny this? Have I not stated the fact exactly as it exists? I am not here to quarrel with men about their opinions upon finance; but I ask them to look at this stubborn fact which no man can deny or doubt.

"What is the consequence? The consequence is that we are eaten up by interest.

What I am endeavoring to impress upon the House is that there should not be such a condition of law, such an administration of its finances by Government, as to give facility for this usury. Why, sir, if men can lend their money for seven, eight, nine, ten, eleven, twelve, and fifteen per cent. interest, it is because of the high rate of interest paid by the Government. It is axiomatic in finance (if there is any such thing as an axiom in finance) that upon Government securities money can always be borrowed at the lowest rate of interest when the Government is at peace and when everybody has confidence in its ability to pay its obligations. Now, of this \$4,000,000,000 of invested debt the Government is a borrower for \$2,300,000,000, or more than one-half; and it borrows it at never less than five per cent. and from that to six per cent. The Government, which offers the best security, pays these rates. Then, when you come to the next best security, which is perhaps on town, city, and county bonds, it is necessary to pay six and seven per cent. When you get to the next best security, say railroad bonds, seven or eight per cent. interest is required; and when you come to borrow for business purposes, because of the risks in business paper, the business man must pay eight or nine per cent. in Massachusetts; and going from the money-centres southward and westward the rate reaches ten, twelve, fifteen, and twenty per cent.

"Now, I want the Government, for its immense loan, to come into the market as a borrower at a lower rate of interest, and then the rate upon the next best class of securities will range lower, and so on till the rate of interest on all forms of indebtedness comes down. That is why I want 3.65 per cent. interest bonds issued by the Government and offered as an investment to the people. Let the Government go into the market as a borrower at that rate, and the general rate of interest will come down. You cannot get it down by simple legislation against taking usury. That is impossible, because men loan their money at what they can get for it on the best security they can get; and upon this axiom of finance, low rate of interest with good security and high rate of interest with poor security; and the business investment is the lowest security."

Mr. Dawes, of Massachusetts, said: "Mr. Chairman, those who are in favor of this bill and of the policy of expansion which is sure to follow from it, as well as those who are opposed to the bill and to that policy, all alike agree that the present condition of things is fraught with evil of an alarming character, demanding the attention of the people's Representatives on whom that people have waited patiently for action till patience itself is well-nigh exhausted.

"The President of the United States and the Secretary of the Treasury call your attention

to this condition of things, and press upon us immediate action; the President putting it before all other matters in his message. The two gentlemen who contend upon this floor for the honor of the fatherhood of this measure vie with each other in calling attention to the necessity of action. We are told, on the one hand, by the Executive, that there is labor enough and capital enough in the country; that labor is knocking at the door of capital and anxious for employment; that capital, for some reason or other, closes its vaults and holds more fast than ever its grip upon the money of the country. We are told by our distinguished friends who have advocated this measure that the people are crying out for employment; that twenty-five or thirty thousand, more or less, in my own State, and twice that number in Pennsylvania, are to-day without employment; that the banker and the capitalist are clutching the money and holding it back from active operation in business.

"So, Mr. Chairman, you see that those who look upon this measure from opposite sides agree that the evil and the mischief to be remedied are the same. It comes, then, to the question whether the measure before the House will remedy the evil. There is no lack of earnestness in the demand for the remedy. There is great diversity of opinion as to what will prove a remedy. Those who pursue the line of policy indicated by the bill declare that the evil lies in the policy favored by those who oppose it; and with equal earnestness they are met by the other side with the argument that it is the very condition of things you propose to aggravate and perpetuate that has brought about the calamities all of us deplore. It would be quite well for us to answer the question why it is that labor is out of employment and that capital is not willing to trust itself in the hands of the laborer. My colleague, in attempting to answer this question, says that while you can borrow money enough on Wall Street or in any other money market on call at two or three per cent., when it is attempted to borrow it for investment in active business for any length of time you must pay six or eight per cent. The fact is substantially as stated by my colleague. The reason he gives why the capitalist will not loan his money at the same rate on investment that he will upon call is, as he says, because he is afraid that the Executive and Congress will contract the currency.

"Now, I insist upon it that there can be no question that the reason why you are obliged to pay more for money on time than on call is because of the apprehension that Congress is going to inflate the currency, not to contract it. And it is because the capitalist knows that an inflated currency is not worth as much as a contracted currency; that it will not purchase as much; that its purchasing power is less. And if he is to be paid nine months or a year hence in a currency whose purchasing power

is less, he must have a greater rate of interest. If he is to be paid in a currency whose purchasing power is greater, he will take a less rate of interest. And the test is the rate of interest in the market to-day. And the answer to what I understood to be my colleague's argument is in that very fact. It is all summed up in these words: We have a currency over the value of which Congress has control, and no mortal can tell what that value will be nine months or a year hence.

"The proposition of my colleague and of the gentleman from Pennsylvania, in the bill before the committee, is to make that which was a war measure of the Government—the introduction of Government promises to pay without provision for their immediate payment—a permanent part of the currency of the country in time of peace. I said when on the floor before that it was a departure from all the former policy of the Government of the United States.

It is a question whether there is any power under the Constitution of the United States, except that power which rises above almost every other—the power of self-preservation in time of war—that authorizes the Government at all to issue this kind of paper. So little did the framers of the Constitution dream of the exercise of such a power under any circumstances, that they did not provide in terms for its exercise even for the purpose of saving the life of the Government in the perils of war. And the Supreme Court of the United States has indicated in its late opinions and judgments grave doubts whether there exists at all in the Government any such power except to meet the exigencies of war. That the power was exercised from the most patriotic motives all admit. All now admit that it was an absolute necessity at the time. The history of the creation of those promises of the Government is that they came out of the groans and the burdens of the life-struggle of the nation, and are not the healthy development and growth of the country in its normal condition. It were a marvel that out of such a state of things, and to meet such a terrible exigency, there came, as by chance, a peace policy setting at naught all the laws of finance by which the civilized world has till now been governed.

"I hold in my hand the autograph letter of the then Secretary of the Treasury, the late Chief-Justice of the United States, in which he returned to the Committee on Ways and Means the first bill that was introduced into the House of Representatives creating these legal-tender notes. In that letter is set forth the necessity for their creation; the struggle in his own mind to come to the conclusion that in that state of things there was power in the Government to make them a legal tender—a conclusion which he afterward, as Chief-Justice, reversed; and his anxiety to meet the issue with a corresponding power to fund them in a

six per cent. gold-bearing bond to keep them at a level with specie and to secure their immediate retirement as soon as the necessities of the Government should permit. And I hold also a subsequent letter to that committee in which, when in order to float in the darkest hours of the war the ten-forty bonds the Government made the fatal mistake of abandoning the idea of funding those notes in a six per cent. gold-bearing bond, he records his anxiety and distress, in view of the necessity pressing upon him, to resort as a substitute for this funding process to that other alternative of contraction, which brings with it so much distress and consequent opposition. I do not feel quite at liberty to put these letters upon the record without permission. I allude to them because they do but give expression to the entire sentiment of those in every branch of this Government who created these notes.

"War, with its necessities and burdens, being passed, the country looked to us for a policy that would cause these notes to pass away also, and the abnormal condition of things created thereby to fade with the memories of the war. They have looked in vain. Indeed, until within a short time it has been the announced policy to let things alone, and allow the country to grow up to the expanded condition of the currency, and so relieve itself of this abnormal, this strange condition of things. But I am here to rejoice with my friend from Ohio (Mr. Garfield) that at last an unmistakable voice comes to our aid from high authority, demanding an affirmative and an aggressive policy toward these Treasury-notes. I rejoice that our hands are being strengthened in the effort (if we have courage to make it) to bring this country back to the laws of trade; those laws which no sophistry of argument, or misapprehension of facts, or misconstruction of circumstances, however specious, can put to naught. But the effort is now, by the bill before the House, to perpetuate this condition of things, and make it the permanent policy of the land."

Mr. Smith, of New York, said: "I have no purpose of making a speech on this occasion. I desire only to explain the reasons which will control my own vote upon this bill.

"First, I am opposed to all inflation of the currency. With the exception of my vote for the \$400,000,000 greenback bill, for reasons which will appear, as I proceed, I have voted steadily and uniformly against expansion in every guise in which it has been presented to the House.

"Second, I am in favor of the resumption of specie payments by the Government at the earliest moment possible, without serious detriment to the finances of the Government.

"Third, I am not only opposed to all expansion of the currency, but I am equally opposed to any legislation in the interest of national-bank currency to the exclusion of the legal tenders, and for these reasons: The

legal tenders represent the non-interest-bearing debt of the Government. Upon the \$382,000,000 of legal-tender notes the Government is paying no interest whatever. Upon the \$356,000,000 of national-bank circulation the Government is paying, by way of interest upon the bonds deposited as security, between twenty and twenty-one million dollars in gold every year.

"I do not think that the substitution of national-bank currency, for the purpose of driving out the circulation of legal tenders, is thrifty statesmanship. I am quite aware that these national banks pay taxes to the Government, which in part compensates for the interest which the Government pays upon that circulation, but it is only in part.

"In the next place, I am opposed to driving greenbacks out of circulation, for the reason that they are legal tenders, and that in the future even more than in the past they will be of signal service to the finances of our country. Now, in place of any extended argument to demonstrate this proposition, let me cite an illustration. In 1857, if at the distance of nearly twenty years my recollection is correct, the Ohio Life Insurance and Trust Company failed. Certain banks in New York City were involved with this company. There were runs upon those banks for specie payments, and they were compelled to suspend. Other banks were so far complicated with them that they suspended also, and nearly every bank in the country had suspended specie payments within the space of ten days. They shut up like oysters, throwing out the paper of solvent customers, who went to protest, and the consequence was, wellnigh universal financial ruin and devastation.

"Now, suppose that in 1857 there had been in circulation, or in the Treasury, \$382,000,000 of legal tenders, and that they could have been had in exchange for Government bonds at par with gold, that disaster to the country which happened from public fright, because of the inability of the banks to redeem their notes, would never have happened. And in the future, when the Government shall have resumed specie payments, in times of public panic, if your legal tenders are in existence, to be had for Government bonds at par with gold, they will be worth more to the commerce and the finances of the country than their face in gold, because they cannot be exported; while your gold, in a sufficient amount to bear the strain of a general panic, cannot be kept in the country. For this reason they will prove to be a handy thing to have in the house. And when resumption of specie payments by the Government is sufficient to meet and overcome the financial evils which we now encounter, are we willing recklessly and madly to throw away the legal tenders, which could be made of infinite value to the commerce of the country in the future? And let me add that, in my humble judgment, in any

issue before the people, between greenbacks and bank-notes, the greenbacks will win, and, brought to par, they ought to win.

"Now, I desire not to be misunderstood. I would consent to the continuance of these legal tenders in circulation only upon condition that they shall be exchangeable for gold at the Treasury of the United States. Before you compel the people to resume specie payments, set them the example. Resume yourselves. Pay gold for your greenbacks at the Treasury. I am unalterably opposed to driving them out of circulation in the interest of national-bank notes. I will vote to make them receivable for customs dues in part. If need be, I will vote to retire them gradually until they come to par, with liberty to reissue them when they are at par. And I will vote with peculiar satisfaction for the measure suggested by the gentleman from Massachusetts (Mr. Dawes), to fund them in a gold-bearing bond which is worth par.

"Now, while there are in the bill of the gentleman from Pennsylvania (Mr. Kelley) some features which impress me very favorably, I think there are very grave objections to it.

"It has been said in this debate that there is no expansion in it, and that allegation has gone unchallenged. Mr. Chairman, it seems to me that there is expansion in this bill; that there is illimitable expansion in it; for this reason: these 3.65 per cent. bonds, it is provided in this bill, may be issued of the denomination of fifty dollars. The \$382,000,000 of greenbacks may be returned to the Treasury, and in exchange for them there may be issued \$382,000,000, in fifty-dollar Government bonds bearing 3.65 per cent. interest. Now, what is to prevent those 3.65 per cent. bonds from being circulated as currency? Why, sir, it was said here last winter by the gentleman from Massachusetts (Mr. Butler), if I mistake not, that the very object of making this interest 3.65 per cent. was that it might be easy of computation, being one cent per day upon \$100, so that they might readily pass from hand to hand, with the interest added. Not only would those Government bonds be circulated as currency, and thereby expand the currency, but they would be sought for with avidity precisely as the interest-bearing Treasury-notes were sought after some years ago when they were in circulation. Now, what would be the result? If the \$382,000,000 of greenbacks were returned and exchanged for Government bonds, and three-fourths of the greenbacks received by the Government were reissued to buy gold for the purpose of taking up our bonds abroad, precisely as is contemplated by this bill, then the greenbacks thus reissued would be put into circulation again, so that after the first exchange there would be in circulation, counting those greenbacks and the Government bonds issued for them, \$668,000,000, and that process would be repeated *ad infinitum*. Thus the amount of paper circulating as currency

in the shape of greenbacks and these bonds (which, as I said before, would be sought for with avidity, because they bear an interest easy of computation) would be limited only by the amount of Government bonds which we could call in under this process.

"For this reason it seems to me there is illimitable inflation in this bill, which I deplore and against which I must protest. But, in the endeavor to relieve one objection to the bill, I move that it be amended in the first section by inserting the words 'one thousand' in lieu of the word 'fifty,' in order that the bonds shall be required to be of the denomination of not less than one thousand dollars."

The bill was further considered and amended, but no final action was taken upon it in the House.

In the Senate, on December 21st, Mr. Sherman, of Ohio, from the Committee on Finance reported the bill to provide for the resumption of specie payments, which was read and passed to the second reading. On the 22d, the bill was considered in the Senate. The bill was read at length, as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized and required, as rapidly as practicable, to cause to be coined at the mints of the United States silver coins of the denominations of ten, twenty-five, and fifty cents, of standard value, and to issue them in redemption of an equal number and amount of fractional currency of similar denominations, or, at his discretion, he may issue such silver coins through the mints, the sub-treasuries, public depositories, and post-offices of the United States; and, upon such issue, he is hereby authorized and required to redeem an equal amount of such fractional currency, until the whole amount of such fractional currency outstanding shall be redeemed.

SECTION 2. That so much of section 3524 of the Revised Statutes of the United States as provides for a charge of 1-5 of 1 per cent. for converting standard gold bullion into coin is hereby repealed, and hereafter no charge shall be made for that service.

SEC. 3. That section 5177 of the Revised Statutes of the United States, limiting the aggregate amount of circulating notes of national banking associations, be, and is hereby, repealed; and each existing banking association may increase its circulating notes in accordance with existing law without respect to said aggregate limit; and new banking associations may be organized in accordance with existing law without respect to said aggregate limit; and the provisions of law for the withdrawal and redistribution of national-bank currency among the several States and Territories are hereby repealed. And whenever and so often as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of \$300,000,000 to the amount of 80 per cent. of the sum of national-bank notes so issued to any such banking association as aforesaid, and to continue such redemption as such circulating notes are issued until there shall be outstanding the sum of \$300,000,000 of such legal-tender United States notes, and no more. And on and after the 1st day of January, A. D. 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding on their presentation for redemption at the office of the assistant treasurer of the United States in the city of New

York, in sums of not less than fifty dollars. And to enable the Secretary of the Treasury to prepare and provide for the redemptions in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for its purposes aforesaid. And all provisions of law inconsistent with the provisions of this act are hereby repealed.

Mr. Sherman, of Ohio, said: "The bill is intended to provide for the resumption of specie payments. The first section of the bill provides for the resumption of specie payments on the fractional currency. It is confined to that subject alone. It so happens that at this particular period of time the state of the money market, the state of the demand for silver bullion, and more especially the recent action of the German Empire, which has demonetized silver and thus cheapened that product, enables us now, without any loss of revenue, without any sacrifice, to enter the market for the purchase of bullion and resume specie payments on our fractional currency. The market price of bullion to-day will justify the Government of the United States, without any sacrifice, at a price about equivalent to or perhaps a trifle above our fractional currency—scarcely a shadow above our fractional currency—to purchase silver bullion in the money markets of the world, mostly of our own production, perhaps entirely of our own production. This bill simply directs that the Secretary of the Treasury shall purchase this bullion and shall coin silver coin and substitute that in the place of fractional currency. To that extent it is a resumption of specie payments upon the silver standard for the fractional currency. This section is recommended not only by the Secretary of the Treasury and the President of the United States, but I believe will meet the general concurrence of every member of the Senate, and we fortunately are enabled to embrace the present time to commence this operation without any loss to the Government, except perhaps the cost of the coinage of this silver may have to be paid out of the Treasury of the United States. That coinage may be done in the ordinary course of business without any increase of expenditures. The mints of the United States are now prepared, immediately upon the passage of this bill, to resume the coinage of silver coins of all the legal denominations. Therefore the committee have provided that the Secretary of the Treasury shall proceed to coin the silver coins and in one of several ways to issue them in the place of fractional currency.

"The second section of this bill simply removes an inducement that now exists to export our gold bullion from the United States

to Great Britain, where by the long-established laws of that country they coin money free of charge. This section involved the surrender of about \$85,000 a year of revenue; that is, the Government of the United States received last year for coining gold coin \$85,000, or one-fifth of one per cent. on forty-five millions of gold coined. The only sacrifice of revenue, therefore, by the second section of the bill is the sacrifice or surrender of \$85,000, which has heretofore been levied upon those who produce gold bullion in order to convert it into coin. In the opinion of many men, among them the Secretary of the Treasury, the Director of the Mint, and perhaps a large number of Senators heretofore, this will tend, in a slight degree at any rate, to prevent the exportation of the gold of our own country into foreign parts, because when the Government of the United States undertakes to put gold bullion in the form of gold coin without additional charge the tendency will inevitably be for the gold bullion to flow into the mints for coinage, and, being put into the form of American coin, it is thought by a great many people that this will tend to prevent its exportation. To the extent it does so it prepares us for specie payments. That is the whole of the second section.

"The third section of the bill contains only two or three affirmative propositions. The first is that after the passage of this act banking shall be free. Perhaps there is no idea stronger in the minds of the American people than a feeling of hostility against a monopoly—a privilege that one man or set of men can enjoy which is denied to another man or set of men. Under the law as it now stands, banking is substantially free in the Southern and some of the Western States; but banking is not free in the great commercial States, in the older States, where wealth has accumulated for ages. This may be a mere sentimental point, but it is well enough to meet it; and by the operation of this bill banking is made free, so that there will be no difficulty hereafter for any corporation organized as a national bank either to increase its circulation or for banks to be organized under the provisions of existing law to issue circulating notes to any extent within the limits and upon the terms and provisions of the banking law. This section, therefore, by making banking free, provides for an enlargement of the currency in case the business of the community demands it, and in case any bank in the United States may think it advisable or profitable to issue circulating medium in the form of bank-notes under the conditions and limitations of the banking law. Coupled with that is a provision, an undertaking, on the part of the United States, that as banks are organized or as circulating notes are issued, either by old or new banks, the Government of the United States undertakes to retire eighty per cent. of that amount of United States notes. In other words, it proposes to redeem the

United States notes to the extent of eighty per cent. on the amount of bank-notes that may be issued; and here is the first controverted question that arises on this bill and the first that is settled. It may be asked, if we provide for the issue of circulating notes to banks, why not provide for the retirement of an equal amount of United States notes. The answer is that under the provisions of the banking act by the law as it now stands a bank cannot be organized and maintained in existence unless the reserve which is in that bank, or required for that bank in the ordinary course of business either on its deposits or circulation, is at least equal to twenty per cent. of the amount of its circulating notes, so that it was believed, according to the judgment of the best business men of the country, and I may say with the Controller of the Currency, that the retirement of eighty per cent. of the amount of bank-notes is fully equivalent to keeping the amount of circulating medium in actual circulation on the same footing, so that this provision of the bill neither provides for a contraction nor expansion of the currency, but leaves the amount to be regulated by the business wants of the community, so that when notes are issued to a bank eighty per cent. of the amount in United States notes is redeemed, and this process continues until United States notes are reduced to three hundred millions.

"Now, Mr. President, that is all there is in regard to banking in this bill and also in regard to the retirement of the United States notes until the time for the resumption of specie payments comes, when this bill provides for actual redemption in coin of all notes presented. It has always been a question in the minds of many people as to whether it is wise to fix a day for specie payments. That matter was discussed at the last session of Congress by many Senators, and the general opinion seemed to be that if we would provide the means by which specie payments would be resumed it might not be necessary to fix the day; but, on the other hand, it is important to have our laws in regard to the currency fix a probable time, or a certain time, when everybody may know that his contracts will be measured by the coin standard. We also know, by the example of other nations which have found themselves in the condition in which we are now placed, and by some of the States when specie payments were suspended, that they have adopted a specific day for the resumption of specie payments. In England, by the bank act of 1819, they provided for the resumption of specie payments in 1823, making four years. In our own State—in New York, in Ohio, in nearly all the States—when there has been a temporary suspension of specie payments a time has been fixed when the banks were compelled to resume, and this bill simply follows the example that has been set by the States, by England, and by other nations, when they have been involved in a like condition.

"This bill also provides ample means to prepare for and to maintain resumption. I may say the whole credit and money of the United States is placed by this bill under the direction of the proper executive officers, not only to prepare for but to maintain resumption, and no man can doubt that, if this bill stands the law of the land from this time until the first day of January, 1879, specie payments will be resumed, and that our United States notes will be converted at the will of the holder into gold and silver coin.

"Mr. President, these are all the provisions contained in this bill. They are simple and easily understood, and every Senator can pass his judgment upon them readily.

"Now I desire to approach a class of questions that are not embraced in this bill. Many such, and I could name fifty, are not included in this bill; and I may say this: that if there should be a successful effort by the Senate of the United States to ingraft any of this multitude of doubtful or contested questions upon the face of this bill it would inevitably tend to its defeat. I am free to say that if I were called upon to frame a bill to accomplish the purpose declared in the title of this bill, I would have provided some means of gradual redemption between this and the time fixed for final specie payments. All of these means are open to objection. There have been three different plans proposed to prepare for specie payments, and only three. They are all grouped in three classes. One is what is called the contraction plan. The simplest and most direct way to specie payments is undoubtedly the gradual withdrawal of United States notes or the contraction of the currency. Now, we know very well the feeling with which that idea is regarded not only in this Senate, but all through the country. It is believed to operate as a disturbing element in all the business relations of life; to add to the burden of the debtor by making scarce that article in which he is bound to pay his debts; and there has been an honest, sincere opposition to this theory of contraction. Therefore, although it may be the simplest and the best way to reach specie payments, it is entirely omitted from this bill. The second plan, that I have favored myself often, and would favor now if I had my own way and had no opinion to consult but my own, is the plan of converting United States notes into a bond that would gradually appreciate our notes to par in gold. That has always been a favorite idea of mine. There is nothing of that kind in this bill except those provisions which authorize the Secretary of the Treasury to issue bonds to retire the greenbacks as bank-notes are issued; and it also authorizes the Secretary of the Treasury to issue bonds to provide for and to maintain resumption. I therefore have been compelled to surrender my ideas on this bill in order to accomplish a good object without using means that have been held objectionable by many Senators.

"The third plan of resumption has been favored very extensively in this country, which is the plan of a graduated scale for resumption in coin or bullion; what I call the English plan. That is, that we provide now for the redemption, at a fixed rate or scale of rates, of so much gold for a specific sum of United States notes. At present rates we would give about \$90 of gold for \$100 of greenbacks, and then provide for a graduated scale by which we would approach specie payments constantly, and reach it at a fixed day. This may be called a gradual redemption. This, also, is objectionable to many persons, from the idea that it compels us to enter the money markets of the world to discount our own paper. It is an ideal objection, but a very strong objection; an objection that has force with a great many people. We have undertaken to redeem these notes in coin, and it is at least a question of doubtful ethics whether we ought to enter into the markets of the world and buy our own notes at a discount. Although that plan has been adopted in England and successfully carried into execution, yet there is a strong objection to it in this country, and therefore that mode is abandoned. Either of these plans I could readily support; but they have met and will meet with such opposition that we cannot hope to carry them or ingraft them in this bill without defeating it. We have then fallen back on these gradual steps: first, to retire the fractional currency; second, to reduce United States notes as bank-notes are increased; and then to rest our plan of redemption upon the declaration made on the faith of the United States, that at the time fixed by the bill we will resume the payment of the United States notes in coin at par. That is the whole of this bill.

"Not only are all these plans of gradual redemption omitted from the bill, but there are also many troublesome questions omitted from the bill. If we undertake to define precisely what shall be done four years hence on the resumption of specie payments, to say whether the legal-tender act shall then be repealed, or whether it shall be repealed before or not, we enter upon a very difficult field, and will undoubtedly divide the Senate and divide the country. Is it not better to postpone, until the time comes to meet them, these questions which must then arise, rather than to engage in an attempt to settle them now, four years in advance?"

Mr. Schurz, of Missouri, said: "I meant to ask whether whenever any greenbacks were retired by the Secretary of the Treasury, or as the bill styles it are redeemed in consideration of so many thousands of dollars of bank-notes having been issued, the greenbacks so retired shall be canceled and destroyed, never to be re-issued again. The Senator will remember very well that we had a protracted struggle about a similar question once, and that the framing of a law gave rise to much controversy on that

identical point. Now, what I am after is, to understand whether the provisions of this bill will in their practical operation work in the direction of specie payments or not, and for that it is a very essential question whether the greenbacks so retired shall be destroyed never to be reissued again, or whether they shall be held as a reserve, as the forty-four millions were, certainly to be put into the market again."

Mr. Sherman: "The Honorable Senator from Missouri and I agreed perfectly some years ago when the question about the \$44,000,000 reserve came up. I should rather put that question to him. At all events I say to him frankly that we do not propose to decide that question in this bill. I have no doubt that, when the time arrives when the question becomes material, it will be met. Undoubtedly until the reduction of the United States notes to \$300,000,000 they cannot be reissued. The process must go on *pari passu* until the amount of legal-tender notes is reduced to \$300,000,000. Before that time will probably arrive in the course of human affairs, at least one or two Congresses will have met and disappeared, and we may leave to the future these questions that tend to divide us and distract us, rather than undertake to thrust them into this bill and thus divide us and prevent us from doing something in the direction at which we aim."

Mr. Schurz: "Mr. President, I do not want to go into an argument upon this bill now, because I confess I am not sufficiently informed about the meaning of the provisions of the bill; and in order to inform myself I should like to put some questions to the Senator from Ohio.

"I see a pledge in this bill to resume specie payments on the 1st of January, 1879. So far, so well. Better late than never. We shall, voting for this bill, consider ourselves honorably bound to fulfill that pledge, and I think we personally intend to do so. That is worth something. But the question is whether the machinery provided for by the bill is such as to bring about a condition of things which will render the performance of that pledge possible; and in order to clear up this important point I asked the Senator what were the provisions of the bill calculated to give us the necessary preparation for the resumption of specie payments. Aside from this pledge, I find in the bill two things: first, free banking; secondly, the retirement of legal tenders amounting to eighty per cent. 'of the sum of national-bank notes so issued to any such banking association.' That is, as far as I can see, all the provision that is made to prepare the way for specie payments. I would ask the Senator from Ohio whether he thinks that free banking—that is to say, the removal of all the restrictions which at present surround the organization of banks and the issuing of bank currency, and coupled with that the withdrawal of eighty per cent. in greenbacks of the amount of national-bank notes so is-

sued—is all that in his opinion is required? I must confess that to my mind it is by no means clear that these provisions are sufficient to render the resumption of specie payments on the 1st of January, 1879, possible. The question I ask the Senator is whether he thinks they are not sufficient, and how they are to operate?"

Mr. Sherman: "I will answer."

Mr. Schurz: "If the Senator will permit me to make it perfectly clear, does he think that the removal of all the restrictions surrounding our banking system will result in the establishment of many more national banks and in the issuing of large quantities of additional currency? and does he think that in consequence thereof the quantity of greenbacks will be materially reduced? Or does he think that free banking will result in the establishment of but few new banks, and so on? In one word, what does he think that the practical effect of this measure will be in paying the way for the resumption of specie payments?"

Mr. Sherman: "As to whether more banks will be organized, or whether old banks will issue more circulating notes with the certainty that they must in four years redeem them in coin, every Senator must form his opinion. I have no doubt some banks will be organized here and there; I have no doubt existing banks will increase their circulation; but to what extent I will not undertake to say; no man can undertake to say. If this be not done, we are no worse off; but, if it be done, we retire eighty per cent. of that amount in United States notes, and that does not only lead us toward specie payment, but lessens the volume which we are bound to redeem when the time comes for final redemption."

Mr. Thurman, of Ohio, said: "Mr. President, the first two sections, so far as my opinion is concerned, are perfectly right; but now we come to the third and last section, and what is it? But, first, let me premise that the first two sections do very little toward the resumption of specie payments, for when you shall have paid the fractional currency in silver, you will have paid it in something that is no more valuable than the greenbacks in which it is now redeemable. So that is but a very slight step toward the resumption of specie payment. And when you shall have done away with the coinage charge, as provided in the second section, you will have done a little, it is true, toward increasing the amount of gold coinage and that is all—an almost infinitesimal step toward specie payments. Therefore, if there is any thing in this bill that looks toward specie payments, it must be in the third section. Now, let us look at that.

"It proposes that there shall be free banking, and then for every \$100 of bank-notes that shall be issued there shall be redeemed \$80 of legal tenders, and that that process shall go on until the amount of legal tenders outstanding shall be \$300,000,000 and no more.

If that were all there was in this section, and it were fairly and distinctly stated that the legal tenders thus redeemed were not to be reissued, but were to be canceled, one could very well understand what the section is, and it would only be a question of time when the effect of the section would be to reduce the legal tenders to \$300,000,000; but that is not all that is in the section by any means. It goes further, and provides that after the first day of January, 1879, there shall be full and complete resumption of specie payments by the Government on the legal tenders, and that means full and complete resumption by the banks, because the banks by their charters are bound to redeem either in legal tenders or in coin; and if legal tenders are redeemed by the Government in coin, it is equivalent to declaring that the banks shall also redeem in coin. Therefore, this bill provides that from and after the 1st of January, 1879, four years hence, there shall be complete resumption of specie payments in the United States. Put that provision in the bill, coupled with the other provision for retiring eighty per cent. of greenbacks for every additional dollar of national-bank issue under this bill, and see how they work.

"Does my friend, the chairman of this committee, believe that there will be in the next four years \$100,000,000 of additional national-bank currency issued? What warrant has he to believe any such thing as that? But without the issue of \$100,000,000 more national-bank currency he cannot retire \$80,000,000 of greenbacks and bring them down to \$300,000,000. What warrant has he for supposing that? Is it in the experience of the Government for the last year? Pray how much increase has there been in national-bank currency under the law which you passed last session? About \$1,000,000 or \$1,400,000, if my recollection is right, at the very outside. Now, it was said that there was a great demand for money, that a great deal of money was needed. Well, in more than twenty States of this Union there has been perfect freedom to issue paper-money by starting national banks for the last eight months, and the result of it all is that the increase in the currency is less than a million and a half of dollars. How, then, will it be in the next four years? What reason have you to suppose that in the next four years you will have banks started or existing banks asking for an increase of circulation, so that \$100,000,000 will be put out, and you will thereby retire \$80,000,000 of the legal tenders? No man can believe any such thing. Pass this bill to-day, and I venture the assertion that the increase of national-bank currency under it in the next four years will not be \$10,000,000; and the retiring of greenbacks, therefore, under it will not amount to more than \$8,000,000 at the very outside. That is the truth about it, sir. You will have no increased banking under this bill, if you pass it, until business be-

gins to revive; and when will business begin to revive? All that is necessary is for a man to open his eyes and read the history of his country to know when it will revive. At intervals of about twenty years we have one of those things called a panic, followed by stagnation in business, the result of overtrading, over-production, of extravagance of all sorts and descriptions, extravagance in individuals, extravagance in corporations, extravagance in governments large and small, until at last the bubble bursts, and then comes a season of retrenchment, of economy; and how long does that last? How long is it before debts are liquidated and a surplus is accumulated, so that there begins to be an upward tide in the business of the country? Never has it been less than four years in the United States.

"Now, Mr. President, one word more on the subject of this section of the bill. My colleague says that this bill will have one great and good effect: it will let the country know what is to be our policy, and then business will go on steadily, because people will know what they have to expect. Why, sir, if it would have that effect it would be in that particular most beneficial, for that is an effect most ardently to be desired. Yet my colleague says to the people—for what he says here goes to them—this bill, which is to inform you what is to be the policy of the Government, does not inform you whether these \$80,000,000 of retired greenbacks are to be poured out again at the pleasure of a Secretary of the Treasury! Why, sir, if this bill could have operation, if there would be issued \$100,000,000 of national-bank notes, and then yet retired \$80,000,000 of greenbacks, it becomes the most material thing in the world for the capitalists and business men of the country to know whether these greenbacks are to be reissued again; for, if they be reissued, the effect would be an inflation of the currency of \$100,000,000. If they are to be canceled then the inflation is only \$20,000,000, and may not be even so much as that on account of the reserve that the banks are required to keep against their deposits; but, if they are to be reissued, then there is unmitigated inflation to the amount of \$100,000,000. Pass the bill in its present shape, and instead of settling you will unsettle, instead of fixing you will unsettle the minds of the people.

"Mr. President, these ideas have occurred to me in the very hasty and imperfect consideration I have been able to give to this bill; and now I propose to send up to the Chair an amendment."

The Vice-President: "The amendment will be read."

The Chief Clerk: "It is proposed to add a new section:"

SEC. 4. That from and after June 30, 1875, one twentieth part of the customs duties shall be payable in United States legal-tender notes, or in national-bank notes, and after June 30, 1876, one

tenth, and after June 30, 1877, one-fifth part thereof may be so paid.

Mr. Boggy, of Missouri, said: "I desire to move an amendment to this amendment, to strike out all after the word 'that' and insert: "

On and after the first day of July, 1875, duties on imports may be paid in legal-tender notes or coin, at the option of the importer.

"My purpose in offering this amendment is to facilitate the object aimed to be accomplished by this bill; that is, as soon as possible, consistent with the interests of the country, to return to specie payments, and upon that subject my mind has undergone no change.

"If the legal tenders are made receivable for duties, you at once give to them a positive value. You at once take away the only demand for gold. At the present day gold is not used for any purpose whatever in this country except to pay duties on imports. It is to-day an article of commerce, as much so as iron or lead, or dry-goods, or sugar, or coffee. It is not used at the present time as a medium of exchange. It remains a measure of value, because it is so recognized by the entire commerce of the world. But as a means of exchange it is not used except as an article of commerce, and is sold from day to day in Wall Street; and for what purpose? Only for one: to enable importers to pay duties amounting to from five to eight hundred thousand dollars a day. Do away with the demand, and what will be the result? There being no demand for gold, as the national-bank notes are redeemable in legal tenders, and these are not yet redeemable in gold, the effect would be that the gold of this country, amounting to \$160,000,000, would at once flow into the channels of trade, and you would really have an expansion of coin of that large amount. The \$160,000,000 now used as an article of merchandise would immediately go into the channels of business. It could not be used for any other purpose. If my friend from West Virginia (Mr. Davis) had \$100,000 in gold, and were a broker in Wall Street, and there were no demand for it, what could he do with it? He would lend it to some one, say to my friend from Delaware (Mr. Saulesbury), and he, having borrowed it, would use it as a necessity for legitimate business purposes, and in that way one hundred and sixty millions would be carried into the channels of trade and be used only as gold should be, as a medium of exchange, in addition to being a measure of value."

Mr. Thurman: "Will my friend allow me to ask him a question?"

Mr. Boggy: "Certainly."

Mr. Thurman: "I should be inclined to favor the amendment of the Senator from Missouri but for one thing, to which I wish to call his attention; and that is the pledge of Congress that so much of the customs duties as shall be necessary is pledged for the pay-

ment of interest on the public debt and the creation of a sinking fund, and that interest is payable in gold. I have made my calculation in my amendment so as to leave an ample amount to meet that pledge; but the amendment of the Senator from Missouri would destroy the pledge altogether.

"I wish to say further in reference to that, that the bill as reported and now before us disregards that pledge quite as much as and more, a great deal, than can be said of my amendment, for mine does not disregard it at all. This bill allows the Secretary of the Treasury to use all the gold that may be received from customs duties to carry out the purpose of the bill, and in fact disregards the pledge totally."

Mr. Edmunds, of Vermont, said: "The Senator from Ohio will pardon me if I suggest to him that he has not read the statute of 1862 or stated it exactly as it is. The act of 1862 does not say so much as shall be necessary (as he stated it), leaving it to the judgment of the Secretary of the Treasury, shall be collected in coin. It says that all duties on imports shall be collected in coin, and the public faith is pledged to it."

Mr. Thurman: "I know it says that all duties shall be payable in coin; but the true interpretation of that statute, so far as it is a pledge, does not pledge us to collect any more in coin than is necessary to answer the purpose for which gold is necessary. I do not wish to go into that argument; I argued it at the last session; and, if my friend will do me the honor to look at what I said then, he will see what I think about it."

Mr. Boggy: "I contend that by making these legal-tender notes what the words authorizing their issue justify, that is, making them receivable for all debts due the Government of any description whatsoever, without excepting duties on imports, you will give to your legal tenders a value equal to gold, and that will do away with the demand for it, and by doing away with this demand it will nevertheless continue to exist to the extent of \$160,000,000 now in the country, and, not being used any longer as an article of merchandise, it will be employed in its legitimate function as a means of exchange. In that way, instead of bringing about an inflation of paper-money, you would in point of fact have an inflation of gold to the amount of \$160,000,000, because at once it would be added to the circulation.

"Now, I am met by the argument advanced by the Senator from Ohio (Mr. Thurman), that this would conflict with the law of 1862, which requires all duties to be paid in gold; not a part, not nineteen-twentieths, but the whole twenty-twentieths; all must be paid in coin. The object of the law beyond a doubt was to create a gold fund to pay the interest upon the gold bonds. But what is really the essence of that contract? Taking the modification of the law made by the act of 1869, which made

all these bonds, both principal and interest, payable in gold, what is the essence of this contract? This Government agreed to pay the interest in coin, and by the act of 1869, modifying the law of 1862, the principal was also made payable in coin. When they were first issued I believed, and believe now, that the intention was to pay the interest in coin, but the principal in legal tenders; but the act of 1869 changed that, and made the interest and principal payable in coin. So be it. The contract is that we shall pay this character of debt, both interest and principal, in coin.

"Now, Mr. President, I leave it to the intelligence of the Senate and the country, if we continue, as we shall be sure to continue, to pay our bonds as they fall due in coin, and if we continue, as we are certain to continue, to pay the interest every six months also in coin, will the credit of the nation be at all affected whether we raise this money by one means or another?"

Mr. Bayard, of Delaware, said: "Mr. President, if I believed that the measure now before the Senate was a bill to restore specie payments in this country, I would be inclined to vote for the measure of the honorable Senator from Ohio on my right (Mr. Thurman). I have myself upon former occasions offered amendments, and voted for those offered by other members of the body, favoring a partial payment of duties upon imports in the paper-money of the United States. I believe the Government discredited its own Treasury-notes by refusing to receive them originally for the payment of debts due the Government while it insisted that other debts equally honest should be made payable in them. It was a mistake, it was a financial blunder, and one of the many which the history of the last twelve years records against the party in power. But, sir, believing that this is a bill rather adverse than favorable to a resumption of specie payments, that it is a bill tending to prevent a return to specie payments, that it contains many of the most objectionable features which have embarrassed our finances in the last eight years, and which it seems to me is intended to reproduce those same results, therefore I shall hesitate to vote even for the amendment of my friend from Ohio, much less for the amendment as amended by the Senator from Missouri.

"I do not desire to banish from this country the last trace of gold payments to the Treasury. It is plain that if we are to resume specie payment there must be a fund of gold accumulated wherewith to resume, and this is nothing but a measure to abolish the only nucleus left by law for such accumulation, and make a return to specie payments an impossibility while such a policy controls the Government. I hope this amendment offered by the Senator from Missouri will not be adopted, nor even that offered by my friend from Ohio, because I believe it should properly be appended to a bill honestly intended to resume specie payments; and, as I

cannot consider the measure before us to be in that direction, I am not disposed to vote for any measure that tends to banish our last source of gold income from the country.

"Sooner or later, a sound public sentiment, born perhaps of the sufferings of the people, will demand that an honest measure of value shall be restored to the dealings of our citizens. That must come sooner or later, and I shall never be satisfied with the legislation of the country until it has produced that effect. Any measure tending to it shall find my vote recorded in its favor, and any measure hostile to it will find in me an opponent.

"Now, I will ask the honorable Senator from Ohio who has charge of this bill whether he objects, on line 15 of section 3, after the word 'redeem,' to inserting the words 'and destroy,' so that it will read:"

It shall be the duty of the Secretary of the Treasury to redeem and destroy the legal-tender United States notes in excess only of \$200,000,000, to the amount of eighty per cent. of the sum of national-bank notes so issued to any such banking association as aforesaid.

Mr. Sherman: "I would ask my honorable friend a question in response; and that is, whether the words he proposes to add will change the meaning of the bill?"

Mr. Bayard: "Certainly they would, sir, in my opinion; and if they do not change it, why should the Senator object to the insertion of the words?"

Mr. Sherman: "I will answer the Senator now frankly, having asked him the question. That I do not propose to give my construction or opinion as a lawyer upon the question as to what is the meaning of the word 'redeemed,' as to whether it precludes or authorizes the reissue of notes, because I say that the question cannot arise under either of these sections until three or four years hence. The Senator will see that this process of reduction must go on until the whole amount of the fractional currency outstanding shall be redeemed. Whether it may then be reissued, I say frankly again to the Senator that we do not undertake to decide except so far as it is fixed by existing law. I, therefore, cannot vote for the Senator's proposition, simply because I propose to leave that an open question to be decided in the future according to law."

The Vice-President: "The question is on the amendment of the Senator from Missouri (Mr. Bogy) to the amendment of the Senator from Ohio (Mr. Thurman)."

The amendment to the amendment was rejected.

The Vice-President: "The question recurs on the amendment of the Senator from Ohio (Mr. Thurman)."

The question being taken by yeas and nays, resulted—yeas 16, nays 33, as follows:

YEAS—Messrs. Bayard, Bogy, Cooper, Davis, Den-
nia, Goldthwaite, Hager, Hamilton of Maryland,
Johnston, McCreery, Merrimon, Norwood, Ransom,
Saulsbury, Stevenson, and Thurman—16.

NAVS—Messrs. Allison, Anthony, Boutwell, Cameron, Carpenter, Clayton, Cragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Hamilton of Texas, Hamlin, Harvey, Howe, Ingalls, Loomis, Morrill of Maine, Morrill of Vermont, Morton, Emerson, Pease, Pratt, Sargent, Schurz, Scott, Sherman, Spencer, Washburn, West, Windom, and Wright—33.

ASSETS—Messrs. Alcorn, Boreman, Brownlow, Buckingham, Chandler, Conkling, Conover, Dorsey, Ferry of Connecticut, Gilbert, Gordon, Hitchcock, Jones, Kelly, Lewis, Mitchell, Oglesby, Ramsey, Robertson, Sprague, Stewart, Stockton, Tipton, and Tiedeligh—24.

So the amendment was rejected.

Mr. Sanbury, of Delaware, said: "I move to strike out the word 'nine,' in line 24, page 3, and insert 'seven,' so as to read '1877.' According to my view of this measure we shall be nearer specie payments in 1879 than we are now. There is no provision in this bill for the resumption of gold for the purpose of resumption in 1879, and I think we may as well come back to specie payments two years earlier as postpone it to that period."

The Presiding Officer (Mr. Allison in the chair): "The question is on the adoption of the amendment of the Senator from Delaware." The amendment was rejected.

Mr. Hamilton, of Maryland, said: "I offer this amendment: Strike out all after the ending clause of the bill, and insert: "

That from and after the fourth day of July, A. 1876, nothing but gold and silver shall be a legal tender for the payment of debts contracted thereafter.

Mr. Stevenson, of Kentucky, said: "I desire briefly to state why I shall vote against the pending bill. It cannot afford the stability which the country expects, nor afford the relief which it has a right to demand. The bill is deceptive. It is a species of Janus-faced legislation, and should be deemed rather a measure of party policy than one of financial relief. The expansionists, by one construction, claim it as their measure, and give it their support, while the contractionists, by a different construction, can insist that they have triumphed, and the bill is one of contraction which commands their support. And it is true that the bill is so worded as to justify diverse constructions, and allow both contractionists and expansionists to unite in its support."

"But, Mr. President, I am opposed to this bill upon another ground. I am unwilling to confer upon any Secretary of the Treasury the power to expand or contract the currency at discretion. The chairman of the committee who reports this bill declines to answer the question whether the Secretary of the Treasury can issue the notes that he has redeemed, whether he will not have the power to reissue them. That is a matter on which the honorable chairman says every Senator must put his own construction. That is not the doctrine of the Democratic party. They are opposed to arbitrary, unlimited power in one or many officials. They go for no ambiguous legislation. They

are for straightforward, honest, upright legislation, which the country can understand and which the public interest demands.

"The present Secretary of the Treasury might, and probably would, construe the act as requiring a destruction by him of all the legal tenders as fast as they should be redeemed, while his successor might take an opposite view, and construe the same words as empowering him to retain the legal tenders which should be redeemed, and to reissue them if he at any time deemed the interests of the country required it. Either construction would find defenders in this chamber from Senators who will vote for this measure. Is such legislation open? Is it wise? Is it beneficent? Are not the interests of the country too great to allow or justify it? I think so, and therefore I shall vote against the bill."

Mr. Hamilton, of Maryland: "I did not know that my amendment was going to give rise to discussion. It expressed my own personal views; but I withdraw it."

The Presiding Officer (Mr. Allison in the chair): "The amendment is withdrawn."

Mr. Edmunds: "I wish to say a word on the general topics that have engaged our attention. The Senator from Kentucky complains that the chairman of this committee does not submit to the Assembly's catechism and answer the thirty-nine or the fifty-nine or the one hundred and nine questions which may be propounded to him. Have Senators forgotten that the construction of this bill, if it becomes a law, is a question which does not belong to Congress, that it belongs in another department and in another tribunal? And if Senators had addressed themselves to the bill itself, instead of the Senator who has it in charge, and had stated to us their opinions of its defects and of its construction, and had offered amendments in that view, there would have been some force in asking us to vote upon those amendments. But this opposition to a bill providing for a resumption of specie payments, which is based upon catechisms and general talk entirely apart from the bill itself and intended to touch an entirely different body of people, as it evidently is, and not intended to touch the merits of the bill at all, is not quite the thing, it appears to me, in the Senate of the United States. Senators seem to be exceedingly ready to ask questions of other people without pronouncing any opinions of their own. I suppose they might catechise the Senator from Ohio on the subject of the ten commandments or of all the laws that we passed last year; but, in connection with that they would give us their own views upon this particular bill and tell us why it is that they are opposed to it and what they understand it to mean as a reason why they are opposed to it, perhaps the country might get some information. Whether it would be valuable information might possibly be another question."

"So, Mr. President, I shall vote, until I get further instruction from the debates, against any amendment whatever that is proposed to this bill unless the Senator who moves it shall show us that that amendment in that particular is to be an improvement upon it."

Mr. Schurz: "I understand the object of those who introduced this bill to be twofold. In the first place the bill appears here as a party measure, and, as we are informed, agreed upon in caucus. About this I have but little to say. If the measure is really a good one, the party bringing it forward and giving it in good faith a united support will be entitled to all the credit that can be derived from it. The most legitimate—nay, the only legitimate way to make party capital consists in doing that which will best serve the interests of the country. I shall, therefore, dismiss this matter without further discussing its propriety. The question which I consider of paramount importance is whether the measure is a good one, and whether it will practically promote the ends it professes to serve. I desire to say at the start that I am going to vote for this bill. I shall do so in spite of all its defects. I should do so simply for the reason that it contains a pledge to resume specie payments on a certain day, and that, as we are solemnly assured, all those who support the measure will, as honest men, be obliged to consider themselves in honor bound to do all that is necessary to render the fulfillment of that pledge possible, should the provisions of the bill as they now stand prove inadequate. That pledge I mean by all means in my power to strengthen.

"But at the same time I am bound to say that in my opinion the redemption of that pledge is not assured by the provisions as they now stand in the bill before us. I put some questions to the Senator from Ohio, who appears as the champion of the measure, for the purpose of ascertaining what his own views of the effectiveness of the different provisions of this bill were, and I regret to say that the answers I received from him were very unsatisfactory.

"Look at the matter in the light of common-sense. How can we get back to specie payments? It requires only candor and a little intelligent study of the subject to see that we cannot resume and maintain specie payments until we have less paper-money and more gold. That is an absolute prerequisite. With the present volume of currency it is absolutely impossible to resume and sustain redemption. I think I am not going too far when I say that you, Senators, all feel this to be true. It is a very simple arithmetical problem. The depreciation of the currency indicates that its present volume is in excess of that which, on a gold basis, is necessary for the business transactions of the country. You resume under such circumstances, with such a volume of currency out, and what will be the consequence? Every dollar of the excess will at once rush to

the Treasury for redemption and drain it of gold to that extent, and not only to that extent, for the general movement will take with it to the Treasury for redemption large quantities of paper-money beyond that excess, enough perhaps to force suspension again. And what will become of the gold so drawn out? At least the excess will in all human probability flow abroad immediately. The effect while such a result would produce upon the business of the country cannot be calculated. I repeat, therefore, and I presume everybody must see it, if we want to resume specie payments with any degree of certainty and safety we must bring about a condition of things which will give us less paper-money and more gold to redeem the remaining paper with, and unless the bill provides for that it does not come up to its profession.

"The Senator from Illinois (Mr. Logan) says to me in an undertone, 'You do not think you can pass a contraction bill?' I tell him candidly that, unless we pass some bill which will bring about the condition of things I indicate, it is absolutely useless to speak of resuming specie payments and maintaining redemption. And in this respect the bill before us is palpably and deplorably inadequate.

"I move you, therefore, sir, that this bill be recommitted to the Committee on Finance with instructions to incorporate in it such provisions as are calculated practically to prepare the way for the resumption of specie payments."

The Presiding Officer: "The Senator from Missouri moves that the bill be recommitted to the Committee on Finance with the instructions he has named."

The motion was not agreed to.

Mr. Schurz: "Then I offer the following amendment, to be inserted on the third page, section 3, line 22, after the words 'and more':

Provided, That not less than \$2,000,000 of legal tender notes shall be retired monthly by the Secretary of the Treasury, and that the legal-tender notes so retired shall be canceled and destroyed.

The result was announced—yeas 6, nays 44 as follows:

YEAS—Messrs. Bayard, Fenton, Hager, Hamilton of Maryland, Hamilton of Texas, and Schurz—4.

NAYS—Messrs. Allison, Anthony, Boggs, Brewster, Cameron, Carpenter, Chandler, Clayton, Conner, Cragin, Davis, Denis, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Goldthwaite, Hendricks, Harvey, Howe, Ingalls, Johnston, Logan, Morrill of Maine, Morton, Oglesby, Patterson, Pratt, Ramsey, Ransom, Sargent, Saulsbury, Sherman, Spencer, Sprague, Stevenson, Thurman, Tipton, Washburn, West, and Wright—44.

ABSENT—Messrs. Alcorn, Boreman, Brownlow, Buckingham, Conkling, Conover, Dorsey, Ferry of Connecticut, Gilbert, Gordon, Hitchcock, Jones, Kelly, Lewis, McCreery, Mitchell, Morrill of Vermont, Norwood, Robertson, Stewart, Stockton, Wall, and Windom—23.

So the amendment was rejected.

The bill was reported to the Senate without

amendment, ordered to be engrossed for a third reading, and read the third time.

The question, being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Allison, Anthony, Boutwell, Carpenter, Chandler, Clayton, Oragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Harvey, Howe, Ingalls, Logan, Morrill of Maine, Morton, Oglesby, Patterson, Pease, Pratt, Ramsey, Sargent, Schurz, Scott, Sherman, Spencer, Washburn, West, and Wright—32.

NAYS—Messrs. Bogy, Cooper, Davis, Dennis, Goldthwaite, Hager, Hamilton of Texas, Johnston, Merrimon, Ransom, Sprague, Stevenson, Thurman, and Tipton—14.

ABSENT—Messrs. Alcorn, Bayard, Boreman, Brownlow, Buckingham, Cameron, Conkling, Conover, Dorsey, Ferry of Connecticut, Gilbert, Gordon, Hamilton of Maryland, Hitchcock, Jones, Kelly, Lewis, McCreery, Mitchell, Morrill of Vermont, Norwood, Robertson, Saulsbury, Stewart, Stockton, Wadleigh, and Windom—27.

So the bill was passed.

On January 7th the bill was taken up in the House and read the first and second time.

Mr. Maynard, of Tennessee, said: "Mr. Speaker, it will be recollected that on the last day of the session previous to the recess, on the 23d of December, an effort was made in the House to go to the Speaker's table with a view of taking up and acting on Senate bill No. 1044, to provide for the resumption of specie payments; such is the title of the bill. Objections were interposed of a character that we all recollect and which it is not necessary to recapitulate. It was, however, by unanimous consent, agreed that the bill should be the special order for to-day at one o'clock, to the exclusion of all other orders. It was also ordered that the bill should be printed in the *Record* of the proceedings of that day, and also printed in the usual form for the information of members and of the country. The bill has thus been printed and has been before us. It is very brief in its text. Its propositions are not numerous—free banking, free coinage, silver change for fractional currency, the resumption of specie payments in 1879, coupled with free banking, and the additional provision that upon the issue of one hundred dollars to national banks eighty dollars of legal-tender notes shall be retired from circulation until the amount shall be reduced to \$300,000,000.

"I am urged by a large number of gentlemen to submit the proposition directly to the House, for its consideration and determination, whether they will accept the Senate bill as it stands. Several gentlemen have expressed a desire to offer amendments of different kinds; others, a desire to address the House upon the subject. I have agreed, and in compliance with that agreement I ask, that should the House sustain the previous question and order the main question, every gentleman who has an amendment to suggest or remarks to submit may be allowed to present them and have them printed in the *Record* of to-day's proceedings. Upon that suggestion I now call

the previous question upon the third reading and passage of the bill."

The House divided; and the tellers reported that there were—yeas 100, nays 91.

So the previous question was seconded.

Mr. Randall, of Pennsylvania, said: "I call for the yeas and nays on ordering the main question."

The yeas and nays were ordered.

The Speaker: "The question is upon ordering the main question, which is, shall the bill be read a third time?"

The question was taken; and there were—yeas 125, nays 106, not voting 57.

The Speaker: "The main question having been ordered, the question is now on ordering the bill to be read a third time."

The bill was ordered to a third reading.

The question being on the passage of the bill,

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Albert, Averill, Barber, Barrere, Barry, Bass, Begole, Biery, Bradley, Burchard, Burleigh, Burrows, Roderick R. Butler, Cain, Carpenter, Cason, Cessna, Chittenden, Clayton, Clements, Stephen A. Cobb, Corwin, Cotton, Crooke, Crounse, Curtis, Danford, Dobbins, Donnan, Duell, Eames, Farwell, Freeman, Frye, Garfield, Gunckel, Eugene Hale, Harmer, Harrison, Hathorn, John B. Hawley, Hays, Gerry W. Hazelton, John W. Hazelton, Hendee, Hodges, Hooper, Hoskins, Houghton, Howe, Hunter, Hynes, Kasson, Kellogg, Killinger, Lamport, Lansing, Lawrence, Loughridge, Lowe, Lowndes, Lynch, Martin, Maynard, McCrury, Alexander S. McDill, James W. McDill, MacDougall, McKee, McNulta, Merriam, Monroe, Moore, Myers, Negley, O'Neill, Orr, Orth, Packard, Packer, Page, Parsons, Pelham, Pendleton, Pike, Thomas C. Platt, Poland, Pratt, Purman, Ray, Richmond, Ellis H. Roberts, James W. Robinson, Rusk, Sawyer, Henry B. Saylor, Scofield, Isaac W. Scudder, Sener, Sessions, Shanks, Sheets, Lazarus D. Shoemaker, Small, Smart, A. Herr Smith, H. Boardman Smith, J. Ambler Smith, John Q. Smith, Sprague, Stanard, Starkweather, St. John, Strawbridge, Taylor, Charles E. Thomas, Christopher Y. Thomas, Thompson, Thornburgh, Todd, Tremain, Tyner, Waldron, Wallace, Jasper D. Ward, Marcus L. Ward, Wheeler, White, Whiteley, Wilber, George Willard, John M. S. Williams, William Williams, William B. Williams, James Williams, and Jeremiah M. Wilson—136.

NAYS—Messrs. Adams, Archer, Arthur, Ashe, Atkins, Banning, Beck, Bell, Berry, Blount, Bowen, Bright, Bromberg, Brown, Buffinton, Caldwell, John B. Clark, Jr., Freeman Clarke, Clymer, Comingo, Cook, Cox, Crittenden, Crossland, Crutchfield, Dawes, DeWitt, Eldridge, Field, Finck, Giddings, Glover, Gooch, Gunter, Hagans, Hamilton, Hancock, Benjamin W. Harris, Henry R. Harris, John T. Harris, Hatcher, Havens, Joseph R. Hawley, Hereford, Herndon, E. Rockwood Hoar, George F. Hoar, Holman, Hutton, Kelley, Knapp, Lamar, Lamson, Lawson, Leach, Magee, Marshall, McLean, Milliken, Mills, Morrison, Neal, Nesmith, Niblack, Niles, Hosea W. Parker, Isaac C. Parker, Perry, Pierce, Randall, Read, Robbins, Milton Saylor, Schell, Henry J. Scudder, Sherwood, Sloss, William A. Smith, Southard, Stephens, Stone, Storm, Swann, Townsend, Vance, Waddell, Wells, Whitehead, Whitehouse, Whitthorne, Charles W. Willard, Willie, Ephraim K. Wilson, Wolfe, Wood, Woodworth, John D. Young, and Pierce M. B. Young—98.

NOT VOTING—Messrs. Albright, Barnum, Bland, Buckner, Bundy, Benjamin F. Butler, Cannon,

Amos Clark, Jr., Clinton L. Cobb, Coburn, Conger, Creamer, Darrall, Davis, Dunnell, Durham, Eden, Fort, Foster, Robert S. Hale, Hersey, Hubbell, Hurlbut, Hyde, Kendall, Lewis, Lofland, Luttrell, Mitchell, Morey, Nunn, O'Brien, Phelps, Phillips, James A. Platt, Jr., Potter, Rainey, Ransier, Rapier, William R. Roberts, James C. Robinson, Ross, John G. Schumaker, Sheldon, Sloan, George L. Smith, Snyder, Speer, Standiford, Stowell, Strait, Sypher, Walls, and Charles G. Williams—54.

So the bill was passed.

The President, on his approval of the bill, sent the following message to the Senate:

To the Senate of the United States:

Senate bill No. 1044, "to provide for the resumption of specie payments," is before me, and this day receives my signature of approval. I venture upon this unusual method of conveying the notice of approval to the House in which the measure originated because of its great importance to the country at large, and in order to suggest further legislation, which seems to me essential to make this law effective.

It is a subject of congratulation that a measure has become law which fixes a date when specie resumption shall commence, and implies an obligation on the part of Congress, if in its power, to give such legislation as may prove necessary to redeem this promise. To this end I respectfully call your attention to a few suggestions.

First. The necessity of an increased revenue to carry out the obligation of adding to the sinking fund annually one per cent. of the public debt, amounting now to about \$34,000,000 per annum, and to carry out the promises of this measure to redeem, under certain contingencies, eighty millions of the present legal tenders, and without contingency the fractional currency now in circulation. How to increase the surplus revenue is for Congress to devise; but I will venture to suggest that the duty on tea and coffee might be restored without permanently enhancing the cost to the consumers, and that the ten per cent. horizontal reduction of the tariff on articles specified in the law of June 6, 1872, be repealed. The supply of tea and coffee already on hand in the United States would in all probability be advanced in price by adopting this measure. But it is known that the adoption of free entry to those articles of necessity did not cheapen them, but merely added to the profits of the countries producing them, or of the middle-men in those countries who have the exclusive trade in them.

Second. The first section of the bill now under consideration provides that the fractional currency shall be redeemed in silver coin as rapidly as practicable. There is no provision preventing the fluctuation in value of the paper currency. With gold at a premium of any thing over ten per cent. above the currency in use, it is probable—almost certain—that silver would be bought up for exportation as fast as it was put out, or until change would become so scarce as to make the premium on it equal to the premium on gold, or sufficiently high to make it no longer profitable to buy for export, thereby causing a direct loss to the community at large and great embarrassment to trade. As the present law commands final resumption on the 1st day of January, 1875, and as the gold receipts at the Treasury are larger than the gold payments, and the currency receipts smaller than the currency payments, thereby making monthly sales of gold necessary to meet current currency expenses, it occurs to me that these difficulties might be remedied by authorizing the Secretary of the Treasury to redeem legal-tender notes, whenever presented, in sums of not less than one hundred dollars and multiples thereof, at a premium for gold of ten per cent., less interest at the rate of two and a half per cent. per annum from the

1st day of January, 1875, to the date of putting this law into operation, and diminishing this premium at the same rate until final resumption, changing the rate of premium demanded from time to time as the interest amounts to one-fourth of one per cent. I suggest this rate of interest because it would bring currency at par with gold at the date fixed by law for final resumption. I suggest ten per cent. as the demand premium at the beginning, because I believe this rate would insure the retention of silver in the country for change.

The provisions of the third section of the act will prevent combinations being made to exhaust the Treasury of coin. With such a law it is presumable that no gold would be called for not required for legitimate business purposes. When large amounts of coin should be withdrawn from the Treasury, correspondingly large amounts of currency would be withdrawn from circulation, thus causing a sufficient stringency in currency to stop the outward flow of coin.

The advantages of a currency of a fixed, known value would also be reached. In my opinion, by the enactment of such law, business and industries would revive, and the beginning of prosperity on a firm basis would be reached.

Other means of increasing the revenue than those suggested should probably be devised, and also other legislation. In fact, to carry out the first section of the act, another mint becomes a necessity. With the present facilities for coining, it would take a period probably beyond that fixed by law for final specie resumption to coin the silver necessary to transact the business of the country.

There are now smelting furnaces for extracting the silver and gold from the ores brought from the mountain Territories, in Chicago, St. Louis, and Omaha—three in the former city; and as much of the change required will be wanted in the Mississippi Valley States, and as the metals to be coined come from west of those States, and, as I understand, the charges for transportation of bullion from either of the cities named to the mint in Philadelphia or to New York City amount to four dollars for each one thousand dollars' worth, with an equal expense for transportation back, it would seem a fair argument in favor of adopting one or more of those cities as the place or places for the establishment of new coining facilities.

I have ventured upon this subject with great diffidence, because it is so unusual to approve a measure—as I most heartily do this, even if no further legislation is attainable at this time—and to announce the fact by message. But I do so, because I feel that it is a subject of such vital importance to the whole country, that it should receive the attention of and be discussed by Congress and the people, through the press and in every way, to the end that the best and most satisfactory course may be reached of executing what I deem most beneficial legislation on a most vital question to the interests and prosperity of the nation.

U. S. GRANT.

EXECUTIVE MANSION, January 14, 1875.

In the House, on February 8d, the bill for protecting all citizens in their civil rights was considered:

Mr. Kellogg, of Connecticut, said: "I move to amend the bill reported from the Judiciary Committee by striking out all of the first section after the word 'amusement.' This amendment in effect strikes out all in reference to public schools."

The Speaker: "The Clerk will read the amendment."

The Clerk read as follows:

Strike out all after the word "amusement," in the seventh line, as follows:

And also all common schools and public institutions of learning or benevolence supported in whole or in part by general taxation, subject only to the conditions and limitations established by law and applicable alike to citizens of every race and color regardless of any previous condition of servitude: *Provided*, If any State or the proper authorities in any city, having the control of common schools or other public institutions of learning aforesaid, shall establish and maintain separate schools and institutions giving equal educational advantages in all respects or different classes of persons entitled to attend such schools and institutions, that shall be a sufficient compliance with the provisions of this section so far as they relate to schools and institutions of learning.

Mr. Butler, of Massachusetts, said: "Mr. Speaker, of the justice of the principles of the bill I can have no doubt. I cannot understand how there can be a class of American citizens, entitled to all the privileges and immunities of American citizens, who can be, or ought to be, deprived of any privilege or immunity or right that appertains to any American citizens.

"It seems to me wholly illogical, as I know it to be wholly unjust and wrong. The colored men are either American citizens or they are not. The Constitution, for good or for evil, for right or for wrong, has made them American citizens; and the moment they were clothed with that attribute of citizenship they stood on a political and legal equality with every other citizen, be he who he may. And I repel and repudiate the idea that there is any intention by the provisions of any one of these bills to make any social equality. That is simply an argument to the prejudice.

"Social equality is not effected by law. It can only come from the voluntary will of each person. Each man can, in spite of the law, and does in spite of the law, choose his own associates.

"But it is said we put them into the cars. The men that are put into the cars and the women that are put into the cars I trust are not my associates. There are many white men and white women whom I should prefer not to associate with who have a right to ride in the cars. That is not a question of society at all; it is a question of a common right in a public conveyance.

"And so in regard to places of amusement, in regard to theatres. I do not understand that a theatre is a social gathering. I do not understand that men gather there for society, except the society they choose to make each for himself. So in regard to inns. Inns or taverns are for all classes of people; and every man, high and low, rich and poor, learned or ignorant, clean or dirty, has a right to go into an inn and have such accommodations exactly as he will pay for, and no other and no different; and there can be no discrimination made in that regard by law. Nor is there association in meeting a man in an inn. I am not obliged to associate with any man that I meet at the table of a railroad refreshment-room.

The whole argument to prejudice I desire once for all to repudiate. I put this question upon a strict basis of right. This question will clear itself, make itself entirely right, if it can be let alone and taken out of the dominion of politics."

Mr. Lawrence, of Ohio, said: "This bill, as I understand it, adopts as to public inns precisely the rule of the common law."

Mr. Butler, of Massachusetts: "Not only as to public inns, but in every other of its provisions the bill adopts precisely the rule of the common law."

Mr. Lawrence: "And the bill is necessary because the common law has been changed by local statutes."

Mr. Butler, of Massachusetts: "The bill is necessary because there is an illogical, unjust, ungentlemanly, and foolish prejudice upon this matter. There is not a white man at the South that would not associate with the negro—all that is required by this bill—if that negro were his servant. He would eat with him, suckle from her, play with her or him as children, be together with them in every way, provided they were slaves. There never has been an objection to such an association. But the moment that you elevate this black man to citizenship from a slave, then immediately he becomes offensive. That is why I say that this prejudice is foolish, unjust, illogical, and ungentlemanly.

"But I have said that I did not intend to discuss the general principles of this bill. They are before the House and before the country."

Mr. Niblack, of Indiana, said: "I desire to ask the gentleman a question about the penalties of this bill. If I remember correctly, the penalty, if a person is found responsible for damages at all under this bill, cannot be less than \$500. Now, if a colored man or any other person is injured, according to the provision of this bill, only to the extent of ten dollars, why should the person who has injured him be made responsible for \$500 damages? These citizens of African descent and all others being on a footing of perfect equality, why not make the person who injures another under this bill individually responsible just in the amount of damages sustained, no more no less, as in all other cases? Why make this an exceptional case? If there is this right at the common law, why not leave it to the common law?"

Mr. Butler, of Massachusetts: "It is the law now that a negro has a right to go to a public inn and be entertained, and if they refuse to entertain him he can sue for damages; but owing to the fact that a class of persons in this country have taken away his wages from generations to generations, he does not have the means to carry on a suit, and as we have given him these rights it becomes our duty to give him the means of enforcing those rights, and we put in this penalty because there are portions of the country where there is not any law which can be enforced in favor of a colored man."

Mr. Niblack: "Then I understand that the gentleman is unwilling to trust the courts of this country for the assertion of the rights of the people, and that is the reason why he wants to institute this extraordinary machinery for the purpose of overriding the laws of the various States to do what cannot be done under State laws."

Mr. Butler, of Massachusetts: "Now let me answer the other question. We go to the United States courts for two reasons. In the first place we hear that in certain portions of our country, under our flag, the judges of the local courts have to run away by night in order to save their lives from assassination, and we do not think that a judge so situated is in a proper condition to judge between a man who has nothing but his civil rights and the men who refuse him those rights. Therefore we put the case in the United States courts where the man is likely to get justice; and what objection, may I ask, has the gentleman from Indiana to having all these cases of wrongdoing carried into the courts of his country recognized by the laws of his country?"

Mr. Niblack: "The gentleman knows that it is five times as expensive to litigate in the Federal courts as it is to litigate in the State courts, and to require a poor man to go into the Federal courts is often to deny him the opportunity to get justice."

Mr. Butler, of Massachusetts: "Permit me. We make it the duty by this bill of the district attorneys to see that the penalties provided for in this statute are enforced."

Mr. Lynch, of Mississippi, said: "Believing as I do that the Constitution as a whole should be so construed as to carry out the intention of the framers of the recent amendments, it will not be surprising to the House and to the country when I assert that it is impossible for me to agree with those who so construe the Constitution as to arrive at the erroneous conclusion that the pending bill is in violation of that instrument. It is not my purpose, however, to give the House simply the benefit of my own opinion upon the question, but to endeavor to show to your satisfaction, if possible, that the construction which I place upon the Constitution is precisely in accordance with that placed upon it by the highest judicial tribunal in the land, the Supreme Court of the United States. And this brings us to the celebrated Slaughter-house cases. But, before referring to the decision of the court in detail, I will take this occasion to remark that, for the purposes of this debate at least, I accept as correct the theory that Congress cannot constitutionally pass any law unless it has expressed constitutional grant of power to do so; that the constitutional right of Congress to pass a law must not be implied, but expressed; and that in the absence of such expressed constitutional grant of power the right does not exist. In other words—

The powers not delegated to the United States by

the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

"I repeat, that for the purposes of this debate at least, I accept as correct this theory. After having read over the decision of the court in these Slaughter-house cases several times very carefully, I have been brought very forcibly to this conclusion: that so far as the decision refers to the question of civil rights—the kind of civil rights referred to in this bill—it means this and nothing more: that whatever right or power a State may have had prior to the ratification of the fourteenth amendment it still has, except in certain particulars. In other words, the fourteenth amendment was not intended, in the opinion of the court, to confer upon the Federal Government additional powers in general terms, but only in certain particulars. What are those particulars wherein the fourteenth amendment confers upon the Federal Government power which it did not have before? The right to prevent distinctions and discriminations between the citizens of the United States and of the several States whenever such distinctions and discriminations are made on account of race, color, or previous condition of servitude, and that distinctions and discriminations made upon any other ground than these are not prohibited by the fourteenth amendment. As the discrimination referred to in the Slaughter-house cases was not made upon either of these grounds, it did not come within the constitutional prohibition. As the pending bill refers only to such discriminations as are made on account of race, color, or previous condition of servitude, it necessarily follows that the bill is in harmony with the Constitution as construed by the Supreme Court.

"I will now ask the Clerk to read the following extract from the decision upon which the legal gentlemen on the other side of the House have chiefly relied to sustain them in the assertion that the court has virtually decided the pending bill to be unconstitutional.

The Clerk read as follows:

Of the privileges and immunities of the citizen of the United States, and of the privileges and immunities of the citizen of the State, and what they respectively are, we will presently consider; but we wish to state here that it is only the former which are placed by this clause under the protection of the Federal Constitution, and that the latter, whatever they may be, are not intended to have any additional protection by this paragraph of the amendment.

If, then, there is a difference between the privileges and immunities belonging to a citizen of the United States as such, and those belonging to a citizen of the State as such, the latter must rest for their security and protection where they have heretofore rested, for they are not embraced by this paragraph of the amendment.

Mr. Lynch: "If the court had said nothing more on the question of civil rights, then there would probably be some force in the argument. But, after explaining at length why the case

before it did not come within the constitutional prohibition, the court says:

Having shown that the privileges and immunities relied on in the argument are those which belong to citizens of the States as such, and that they are left to the State government for security and protection, and not by this article placed under the special care of the Federal Government, we may hold ourselves excused from defining the privileges and immunities of citizens of the United States which no State can abridge until some case involving those privileges may make it necessary to do so.

"But there are some Democrats, and, if I am not mistaken, the gentleman from Georgia (Mr. Stephens) is one among the number, who are willing to admit that the recent amendments to the Constitution guarantee to the colored citizens all of the rights, privileges, and immunities that are enjoyed by white citizens. But they say that it is the province of the several States, and not that of the Federal Government, to enforce these constitutional guarantees. This is the most important point in the whole argument. Upon its decision this bill must stand or fall. We will now suppose that the constitutional guarantee of equal rights is conceded, which is an important concession for those calling themselves Jeffersonian Democrats to make. The question that now presents itself is, has the Federal Government the constitutional right to enforce by suitable and appropriate legislation the guarantees herein referred to? Gentlemen on the other side of the House answer the question in the negative; but the Supreme Court answers the question in the following unmistakable language:

"Nor shall any State deny to any person within its jurisdiction the equal protection of the laws. In the light of the history of these amendments and the pervading purpose of them, which we have already discussed, it is not difficult to give a meaning to this clause. The existence of laws in the States where the newly emancipated negroes resided, which discriminated with gross injustice and hardship against them as a class, was the evil to be remedied by this clause, and by it such laws are forbidden.

If, however, the States did not conform their laws to its requirements, then by the fifth section of the article of amendment Congress was authorized to enforce it by suitable legislation. We doubt very much whether any action of a State not directed by way of discrimination against the negroes as a class, or on account of their race, will ever be held to come within the purview of this provision.

"It will be seen from the above that the constitutional right of Congress to pass this bill is fully conceded by the Supreme Court. But, before leaving this subject, I desire to call attention to a short legal argument that was made by a distinguished lawyer in the other end of the Capitol (if it is parliamentary to do so) when the bill was under consideration before that body:

Mr. Carpenter: "Mr. President, as I shall vote against this bill in its present form, I wish to state very briefly why I shall do so. Without discussing other provisions of the bill, one makes it impossible for me to vote for it, and that is the provision in regard to State juries. I know of no more power

in the Government of the United States to determine the component elements of a State jury than of a State bench or of a State Legislature. I can see no argument which shows the powers of this Government to organize State juries that does not apply to State Legislatures; a power which, in my judgment, is clearly not conferred upon this Government. I cannot vote for a bill as an entirety which contains even one provision which I deem unconstitutional. For that reason I shall vote against this bill."

"The Clerk will now read the fourth section of the bill; the section referred to by the distinguished Wisconsin Senator."

The Clerk read as follows:

SEC. 4. That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as juror in any court, national or State, by reason of race, color, or previous condition of servitude; and any officer or other persons charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the reason above named shall, on conviction thereof, be deemed guilty of a misdemeanor and be fined not less than \$1,000 nor more than \$5,000.

Mr. Lynch: "The position assumed by the eminent lawyer is so unreasonable, untenable, and illogical, that it would have surprised me had it been taken by an ordinary village lawyer of inferior acquirements. There is nothing in this section that will justify the assertion that it contemplates regulating State juries. It simply contemplates carrying into effect the constitutional prohibition against distinctions on account of race or color.

"There is also a constitutional prohibition against religious proscription. Let us suppose that another section conferred the power on Congress to enforce the provisions of that article by appropriate legislation; then suppose a State should pass a law disqualifying from voting, holding office, or serving on juries all persons who may be identified with a certain religious denomination; would the distinguished Wisconsin Senator then contend that Congress would have no right to pass a law prohibiting this discrimination, in the face of the constitutional prohibition and the right conferred upon Congress to enforce it by appropriate legislation? I contend that any provision in the constitution or laws of any State that is in conflict with the Constitution of the United States is absolutely null and void; for the Constitution itself declares that—

This Constitution and the laws of the United States which shall be made in pursuance thereof . . . shall be the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding.

"The Constitution further declares that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, . . . nor deny to any person within its jurisdiction the equal protection of the laws.

"And that—

The Congress shall have power to enforce this article by appropriate legislation.

"As the Supreme Court has decided that the above constitutional provision was intended to confer upon Congress the power to prevent distinctions and discriminations when made on account of race or color, I contend that the power of Congress in this respect is applicable to every office under the constitution and laws of any State. Some may think that this is extraordinary power; but such is not the case. For any State can, without violating the fourteenth or fifteenth amendment and the provisions of this bill, prohibit any one from voting, holding office, or serving on juries in its respective limits, who cannot read and write, or who does not own a certain amount of property, or who shall not have resided in the State for a certain number of months, days, or years. The only thing these amendments prevent them from doing in this respect is making the color of a person or the race with which any person may be identified a ground of disqualification from the enjoyment of any of these privileges. The question seems to me to be so clear that further argument is unnecessary."

Mr. Finck, of Ohio, said: "Mr. Speaker, I rise for the purpose of opposing the passage of this measure. A bill of this character, sir, is not to be disposed of by mere appeals to passion, if the Constitution of our country still retains its vigor and the force to control our action. It is a question to be disposed of in accordance with the organic law. If it violates any principle of the Constitution, then it ought not to be passed by this House. The provisions of the first section of this bill are as follows:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theatres, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported, subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

"Other sections of the bill provide penalties by fine and imprisonment for a violation of the provisions of the first section.

"Mr. Speaker, I have read the first section of the Senate bill. There are various amendments proposed in the House by which it is endeavored in some manner to modify the provisions of this section, but substantially the question remains whether or not the Congress of the United States has the constitutional power to pass this proposed measure. I intend to be very brief, but in order that we may consider the question it is necessary to advert to the nature of our Government. The Federal Government is a Government of limited and defined powers. It exists only by virtue of the Constitution of the United States, and it can exercise no powers except such as have been granted by that instrument. If it should be

found upon examination of the Constitution that there has been no power delegated to the Federal Government which warrants this legislation, then if our Republican friends are willing to abide by the Constitution and its limitations they will reject the measure.

"My opposition to this bill is not founded in any hostility to the colored race. I entertain no such hostility.

"Mr. Speaker, soon after the adoption of the Constitution of the United States various amendments were made to it, eleven in number, and all these amendments provided limitations upon the powers of the General Government. An additional amendment was made in the year 1808, but after that, and after a lapse of more than fifty years, there were three other amendments made to the Constitution, namely, the thirteenth, fourteenth, and fifteenth amendments. The first section of the fourteenth article of amendment, under which the advocates of this bill claim the constitutional power to pass it, reads as follows:

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of its laws.

"In the Constitution of the United States there are various limitations and restrictions upon the powers of the Federal Government; and so cautious were the statesmen of the early days of the republic that the Federal Government should exercise no power not delegated to it, that they made provision by an amendment adopted soon after the ratification of the Constitution that—

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

"It will be observed, Mr. Speaker, in the reading of the bill now under discussion, that it is a proposition by the Federal Government to go into the States for the purpose of exercising legislative power over the people of the States, and to control and regulate the local concerns and affairs of the citizens of the several States.

"I deny that under any delegation of power which has been provided by the Constitution or by the amendments which have since become part of the Constitution, any such power can be exercised by the Federal Government. Gentlemen claim that this power can be exercised under the provisions of the first section of the fourteenth amendment to the Constitution. What is it?

No State—

"I am reading the clause under which the power to pass this bill is claimed:

No State shall make or enforce any law which

shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of its laws.

"Now, what is the effect of this clause of the fourteenth amendment? It is a prohibition upon the States. It is a command directed against the States in their organization as States.

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of its laws.

"Now, sir, I deny that there is any grant of power contained in this article of amendment which confers upon the Federal Government the power to pass a law to regulate the keeping of an hotel, or the running of a steamboat, or a railroad train within a State, or to prescribe who shall be permitted to enter into a theatre, and what class of children shall go into the common schools of the States.

"The amendment prohibits the States from doing certain things. No State shall do so and so; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws." It is a command to the State. But it does not confer upon Congress any affirmative power to go into the States and regulate the intercourse of citizens of the State one with the other—not a particle. And this provision of the amendment that the "Congress shall have power to enforce, by appropriate legislation, the provisions of this article," does not confer upon Congress any power to pass this bill.

"It will be observed that the first clause of the fourteenth article of amendment defines who shall be citizens of the United States and of the States; and the next clause provides that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"We have a decision made by the Supreme Court of the State of Ohio in regard to the common schools of that State, in which this clause of the fourteenth amendment was fully considered and discussed by that court. It is a decision made in 1871 by a full court, composed of five eminent jurists of that State, every one of whom was a leading and prominent member of the Republican party. In that decision they held that this clause of the amendment did not authorize the Government of the United States to control the schools within the State; that that was a question for the people of the State under their own constitution and laws. The question grew out of the refusal of the board of school directors of one of the sub-districts in the State of Ohio to permit colored children to attend a school with white children. A suit was prosecuted in the courts of

Ohio and carried up to the Supreme Court of the State; and this question in relation to mixed schools was fully discussed and decided, and the court held, by the unanimous opinion of all the judges, that the State of Ohio had the right to establish separate schools for colored children, and that the fourteenth amendment to the Constitution of the United States did not impair that right.

"I read from the opinion of the court in the case of The State of Ohio *ex rel.* William Garnes vs. John W. McCan and others, 21 Ohio State Reports :

But it is claimed that the law authorizing the classification in question contravenes the provisions of the fourteenth amendment to the Constitution of the United States, and is abrogated, therefore, thereby. . . .

It would seem then that these provisions of the amendment contain nothing conflicting with the statute authorizing the classification in question; nor the decisions heretofore made touching the point in controversy in the case. But the clause relied on in behalf of the plaintiff is that which forbids any State to make or enforce any law which shall abridge the privileges or immunities of citizens of the United States. This involves the inquiry as to what privileges and immunities are embraced in the inhibition of this clause. We are not aware that this has been as yet judicially settled.

The language of the clause, however, taken in connection with other provisions of the amendment and of the Constitution of which it forms a part, affords strong reasons for believing that it includes only such privileges and immunities as are derived from or recognized by the Constitution of the United States. A broader interpretation opens into a field of conjecture limitless as the range of speculative theories; and might work such limitations on the power of the States to manage and regulate their local institutions and affairs as were never contemplated by the amendment. If this construction be correct the clause has no application to this case, for all the privileges of the school system of this State are derived solely from the constitution and laws of the State.

If the General Assembly should pass a law repealing all laws creating and regulating the system, it cannot be claimed that the fourteenth amendment could be interposed to prevent so grievous an abridgment of the privileges of the citizens of the State, for they would thereby be deprived of privileges derived from the State, and not of privileges derived from the United States.

"And further on in the same case the court say :

We have seen that the law in the case before us works no substantial inequality of school privileges between the children of both classes in the locality of the parties. Under the lawful regulation of equal educational privileges, the children of each class are required to attend the school provided for them, and to which they are assigned by those having the lawful official control of all.

The plaintiff then cannot claim that his privileges are abridged on the ground of inequality of school advantages for his children. Nor can he dictate where his children shall be instructed or what teacher shall perform that office, without obtaining privileges not enjoyed by white citizens. Equality of rights does not involve the necessity of educating white and colored persons in the same school any more than it does that of educating children of both sexes in the same school, or that different grades of scholars must be kept in the same school.

Any classification which preserves substantially equal school advantages is not prohibited by either State or Federal Constitution, nor would it contravene the provisions of either. There is then no ground upon which the plaintiff can claim his rights under the fourteenth amendment have been infringed.

"This is a case which was decided by a Republican court of the State of Ohio, in which decision it was held that it was no infringement of the fourteenth article of amendment to the Constitution to prohibit colored children from attending the same school with white children.

"But since that time we have had a decision made by the Supreme Court of the United States, which I believe settles the question of power involved in this bill. It was a decision rendered in the celebrated Slaughter-house cases at the December term, 1872, to which I will call the attention of the House. It involved directly the examination of the powers which were granted to Congress and of the immunities and privileges which were conferred by the fourteenth article of amendment to the Constitution. The Supreme Court laid down distinctly, and clearly, the difference between the rights and immunities of citizens of the United States, and the rights and immunities of citizens of the several States. The court say in that opinion:

It is quite clear, then, that there is a citizenship of the United States and a citizenship of a State which are distinct from each other, and which depend upon different characteristics or circumstances in the individual.

We think these distinctions and its explicit recognition in this amendment of great weight in this argument, because the next paragraph of this same section, which is the only one mainly relied on by the plaintiffs in error, speaks only of privileges and immunities of citizens of the United States, and does not speak of those of citizens of the several States. The argument, however, in favor of plaintiffs rests wholly on the assumption that the citizenship is the same and the privileges and immunities guaranteed by the clause are the same.

The language is, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." It is a little remarkable, if this clause was intended as a protection to the citizen of a State against the legislative power of his own State, that the word citizen of the State should be left out when it is so carefully used, and used in contradistinction to citizens of the United States, in the very sentence which precedes it. It is too clear for argument that the change in phraseology was adopted understandingly and with a purpose.

Of the privileges and immunities of the citizen of the United States and of the privileges and immunities of the citizen of the State, and what they respectively are, we will presently consider; but we wish to state here that it is only the former which are placed by this clause under the protection of the Federal Constitution, and that the latter, whatever they may be, are not intended to have any additional protection by this paragraph of the amendment.

If, then, there is a difference between the privileges and immunities belonging to a citizen of the United States as such, and those belonging to the citizen of the State as such, the latter—

"That is, the rights and immunities of citizens of a State—

must rest for their security and protection where they have heretofore rested, for they are not embraced by this paragraph of the amendment.

"Here is the clear and distinct statement by the court in this case that the privileges and immunities of citizens of a State must rest where they heretofore have rested, under the protection of the State. And further on in this decision the court vindicates what it has already said in regard to the distinction between the privileges and immunities belonging to the citizens of the United States, and privileges and immunities belonging to citizens of the State as such. The court say:

It would be the vainest show of learning to attempt to prove by citations of authority that up to the adoption of the recent amendments no claim or pretense was set up that those rights depended on the Federal Government for their existence or protection, beyond the very few express limitations which the Federal Constitution imposed upon the States—such, for instance, as the prohibition against *ex post facto* laws, bills of attainder, and laws impairing the obligations of contracts. But with the exception of these and a few other restrictions, the entire domain of the privileges and immunities of citizens of the States, as above defined, lay within the constitutional and legislative power of the State and without that of the Federal Government. Was it the purpose of the fourteenth amendment, by its simple declaration that no State should make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, to transfer the security and protection of all the civil rights which we have mentioned from the States to the Federal Government? And where it is declared that Congress shall have the power to enforce the article, was it intended to bring within the powers of Congress the entire domain of civil rights heretofore belonging exclusively to the States?

All this and more must follow if the proposition of the plaintiff in error be sound. For not only are these rights subject to the control of Congress who ever in its discretion any of them are supposed to be abridged by State legislation, but that body may also pass laws in advance, limiting and restricting the exercise of legislative power by the States, in their most ordinary and usual functions, as in judgment it may think proper on all such subject. And still further, such a construction followed the reversal of the judgments of the Supreme Court of Louisiana in these cases would constitute the court a perpetual censor upon all legislation of the States, on the civil rights of their own citizens, with authority to nullify such as it did not approve, consistent with those rights, as they existed at the time of the adoption of this amendment. The argument we admit is not always the most conclusive which is drawn from the consequences urged against the adoption of the particular construction of an instrument. But when, as in the case before us, the consequences are so serious, so far-reaching, and pervading, so great a departure from the spirit and spirit of our institutions; when the effect is to fetter and degrade the State governments by subjecting them to the control of Congress in the exercise of powers heretofore universally conceded to them of the most ordinary and fundamental character, when in fact radically changes the whole theory of the relations of the State and Federal Governments to each other, and of both these governments to the people, the argument has a force that is irresistible in the absence of language which expresses such a purpose too clearly to admit of doubt.

"The court goes on further to say:

We are convinced that no such results were

tended by the Congress which proposed these amendments, nor by the Legislatures, of the States which ratified them.

"Now, mark the language of the court:

Having shown that the privileges and immunities relied on in the argument are those which belonged to citizens of the States as such, and that they are left to the State governments for security and protection and not by this article placed under the special care of the Federal Government, we may hold ourselves excused from defining the privileges and immunities of citizens of the United States, which no State can abridge until some case involving those privileges may make it necessary to do so.

"Mr. Speaker, if the Supreme Court of the United States has decided any question in this case it has decided that the rights, privileges, and immunities of citizens of the States, as such, are left to the protection of the States, and not to the protection of the Federal Government; and it has decided that the rights and immunities belonging to citizens of the States cannot be controlled by the Federal Government. That is the effect of this decision in what are known as the 'Slaughter-house cases.'

"Now what does this bill propose to do? It proposes in the first section to enter into the States and regulate the local affairs and concerns of the people of the States. It proposes to go into the State and say how its school system shall be conducted. It proposes to define and regulate how a hotel within a State shall be conducted. It proposes also to regulate the rights of citizens who enter theatres, places of public amusement, and public conveyances. If the Federal Government has the power to go into the States to regulate these affairs within their boundaries, among their citizens, where is the limit of the power of the Federal Government over the domestic concerns of the States? If the Federal Government may do this, there is no limitation which can be set to the power it may exercise within the States. I say, therefore, at the very threshold, that the provisions of this bill are without authority; there is no power conferred upon the Federal Government to pass the proposed measure. The Supreme Court of the United States has already decided, in the case adverted to, that no such powers have been conferred upon the Federal Government by the fourteenth amendment."

Mr. Rainey, of South Carolina, said: "The act of the determined and earnest opposition to which this measure has been subjected is an additional argument in favor of its passage in order that we may have the constitutional rights guaranteed us, being citizens. The time has come under this Government when we must no longer be looked upon and judged by the color of our skins. Yes, the time is at hand when you must cease to take us for dragging slaves. We may have been such in the past, but you should not fail to remember that we are freemen now, and citizens of this great country in common with yourselves;

therefore entitled to the full enjoyment of all the privileges and immunities incidental to that condition.

"Now, I take the ground that there will be no difficulty in any of the States on account of this bill. There is no argument offered by the opposition to it that was not presented here years ago. True, it was not upon this subject, but subjects of a kindred nature affecting the Government more vitally than this ever will. I assert that this 'genus' in argument has gnawed at the vitals of this republic for nearly half a century, until it was aroused from its masterly inactivity, throttled the demon of rebellion, and asserted its potency.

"It was declared, sir, that if we were enfranchised it would provoke conflict and create strife; that if we were placed in the jury-box it would create a similar result. We have been in the jury-box; we have sat upon cases involving the interests of our fellow-citizens, and have rendered verdicts, and I can say with confidence and pride that as regards my own State our action in this respect has been recognized and accepted even by the Democratic lawyers, who frequently select colored jurors. We have also had the pleasure of voting; and the only trouble to-day is that the colored man is so loyal to the Government and true to the party that has given him such rights as he has, that he cannot be prevailed upon to enter the ranks of the opposition. That is the reason why gentlemen on the other side are fighting so strenuously against our advancement. But I will say to them that we intend to continue to vote so long as the Government gives us the right and the necessary protection; and I know that right accorded to us now will never be withheld in the future if left to the Republican party. The sooner those opposed to us will understand and concede the fact the better it will be for the tranquillity, prosperity, and happiness of the whole country.

"I do not doubt that there are privileges accorded to the colored people in Virginia; that they are allowed to live quietly and without molestation; but I ask why? The answer is, since the election of Governor Walker in that State colored men have been compelled, to a great degree, to vote as the Democracy dictated or else not vote at all, without detriment to their business. Whenever the Democrats get control of a State, they say, 'Every thing is lovely, and the negroes are happy and prosperous;' but just as soon as the Republicans obtain control, then the cry is made loudly that anarchy, ruin, and general destruction are upon the people; that they are oppressed nigh unto death by burdensome taxation, and that the Government is a failure.

"Sir, in the State of South Carolina, where we have a republican form of government indeed, where the colored people are in a majority, we are endeavoring, with a fair prospect of success, to demonstrate that the reconstruction policy is not a failure. You may

overrule us in Virginia, North Carolina, and Georgia; but we will hold our own in South Carolina; and when her government passes out of the hands of Republicans our flag shall yet be flying.

"It may be true that in Virginia they have some regard for the colored people; but I can mention a circumstance from my personal observation which does not show regard for the dead and little for the living. When in Richmond some two or three years ago I was taken to the outskirts of the city where there was a burial-ground in which the slaves had formerly been buried. To my astonishment I found that graveyard cut through for the purpose of opening a street, and the city carts hauling away the dust of those poor dead slaves and strewing the same about the streets to fill up the low places and mud-holes. I saw this with my own eyes, and therefore can testify before God and man as to the fact. Does not this statement show that with some people there is no regard for the poor negro, living or dead? Think of it! The sacred dust of the dead in a civilized community used to fill up mud-holes and low places!

"Yet you talk about humanity; your kindly feeling for the colored race. Gracious Heaven! If you have no feelings for the ashes of the dead; if you have no regard for the dust of the dead slave who served you all the days of his life faithfully, honestly, well, we may have apprehensions as to the manner in which we will be treated, now that we are free and struggling for equal rights, unless we are protected by the strong arm of the law.

"We do not intend to be driven to the frontier as you have driven the Indian. Our purpose is to remain in your midst an integral part of the body politic. We are training our children to take our places when we are gone. We desire this bill that we may train them intelligently and respectably, that they may thus be qualified to be useful citizens in their day and time. We ask you, then, to give us every facility, that we may educate our sons and our daughters as they should be. Deprive us of no rights belonging to us as citizens; give us an equal opportunity in life; then if we fail we will be content if driven to the wall.

"Much apprehension and fear have been exhibited on account of the social aspect of this subject. A few words on that point will not be out of place. This fear and apprehension are unwarranted; there is no social precedent for this alarm. It is merely conjectural, or, in other words, it is nothing more than the result engendered by a diseased and prejudiced mind. Every impartial thinker is aware that no law is supposed possible to regulate the social customs of any people. What is social equality? Is it the undisturbed right to enter public places of amusement, and receive the same accommodations as are offered others at like cost? Surely that cannot be, for it is obvious that suspicious characters are frequently

the occupants of first-class seats among the spectators; so if this settles the question we may well tremble for the purity and reputation of good society. Is it the unrestricted right to be entertained at public inns or restaurants and be respectfully treated? That cannot be, for we have daily instances before us where thieves and others of questionable repute enjoy these advantages without, I hope, being considered social equals of other guests. Is it the right of franchise, of being accommodated by common carriers, whether by land or water, and treated as other first-class passengers are? I think not. It is therefore a waste of argument to insist upon it. Social equality consists in congeniality of feeling, a reciprocity of sentiment, and mutual, social recognition among men, which is graded according to desire and taste, and not by any known or possible law. Men as a rule are always careful never to introduce into the sanctity of their family circles those who would abuse the privilege, or who are not recognized as social equals. This is a right that cannot be disputed, neither can it be invaded by any law or statutory enactment.

"The earnest desire for the passage of this bill as a measure of justice and equity becomes more evident from the stubborn opposition made to it. There has been no measure passed by Congress having for its avowed object the benefit of the negro race in any way but what has met the same contention that has been so apparent in this instance.

"Much has been said about the Constitution and its bearing upon the passage of this bill, and the ultimate result of such an event. Time will not permit me to refer to them all. I will say, by way of general reply, that those who read the Constitution with partial and selfish motives in view fail to see the interests of the colored race apart from what is implied in the last three amendments thereto, and frequently with a narrow conception of those. We claim equal rights and interests with other citizens who are embraced within the limits of all its provisions. If this should not be admitted, the people would soon lose appreciation for that instrument, and clamor for a change that would afford them more general and better protection. Believing it to be adequate for the ample security of all, the people are content with it.

"Article iv., section 2, of the Constitution reads thus:

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

"According to this provision it is unconstitutional to deny any privilege or immunity to colored citizens in either Virginia, Georgia, Kentucky, or any other State that is guaranteed to other citizens. It must be remembered that we are not dealing with the past, but with the immediate present and for the future.

"In this connection reference may be properly made to the public schools. All the ob-

jections that have been urged against the general commingling of white and colored children in these schools have been stated and successfully refuted in the past. There was great dissatisfaction shown at the inauguration of this system in those States where it has been in successful operation for years. It is gratifying to state that the satisfactory results of its workings have dispelled all doubts in regard to its practicability, quieted apprehension, and contributed largely to remove fears and annihilate that prejudice which has been declared upon this floor should be fostered and respected. It is with the aim of making more complete the destruction of this uncharitable sentiment and proscription that the opening of the public schools to all is so much to be desired. Surely the children are not better than their parents, who now sit with us in the jury-box, the legislative hall, and are daily to be seen in the same public conveyances. Therefore I can see no reason why the white and colored children cannot attend the same public school.

"What we desire, Mr. Speaker, is to have the cloud of proscription removed from our horizon, that we may clearly see our way to intellectual and moral advancement. This is nothing more than what all good citizens desire to enjoy and ought to have. I therefore favor the passage of the Senate bill now on your table."

Mr. Cain, of South Carolina, said: "Mr. Speaker, in the discussion of this question of the civil-rights bill, it has become a question of interest to the country how the colored people feel on this question of the schools. I believe, sir, that there is no part of this bill so important as the school clause. The education of the masses is to my mind of vital moment to the welfare, the peace, the safety, and the good government of the republic. Every enlightened nation regards the development of the minds of the masses as of vital importance. How are you going to elevate this large mass of people? What is the means to be employed? Is it not the development of their minds, the moulding and fashioning of their intellects, lifting them up from intellectual degradation by information, by instruction? I know of no other means so well adapted to the development of a nation as education.

"Especially is this true in the Southern States of this Union, where the great cry against the colored people is their ignorance. Admit it, sir, and it is a lamentable fact that the past laws and customs, and habits and interests of the Southern States have prevented the colored people from attaining that education which otherwise they would gladly have attained. It was a part and parcel of the system of slavery to prevent education; for the moment you remove ignorance and develop the minds of those who are enslaved, the less likely they are to remain contentedly in servitude. For this reason it was the policy of the South to keep in ignorance that part of the communi-

ty that they controlled for their benefit as their slaves. Now that there is a change throughout the land, now that these millions formerly enslaved are free, it is essential to the welfare of the nation that they should be educated.

"But the question arises in the discussion of this bill, How and where are you to do this work? As a Republican, and for the sake of the welfare of the Republican party, I am willing, if we cannot rally our friends to those higher conceptions entertained by Mr. Sumner—if we cannot bring up the Republican party to that high standard with regard to the rights of man as seen by those who laid the foundation of this Government—then I am willing to agree to a compromise. If the school clause is objectionable to our friends, and they think they cannot sustain it, then let it be struck out entirely. We want no invidious discrimination in the laws of this country. Either give us that provision in its entirety, or else leave it out altogether, and thus settle the question.

"I believe the time is coming when the good sense of the people of this country, Democrats as well as Republicans, will recognize the necessity of educating the masses. The more the people are educated, the better citizens they make. If you would have peace, if you would have quiet, if you would have good-will, educate the masses of the community. Objection is made to the ignorance of the colored people, and the State of South Carolina is cited as an illustration of that ignorance operating in legislation. Why, sir, if it be true that the legislators of South Carolina are to some extent ignorant, I answer that it is not their fault; the blame lies at somebody else's door.

"Now, sir, let the Democracy, instead of reproaching us with our ignorance, establish schools; let them guarantee to us schoolhouses in all the hamlets of the country; let them not burn them down, but build them up; let them not hang the teachers, but encourage and protect them; and then we shall have a great change in this country.

"Sir, we must be educated. It is education that makes a people great. We are a part and parcel of this great nation, and are called upon to assume the responsibility of citizenship. We must have the appliances that make other people great. We must have schoolhouses and every appliance of education. If your objection is to guaranteeing to us in the civil-rights bill an equal enjoyment of school privileges, then I say surround us with all the other appliances; say nothing of the schoolhouse, if you choose, but enforce our rights under the law of the country, and we shall be enabled to exercise every other privilege in the community."

Mr. Gunckel: "Let me ask the gentleman from South Carolina whether the colored people of the South want mixed schools."

Mr. Cain: "So far as my experience is concerned, I do not believe they do. In South Carolina, where we control the whole school

system, we have not a mixed school except the State College. In localities where whites are in the majority, they have two white trustees and one colored."

Mr. Cobb, of Kansas, said: "I desire to ask the gentleman what, in his opinion, will be the effect of the passage of the Senate civil-rights bill so far as regards the public-school system of the South."

Mr. Cain: "I believe that, if the Congress of the United States will pass it, and make it obligatory upon all the people to obey it, and compel them to obey it, there will be no trouble at all."

Mr. Kellogg: "Would the gentleman prefer to retain the provision in regard to schools which I have moved to strike out in the House bill, or would he rather have that provision struck out according to my amendment?"

Mr. Cain: "I agree to accept it."

Mr. Kellogg: "I offered it in the interest of your people as well as ours."

Mr. Cain: "One word in conclusion. I think I have answered all questions put to me. But I say this, if we pass this bill, make it satisfactory. I know we are in the minority in this country—I speak of course of the colored people. We are willing to accept any thing which is deemed necessary to the welfare of the country. Spare us our liberties; give us peace; give us a chance to live; give us an honest chance in the race of life; place no obstruction in our way; oppress us not; give us an equal chance, and we ask no more of the American people."

Mr. Kellogg: "Mr. Speaker, I do not desire to say any thing upon this bill, except in regard to the amendment I have offered. I think too much time has been consumed already, and this delay has been forced upon us by the action of the other side of the House last week. The amendment I have proposed is to strike out of the House bill reported by the Committee on the Judiciary all that part which relates to schools; and I do it, Mr. Speaker, in the interest of education, and especially in the interest of the education of the colored children of the Southern States. As the bill is now drawn, we recognize a distinction in color which we ought not to recognize by any legislation of the Congress of the United States. Sir, in the legislation of this country I recognize no distinction of color, race, or birthplace. All ought to be equal before the law; and the children of all should have an equal right to the best education they can have in the public schools of the country. But this bill proposes to make a distinction by a national law. The proviso to the first section is one that makes a discrimination as to classes of persons attending public schools; and I do not wish to make any such provision in an act of Congress."

"But upon this school question we should be careful that we do not inflict upon the several States of the Union an injury that we ought

to avoid. A school system in most of the Southern States has been established since the war of the rebellion, by which the colored children of the South have the advantages of an education that they never could have before that time. I believe, from all the information I can obtain, that you will destroy the schools in many of the Southern States if you insist upon this provision of the bill. You will destroy the work of the past ten years and leave them to the mercy of the unfriendly legislation of the States where the party opposed to this bill is in power. And, besides, this matter of schools is one of the subjects that must be recognized and controlled by State legislation. The States establish schools, raise taxes for that purpose, and they are also aided by private benefactions; and they have a right to expend the money, so raised, in their own way. So far as agricultural schools are concerned which are endowed by Congress, it may be proper to make this provision. But, sir, when I see all that has been done for the education of the colored children of the South since the war, all that has been accomplished in that direction, I could not in good conscience vote for any measure which would destroy the whole of the good work that has already been accomplished, and destroy the system of schools already established in those States. I believe the colored people of the South as well as the colored people of the North, when they understand this question, will wish that no such provision shall be made in this or any other bill."

Mr. Butler, of Massachusetts, said: "I had hoped when this bill was first brought before the House that in all kindness of heart, in all singleness of purpose, with all propriety of tone and thought, we should discuss one of the most momentous questions of civil liberty that can be raised; a question the solution of which, for good or for evil, will affect our country longer, much longer, than we shall remain on the earth; but I have been disappointed."

"It is a question of equal civil rights to all citizens—a doctrine in which I was brought up from my earliest boyhood. I have always been taught that the foundation of all democracy was equality of right, equality of burden, equality of power in all men under the law. And when, a few years ago, a religious and partisan furor shook the land, and it was attempted to disfranchise from some of their rights in many of the States a portion of our citizens because of their foreign birth and because of their religion, when the cry went out 'Put no one but Americans on guard,' I stood in my State in almost a hopeless minority, indeed almost alone, in saying that the privilege of American citizenship once granted was like the privilege of the Roman citizen—to be to him the same in Latium and at Athens. And I stood firmly to that until all that prejudice was rolled away from the foreign-born citizen

by his standing shoulder to shoulder with our brothers and sons in the red track of battle.

"Now comes another question of prejudice in which I was educated in my youth differently, the rights of the colored man. He has been made, by right or by wrong, but under the forms and with the force of constitutional law, a citizen of the United States. And were he as black as the black diamond, he has an equal right to every privilege with any citizen who is white as an angel. And upon that ground alone can a democratic republic stand. Upon that ground alone is civil and constitutional liberty on this continent to be preserved. And, therefore, I wonder with amazement when I hear it here stated that this bill is intended as a stab to constitutional liberty. Why, sir, this bill is the very essence of constitutional liberty. What does it do? It simply provides that there shall be an equality of law all over the Union.

"My friend from Mississippi (Mr. Lamar) says that in Mississippi the white man and the colored man have equal privileges. Be it so. Good for Mississippi. This was so made by a Republican Legislature in which was a colored majority. But where is the like law in Kentucky, the 'dark and bloody ground?' Where is that law in Tennessee? Where is that law—without stopping to enumerate—in a majority of the Southern States? But, if it is a good law in Mississippi, why should it not be extended over all the Southern States? If it is a good law, and my friend from Mississippi agrees it is a good law and works well there, why should it not be enforced by proper and sufficient penalties to restrain bad men from violating it? And that is all the bill does.

"I do not here and now mean to deal with the question of schools, for this reason: There are two kinds of opinion in the Republican party on this question. I myself would legislate equal privileges to white and black in the schools, if I had the power, first, to legislate, and, secondly, to enforce the legislation. But the difficulty I find in that is, that there is such a degree of prejudice in the South that I am afraid that the public-school system, which has never yet obtained any special hold in the South, will be broken up if we put that provision in the bill. Then comes the provision of the committee that there shall be separate schools wherever schools are supported by taxation. There are some difficulties with an unwilling people in carrying out that provision, and there is an objection to it on the part of the colored people, because they say they desire no legislation which shall establish any class distinction.

"Then comes the proposition of my friend from Connecticut (Mr. Kellogg) to strike out all relating to schools. I should very much rather have all relating to schools struck out than have even the committee's provision for mixed schools. I leave this provision with these observations.

"I must say once for all that I cannot yield and will not yield to a mortal man. I would yield to my friend from Ohio quicker than to any other man.

"Now, then, what are the objections here made to this bill? The first objection stated on the other side is that this bill establishes social equality. By no means; by no means. I undertook to show, when up before, how by this law social equality is not touched by the bill. It allows men and women of different colors only to come together in public, in theatres, in stage-coaches and cars, in public houses."

The Speaker: "The question is on the amendment of the gentleman from Connecticut (Mr. Kellogg) which is to strike out from the bill reported by the Judiciary Committee the words which will be read by the Clerk."

The Clerk read as follows:

Strike out the following:

And also all common schools and public institutions of learning or benevolence supported in whole or in part by general taxation, and also the institutions known as agricultural colleges endowed by the United States.

Strike out also the following:

Provided, That if any State or the proper authorities in any State, having the control of common schools or other institutions of learning aforesaid, shall establish and maintain separate schools and institutions, giving equal educational advantages in all respects for different classes of persons entitled to attend such schools and institutions, such schools and institutions shall be a sufficient compliance with the provisions of this section so far as they relate to schools and institutions of learning.

The question being taken on the amendment of Mr. Kellogg, there were yeas 128, nays 48.

Mr. Orth called for the yeas and nays.

Mr. Burrows: "Can the question on this amendment be divided?"

The Speaker: "It is not divisible."

The yeas and nays were not ordered.

The amendment of Mr. Kellogg was agreed to.

The bill, as amended, was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time.

The question then recurred on the adoption of Mr. Shank's preamble, as follows:

Whereas, It is essential to just government that we recognize the equality of all men before the law, and hold it is the duty of government in its dealings with the people to mete out equal and exact justice to all, of whatever nativity, race, color, or persuasion, religious or political; and it being the proper object of legislation to enact fundamental principles into law: therefore, etc.

The question was taken; and it was decided in the affirmative—yeas 218, nays 26, not voting 45.

The question was on the passage of the bill.

Mr. Eldredge: "I call for the yeas and nays."

The yeas and nays were ordered.

The question was taken; and there were, as follows:

YEAS—Messrs. Albert, Albright, Averill, Barber, Barrere, Bass, Begole, Biery, Bradley, Buffinton,

Bundy, Burchard, Burleigh, Burroughs, Benjamin F. Butler, Cain, Cannon, Carpenter, Cason, Cessna, Amos Clark, Jr., Freeman Clarke, Clayton, Clements, Stephen A. Cobb, Coburn, Conger, Corwin, Cotton, Crooke, Crounse, Curtiss, Darrall, Dawes, Dobbins, Donnan, Duell, Dunnell, Eames, Field, Fort, Foster, Garfield, Gooch, Gunkel, Hagans, Eugene Hale, Robert S. Hale, Harmer, Benjamin W. Harris, Hathorn, John B. Hawley, Joseph R. Hawley, Hays, Gerry W. Hazelton, John W. Hazelton, Hendee, E. Rockwood Hoar, Hodges, Hooper, Hoskins, Houghton, Howe, Hubbell, Hunter, Hurlbut, Hyde, Hynes, Kasson, Kelley, Kellogg, Lampport, Lansing, Lawrence, Lawson, Lewis, Loughridge, Lowe, Lynch, Martin, McCrary, Alexander S. McDill, James W. McDill, MacDougall, McKee, McNulta, Merriam, Monroe, Moore, Morey, Myers, Negley, Niles, O'Neill, Orr, Orth, Packard, Packer, Page, Isaac C. Parker, Parsons, Pelham, Pendleton, Phillips, Pierce, Pike, James H. Platt, Jr., Poland, Pratt, Rainey, Rapier, Richmond, Ellis H. Roberts, James W. Robinson, Ross, Rusk, Sawyer, Henry B. Saylor, Scofield, Henry J. Souder, Isaac W. Souder, Sessions, Shanks, Sheats, Sheldon, Lazarus D. Shoemaker, Small, Smart, A. Herr Smith, George L. Smith, H. Boardman Smith, John Q. Smith, Snyder, Sprague, Starkweather, Charles A. Stevens, Stowell, Strawbridge, Sypher, Taylor, Charles R. Thomas, Thompson, Todd, Townsend, Tremain, Tyner, Waldron, Wallace, Jasper D. Ward, Marcus L. Ward, White, Whiteley, Wilber, Charles W. Willard, George Willard, Charles G. Williams, John M. S. Williams, William Williams, William B. Williams, James Wilson, Jeremiah M. Wilson, and Woodworth—162.

NAVS—Messrs. Adams, Archer, Arthur, Ashe, Atkins, Banning, Beck, Bell, Berry, Bland, Blount, Bowen, Bright, Bromberg, Brown, Buckner, Roderick B. Butler, Caldwell, Caulfield, Chittenden, John B. Clark, Jr., Clymer, Comingo, Cook, Cox, Crittenden, Crossland, Crutchfield, Davis, DeWitt, Durham, Eldredge, Finck, Giddings, Glover, Gunter, Hamilton, Hancock, Henry R. Harris, John T. Harris, Harrison, Hatcher, Hereford, Herndon, Holman, Hunton, Knapp, Lamar, Lamison, Leach, Lofland, Lowndes, Luttrell, Magee, McLean, Milliken, Mills, Morrison, Neal, Nesmith, Niblack, O'Brien, Hosea W. Parker, Perry, Phelps, Potter, Randall, Read, Robbins, William K. Roberts, James C. Robinson, Milton Saylor, Sohell, John G. Schumaker, Sloan, Sloss, J. Ambler Smith, Speer, Stannard, Standiford, Alexander H. Stephens, Stone, Storm, Swann, Christopher Y. Thomas, Thornburgh, Vance, Waddell, Wells, Whitehead, Whitehouse, Whitthorne, Willie, Ephraim K. Wilson, Wolfe, Wood, John D. Young, and Pierce M. B. Young—99.

NOR VOIRIE—Messrs. Barnum, Barry, Clinton L. Cobb, Creamer, Danford, Farwell, Freeman, Frye, Havens, George F. Hoar, Kendall, Killinger, Marshall, Maynard, Mitchell, Nunn, Thomas C. Platt, Purman, Ransier, Ray, Sener, Sherwood, William A. Smith, Southard, St. John, Strait, Walls, and Wheeler—88.

So the bill was passed.

In the Senate, on February 27th, the bill was reported without amendment and read a third time.

Mr. Edmunds, of Vermont, said: "What does this bill propose to do? This bill that we have under consideration only proposes that if there are any fundamental rights in this Constitution they shall be secured by that power which the Constitution says shall take the measures to secure them, and that the

Congress of the United States by legislation appropriate shall secure to every citizen in this land the rights which the Constitution gives him; and yet Senators say this is invading State rights; this is tyrannical! Why, Mr. President, State rights justly considered, the real and the true rights of States can only be secured under and by the Constitution of the United States; and therefore, in my opinion, it is an invasion of State rights instead of an attack upon them to say that you will turn every State adrift and all its citizens be subject to the turmoil and the disturbance and the passion and the prejudice which may happen from time to time to exist in any particular State. There is no security for a State that is not found under this bond of union which the Constitution of the United States secures; there is no security to any citizen of a State, either under the State or under any other provision, that is not found fundamentally and in the first place in the fact that the whole family of these States have a common interest in his protection and in the protection of his State; and it was so in the first Constitution as it is in this.

"The Constitution of the United States, as was stated in an opinion of the Supreme Court once by an eminent Democratic judge, is a bill of rights for the people of all the States, and no State has a right to say you invade her rights when under this Constitution and according to it you have protected a right of her citizens against class prejudice, against caste prejudice, against sectarian prejudice, against the ten thousand things which in special communities may from time to time arise to disturb the peace and good order of the community. That is all this bill undertakes to do. Now let us see what this bill is.

"That first section of it simply provides that all persons shall be entitled to certain common rights in public places, in the streets, if they were in—they are not in, but that illustrates it—that no State shall have a right and no person shall have a right to interrupt the common use by citizens of the United States of the streets of a town or city. Where is the authority for that, Senators ask; where is the authority for saying that a State shall not have a right to pass a law which shall declare that all citizens of the German race shall go upon the right-hand side of the streets and all citizens of French descent shall go upon the left, and so on, and that all people of a particular religion shall only occupy a particular quarter of the town, and all the people of another religion another side? Is it possible, with a national Constitution which creates fundamentally a national citizenship, that anybody can say a State has a right to make laws of that kind? I should be amazed to hear it stated. If that can be stated, then I should be glad to know what there is in being a citizen of the United States that is worth a man's time to devote himself to defend for a single instant.

"What is it to be a citizen of the United States, if, being that, the citizen cannot be protected in those fundamental privileges and immunities which inhere in the very nature of citizenship? And there is the fault into which my honorable friends on the other side have fallen in arguing this constitutional question. The question is not whether citizens of a particular character, either as to color or religion or race, shall exercise certain functions; but the question is the other way. It is that no citizen shall be deprived of whatever belongs to him in his character as a citizen; and what belongs to a man in his character as a citizen has been long in a great many respects well understood. There was the old Constitution, the fourth article, you remember, which said that citizens of each State should be entitled to the privileges and immunities of citizens of the several States. What did that mean? That has received judicial interpretation.

"By common consent of all parties, before this gravest question arising out of the rebellion and the war has been forced upon us, the courts had held with universal acceptance, I believe, that there did belong to citizens certain inherent rights which could not be denied to them, and that you could not, under the Constitution of the United States, either through State or other authority, set up distinctions which interfered with these fundamental privileges. Perfectly consistent with that, as everybody knows, you may say that in order to fulfill a certain function in the State as to hold a certain office all citizens alike must conform to certain qualifications. Your courts may say—a case which seems to have troubled my honorable friend from Wisconsin (Mr. Carpenter) very much—your courts may say, be they Federal or be they State, that in order to practise law every citizen must possess certain qualifications of sex, of age, of learning, or experience, or whatever; but what has that to do with the question? Unless you can say that it is a fundamental right of a citizen to be a lawyer, you do not get ahead in the argument at all; but yet every one who is acquainted with constitutional history knows that it never has been contended that a fundamental right of a citizen was to be a lawyer or a schoolmaster or a judge or a Senator. The only thing that the Constitution says is that there shall never be a distinction in respect to the rights which belong to a citizen in his inherent character as such. Now, what are those rights? Common rights as the common lawyers used to say, common rights as the courts of the United States have said under the fourth article. Among those may be enumerated—it may be that you cannot make a precise definition, but you can always tell, when you name an instance, whether it falls within or without it—the right to go peaceably in the public streets, the right to enjoy the same privileges and immunities, without qualification

and distinction upon arbitrary reasons, that exist in favor of all others. That is what it is. Then apply it to this bill, and what have you? You say it shall not be competent for any person, either under the authority of a State or without it, to exclude from modes of public travel persons on the ground that they have come from Germany, like my distinguished friend behind me (Mr. Schurz), or that they have come from Ireland, as some other Senators here may have come, or that their descent is traced from Ham or Shem or Japhet. And yet Senators seem to be greatly alarmed when this simple proposition of common right inherent in everybody is put into a statute-book, which carries out a Constitution which declares that every privilege and every immunity of an American citizen shall be sacred and protected by the power of the nation. That is all there is to it; and those, therefore, who go fishing and talking dialectics about attorneys and about slaughter-house cases and police regulations find themselves entirely wide of the mark. The real thing, Mr. President, is that there lies in this Constitution, just as in *Magna Charta*, and as in the bills of rights of all the States, a series of declarations that the rights of citizens shall not be invaded. These bills of rights do not say that A or B or C or any class shall hold an office or be a witness or a jurymen or walk the streets. They only say that these common rights, which belong necessarily to all men alike in the reason of things, shall not be invaded on the pretense that a man is of a particular race or a particular religion."

The Vice-President: "The question is on the passage of the bill."

The result was announced—as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Boreman, Boutwell, Cameron, Chandler, Clayton, Conkling, Conover, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Harvey, Howe, Ingalls, Jones, Logan, Mitchell, Morrill of Vermont, Morton, Oglesby, Patterson, Pease, Pratt, Ramsey, Robertson, Sargent, Scott, Sherman, Spencer, Stewart, Washburn, West, Windom, and Wright—38.

NAYS—Messrs. Bayard, Bogy, Carpenter, Cooper, Davis, Dennis, Eaton, Ferry of Connecticut, Goldthwaite, Gordon, Hager, Hamilton of Maryland, Hamilton of Texas, Kelly, Lewis, McCreery, Merrimon, Norwood, Ransom, Saulsbury Schurz, Sprague, Stevenson, Stockton, Thurman, and Tipton—26.

ABSENT—Messrs. Brownlow, Dorsey, Fenton, Gilbert, Hamlin, Hitchcock, Johnston, Morrill of Maine, and Wadleigh—9.

So the bill was passed.

In the House, on December 17th, the appropriation bill to defray the expenses of the Government being under consideration, the Clerk read as follows:

For the Commissioner of Education, \$3,000; chief clerk, \$2,000; one clerk of class four; one statistician, with the compensation of a clerk of class four; one clerk of class three; one translator, with the compensation of a clerk of class three; one clerk of class two; four copyists, at \$900 each; one messenger, \$640; and one watchman; in all, \$18,860.

Mr. Monroe, of Ohio, said: "I wish to move

several amendments to this paragraph. I will begin with one to increase the number of clerks of class four from one, as proposed in this paragraph, to two.

"I am prepared to say, on my responsibility in my place here, that I believe the estimates which were furnished by the Commissioner of Education in regard to the clerical force which he needed and the appropriations which he required were made just as low as they could be made. It has been the habit of the commissioner of that bureau, in accordance with the suggestions made to him, to put his estimates just as low as he can put them and efficiently and properly discharge the duties of that bureau. And it is my opinion, from personal observation, that the bill of the Committee on Appropriations has cut down his estimates so low that his force will be so reduced that he cannot carry on the work of his office with proper efficiency.

"Now, I say this positively, and I beg leave to call the attention of the committee for a moment to the comparative force allowed and the comparative appropriations made in this bill: first, for the Department of Agriculture; second, for the Bureau of Statistics; and, third, for the Bureau of Education.

"If the committee will compare for a moment the work which these several departments have to do and then compare the appropriations made by the Committee on Appropriations for them, I think they can but feel the appropriations for the Bureau of Education are fixed far too low. Why, sir, in the Treasury Department the head of the Bureau of Statistics corresponds, I suppose, with all the boards of trade in all the principal cities and towns of the United States. Well, the Commissioner of Education must correspond with all the principal cities and towns. The head of the Department of Agriculture must correspond with all the county agricultural societies and other like associations. Well, sir, the Commissioner of Education (and I may say it is but a small part of his duty) has to correspond with every county in the United States. Indeed, the work of correspondence in that office has become something wonderful; something which any member of this House would scarcely believe if he had not personal knowledge of it. I happen to know the fact that the number of regular correspondents of the Bureau of Education—the number of regular correspondents connected with schools, colleges, libraries, and educational institutions of all sorts in all the cities and towns and States and Territories of the Union—is now more than eight thousand.

"I wish to call the attention of the committee to the fact that there are large portions of this Union in which school systems of all sorts are in a state of formation, are in their infancy. You would have no conception, if you were not daily in that office, of the enormous number of letters coming from every section asking

for information on an immense variety of subjects, information about building schoolhouses; plans for building, heating, and ventilating; systems of instruction; and the thousand questions which you, who are familiar with this matter, will at once understand; so that the regular correspondence of the office has become something immense; and my impression is, although I am not so familiar with these other Departments—the Bureau of Statistics and the Bureau of Agriculture—as I am with the labor of this bureau, it is much larger than either of the others in this respect."

Mr. Hale, of Maine, said: "The fundamental error of all this argumentation, all this talk in favor of increasing the appropriations to this bureau, in my mind lies here: that it is not the business of the Government of the United States under our laws and the spirit of the Constitution to build up a great directing educational establishment. That, I believe, we have never heretofore tried to do; and in limiting this appropriation and in guarding it to the extent that we have always guarded it, we have borne in mind and maintained this principle.

"The gentleman from Ohio (Mr. Monroe) says that there are numerous inquiries constantly being received from all parts of the country as to educational matters. Undoubtedly; but it is not the province of Congress to furnish a directing bureau of education to say to a correspondent in Iowa, or in Maine, or in Massachusetts, or in California, that such and such a system should be established; and when you magnify this bureau and begin to extend it, it is a sure step in the direction of a supreme and directory bureau. All of these things begin in this small way.

"I, for one, assent that there shall be here under the direction of the department where it is placed, a small bureau that shall from time to time perform what may perhaps be called statistical labor, in the gathering of reports from different States and different countries and yearly, or oftener, if deemed advisable presenting a report, so that the public may see to this extent, what is going on. For the purpose and in that purview, I believe, lies all that should be given to this bureau."

Mr. G. F. Hoar, of Massachusetts, said: "The Commissioner of Education, confining the work of that bureau to what the gentleman from Maine accurately defines as its proper function—that is, supplying the different States and Territories forming their school systems with such information of what is going on in other States and other Territories and other countries, by means of statistics as can only be gained by a central office, doing for the education of the country just what the Government does for its agriculture, just what the Government does for its commerce, just what the Government does for its inventions—requires a little larger force than is reported in this bill and that is the whole of it.

"Two policies present themselves in dealing with the problems which are upon us; the one charging that ignorance is massed upon the one side and the other charging that disloyalty is massed on the other. Two parties present themselves; the one asks you to send down there bayonets, and the other asks you to give them such aid as the Federal Government may properly do in increasing their intelligence and establishing their systems of education; one demands of the Federal Government bayonets, the other demands of the Federal Government such aid as it gives to commerce, such aid as it gives to agriculture, for educational purposes, in furnishing the necessary assistance in building up systems of education."

Mr. Cox, of New York, said: "I will accept the gentleman's statement. I will say that I have been opposed to all this bureaucratic system, Freedmen's Bureau and all; ay, to the Agricultural Bureau, if you please. And what good has this bureau done? It has depreciated the value of the State school system. It has done no good except to collect statistics which could just as well be collected in some other mode. I remember well when this thing commenced with a small appropriation. It was then said by gentlemen on this side of the House that that was only the entering wedge, and the institution has since grown until the people who seem to understand that powers are being aggregated in this Federal Centre have themselves spoken. And even the eloquent gentleman from Massachusetts (Mr. Dawes) was compelled, in addressing the State Republican Convention of Massachusetts, to say that the Republican party had to call a halt in centralizing power or his party would be lost. I know they speak that way. Sir, I have said, I am opposed to the creation of all these bureaus. The only way is to cut them up by the roots, and it will be done by the next Congress if not by this; for, although we may not have a majority in the Senate in the next Congress, we shall have power in this House to stop the passage of the laws."

Mr. Townsend, of Pennsylvania, said: "Mr. Chairman, I join issue with my friend from New York when he says there is no power in the Constitution under which to establish a bureau of this character. You will find in the Constitution that Congress has power to do many things that are there set forth in the ninth section, and at the end of that section Congress has specific power to make all laws that may be necessary to provide for carrying into execution the foregoing powers and all other powers vested by the Constitution in the Government of the United States or any department thereof. There is no special power mentioned in the Constitution whereby Congress can institute a United States Bank. There is no power in that instrument whereby there can be instituted a Bureau of Education or of Agriculture or a Bureau of Statistics. The question of the power of Con-

gress was mooted when the question of the charter of the United States Bank came before the Supreme Court of the United States, and John Marshall, the greatest jurist that ever sat on the bench, decided that under that clause there was power to create such a bank. He said:

Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to the end, which are not prohibited but which consist with the letter and spirit of the Constitution, are constitutional.

"Under this construction of the Constitution we have created the bureaus mentioned, for Congress has the right to decide whether such bureaus are necessary and proper; if Congress decides that they are, the question of constitutionality ends."

Mr. Willard, of Vermont, said: "I desire to say to the committee that I cannot consider this question as one to be passed upon simply as a question affecting education. I hold that a member of this committee may be as warmly in favor of the highest degree of education and culture as the gentleman from Massachusetts (Mr. G. F. Hoar) or the gentleman from Pennsylvania (Mr. Townsend), and still be opposed to increasing the force of this Bureau of Education. And for this reason: the education of the people, the schools of this country, is committed, and should be committed, to the care of the localities in which those schools exist. There is no State in the Union that would sooner rebel against any Federal interference with its system of schools than the State of Massachusetts; there is no section of this country that would sooner resist any Federal interference with its methods of education than New England; and there is no section of the country, I believe, that has any better schools or any higher system of education. And this has come to be their distinction, because the people believe that they are the best guardians of their educational interests, and they do not care to have the views of other people imposed upon them in this matter of education.

"It may be true that the information collected by this bureau may be of some value. So you might create a hundred bureaus in this Government to collect information that would be of some value to the people. And those who press these appropriations upon our attention seem to proceed upon the assumption of that as the only question at issue, whether the information collected by this bureau is valuable or not. I submit, Mr. Chairman, that that is not an element which should have the smallest influence in deciding this question. We might inquire into a great variety of subjects; we might get information that would be valuable upon large numbers of topics; we might print that information at the public expense, and distribute it throughout the country; and it might be a source of some profit to the people. But that would be no reason why our action

would be warranted by the Constitution or by precedent. The gentleman from Ohio (Mr. Garfield) suggested that we had as much right to collect this information as to collect information in respect to commerce—commercial statistics. I apprehend, sir, that there is a wide distinction. The subject of commerce is committed to Congress by the Constitution itself. The subject of education is not committed to Congress. We have a right to collect information that may guide us in making tariffs, in imposing internal-revenue taxation, in regulating commerce, because legislation upon those subjects is a part of the duty of Congress under the Constitution; but no duty with respect to education is imposed upon Congress."

Mr. Hereford, of West Virginia, said: "There is a broad difference between making appropriations for gathering statistics concerning commerce and gathering statistics concerning education. The Constitution has in express terms given us power over commerce, but not over the systems of education. The sooner the American Congress allows the people of the States to govern themselves in reference to their domestic matters, the better it will be for the people of each State and the better it will be for the people of the whole United States. I am in favor to-day, as I ever have been, of allowing the people in these matters to govern themselves. Let us have local, home, self-government. There is too much government to-day by the Federal authority. I am opposed to this centralization of power. We should not take the power from the people and centralize it in the hands of the General Government."

"Mr. Chairman, I wish I had time to-day to refer to a celebrated speech which a former minister of Spain to England made in this very connection, and where he gave as an instance his own government of Spain, which for over three hundred years had legislated for every thing, taking all power from the people. He stated the result was that although the nation for a time grew powerful the individual became dwarfed. Thus it ever has been, as all history teaches us, and thus it ever will be 'until the last syllable of recorded time.' The more the General Government exercises this power, the more you take away from the individual the privilege he ought to have, the more you teach him to rely upon the government and not upon himself, of course the less reliance he will have upon himself, and the less will he make exertion to help himself, and the less will either the individual or the State develop itself."

"I am in favor, then, of standing by the Constitution, and for that very reason I am opposed to the General Government imposing upon the people of the States any system of education. On the contrary, let each State attend to this matter for itself. I hope, Mr. Chairman, that the whole paragraph will be

stricken out, and if it is stricken out the people will save \$18,336 in this one item."

Mr. Monroe's amendment was rejected.

The question then recurred on the motion of Mr. Hereford to strike out the whole paragraph.

The committee divided; and the tellers reported yeas 85, nays not counted.

So the amendment was rejected.

In the Senate, on February 13th, the bill for the government of the District of Columbia being under consideration, Mr. Thurman, of Ohio, said: "The twenty-fifth section of this bill provides as follows:

That, except in cases of the pecuniary inability so to do, and in cases of the mental or physical incapacity of children so to learn, it will be the duty of every parent, guardian, and of other person having the care or control of any child in said District, to cause, to the best of the authority and means of such person, said child to be reasonably instructed (in reference to its capacity), either in said free public schools or privately, at least in reading, writing, spelling, geography, elementary arithmetic, and the elements of English grammar; and, unless any such child has received from said Board of Education a certificate of having attained such amount of instruction, it will be the duty of such person to cause, to the best of the authority and means of said person, such child to attend such public schools, or some good private school or instruction, during such school-attending age for a period of at least fourteen weeks of each year, eight of which shall be consecutive, from its sixth year to its eighteenth—

"That is, twelve years—

but two evenings of attendance of any public or good private evening school shall be the equivalent of one day's attendance at a day school. Any certificate from the Board of Education, under its seal, touching any matter within the sphere of its duty, or any transcript from its records or register, signed by its president and certified by its secretary as correct, or as being a true copy, shall be regarded as *prima facie* evidence of any facts such certificate may state and as to the qualifications, age, residence, attendance, or non-attendance at any public or other school of any child or person named, or as to any facts required to be stated in any register mentioned in this chapter.

"Now I pause for a moment to say that that introduces what is called compulsory education, and it introduces it in respect to both sexes and requires that compulsory education from the age of six to the age of eighteen. twelve years, although many people have been of the opinion that it is not wise to send a child of six years of age to school but that school education ought to commence much later. But, however that may be, here is a provision for compulsory education for twelve years of all the children of either sex between six and eighteen years of age in this District. How is that enforced? One would suppose that it would be enforced by the punishment of the parent or the guardian who omitted to send the child to school. That would be the natural supposition, but on the contrary the punishment is upon the child."

Mr. Morrill, of Maine, said: "Will my honorable friend state his amendment?"

Mr. Thurman: "I move to strike out the whole of section 25. I have read the provision for compulsory education. Then comes the provision to punish, not the person who fails to send the child to school, but to punish the child by prohibiting any person from employing any such uneducated child within this District, making it an offense to employ the child. I think it is bad enough for the child to have no education, to be ignorant, but to deprive it of employment strikes me as being inhuman. I move to strike out the whole section. I wish the Senate to understand this matter; the twenty-fifth section of this bill requires compulsory education of all children, of either sex, from the age of six to the age of eighteen, and then provides not for punishing the parent or guardian who shall fail to send the child to school, but for punishing the child by making it unlawful for any person in this District to employ a child who is not certified by this Board of Education or some member thereof to have attended school, and in one instance to have made the proper progress as required by this law. Why, sir, it is monstrous enough that the child should be in ignorance; but to deprive the child of even employment that may give it its daily bread on account of the fault of the parent or guardian does strike me as one of the most disgraceful provisions I have ever seen in a law; but I am opposed to the whole section from beginning to end."

Mr. Sherman, of Ohio, said: "I submit a motion to strike out the latter clause. I think the section is worded it would punish the temporary employment of a child. For instance, to employ a vagrant boy on the street for a day or a week as a matter of charity. Is he to be punished? The first clause I think could be enforced by regulations of the commissioners which they have ample power to make under the first section. I move to strike out the latter part."

Mr. Howe, of Wisconsin, said: "I will say that I shall not vote for the amendment to the amendment. I think then you would vote for the most anomalous piece of legislation that I ever heard of. The section as it stands says two things: First, that it is the duty of a child of a certain age to attend school; and, secondly, that employers shall not hire a child not to go to school. The Senator from Ohio (Mr. Sherman) shakes his head. That is the way it strikes me."

Mr. Sherman: "The part I propose to strike out simply punishes the employer of a vagrant child—that is all it does—without any relation to its going to school."

Mr. Howe: "It can scarcely be called a punishment of the Senator from Ohio for hiring a vagrant child when the law simply says he shall not pay the child. The peculiarity of the section as it stands is that it does not say you shall not hire the child, but if you hire him you shall not pay him."

Mr. Sherman: "No; it says no such child—

shall be employed, or furnished with employment, or be paid wages by any person in said District for work done by any such child during any portion of the day, when, according to the regulations of said board, the public schools are open.

Mr. Thurman: "It says he shall not be employed or furnished with employment or be paid wages. He cannot be lawfully furnished with employment."

Mr. Howe: "Suppose you do employ him or furnish him with employment, what becomes of you?"

Mr. Sherman: "You are prosecuted for a violation of the ordinance. The law goes on to provide—

But it shall be a good defense to any prosecution under this clause.

Because there is a general provision in the bill to authorize prosecutions."

Mr. Howe: "Is there any prosecution provided for in this section?"

Mr. Sherman: "Yes; because a section of the bill authorizes a prosecution for any violation of any clause of this bill, and the Board of Regents has power to fix a penalty. Then this goes on to provide in case of such prosecution what the evidence shall be."

Mr. Washburn, of Massachusetts, said: "I hope this section will not be stricken out. I do not think if Senators understood the exact condition of it they would see any thing peculiar in this section. It applies, as I understand, to only the period of fourteen weeks during the year. Very many of our States have this provision and have had it for years. Very many States that have not a provision similar to this are taking steps to require education at least for a certain portion of time. Is it too much to require that every child during a given age shall receive at least fourteen weeks' education during the year? If it is not too much, then is it improper to say that the individual who endeavors to prevent that child from securing fourteen weeks' education in a year shall be prevented from so doing? In my own State the great difficulty is that our manufacturers—those persons who employ children—have been unwilling that those children shall go to school during the number of weeks required by the law; and if you go into many factories you will find children, that ought to be at school undergoing training and preparation to assume the duties and responsibilities of men and women in supporting the government, are employed in the factories and growing up in ignorance. This being the case, it has been found absolutely necessary to provide by law that manufacturers for a certain number of weeks in the year shall not employ these children."

"This section provides that if these children do not attend during the day, they may as an equivalent attend an evening school. It does not seem to me that this Senate wants to say that no provision shall be made for educating

all the children in this District. It occurs to me that it is a necessity which we ought to insist upon. If, as my friend from Ohio says, six years is too young an age, strike out 'six' and insert 'eight;' but do not let us say that they shall not be required to attend school during a certain portion of the time in the year, and that manufacturers or business men or individuals who may wish to employ them in any capacity of life shall not be prevented from employing them during this limited period. It is not a hardship on these children. It is the greatest boon you can confer upon them. They at this early period of their existence are not prepared to judge for themselves. I hope this section will be retained in the bill."

Mr. Thurman: "Mr. President, no man on this floor is more devoted to the cause of education than I am, I am quite sure. I have proved that by my work. I bestowed the largest portion of six years of my life in administering the common-school system of the State of Ohio; and I do not yield to any man in the desire to see the children of this country educated; but at the same time I do not believe that this section would be productive of good. So far as my experience goes, parents avail themselves of the opportunities of education that are afforded. I do not know any place in which education is more general than in the State of Ohio. We never have found any difficulty there in inducing parents to send their children to school. The only trouble has been to provide a sufficient number of schools for them. Parents are so ambitious of seeing their children educated and seeing their condition bettered in the world, that I know of no place in America where parents are not willing to send their children to school if opportunities are afforded them to do so.

"I do not think compulsory education is a desirable thing here. That there may be places in the world where it is, I will not gainsay. But though compulsory education might be a desirable thing, this section does not provide for it. It first provides that it shall be the duty of parents and guardians to send children to school fourteen weeks in each year for twelve years; but there is no sanction whatsoever, except the provision that the punishment shall fall on the child, that the child shall not be employed unless it brings a certificate not simply that it has attended school for fourteen weeks in the year, but also that it has made the 'reasonable attainments' which are required in this bill. If the child cannot do that, cannot come fortified with a certificate that it has attended school fourteen weeks in the year, and not only that, but has 'made the reasonable attainments aforesaid,' it cannot be employed; and what are these 'reasonable attainments?' Attainments in reading, writing, spelling, geography, elementary arithmetic, and the elements of English grammar. Unless it comes fortified with that certificate, everybody is prohibited from employing that child up

even to the age of eighteen years. Why, Mr. President, it will not do at all.

"The Senator who has this bill in charge and my colleague see that this is an enormity to visit the punishment upon the child instead of on the delinquent parent or guardian."

Mr. Morrill, of Maine: "My honorable friend quotes me. I desire to say that that is too strong. I do not concede that it falls upon the child. The child owes service to the parent. In all these cases the child is put to service by the parent, oftentimes against his will and in most cases it is so. Therefore it falls on the parent and not on the child."

Mr. Thurman: "Not at all."

Mr. Morrill, of Maine: "The law steps in before a negligent parent to insist upon it that the child shall have an education, and take away the service from the parent to that end. That is my understanding of it."

Mr. Thurman: "An orphan child owes a service to its guardian for the benefit of the guardian. That is very certain. The wages obtained by a child under guardianship belong to the child; they are simply to be administered by the guardian; and we know in practice that the wages which are obtained by these children, up say to the age of eighteen years do not all go to the parents, even where the children have parents.

"Seeing that, the Senators have proposed to strike out this latter clause which visits the punishment upon the child. Very well, suppose it is stricken out, then the section stands making it the duty of the parent or guardian to send the child to school, but without any sanction whatever to that provision of the law without any thing to enforce it."

Mr. Hamilton, of Texas, said: "I would call the attention of the Senator from Ohio to the sixth disqualification in regard to suffrage on the next page. It deprives a man of the elective franchise who fails to send his child to school. That is punishment enough on the parent, should think. If you strike out the section proposed by the Senator from Ohio it will leave that punishment for the parent."

Mr. Thurman: "What page is that?"

Mr. Hamilton, of Texas: "It is in voting for some officer; it requires a registration of voters—

Sixthly. Must not during the past year have omitted to do his duty as in this act contemplated in regard to educating or sending any child to school."

"Then he is not to be registered as a voter."

Mr. Thurman: "I am very glad the Senate has called my attention to that. Here is a limiting of suffrage in a prodigious way. That is a small smack of know-nothingism in this that had escaped my attention entirely. The voter 'must, if coming of age after the 4th day of July, 1876'—which is pretty close upon us—'be able to read and write the English language, unless disqualified from so doing by physical incapacity.' That knocks out a good many Germans in this District from voting

and a large amount of American citizens of African descent."

Mr. Washburn: "A single word. The Senator from Ohio has referred to the provision as to wages as a punishment of the child."

Mr. Thurman: "Is it not?"

Mr. Washburn: "If I understand the meaning of that language, it is that if a child has made these attainments the board may give permission although the child has not attended school fourteen weeks in the year; but, if the child is ignorant and has not made these attainments, the board must require that the child attend fourteen weeks. The outside is the requirement of fourteen weeks. If the child has attended for fourteen weeks, although it has not made the attainments which are referred to here, there is no difficulty in employing it during the rest of the year."

Mr. Stockton, of New Jersey, said: "Mr. President, I regret very much that the Senator from Massachusetts (Mr. Washburn) should have given us such an account of the inhuman conduct of the manufacturers in Massachusetts to show the necessity of the passage of such a law as this for compulsory education to keep them from preventing children from having a proper education. It is fortunate for us, however, that we are not called upon now and here to make laws in reference to the State of Massachusetts. They have their laws there, and they probably are suitable to their people. This law is not aimed to control rich manufacturers anywhere. The effect of it will not be to operate on that class of children who are fortunate enough even to be in the employment of rich manufacturers."

"Year after year, since I have been here, have you appropriated \$30,000, \$40,000, and \$50,000 from the Treasury in the middle of winter to keep the poor children in this District from starvation. Now, when you vote to compel them to go to school, vote first to fill their bellies. To compel the wretched children who are begging for their parents in this District to go to school or make them or their parents suffer the penalties of this bill, is simply an absurdity. It is cruel and inhuman."

"Education is undoubtedly a necessity in this country. It is undoubtedly true that we cannot hope that republican institutions shall for any length of time continue in this country unless we educate the people; but a compulsory system of education which omits altogether any reference to the circumstances of those who are compelled to go or of those who have charge of them or may be dependent upon them, is certainly an absurdity. It is requiring what cannot be done, and punishing where there is no fault and no crime. Mr. President, not long since I met in the streets of Washington a poor boy, ten or eleven years of age, covered with rags, his feet bare, in the middle of the coldest days in the winter. On the statements of those who were kindly charitable to inquire, I found that the boy had a widowed

mother and five or six brothers and sisters over in what they call the Island. He was a white boy, with a strong Virginia accent. Where those people came from I do not know, nor their history. Those who were charitable enough, I know, did attend to that little case. Is that boy to be made to go to school fourteen weeks without clothes and without shoes or stockings?

"Your compulsory system is not for the rich. It is not for those who can afford to pay for their education. It is for the poor; and this system would apply to the poor boys who cannot provide for their wants, the wants of their parents, and the wants of their starving brothers and sisters, and who require the pittance they earn simply to sustain life. This boy, assisted by a few charitable people, was started as a newspaper boy, and from begging around as a newspaper-boy he advanced until he finally got into another little business, and the last I heard of him he was driving a cart on the public works. You want him to go to school. What are you going to do with the brothers and sisters he supports? What is his mother going to do when she waits for him to come back and bring the half-dollar he has earned in the day?

"I say the bill in this respect will do more wrong—it has more faults, as applied to the condition of things now in the District of Columbia—than any bill I have ever seen introduced in Congress. I am opposed to the whole compulsory school system here from beginning to end."

Mr. Bayard, of Delaware, said: "The Senator from Ohio nearest me (Mr. Thurman) moved first to strike out section 25. His colleague (Mr. Sherman) has proposed an amendment to that motion by moving to strike out a portion of the section. At a proper time I shall move to strike out section 26 as well as section 25, and my reasons for voting in favor of all these amendments I will give in as few words as possible."

"I confess I was not aware that this bill contained a scheme of compulsory education. It seems to me that this is but another illustration of adopting a coercive system and relying upon coercion as a principle in our government instead of the voluntary system on which, I think, the philosophy of that government rests. It is the interference coercively by the State with that which I believe to be the natural duty of the parent that I object to."

"I have no boasts to make of my services in the cause of education, but I can only proclaim myself most sincerely the friend of the cause of education. I appreciate its blessings; I appreciate its importance; and I endeavor, so far as my individual life is concerned, to carry into effect the professions that I make. But I do object to the State taking the place of the parent. If you remove the responsibility from the parent, if you interpose the power of the State instead of the duty of the parent, you

take from the parent that sense of obligation which is the very best security for the education of the child.

"What is the object of this compulsory system of education, which shall place all children in the District from the age of six years up to eighteen under the police control of the officers of the District; that their mental and intellectual regimen shall be measured by the certificate of a Board of Education; that the discretion and control of the parent, instructed by his sense of duty, instructed by the love for his children implanted in his breast by the God of Nature, shall be overruled and disregarded, and made subordinate to the certificate of a Board of Education of the District of Columbia?"

"Mr. President, I resent it as a parent myself. Among the chief blessings which have met me in life is the presence of children who look up to me for protection, and whom I feel bound by every tie to protect, and guard, and educate. If these feelings be mine when I can contemplate some Board of Education or its police agent entering my family, asking me what I have done with this little one or that, whether I have taught them mental arithmetic or whether I have taught them English grammar or any other branch of common education—if I feel resentment at such inquisition into my affairs, shall I not give my humbler neighbor, perhaps my poorer neighbor, or any neighbor, rich or poor, high or low, black or white, credit for the same feeling which I have myself?"

"Sir, I tell you that these inquisitorial, prying, coercive regulations are wholly contrary to the spirit of our institutions, and I regret to see them gaining in force or in credit in this country. I do not care whether I shall stand by myself or whether I shall stand with the great majority of the people of this country at my back, I shall, so long as my conscience is so clear as it is upon this subject, object and protest against this invasion of the domestic and family circle and the rights of the poorest or richest citizen of this land.

"Talk about the education of your children! Here is what? Their intellects are to be trained by law in writing, spelling, geography, elementary arithmetic, and the elements of English grammar; and this, forsooth, that education may be encouraged, and we and the nation may not be disgraced by illiterate or vagrant children! I would rather have one lesson of truth, of modesty, of self subordination, of self-denial, and have those qualities by which a community shall be built up, than I would have this attempt to interfere and give mental education to children and punish those who do not give it as well as the child for not receiving it.

"This occasion is too short for justice to be done to a subject so great as this. But, if this bill had nothing in it but this provision, it would never receive my sanction, however beneficent its other provisions might be. I trust it will be stricken out."

Mr. Sprague, of Rhode Island, said: "To my mind the enactment of this clause in the bill is of no account whatever. We must judge of the working of a law where it has had application and favorable consideration. The country will look to New England for the proper understanding of a law where in New England such a law has operation, because it is conceived that there favorable circumstances attend it. The Senator from New Jersey (Mr. Stockton) has touched the key of the whole question. The compulsory laws in New England are a dead letter. This fact is evident, and the statistics will show it, that notwithstanding the lavish expenditure of money, the building of edifices of an extravagant character, and the whole attention of the people being directed to the system of education, owing in each of those States to the enormous centralization of values, leaving in their circumference and surroundings people without power and without the means of procuring an education, and the circumstances attending the factory system to-day, in proportion to the population, there are more unlettered people than there were in the time of the Revolution. The law respecting New England, where you would look for favorable application of this system, is a dead letter."

The Vice-President: "The question is as the amendment moved by the Senator from Ohio nearest (Mr. Sherman), to the twenty-fifth section of the bill."

The question being taken by yeas and nays resulted—yeas 27, nays 23, as follows:

YEAS—Messrs. Bayard, Boggs, Boreman, Cooper, Cragin, Davis, Dennis, Eaton, Goldthwaite, Gorham, Hager, Hamilton of Maryland, Johnston, Kent, McCreery, Merrimon, Norwood, Ransom, Sargent, Saulsbury, Sherman, Sprague, Stevenson, Stewart, Thurman, and Tipton—27.

NAYS—Messrs. Boutwell, Cameron, Chandler, Clayton, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Harvey, Howe, Ingalls, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Patterson, Pease, Ramsey, Scott, Spencer, Washburn, West, and Wright—23.

ABSENT—Messrs. Alcorn, Allison, Anthony, Brownlow, Carpenter, Conkling, Conover, Doremus, Fenton, Ferry of Connecticut, Gilbert, Hamilton of Texas, Hamlin, Hitchcock, Jones, Lewis, Logan, Oglesby, Pratt, Robertson, Schurz, Wadleigh, and Windom—23.

So the amendment was agreed to.

The Vice-President: "The question recurs on the motion of the Senator from Ohio (Mr. Thurman) to strike out the twenty-fifth section, upon which the yeas and nays have been ordered."

Mr. Thurman: "Before that vote is taken I wish to give some official figures. I have been from a speech delivered by the Delegate from this Territory at the last session, these figures which are taken from the official reports:

Children of school-age in the District of Columbia..... 12,920
Seats provided for the same in public schools..... 12,920

Without public-school benefits of school-age..... 14,000

"Of this number 6,759 are in attendance

upon private schools, leaving 7,866 for whom there are no school accommodations; and now you propose that those seven thousand and odd children, now perhaps eight thousand, when they ask for employment and cannot present the certificate that this bill requires, shall be refused employment."

Mr. Edmunds: "I think that statement is calculated to mislead. I suppose those figures show the total number of children of school-age first, then second the total number of children who have attended school, not the average daily attendance but every single child who has been to school once during the year is put down as having attended school. I suppose the fact will turn out to be, if this city is like others, that with the number of seats provided there will always be seats for a great many more children than attend on each day, although the total result may show that if all the children attended school every day there would not be seats enough for them. There are sickness and vagrancy and the ten thousand things that always make a percentage of children absent themselves from school. Therefore in a district anywhere in Ohio where you have a hundred children of the school-age, if you have seats for seventy, and ninety of them attend school, you will have seats enough, because it will happen from the ten thousand accidents that occur that the total number or any thing like the total number will not attend on any given day. That figuring, therefore, as against this section in my opinion is entirely fallacious."

Mr. Frelinghuysen, of New Jersey, said: "I understood that by the vote just taken that part of the section which prevented children having employment unless they went to school was stricken out of the section."

Mr. Thurman: "Yea."

Mr. Frelinghuysen: "So that it does not follow, as I understand the Senator from Ohio to intimate, that unless they have schooling they are to be deprived of employment. It seems to me that a statement that there are from ten to fourteen thousand children here that have not got school accommodations shows the importance of our passing this section so as to express our opinion to these commissioners, if it only amounts to a declaration that they should make provision for the schooling of the children."

The question being taken by yeas and nays, resulted—yeas 23, nays 29, as follows:

Yea—Messrs. Bayard, Boggy, Cooper, Davis, Denison, Eaton, Goldthwaite, Gordon, Hager, Hamilton, Maryland, Johnston, Kelly, McCreery, Merrimon, Newell, Ramsom, Sargent, Saulsbury, Sprague, Tamm, Stockton, Thurman, and Tipton—23.

Nay—Messrs. Allison, Boreman, Boutwell, Cameron, Chandler, Clayton, Cragin, Edmunds, Ferry, Michigan, Flanagan, Frelinghuysen, Harvey, Iowa, Ingalls, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Patterson, Pease, Ramsey, Sherman, Spencer, Stewart, Wadleigh, Washington, West, and Wright—29.

Absent—Messrs. Alcorn, Anthony, Brownlow,

Carpenter, Conkling, Conover, Dorsey, Fenton, Ferry of Connecticut, Gilbert, Hamilton of Texas, Hamlin, Hitchcock, Jones, Lewis, Logan, Oglesby, Pratt, Robertson, Schurz, and Windom—21.

So the amendment of Mr. Thurman was rejected.

Mr. Thurman: "I have an amendment to offer to section 25 that I hope will be accepted. In line 17 I move to strike out the word 'sixth' and insert 'tenth,' and the word 'eighteenth' and insert 'fifteenth.' It requires now compulsory education from the sixth year to the eighteenth. If my amendment prevails it will be from the tenth to the fifteenth year; I hope there will be no objection to that."

Mr. Morrill, of Maine: "I would suggest 'eighth' instead of 'tenth.'"

Mr. Thurman: "Well, I will put it at eight."

The Vice-President: "The question is on the amendment moved by the Senator from Ohio (Mr. Thurman)."

The amendment was agreed to.

In the Senate, on January 21st, a joint resolution to amend the Constitution, reported by Mr. Morton from the Committee on Privileges and Elections, was considered:

Mr. Morton, of Indiana, said: "Mr. President, the proposition is to amend the Constitution of the United States as to the method of electing President and Vice-President, so as to bring the election home to the people as nearly as possible, and at the same time to avoid the dangers that exist under the present method. No more important question can be considered by the Senate of the United States at this session of Congress; for in my opinion great dangers impend, owing to the imperfection of the present system of electing the President and Vice-President of the United States."

The Chief Clerk read as follows:

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

Mr. Morton: "The first point now to which I call the attention of the Senate is that the election of electors is placed absolutely under the control of the Legislatures of the several States and that Congress had no power over the election of these electors or to determine any question in regard to their election, but that the selection or appointment of electors was to be placed exclusively in the hands of the State Legislatures. The States could not by their constitutions control or in any manner change the appointment of electors; the power of a Legislature to appoint electors is conferred not by the State constitution, but is conferred by the Constitution of the United States, so that it is not in the power of a State constitution to take from the Legislature the power to appoint electors in any way that that Legislature may see proper. The Legislature may re-

peal any day the law by which the electors are elected by the people. The Legislature may elect these electors by joint ballot of the two Houses; it may authorize the Governor to appoint them; it may authorize the Supreme Court of the State to appoint them; and this power has been exercised in various ways in various States. In some States the electors were once elected by separate districts, like members of Congress; in all the States now by general ticket. In some States in times past they were chosen by the different Houses of the Legislature, and where the Houses were divided in politics, the Senate, for instance, being Federal, and the House Republican, they divided the electors by contract, the Senate to choose so many and the House to choose so many. They have been elected by double and treble districts, by dividing the State into a number of districts less than the number of members of Congress, so that one district would elect two or three electors. In other words, various expedients and various methods have been adopted by the States at different times in the choice of electors, and this power to choose electors being placed absolutely with the Legislature of each State by the Constitution, it is in the power of any Legislature, at the next or before the next election, to withdraw the election from the people and choose electors in some other way that may seem good to the Legislature of the State, and Congress has no power to control it; it has no power to determine whether the election has been properly held or not. In other words, no contested election of electors can be determined by the Congress of the United States, because the Constitution has placed that election absolutely and entirely with the States. All the power that Congress has over the electors is contained in the third clause of that section, which is in these words:

"The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

"With these two exceptions every thing is left to the States through their Legislatures.

"This brings me to the consideration of the next proposition. Congress has no power to provide for contesting the election of electors. That power is devolved entirely upon the State Legislatures; and if they make no provision for cases of contested elections of electors Congress cannot do it, because it was the policy of the framers of the Constitution to make the election of President entirely independent of Congress, so that the Executive should be entirely independent of the Legislative; and therefore, if there is to be any provision made under the present Constitution for determining a contested election of electors, it must be made by the several States and cannot be made by Congress. All the power that Congress has is to fix the time when the electors shall be chosen by the States, and to determine the

day when they shall come together as electors to cast their votes, which shall be the same day in all the States.

"The next proposition that I call the attention of the Senate to is that the States have made no provision for contesting the election of electors. All the States have now provided for electing electors by general ticket by the vote of the people; but this is of recent origin. Up to 1824 eight States chose electors by the Legislature, and up to the beginning of the war in 1860 South Carolina chose her electors by the Legislature, just as she did her Senators. Now all the States, however, have agreed that they shall be elected by the people upon general ticket, so that whatever set of electors get the most votes in a State, if it is only a majority of five, cast the whole vote of the State.

"But no State has provided any method of contesting the election of electors. Though this election may be distinguished by fraud, notorious fraud, by violence, by tumult, yet there is no method for contesting it; no State has passed a law for that purpose. Every State has passed laws for contesting the election of Governor, of Lieutenant-Governor, of members of the Legislature, and of all State officers; but no State has made any provision for determining a contested election as to electors; so that whatever electors are certified to by the State authorities have the right to cast the vote, and there is no power in Congress anywhere else to prevent them from doing it, although it may be known to the whole world that they were not honestly elected and have no right to cast the vote of that State.

"Not only that, but the law passed by Congress in 1792 to carry out the provision of the Constitution prohibited any contest in effect either by the State or by Congress. That law provides that the electors shall assemble in the several States on the first Wednesday of December and cast their votes. It further provides that the electors shall be chosen whether by the people or by the Legislature within thirty-four days of the time when they are required to cast their votes, so that a time is left between the selection and the vote for any contest; nor can there be any contest afterward. When the electors have cast their votes, they are *functus officio*; they can never meet again; their office has expired. When they meet and vote on the first Wednesday of December, their functions have expired; they can never be called together again.

"And then the Constitution goes on to provide that they shall vote by ballot. Well, that it may not be known to each other how they voted; that it may never be known to the people how they voted; and then that the vote shall be sealed up and sent to the President of the Senate and that he shall not open that vote until the day it is counted; that the vote is to be opened in the presence of the two Houses and at the very moment it is to be counted; so that, if there is any informality in

that vote, if there is any fraud or irregularity, there is no possibility of knowing it, there is no possibility of correcting it, because the sealed package is not to be opened until the very moment the vote is to be counted in the presence of the two Houses. It seemed never to have occurred to the members of the Convention that there could be two sets of electors; it seems never to have occurred to them that there would be fraud or corruption or any reason why the votes of electors should be set aside. It is clearly a *casus omissus*, a thing overlooked by the framers of the Constitution, and there is no place to contest the vote either of the electors by the people, or by the Legislature, or the vote of the electors for President, because all that they have done is to be absolutely sealed until the very moment when the vote is to be counted.

"Then, Mr. President, how is the vote to be counted? I come to that as the next consideration. The Constitution provides that the vote shall be sealed up when it is cast by the electors, and sent to the President of the Senate, and that he shall open the sealed paper in the presence of the two Houses, 'and the votes shall then be counted.' The two Houses are to come together, and they are to be as witnesses merely. They cannot act together as a joint convention; they cannot vote as one body. There is no function that they can perform when they are together. They are there simply as witnesses. The vote is to be sealed up and sent to the President of the Senate, and he is to open it in the presence of the two Houses, but the two Houses thus assembled can do nothing, whatever may be the irregularity, whatever may be the wrong visible on the face of the papers. They cannot act together as a joint convention; they cannot act as one body; they cannot act as separate Houses in the presence of each other; but the Constitution says 'the vote shall then be counted.' That is all that is to be done.

"Now we see the power which is given to the President of the Senate, ordinarily the Vice-President of the United States. The sealed votes are to be sent to him and he is to open them in the presence of the two Houses, and the votes shall then be counted.' Suppose there are two sets of electoral votes, as in Louisiana at the last election, sent up to the Vice-President; he has two packages, and causes both to be opened in the presence of the two Houses; who shall determine which shall be counted? The one handed over to the Vice-President to be counted must be counted. The choice is left with him. There is no earthly power to correct it. If in the case of Louisiana the Vice-President had handed over to the tellers the electoral votes that had been certified to by McEnery, they must have been counted; there was no power to prevent it; or, if on the other hand he had handed over those that had been signed by Calhoun, they must have been counted. The

two Houses together could do nothing. The two Houses separately could do nothing. This is a case where this great power is vested in the hands of the Vice-President because of an omission in the Constitution. There is no power provided anywhere to determine which of these two sets of electoral votes should be counted, and it depends upon him as to which set he will hand over.

"See what a vast power is placed in the hands of the Vice-President. He may understand, as likely he will, the contents of the different papers that are placed in his hands, and he may be a candidate himself for election. That has so happened six times. It has happened six times that the Vice-President has opened and counted the votes where he himself was a candidate. John Adams as Vice-President opened and counted the votes and declared himself elected in 1797. Mr. Jefferson as Vice-President opened and counted the votes in 1801, when he was a candidate for President, and he declared the vote to be a tie. Suppose in that case there had been two sets of electoral votes from a State, certified to, and in his hands, one of which would have made a tie, and the other of which would have elected him President; there was no constitutional power anywhere to prevent him from handing over that set which would have elected himself as President. Nor could his action have been revised in any possible way. Again in 1821 Mr. Tompkins counted the votes when he himself was a candidate for reelection as Vice-President. In 1837 Mr. Van Buren counted the votes and declared himself elected President of the United States. In 1841 Mr. Johnson counted the vote when he was a candidate for reelection as Vice-President. In 1861 Mr. Breckenridge opened and counted the vote when he was a candidate for President. True, it was done honestly in all these cases; but suppose a case where the election is close, where by opening one set of papers the Vice-President is to be elected President, and by opening another set he is to be defeated, or where by refusing to count at all the vote of a particular State the result will be to elect him or to elect the candidate of his party! You see what a monstrous and irresponsible power has been placed in the hands of the Vice-President or the President of the Senate.

"I have spoken of the theory of the electoral college; and now let us consider how completely it has failed, let us see how completely that theory has been reversed in practice. What was the theory? That the President should not be elected by the people—the people could not be trusted—but the election was to be vested in the hands of select men, who were to come together and act as deliberative, independent bodies. They were all to vote on the same day, so that there should be no collusion between them. The votes could not be cast on different days, where there might be correspondence with different States

so as to control the last elections. That might take place; but the Constitution requires that the electors shall vote in all the States on the same day. And how are they to vote? Vote by ballot, so that one elector may not know how the others vote, and so that the people shall never know how they vote; but they were to deliberate, to be deliberative bodies. They were to consider and discuss, and were thus made independent of all knowledge by the people, that they might act entirely independent of all improper considerations or influences. That was the theory.

"How has it turned out in practice? It has turned out in practice that the electors are pledged in advance to vote for a particular candidate; that they have been elected as mere agents, to cast their votes for the candidates of their party, a pledge that has never been violated, and the violation of which would bring upon the offending party all the indignation that society could invent. It never has been violated and it probably never will. Therefore the theory is a total failure. Instead of being deliberative bodies, they are pledged in advance to vote for particular men. Therefore the reasons for the electoral college have gone. Why not let the people vote themselves for the presidential candidates, instead of voting for electors who are pledged to do the same thing?

"Now let me consider some of the dangers and difficulties attending this system. In the first place, by law when electors have died since their election, or fail to attend, then the others may fill their vacancies. In the case of Texas at the last election, when the electors met to vote, four were absent, just one-half the whole number. The other four supplied the vacancies by election. Suppose there should be five in favor of one candidate and five in favor of another and one elector dies. Then one five will have the majority over the other, and they can fill the vacancy, and they can thus secure a majority in the electoral college.

"But let us look at the unfairness of it in another particular as now adopted. They vote by general ticket in all the States. That set of electors that get a majority of one vote cast the vote of the whole State. A majority of one will cast the entire vote of New York; so that nearly two millions and a half of people are utterly silenced in their vote for President. It becomes an election of States. That was not intended by the framers of the Constitution. They did not intend to make it an election by States in one particular, because they expected the electoral colleges to be deliberative bodies, and as deliberative bodies to divide up, some to vote for one candidate and some for another; but it has turned out in practice that the electors are all pledged in advance to vote for a particular candidate, and that one set or the other set will be elected as an entirety, and they come together and cast

the vote of the State. It is therefore a vote by States; and under the present system ten States can elect a President of the United States. It is just the same thing as if every man in those ten States had cast their votes for those candidates—a thing never likely to happen; but that is the effect of it. It is an election now by States. It is not a national election. It is removed further from a national election than was contemplated by our fathers, because they supposed these electors would divide—first deliberate, first discuss and consider with each other, and then divide the votes; but it turns out they do not do so. They are pledged in advance. They vote as a unit; and therefore the vote of New York, of Indiana, of Pennsylvania, of Illinois, is given as an entirety. It is therefore an election by States. It enables a small minority of the people of the United States to elect a President. Let us suppose, for example, that one man receives enough electoral votes to elect him; that he has carried enough States by small majorities to give him 186 electoral votes. If you please, he has carried New York by 5,000, Pennsylvania by 3,000, and so on, so that his aggregate majority in those States is less than 50,000. His opponent carries the other States by large majorities, so that it may turn out that his opponent will have half a million majority of the popular vote of the United States."

Mr. Bayard: "That was the case with Mr. Lincoln, I believe. He had a very small minority of the entire popular vote of the United States."

Mr. Morton: "But the remaining vote was divided between two other candidates."

Mr. Bayard: "I say he had a small minority of the entire popular vote of the United States."

Mr. Morton: "Yes, he had. It turns out that four Presidents have had less than a majority of the popular vote, and it is the possibility at all times under this system that a small minority of the votes of the people may elect a President of the United States. That is anti-republican; it is anti-democratic; and that possibility of itself calls for a change in the method of electing a President and Vice President of the United States."

"For my part, I would much rather elect the President by the people of the United States as one entire community, but I know we cannot change the Constitution to that effect. I know the small States will never vote for that; but I would prefer it. But the next and the nearest approach that we can make to an election by the people is to elect by districts. Now, I wish to read from the report, which is more accurate than I can state it. I wish to show by past history how far the electoral college has come from representing the popular vote, and how much nearer the district system will approach to it, and I will ask the attention of the Senate to this extract from the report, which has been carefully prepared.

"In the first place, I will state that, so far as I can gather the evidence, the electoral college has never come within 10 per cent. of representing the popular vote, and it several times has differed from it more than 80 per cent.

The following statement of the result in the different presidential elections from 1872 back to 1844 will establish the truth of what we have said:

In 1872 General Grant received 55 per cent. of the votes of the people; in the electoral college he received 81 per cent.

In 1868 General Grant received 52 per cent. of the popular vote, and 73 per cent. of the electoral vote.

In 1864 Mr. Lincoln received 55 per cent. of the popular vote, and 91 per cent. of the electoral vote.

In 1860 Mr. Lincoln received only 40 per cent. of the popular vote; he received 59 per cent. of the electoral vote.

In 1856 Mr. Buchanan received only 45 per cent. of the popular vote; he received 59 per cent. of the electoral vote.

In this election Fillmore received 25 per cent. of the popular vote, and only 2 per cent. of the electoral vote; but fourteen of his friends were elected to Congress.

In 1852 Pierce received 51 per cent. of the popular vote, and 85 per cent. of the electoral vote.

In 1848 General Taylor received 47 per cent. of the popular vote, and 56 per cent. of the electoral vote.

At this election Mr. Van Buren received about 10 per cent. of the popular vote, and received no electoral vote; but three of his friends were elected to the House of Representatives.

In 1844 Mr. Polk received not quite 50 per cent. of the popular vote; he received 62 per cent. of the electoral vote.

"To compare the district system with the general-ticket system and to see how much nearer it comes to representing the people, I call the attention of the Senate to the following statements. I will take the four States of Pennsylvania, Ohio, Indiana, and Illinois:

These States voted solidly for Mr. Lincoln in 1860, casting seventy-four electoral votes. At the same election they returned sixty-six members of Congress, of whom twenty-four were Democrats.

In 1864 the same States cast seventy-six electoral votes for Mr. Lincoln again, and elected the same sixty-eight members of Congress, of whom sixteen were Democrats.

In 1868 the same States threw seventy-six electoral votes solidly for General Grant, and elected sixty-eight members of Congress, of whom twenty-two were Democrats.

In 1872 the same States again voted solidly, giving eighty-five electoral votes to General Grant, and elected seventy-seven members of Congress, of whom twenty-five were Democrats.

In these four States the Democratic strength, as compared with the Republican, has been about as five to ten, but, under the operation of the general-ticket system, they had been wholly unrepresented in the electoral college; but, in the House of Representatives, under the district system, they have had a average of nearly one-third of the members.

"Now I will take the State of New York alone for the same period:

In 1860 New York cast her thirty-five electoral votes solidly for Mr. Lincoln. At the same time she elected thirty-three members of Congress, of whom nine were Democrats. In 1864 she again cast her thirty-three electoral votes solidly for Mr. Lincoln, and at the same time elected thirty-one members of Congress, of whom eleven were Democrats.

In 1868 she cast her thirty-three electoral votes solidly for Mr. Seymour. The State was carried for Mr. Seymour by his overwhelming majority in the city of New York, about the character of which grave charges were made, but of which the committee expresses no opinion; but the rest of the State, unaffected in their districts by this large majority in the city, returned eighteen out of the thirty-one members of Congress, who were opposed to Mr. Seymour, thus showing conclusively how the voice of the people of New York outside of the city had been stifled in the presidential election by the city majority, operating through the general-ticket system.

"There is a very fair illustration of the dangers of the general-ticket system. A large fraud in the city of New York controls the election for Governor, controls the election for President; but in the election of members for Congress by districts, out of the city, not being affected by this large fraud in the city, they elected eighteen Republicans out of thirty-one members of Congress, showing what would have been the voice of New York if the country had not been stifled by the enormous frauds committed in the city, about which fraud there was scarcely any dispute, and will be scarcely any now. These cities present the elements of fraud: New York, Philadelphia, Boston, Cincinnati, St. Louis, and New Orleans, all these large cities; and the fraud committed in a city may control the vote of a whole State, so far as the election by general ticket is concerned; but, if the election is by districts, that fraud only affects the district in which it is committed, and will not control the vote of the whole State. Here is great temptation to fraud; because, where parties are closely divided in a State, with but a small margin one way or the other, there is great temptation to commit a fraud which determines the vote of the whole State. By the election by districts you do not bring the vote absolutely home to the people as you would by a vote as one community, but you come as near to it as possible. You find that the district system approaches more nearly by one-third to the whole popular vote than the election by general ticket in the present method. I would prefer to elect the President by the vote of the whole people as one community; yet I think we cannot do that. I then prefer to come as near to it as possible, to elect the President by districts; and that is what we propose by this amendment. We propose, in the first place, that the candidate who gets the highest number of votes in a State shall have two presidential votes. This is to preserve the autonomy and the power of the small States. They now have two presidential electors, two votes at large, as they have two Senators. We preserve that theory by giving them two presidential votes; and the man who gets the highest vote in the State shall get those two votes. Then we have the State divided into as many districts as it has members of Congress, and the candidate who gets the highest vote in a district has the vote of that district. He may

not have a majority, but, if he has a plurality, if he has more votes than any other candidate, he gets the vote of the district, and it counts one. This brings the election home to the people as nearly as possible. So far as these districts are concerned, we leave the power to make the districts just as it is now with regard to members of Congress. The States now district themselves by their Legislatures, but Congress has the power at any time to lay off the districts for electing members of Congress. It has never been exercised, but that power is reserved to Congress. And we make the same provision in regard to these presidential districts; that is, leave the States to form them in the first place, but reserve the power in Congress to alter them or to change them at any time. These districts may be gerrymandered, as they are for Congress. That has been done; it is an evil; you cannot correct it altogether. But we require the districts to be composed of contiguous territory as nearly as possible, and as nearly equal in population as possible. Under the system of electing members of Congress by districts instead of by general ticket, as I have already shown, you approach one-third more nearly to the popular vote than by electing by the general ticket. In the States that I have mentioned the votes were cast solidly for one candidate for President, yet the same States elected nearly one-third of all their members of Congress on the other side, electing Democrats, showing that by the district system you give to the people of the States comparatively a voice in the election of President according to their views.

"There is another question involved in electing by districts as compared with general ticket, and that is that, when you elect by general ticket under the present system, no man can vote unless he has a party in the State large enough to hold a convention and put an electoral ticket in the field. If I want to vote for a particular candidate, and that candidate has no party in my State, though he may have a strong party in other States, I cannot do it; I must vote for electors who will vote for him. I cannot put an electoral ticket into the field myself, but there must be a party convention to do it. Therefore I am disfranchised in point of fact, unless there is a convention held in that State which will appoint an electoral ticket to vote for the candidate I am in favor of. How did this operate in the South in 1856 and in 1860? In 1856 there were thousands of Republicans in the South who did not vote because there were no electoral tickets in the field for Fremont and Dayton. That peculiar state of public opinion prevailed in those States that Republicans could not meet in convention and nominate electoral tickets. Therefore the votes of those men that were in favor of Fremont and Dayton were entirely lost; they could not vote at all. Under the present system, to enable a man to vote, there must be

enough men of his own way of thinking in the State to put an electoral ticket in the field that he may vote for it. Now, this can hardly be called republican. The government is republican which enables every man to vote directly for the man of his choice, although there may not be another man in the whole State that feels as he does. A particular candidate may have a majority in some States, but he may have scarcely any friends in others; his friends may all be in one district; they may be concentrated; but, unless there is a convention, a caucus, if you please, to nominate candidates for electors, his friends are excluded from voting, because they cannot vote directly, but must vote for intermediate men.

"Now, Mr. President, I consider another question, and that is the danger of the present system. Mark you, no State in this Union has a law to contest the election of electors, and there is no room for a State law; there is no time for it, even if the States were disposed to enact laws. Congress has no power, there is no power to judge except the President of the Senate. He is irresponsible; he is the depository of all the votes, and as to whether those votes shall be cast depends entirely upon himself, so far as the Constitution is concerned. Suppose that the election of President had depended in 1872 upon the vote of Louisiana, or upon the vote of Arkansas, or upon the vote of Texas, would we not, in all probability, have been involved in revolution? If the election of Greeley had depended upon counting the votes certified to by McEnery, or the election of Grant had been dependent upon counting the votes certified to by Kellogg, I ask you what would have been our condition? If it had been decided either way, in all probability there would have been resistance and there would have been rebellion. It is full of danger. We have escaped it thus far. It was a matter of congratulation to both Democrats and Republicans that Grant's majority was as large as to make the vote of Louisiana, of Arkansas, and of Texas unimportant; but if it had been otherwise, if the election was to depend upon the vote of any one of those States, what would have been the result?

"Mr. President, let me consider the result in 1857, when Buchanan and Fremont were candidates. The electoral vote of Wisconsin was not cast on the day fixed by law. The Constitution requires all these votes to be cast upon the same day. There was a snow-storm in Wisconsin that prevented the electors from coming together and voting upon that day. They voted upon the next day. When they came to count the votes in 1857, a motion was made by a Senator to reject the vote of Wisconsin because it was not cast upon the day provided by law. I think the objection itself was good; but what was the decision of the President of the Senate, Mr. Mason? He decided that the motion was out of order. He said nothing was in order but to count the

votes. He overruled the motion, and he would have overruled a motion to exclude the vote of any State. He took the view of his power, and I think it was correct, that the two Houses were there simply as witnesses; they were not there to make motions, they were not there to offer objections; but they were simply there to witness the count; and so he decided. And when motion after motion was made to exclude the vote of Wisconsin because it was not cast as required by law, he decided every time that nothing was in order but to count the votes. And when they had counted the votes, he said the purpose for which they had assembled had been discharged, and the two Houses separated. They had a great debate in the House over the question, which lasted two or three days, and they came to the conclusion, substantially, that the two Houses had no power over the question. They had a debate in the Senate, and they arrived at the same conclusion in the Senate, although not by resolution, that they were powerless. Now, suppose the election had turned upon the vote of Wisconsin—that by counting the vote of Wisconsin Fremont would have been elected, that by rejecting it Buchanan would have been elected. If Mr. Mason had excluded the vote of Wisconsin, his party would have supported it; if he had received the vote of Wisconsin, the Republicans would have supported it; and in that case he would have had beyond all question the decision of the election in his own hands. In either case it would, in all probability, have resulted in violence, in insurrection. The danger was escaped in that case because Buchanan was elected independently of the vote of Wisconsin, and it was no matter how it was cast. But the point to which I call the attention of the Senate was the decision of the Vice-President in that case, that nothing was in order but to count the votes, and that the Houses were there simply to witness that count, but without having any power whatever.

"Now, Mr. President, I come to the consideration of what is called the twenty-second joint rule of the two Houses."

Mr. Sargent: "Will the Senator allow me to make a suggestion?"

Mr. Morton: "Certainly."

Mr. Sargent: "The Senator, by his amendment, it seems to me, does not make provision for one contingency. It may be a remote contingency, but still it may arise, and that is, in case no person should receive a majority of the votes thus cast in the various districts, or if two persons receive the same number, it does not provide which shall have the place or how that controversy shall be settled. Perhaps it is not so remote a contingency, when we find the remarkable fact that in districts where thousands and tens of thousands of votes are cast, still on counting them they come out nearly even. There seems to be some law of chance which leads to parallels in such cases

that are really remarkable. It certainly would not be very remarkable if, after all the votes are cast in the districts and the additional votes are given in the proper manner, it should be found that two persons have an equal number."

Mr. Morton: "I will state that that contingency is not provided for by the amendment. The committee did not agree upon it. I was of the opinion that in such cases as that the election would be by both Houses of Congress in joint convention, each Senator and each Representative having one vote. I will come to the consideration of that after a while. But in regard to the question of majority we provide for that. We dispense with the requirement of a majority, and we adopt the plurality system, and I will now speak of that. We intend to avoid an election by the House altogether, and that that candidate having a plurality shall be elected and not require a majority of all the votes cast. We now require a majority of all the electors appointed to elect, and if no candidate gets a majority of all, then the election goes to the House of Representatives, and the election is there not by each member having a vote, but the election is by States. Now one word as to the plurality rule. It is adopted by all the States except three in the election of State officers. It is adopted by all the States in regard to the election of members of Congress, and no complaint is made of it. It is adopted by the States in the election of electors. The electors who have a plurality are elected. A majority is not required to elect electors, even, under the present system. We believe that the election there should be final, that there should be no second election required, and that that candidate who has a plurality of all the votes, that is, a majority over anybody else, shall be elected. It has worked well in the States; it has been used in most of the States for a hundred years, and no State now proposes to go back from the plurality to the majority system. I now ask for the reading of the twenty-second joint rule."

The Chief Clerk read as follows:

The two Houses shall assemble in the hall of the House of Representatives at the hour of one o'clock P. M., on the second Wednesday in February next succeeding the meeting of the electors of President and Vice-President of the United States, and the President of the Senate shall be their presiding officer; one teller shall be appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, the certificates of the electoral votes; and said tellers, having read the same in the presence and hearing of the two Houses then assembled, shall make a list of the votes as they shall appear from the said certificates; and, the votes having been counted, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote and the names of the persons, if any, elected; which announcement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and, together

with a list of the votes, be entered on the Journals of the two Houses. If, upon the reading of any such certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the Presiding Officer, the Senate shall thereupon withdraw, and said question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall, in like manner, submit said question to the House of Representatives for its decision; and no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses; which being obtained, the two Houses shall immediately reassemble, and the Presiding Officer shall then announce the decision of the question submitted, and upon any such question there shall be no debate in either House; and any other question pertinent to the object for which the two Houses are assembled may be submitted and determined in like manner. At such joint meeting of the two Houses seats shall be provided as follows: For the President of the Senate, the "Speaker's chair;" for the Speaker, a chair immediately upon his left; the Senators in the body of the hall, upon the right of the Presiding Officer; for the Representatives, in the body of the hall not occupied by the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk, and upon either side of the Speaker's platform. Such joint meeting shall not be dissolved until the electoral votes are all counted and the result declared; and no recess shall be taken unless a question shall have arisen in regard to counting any of such votes, in which case it shall be competent for either House, acting separately, in the manner hereinbefore provided, to direct a recess, not beyond the next day at the hour of one o'clock P. M.

Mr. Morton: "The first point to which I call the attention of the Senate is that this twenty-second joint rule is grossly unconstitutional. No provision can be found in the Constitution that gives a shadow of power for its adoption. Not only is it without authority, but it is in violation of the very theory of the Constitution. The intention was to place the election of President independent of Congress, to make the Executive independent of the Legislature, but this makes the election of President to depend on either House, not by a law, but by a joint rule. It enables the Senate by a vote to throw out the vote of North Carolina or New York; it enables the House of Representatives to do the same thing. What is the provision? When you come to look at it, it is monstrous. It is astonishing how that rule could ever have been adopted. The two Houses are assembled to count the votes, and a formal objection is made, if you please, to counting the vote of New York, entirely formal; there may be no sense in it, no foundation for it, but if anybody objects, then the two Houses must separate and they must vote upon this objection, and unless it is overruled by both Houses the vote is rejected. If the Senate sustains the objection, the vote of New York is thrown out. If the House sustains it, the vote of New York is thrown out. It enables either House, without debate—they must not debate without adjournment—they must not adjourn to consider, but they must decide

summarily—it enables either House to throw out the vote of any or of all the States.

"We had an illustration of that the last time the votes were counted. A formal objection was made to receiving the vote of Arkansas. The Houses separated and voted. What was the result? What was the objection to receiving the vote of Arkansas? When you came to look at the seal upon the certificate it did not appear to be the seal of the State. Upon close examination it was found to be the seal of the Secretary of State, and not the great seal of the State. Upon that technicality the vote of Arkansas was lost, the people of Arkansas were disfranchised in the presidential election. It turned out, I believe, that the State had no other seal, and that the seal was put to that certificate that is put to all papers required to be certified by the executive department of Arkansas; and yet upon that objection the vote of Arkansas was lost. The House overruled the objection, but the Senate sustained it. Suppose it had been New York, the vote of New York—the vote of five millions of people—would have been thrown out upon the mere technical objection by one House. There would be more sense in it if it required the concurrence of both Houses to throw out the vote of a State, but, by this rule, one House may reject the vote of a State. And so it may reject the votes of all the States, and you may in every case throw the election of President into the House of Representatives.

"To show you some of the objections offered upon that occasion, I want to refer to the proceedings that took place at the time. For example, a motion was made to reject a part of the vote of Georgia cast for Horace Greeley, upon the ground that he was dead. It would have been very important in determining the question of the majority if the election had been close. The Senate overruled that motion, and decided that the votes cast for Horace Greeley must be counted, so that they would count in making up the majority of all the electoral votes. The House sustained the objection, and the vote of Georgia in part was lost simply because the House of Representatives sustained the objection. There the two Houses disagreed. They disagreed in the case of Arkansas. Now we come to the case of Texas. Objection was made to receiving the vote of Texas. I will read what the objection was, to show the character of it. Mr. Trumbull, a very able lawyer, as you all know, objected on this ground:

Because there is no certificate by the executive authority of that State that the persons who voted for President and Vice-President were appointed as electors of that State, as required by the act of Congress.

"The certificate was informal, had not been made out correctly. That was Mr. Trumbull's objection. It was afterward reinforced by Mr. Dickey, of the House:

Mr. Dickey objected to the counting of the elec-

total vote of the State of Texas, because four electors, less than a majority of those elected, undertook to fill the places of other four electors, who had been elected and were absent.

The two Houses separated and voted. We overruled the objection in the Senate by a vote of 34 to 24; I believe the vote in the House was still closer; but a change of six votes in the Senate would have thrown out the vote of Texas. Luckily nothing depended upon it; but, if the election of one candidate or the other had depended upon it, what would have been the result in that case? Then we come to the vote of Mississippi. A formal objection was made to the vote of Mississippi. We overruled it; the House overruled it by a small majority; but it happened that nothing depended upon that vote. It was not very important; but it shows the possibility of doing the thing. Now let me suppose a case where the Senate belongs to one party and the House to another in point of majority and we come to count the votes. If you please, a Democratic State is called. We look at the certificate. It is informal in some respect; some little objection may be made to it in the nature of a special demurrer. We separate, and vote. The Senate being Republican, we throw out the vote. The next State called is a Republican State. Some little objection is found to that, because a good lawyer can always pick some little flaw in a certificate. The two Houses separate, and the House of Representatives throws out that vote. And thus we throw out first on the one side and then on the other, till they are all gone, and the election goes for nothing.

"This is not only possible but it is probable. Here we have a rule—not a law, but a simple rule agreed upon between the two Houses—by which either House, against the other, may throw out the vote of every State in this Union for President and disfranchise the people and throw the election into the House of Representatives. There could not be a grosser violation of the Constitution of the United States. It was not intended to give Congress any power over the electoral votes; but here by a simple rule, never passed as a law, never approved by the President of the United States, either House of Congress is enabled to disfranchise any and every State in this Union and to throw the election into the House of Representatives. If that is not full of danger, I cannot conceive what is. You take a time when parties are bitter, when party spirit runs high. The election of President is a great prize; the office commands vast patronage and vast power; and here is a rule which enables either House to cast out the vote of any or of all States, disfranchise the people, and throw the election into the House of Representatives. It makes Congress a canvassing board, a thing that the Constitution expressly prohibited, not in words but in effect, by various provisions. While the Constitution attempted to withdraw the

election entirely from Congress, here is a rule that puts it in the hand of either branch. It does not require a joint vote to disfranchise New York, but enables either the House or the Senate to disfranchise New York, Mississippi, or Indiana.

"Now, sir, I come to the question of an election by the House of Representatives. We have a rule that enables either House to throw the election there. What is an election by the House of Representatives? There they vote by States. They do not elect the President by a majority of the members of that House, giving it some sort of a popular character, but they vote by States. Nevada has one vote; New York has one vote. Nevada with forty-two thousand people has the same vote as New York with five million—one hundred and fourteen times the population of Nevada.

There was some calculation made as to the possibility of an election by the House, and I want to read it from the report, as being better stated than I can do it now. Let me call the attention of the Senate to the possibility of an election by the House of Representatives. In the election of a President by the House of Representatives under the present apportionment, each State having one vote, forty-five members out of two hundred and ninety-two can make the election. For example:

Delaware, Nebraska, Nevada, and Oregon, have each one member, and four members would cast the votes of those four States; Rhode Island and Florida have each two, and four members would cast the votes of those States; Minnesota, New Hampshire, West Virginia, Vermont, and Kansas have each three members, and two votes in each, or ten members in all five, would cast the votes of those five States; Arkansas, California, and Connecticut have four members each, and three in each, or nine in all, may cast their votes; Maine and South Carolina have each five members, three of whom in each, or six in both, may cast their two votes; Maryland, Mississippi, and Texas have each six members, and four in each, or twelve in all, may cast the vote of those three States. This makes nineteen States, or a majority of the States in the Union, and forty-five members may cast their votes and elect a President of the United States against the wishes of the other two hundred and forty-seven members of the House of Representatives.

This may not be likely to happen; but this can be done under the election of a President by the House of Representatives. Why, sir, to call that republican or to call it democratic is to make nonsense of it. It is as far removed as possible from what may be considered a democratic or republican election of a President of the United States. And see how it is done: The voting is by members elected two years before. Members elected two years before on different issues, when the politics of the country were entirely different from what they are when the election takes place, are to choose the President of the United States and do it by States.

The election of a President by the House of Representatives is full of danger. It has been tried twice, and each time we came near mak-

ing shipwreck. Can this Government stand the strain of another election by the House of Representatives? The monstrous injustice of giving forty-two thousand people in the State of Nevada the same voice in electing a President that New York with five million has is too great a strain for the Constitution of the United States. In 1801 it came near making shipwreck. They balloted until nearly the 4th of March, and then an election was secured by a change brought about under circumstances that I will not now state, not reflecting great credit upon the parties engaged in that change. In 1825 John Quincy Adams was elected by the House. The election was said to have been brought about by the action of Mr. Clay in securing for Mr. Adams the vote of Kentucky. Mr. Clay was afterward appointed Secretary of State. He never recovered from it. It was too great a power. I do not believe that Mr. Clay was guilty of corruption; I think that is not the general opinion; but the fact that Mr. Clay caused the vote of Kentucky to be cast for Mr. Adams, and that Mr. Adams afterward appointed him Secretary of State, ruined the prospects of Henry Clay; he never recovered from it. And now think of the grand opportunities for corruption. Take those States where one Representative casts the vote of the State; take the State of Nevada, or any other State that has but one member; that one Representative has the same power as all the Representatives of the State of New York. The patronage of the President is ample enough to reach every member of that House. You cannot conceive of grander opportunities for corruption than with a Representative from a State where there is but one Representative, or where a Representative may cast the casting vote in the delegation of a State and determine the vote of it. It is not only anti-republican essentially; it was the result of a compromise; but it is full of danger; and in these days, when there is so much said about the danger of corruption, we cannot contemplate without horror the idea that the election may be placed in the House, where a few members of the House, by the sale of their votes or the promise of office to themselves or to their friends, may determine the election and elect a President for forty-two millions of people.

"Mr. President, to sum up the points which I am making against the present provisions of the Constitution and in favor of the proposed amendment, I will state that the theory of the electoral college grew out of a distrust and unwillingness to allow the President of the United States to be elected by the people; that the theory was that the election should be committed to a body of men who should be made entirely independent, who should meet and deliberate and vote secretly, so that they might be independent; that their action should never be known, they should vote by the ballot, but all of that has been reversed by pledging them in advance to vote for particular candidates;

that by the general-ticket system the vote is by States, it is an election by States, it is not national in its character; that a few States may control the election, so that now attention is paid only to the votes of the larger States, the votes of the small States have very little consideration, but under the plan proposed each district must be counted by itself and it is the same thing whether it is in a large State or in a small State; that under the present system a small minority of the people of the United States may elect a President against a very large majority for the defeated candidate that under the present system the electoral vote has never approached within 10 per cent of the popular vote, and has varied from several times from 30 to 35 per cent; that under the present system an election may be had by the States in the House of Representatives in defiance of the popular vote and in defiance of the plurality vote of the electors.

"General Jackson in 1824 had the large popular majority that any President has ever received in the United States, and he had a large plurality of the electoral votes also; but there were four candidates, and he did not get a majority of all the electors. The election went to the House of Representatives, and Mr. Adams, who did not receive one-third of the popular vote, was elected over General Jackson. What has been done may be done again.

"Then there is no method now of contesting a fraudulent election of electors. Though the fraud may be so open that the world knows it, yet that vote must be counted unless the President of the Senate shall take the responsibility of withholding the vote on the day when it is to be counted. I say further that there is a power in Congress, that there is no room left to the States, in point of fact, to contest the election of electors; that under an election in the House, the vote being taken by States, forty-five members of that House may elect a President against the wishes of two hundred and forty-seven; that the States casting the vote may have a population of only one-fifth of the entire population of the United States.

"Mr. President, the original theory that the people could not be intrusted with the election has failed. We now understand that large constituencies are safer than small constituencies. The patronage of the President is ample to reach every elector; it is ample to reach every member of the House of Representatives but it is not ample enough to reach the people of the United States where they vote directly for the candidate of their choice. We are in danger of a collision at any time. In a closely contested election, to be decided by fraudulent votes, to be decided by arbitrary conduct on the part of the President of the Senate, there is danger of revolution.

"Now, I submit to the members of the Senate that this question is too important to be passed over. It ought not to go over this session without action. You may not be able

to agree upon this amendment, but perhaps you can agree upon something by which we can take away all or a part of the dangers by which we are surrounded; and I submit that the Senate ought never to give up the consideration of this question until something has been decided that we may send to the House of Representatives for their concurrence.

"It is more important than any other measure that can possibly come before us. It is not new. For more than seventy years attempts have been made, at different times, to change the Constitution so as to avoid some of these dangers. Amendments have passed the Senate and the House four times by a two-thirds majority to avoid some of these evils, and yet finally failed. The question is not new. The remedy proposed is not new, it is almost as old as the Constitution. Seventy years ago some of the ablest men in the Senate of the United States foresaw these dangers, but they have been allowed to sleep along. But shall we allow them to sleep along until the danger comes, until the actual collision takes place?"

Mr. Thurman, of Ohio, said: "Mr. President, the dangers to which we are subjected have not been exaggerated by the Senator from Indiana; the difficulties under which we labor have not been exaggerated at all; but it does seem to me that the remedy proposed by the committee in the resolution now under consideration really fails to meet the very danger which is most menacing. That there may be frauds in the election we all know. That there may be fraudulent returns in the States and a fraudulent count of returns, with the experience of Louisiana before us, needs no proof. But the greatest difficulty, the most menacing of all, is the count of the electoral votes here in Washington. If the result of the presidential election had depended on the votes of Arkansas and Texas at the last count that was made, we might have seen this country plunged in civil war. And before that we once witnessed the most extraordinary spectacle when the votes were counted in February, 1869, when the President of the Senate, or the acting Vice-President as he was called, announced that under a resolution passed by the two Houses of Congress the vote of the State of Georgia should be counted if it did not change the result; but that if it should change the result it was to be rejected.

"With these dangers menacing us, liable at any moment by this mode of counting the vote to see this country convulsed from one end to the other, not in a sectional way, but in a way that may reach every hamlet in the land, I must confess I was a little surprised when I looked at this report to find that it provides no sufficient or safe mode of counting the electoral vote."

Mr. Morton: "Will the Senator allow me a word just there?"

Mr. Thurman: "Certainly."

Mr. Morton: "I intended to speak of that

part of the amendment providing a tribunal for the decision of contested elections. It was a subject of grave consideration in the committee. Some were in favor of constituting the Supreme Court of the United States the tribunal to decide questions of contested elections; others thought the circuit courts or the district courts of the United States should be provided; others again thought there ought to be a special tribunal created by Congress. It was then thought better to place the whole matter in the decision of Congress to provide this tribunal. If we should put any special tribunal into the Constitution, it might not work well, and it might be difficult to change it. It was thought better, therefore, to leave the whole subject to Congress, believing that Congress would come to a safe and wise conclusion, because the subject was necessarily not of a party character, but one upon which men would differ or act together simply as they were patriots and lovers of their country, and we therefore inserted this provision:

The Congress shall have power to provide for holding and conducting the elections of President and Vice-President, and to establish tribunals for the decision of such elections as may be contested.

"We could therefore establish, if Congress thought proper, the Supreme Court as the tribunal, or the circuit courts in the different parts of the United States, or we could establish an independent tribunal for this very purpose. The whole power is left to Congress, where it did not rest before."

Mr. Conkling, of New York, said: "Was it the opinion of the Committee on Privileges and Elections that, under the Constitution as it stands now, Congress has not the power to dispense not only with the twenty-second joint rule, but to put in its place a mode safer for ascertaining and counting the electoral votes?"

Mr. Morton: "I cannot speak for all the members of the committee. I think there can be no doubt that Congress can dispense with the twenty-second joint rule, and that if nothing else be done that ought to be done. But it was my opinion, and I think the opinion of other members of the committee, though I will not undertake to speak for them, that Congress has no jurisdiction over the question; that the question of appointing electors and determining who are appointed is a question that belongs to the Legislatures of the several States, and that the other provisions of the Constitution show that it was intended to take the whole subject out of the hands of Congress except in regard to two things which are specially mentioned: first, the time of choosing the electors by the Legislatures; and, second, the time when the votes shall be cast by the electors, which shall be on the same day in all the States. My own conviction is that Congress has no power over the subject whatever, and that the power of the Vice-President results *ex necessitate rei* from the absence of any power to control him.

Mr. Thurman: "I was aware that in the resolution reported by the committee there is a provision that Congress shall have power to provide for counting these votes, and indeed for much more than that; but I, for one, am not willing to confide that power to Congress. I want the tribunal that shall count these votes to be provided for in the Constitution. Whether it be the Supreme Court or whether it be some tribunal created for that specific purpose, whatever it may be, I want it provided for in the Constitution. I do not want the laws that are to affect these great privileges, that are to operate on this great subject, to be at the mercy of the dominant faction for the time being in Congress, whatever party that faction may be. I want it fixed in the fundamental law, so that every party shall be compelled to obey it. Therefore, with great respect to the committee and to the able chairman of it, who has devoted so much patriotic labor to this subject, I do say that in my humble judgment the report is manifestly defective in this particular; that it will not do; it will not cure the evils, and the greatest of all the evils, that attend this subject.

"Mr. President, there is another matter in this resolution that requires the gravest consideration. It proposes a sweeping change in the mode of electing the President of the United States. I will not refer to the abolition of the college of electors. I do not think that is a matter of so much importance; but I refer to that change by which the President is to be elected by a plurality instead of by a majority. That is a sweeping change, that is a mighty change, I may say, in our mode of electing the Chief Magistrate of this country; and when we come to consider the tendency to increase his power, when we come to look at the facts that show the mighty growth of executive power in this country, it behooves us to take care that we move slowly in the direction of so fundamental a change as that proposed by the report of this committee. I will not say that under no possible circumstances might such a change be undesirable, but I want to amend the Constitution of this country, when it is amended, with the utmost care. It is not a thing to be lightly dealt with. It is not a by-law, or an ordinance, or an ordinary act of legislation that is to be changed every day with every tide of public sentiment or according to the notion of any party that happens to be dominant in the halls of Congress. Changes in it should be made with the utmost care by every one engaged in making those changes, from their inauguration in either House of Congress to the final votes of the people or of the Legislatures by which amendments are to be ratified or rejected. Therefore, it does seem to me that a proposition so sweeping as this deserves, and must receive before it can be acted upon, the most ample consideration of the Senate."

Mr. Conkling, of New York, said: "I will

not at this time ask the Senate to listen to an opinion from me as to power conferred by the Constitution to adopt this twenty-second joint rule, but, if I read Article XII. with so much latitude as to convince me that the twenty-second joint rule is within its permission, I think I should be willing to rely even upon my own ingenuity then to devise ways and modes, under a reading of the Constitution as broad as that, which would go very far to avoid and guard against the danger that surrounds the count. Certainly I think few lawyers will study the twenty-second joint rule and deny that some of its provisions are at least questionable in respect of the power given by the Constitution thus to direct and govern the counting of the votes.

"Returning for a moment to those words in the Constitution, we find that the President of the Senate is to do but one thing, which is to open, and of course manually to present, and be the custodian of, the returns upon which the election is to depend, which are called in this provision of the Constitution 'the certificates.' Then we find the language changes, and it ordains in most mandatory phrase that 'the votes shall then be counted.' There, I submit, is appropriate domain for legislative discretion, either by legislation or by a joint rule, if concurrent action between the two Houses rather than legislative action be preferred. I find added:

The person having the greatest number of votes for President shall be the President.

"Those are not superficial words. They do not relate to the *modus*; they are not confined to the count; but they go to the ultimate result, and declare that the person having the greatest number of votes shall be the President. Stopping where I am, as I do not mean to detain the Senate, I cannot doubt, until some Senator shall adduce reasons which have never been given in my hearing, that there lies within the limits of that provision an opportunity not only to dispense with the twenty-second joint rule, but to put in its place a rule or a statute under which those words can certainly be enforced, under which the votes can be counted and counted in the presence of the two Houses, and under which the person for whom a majority of them has in truth been cast shall be the President. Of the details I say nothing; of the merits of the proposed constitutional amendment I say nothing; but I do say, and had I the power to do it and believed it to be necessary, I would bring it home to every Senator and impress it upon him, that we shall fall short in an urgent and imminent duty if the 4th of March witnesses a dissolution of these two Houses without their having devised some mode better than the twenty-second joint rule of ascertaining and recording and establishing the will of the people expressed by elections in the States as to the choice of a Chief Magistrate."

Mr. Edmunds, of Vermont, said: "There is

great force in what the Senator from New York has said touching the doubts that may arise respecting the twenty-second joint rule. I think myself that there is constitutional power in the legislative branches of the Government to regulate the exercise of the power conferred in the Constitution respecting the election of President and Vice-President, just as, in all other powers granted in the Constitution, Congress has always exercised and must always exercise the authority to regulate the methods and manners through which the ends looked to in the Constitution are to be reached. We have always done that as to the courts, in many respects as to elections, and in fact respecting the exercise of almost every one of the powers granted in the Constitution. But whether it is competent for the two Houses, not acting in a legislative capacity, but each acting for itself, to provide a rule by which it is in the power of either House to prevent the counting of every vote that may be returned from a State, is open to very grave question indeed.

"It is plain enough, I think, that Congress cannot by a law declare that the Vice-President of the United States, or rather the President of the Senate, whoever he may be, should not open and count the returns made from the various States; but the manner of such a count, what should be regarded as in law a vote of a State, the means of ascertaining whether it is the legal vote of the State, it appears to me, must be the subject of legislative provision. And so also I think it safe to say—perhaps safer than what I have already said—that Congress may provide by law a tribunal which, in case of a dispute after the function named in the Constitution has exhausted itself, of this opening and counting of the votes, shall have the power to decide who is legally elected President of the United States; not to review the action which the Constitution declares the Presiding Officer of the Senate shall take in the presence of the two Houses, but to ascertain in a method pointed out by law what are the votes that the States have given, and who therefore is the person who has received, in the language of the Constitution, the greatest number of votes."

Mr. Anthony, of Rhode Island, said: "Mr. President, agreeing with the conclusion of the report, although not fully with some of its reasoning, I shall briefly consider the subject particularly with reference to the smaller States of the Union, one of which I have the honor, in part, to represent.

"But first, while I fully appreciate the peril of the existing system, in some respects, I apprehend no danger from the election of a President, in the last resort, in the mode in which the Constitution provides, the mode which the people ordained, the mode to which every State has solemnly assented, and which has been twice tried, and the President thereby elected has exercised, undisputed, all the

authority of his office. The people of the United States are a law-abiding people. They must be a very restless and unreasonable people who would revolt at a mode of election which themselves had ordained, and had twice consented to, and which they have the power to change. There are reasons sufficient for the change proposed, there is danger sufficient in the present system, without supposing one which could arise only from the insubordination of the people to their own law, changeable, at their pleasure, in the mode which they have provided. That an election illegally or fraudulently forced through the House of Representatives might endanger the stability of the Government is just as probable as that an election illegally or fraudulently accomplished in any other way might produce that result. In either case, the dissatisfaction would be, not with the provisions of the Constitution, but with the perversion, the violation of those provisions. In the case of James K. Polk, who was thought by the friends of Henry Clay to have been elected by the naturalization frauds in New York and by the Plaquemine frauds in Louisiana, the people submitted, because there was no legal remedy, and because all the forms of law had been complied with. And moreover, although the supporters of Mr. Clay believed that a majority ought to have been returned for him, it was undeniable that the difference in the legal votes of the two candidates was small. It was not as though a President had been forced on the people against the wish of the great majority.

"In the case of John Quincy Adams, although there was a good deal of partisan talk about not submitting to the election by the House of Representatives, there was never any real danger to the public tranquillity; and the talk was not against the constitutional mode of the election, but against the agencies by which it was alleged to have been accomplished. That these allegations of fraudulent or improper agencies were the suspicions or the inventions of heated partisanship history has well established. But they had, at the time, a great effect; indeed, to them was due all the apprehension, real or imaginary, of danger from the unusual but constitutional mode of the election. There was no proper cause of complaint, certainly none of indignation. There was no outrage upon popular rights. The people had divided their votes among four candidates, and neither having a majority, the election came into the House of Representatives. Jackson received 99 electoral votes and Adams 84, and there were 78 against both. With so small a plurality, and in so decided a minority, the candidate who received the highest number of votes had no right to claim from the Representatives, on whom the election devolved, the subordination of their own judgment to that of a minority of the electors, who had cast their votes for the highest candidate. To claim this would be to claim an election by a simple

plurality, and to make the election by the House less than a ministerial office, a mere farce. It was on no such ground that the friends of Jackson denounced the Representatives who had exercised their constitutional right and their constitutional duty. It was on the pretense of corrupt bargaining in the election, a pretense which deceived many well-meaning men.

"The previous case of the election of Jefferson presented a much more serious cause of alarm. Yet this did not arise out of the mode of the election, but out of the singular complications which threatened to prevent an election of either President or Vice-President, and to bring the Government to a stand-still. It was reported that the opponents of Jefferson had gone so far as to determine that, rather than to submit to his election, they would prevent an organization, and drive the country to revolution. No such purpose was entertained, unless by a few hot-headed men, who were found in every party, and for which no party should be held responsible. Hamilton disapproved even of the initial proceeding, and frankly and earnestly declared that it was more than a mistake, that it was full of danger, and that its success would threaten the very existence of the Government. Jefferson, who naturally listened with credulity to these reports, said that, while he would have joined in armed hostility against any act of usurpation, he would have cheerfully yielded to the election of Burr and taken the place of Vice-President, 'because, however it might have been variant from the intention of the voters, yet it would have been agreeable to the Constitution.' The crisis did not grow out of any unfairness in the mode of election by States, but out of an apprehended abuse of that mode of election, as any other mode might be abused. Had the same dead-lock occurred by the equal division of the electoral or of the popular vote, a similar danger might have occurred. The danger was not in the system, but in the party madness which strove to pervert to party uses the mode appointed for continuing the Government, and to do this, at the risk of destroying the Government itself. There was not, in either case, just cause of complaint of the equality of the States in the election by the House. And in the result it proved that patriotism was too strong for party, and some of the strongest Federalists—and these, it must be remarked, were from the smaller States—took the course which Hamilton advised from the beginning, and voted for Jefferson, or cast blank votes, which amounted to the same thing.

"The lead in that patriotic act was taken by the grandfather of the Senator, may I not say the hereditary Senator whose credentials of reelection from Delaware have just been read, and whose name has been borne in this chamber by three generations, *sans peur et sans reproche*.

"Moreover, there is great advantage in keeping constantly in view the federal character of

the Government and the power of the States out of which the republic grew. We have been compelled, in the great struggle for national existence, and in reorganizing government on the principles which prevailed in that struggle, to transfer to the General Government power and authority which had hitherto been exercised by the States, and which we had been educated to believe could be best exercised by them. While the necessity of this sacrifice was to be regretted, no patriotic man regrets that it was rendered. In that way alone could the rights, the existence of the States themselves, be preserved.

"Nor do I agree in all that is said about the unfairness of this mode of election. If the election were made originally by the States, each State having one vote, the objection urged to it would be unanswerable; but, as the choice is confined to the three candidates who have received the highest number of electoral votes, the only power of the House is to select which one of three men, high in the public confidence and favor, shall exercise the office which must be exercised by somebody, and the people cannot decide upon whom to confer it. The action of the House is very different from a free election; it partakes of a judicial as well as of a political character.

"In yielding my assent to the proposed amendment, I am not therefore influenced by apprehension of resistance to the election of the President by the House of Representatives in the mode provided by the Constitution. But the existing system is an acknowledged failure of the expectations with which it was adopted. Nothing is perfect. The more we study the Constitution of the United States, the more we admire the wisdom with which it was framed, and the elasticity with which it adapts itself to enlarged limits, multiplied population, and altered conditions of society. But, in respect to the election of President and Vice-President, it never once fulfilled the intention, which was that the electors should be unpledged men, not appointed for a mere ministerial office, but chosen for their character, their wisdom, their patriotism, to perform, according to their own judgment, the highest and most responsible duty that could be delegated by the constituents of a representative government to their most trusted public servants. Instead of that, the electors, as we all know, have been selected to vote for candidates already designated, and the character of the electors does not even enter into the consideration of the voters by whom they are chosen. The cumbrous machinery which interposes between the people and the candidates of their choice performs no real service, and is only a needless obstacle and delay. But more than this, it restricts the choice of the people; and, instead of leaving their selection open to the whole body of the citizenship, confines it to those who have a sufficient following, in the State in which the voter lives, to receive the nomination of a full college of

electors. And, even should a candidate have a considerable support in the aggregate, it is all wasted, unless it can be concentrated in sufficient number in one State. A candidate may have powerful support and large minorities, scattered among five or six States, but, unless he has a plurality in some one State, every vote for him is thrown away. Practically, the chance is limited to two, or at most to three candidates; and these must be the candidates of a recognized party, strong enough to perfect an organization, and to put an electoral ticket in the field. As the voter cannot vote for his candidate personally, he must vote for a number of candidates equal to the number of electors to which his State is entitled, and must find that number who are precisely of his way of thinking, and who will consent to serve if elected; and moreover they must be distributed all over the State. Nor can the voter select the President of one party and the Vice-President of another; he cannot vote for his choice, for one of these offices, unless he accepts the candidate associated on the ticket with him. At the last election, the choice of every voter was practically restricted to Grant and Greeley. If he desired a man other than either of them, he had no way of making his choice effective, even to the extent of his own vote. Nor could he vote for Grant and Brown or Greeley and Wilson. He was obliged to vote for Grant and Wilson or for Greeley and Brown, or to throw away his vote, which he would do just as effectually by voting for any other candidate, or for any two of them, except on the ticket on which the two were associated.

"A great evil of this is that it strengthens and perpetuates, indeed it makes quite necessary the caucus or convention, which has grown to be almost as much a part of our political system as though it were embodied in the Constitution, and which crushes the individuality of the voter, and makes him only a part of a great partisan machine, his only choice being to which party he shall surrender his rights of private judgment. How this opens the way for intrigues and disreputable combinations and for conspiracies to obtain power for personal objects, how it pledges in advance, and as the price of support in the convention, that great patronage which the President wields, I need not point out. It would greatly purify our elections if the voters could select their candidates from the whole body of their fellow-citizens, uncontrolled by convention or caucus, and responsible only to their own sense of right. It would not indeed supersede the convention, but would deprive it of its tyranny, and make it responsible to a patriotic public opinion. The voter, if he did not like a candidate, would not be obliged to vote for him because there was no other way to vote except for one that he liked still less. And this consideration would compel the nominating conventions to greater prudence and wisdom in the selection of candidates.

"All the machinery of the existing system is absurd, and is an obstacle rather than a facility, on any other theory than that upon which indeed the Constitution was adopted, but which has utterly failed, that the electors should be unpledged men, charged with the duty of choosing a President, according to their own judgment, and to what they might consider the public good, not controlled or in any way directed by the popular voice, which it was supposed that they would guide, not follow. Every one argues that the system should be abandoned, that the theory of the election should be conformed to the practice, and that the machinery should be better adapted to the purpose which it is intended to accomplish.

"At the same time it is very much better to make the change with as little violence as is practicable to the traditions of the Government, and to retain, as far as possible, all of the original intentions of the Constitution, except where the intention has manifestly failed in practice. Especially is it necessary to preserve the recognition of the States, in the two electors which belong to each equally, beyond those to which they are entitled on the basis of population. Not only is this right, but no amendment which failed to recognize this equality could obtain a two-thirds vote in this body, or receive the requisite assent of three-quarters of the States.

"The amendment proposed happily secures the right of individual selection, without infringing upon the rights already secured to the States. It permits every voter to vote for the candidates of his choice for President and for Vice-President, and yet preserves to the States the equivalent of the two electoral votes to which, by the original compact, they are entitled, in addition to those which are based on population. It presents the natural mode of election, and abolishes the unnecessary formalities which separate the people from the candidates. While it is desirable that the Chief Executive of the country should be elected by a majority of the people, and that his authority should rest on the broadest basis of the popular will, yet, since so desirable result can only be attained by the general concurrence of opinion which must be left to its own free expression, it is a matter of necessity that some expedient be resorted to, in the failure of such concurrence. To require an absolute majority to elect the President might practically prevent an election; and if there be no one whom a majority of the people prefer, then the natural expedient is to elect that one whom the greater number prefer. In the first instance, absolute unanimity would be desirable; but that is practically impossible; so a majority is accepted; and by the same natural conclusion, if an absolute majority be unattainable, a plurality is next best. So plain is this, that, in nearly all the States, a plurality elects the State officers, executive, legislative, and, when they are chosen by the people, the judicial; in some

States, a majority is required for members of Congress on the first trial; but, in all, a plurality elects on the second. Nor does the present mode of election secure a majority of the people to the election of President. It may happen, and has happened, that the candidate receiving a majority of the electoral vote is in a minority of the popular vote. On the whole, it must be admitted that, next to an absolute majority, a plurality presents the most natural and the fairest mode of election, and that the other expedients, however well planned, have not commended themselves in practice.

"Although, therefore, I do not object to the election by the House of Representatives, for the reasons that have been stated elsewhere, I freely agree that it should be abandoned. It may seem, at first, that the smaller States make some surrender of power by changing the system which gives them an equal suffrage in the last resort. This might be true if the smaller States had some interest apart from the larger ones and opposed to them. If it were so, I should recognize a deep if not a fatal defect in our political system. I see no such opposition of interests. Experience has shown that the questions which have organized parties and divided the country pass over State lines without noting them, and invade alike the large and the small States. There is nothing in the disparity of the geographical limits which makes it probable that New York and Rhode Island shall separate on political questions, or that Delaware and Florida shall unite. The smaller States are distributed in all parts of the Union, East, West, North, South, and Middle. They have no purposes that are not as likely to be common to the larger States as to each other. All the apprehensions of a combination of the larger States, to the disadvantage of the smaller, have proved groundless. There is nothing for them to combine for or against. The great interests of the country are common to all the States, and where there have been separate interests, real or imaginary, they have not been based on the territorial limits of the members of the Union. I do not, therefore, regard the surrender of the equal suffrage in the election by the House of Representatives as an important concession. But I can plainly see that in the mode proposed of election by districts the overshadowing power of the great States is destroyed. They will no longer cast their solid vote for President, bearing down four or five of the smaller States, each of which may, possibly, cast a greater popular majority, the other way. New York may cast thirty-five votes for one candidate, while the popular majority is less than that which Delaware, with but three votes, gives for the opposing candidate. The present system gives immense power to majorities, however small, in the great States, and disfranchises the minority, however near it rises toward the majority. Thus the State of New York, outside the city, may give a ma-

jority one way, and the overwhelming vote of the city, not the purest and most authentic, may reverse it, and carry, not only the force that properly belongs to the city, but the entire State, leaving to the rest of the State, to the great inland cities, to the rich rural districts, to the prosperous and enterprising communities, from the Hudson to the great lakes, no voice in the election, for which the heterogeneous and often the corrupt masses of the city speak, not for itself alone, but for the State. By the system proposed, the minority in each State will be represented, and a great State, divided nearly equally, will have no greater preponderance than a small State united upon one candidate.

"The frauds which in 1844 carried the thirty-six electoral votes of New York for Polk, under the present system, would, under the amendments proposed, have carried only the four votes in the city, and the inducement to the frauds would have been wanting, for the honest vote of the city was for Polk, and the frauds were perpetrated only to overbalance the suffrage of the interior. Thus the purity of the election would be greatly promoted by the change. The motive to fraud would be much diminished, and the effect of fraud would be much lessened.

"The danger of a disputed election for President, in a State whose electoral vote would decide the contest, is a most serious one. There is no tribunal for the verification of the votes; and, although the election may be carried, notoriously, by fraud, or by violence, the electoral votes must be returned and counted. The fraud or the violence may be punished, but the wrong that they have committed remains, and there is no redress for it. And the appointment of the electors being left entirely with the Legislatures of the States, there would be no mode or power of appointment if a State Legislature should repeal the law directing the manner of the election. The Federal Government has no power to perpetuate the executive authority. In the exciting election which resulted in the choice of Jefferson by the House of Representatives, the Legislature of Maryland was Federal, and it was supposed that the popular vote would be for Jefferson. It was seriously contemplated that the Legislature should repeal the law under which the electors were chosen by the people, and should choose them by the Legislature; and this on the avowed ground that it was necessary to defeat the candidate whom it was supposed that the majority of the people preferred. This was recommended on no less authority than that of Charles Carroll, of Carrollton. When a man so pure, so patriotic, and so conservative, could see his way clear to make such a recommendation, what might be apprehended from heated partisans and selfish aspirants for political power? If that suggestion had been carried out, and the ten electoral votes of Maryland had been given wholly for Adams,

he would have been elected. They were divided equally between the two, each receiving five. Jefferson's total vote was seventy-three, Adams's sixty-five. Had all the votes of Maryland been given for Adams, his total would have swelled to seventy, and Jefferson's would have shrunk to sixty-eight; and the election would have been strictly and unquestionably legal and constitutional. The Legislature of Maryland would have exercised no power but that which the Constitution clearly conferred upon it, and confers upon it still, and there was no authority to review its doings. Such a proposition, although not carried to the extent of a precedent, yet was urged on such authority as gives to it almost the weight of a precedent.

"And, be that as it may, it might have been done then, and it might be done now; and those who resisted it would place themselves against the law, and expose themselves to the penalties of the law. A President thus elected, however he might lack the moral support which should underlie his great office, would be 'every inch' a President, would command the army and the navy, and must have the solemn judgment of the Supreme Court.

"From all the difficulties of the existing system, from all the evils and the dangers which experience has developed in it, the proposed amendment appears to offer a mode of relief; and, while it commends itself to all the States, I think that it is especially desirable to those, if any there still be, who apprehend the danger to the smaller members of the Union from the ambition or the aggression of the larger.

"Representing, in part, one of the smaller States, but one of those which brought its original sovereignty into the compact, and which required no vote of the other States for admission into the Government, which she had her full share to establish, I give my cordial assent to this important change which is so clearly for the general good; and which, by dividing all the States into single electoral districts, yet preserving to each the equal votes that she has enjoyed, in recognition of her equal membership in the Union, breaks down the unhealthy, if not dangerous, preponderance of the larger States possess."

Mr. Thurman: "This is one of the greatest objects that could possibly engage the attention of the Senate; and I do not think a casual consideration of it, calling it up and then laying it over in a casual way, is likely to be productive of much good. If a time is set for its discussion, and we go on with the discussion of it, Senators will attend to it and understand the question; but if it is taken up in a perfunctory way one day and then laid aside, and then taken up three days afterward, nobody knowing when it is to be up, it will not receive that consideration which it ought to have. I therefore renew my motion to postpone to next Wednesday."

The Presiding Officer: "The Senator from Ohio moves to postpone the pending joint resolution until Wednesday next."

The motion was agreed to.

No final action was taken on the resolution, but the subject was further discussed.

In the Senate on January 27, 1874, Senator Morton, of Indiana, offered the following resolution relative to counting the votes for President and Vice-President, which was taken up for consideration on February 4, 1875:

Resolved by the Senate (the House of Representatives concurring), That the twenty-second joint rule of the two Houses be, and the same is hereby, repealed.

Mr. Morton: "Mr. President, the abolition of this rule of course would follow as a result of the constitutional amendment which I had the honor to report from the Committee on Privileges and Elections; but I am satisfied that, from the want of time and other causes, that amendment cannot be passed and adopted before the next presidential election; and as, in my opinion, the existence of this rule imperils the peace of the nation and subjects the Government to great danger, I think it is our duty to repeal the rule or to so amend it at once as to avoid this approaching danger. After consulting with a number of Senators in regard to this matter, I ask leave to submit this as a substitute for the resolution already offered, which is to amend the rule, instead of repealing it:

That the twenty-second joint rule of the two Houses be so amended that no objection to the reception and counting of any electoral vote or votes from any State shall be valid unless such objection is sustained by the affirmative votes of the two Houses.

"Under the rule as it now exists, when the votes for President and Vice-President are counted, any formal objection, no matter how trifling or insufficient or even contemptible in its character, has the effect to separate the two Houses, and they are to vote upon this objection, and, unless both Houses concur in voting it down, the electoral vote of that State is lost. In that way by the dissent of either House any State may be disfranchised; the vote of the State of New York or of Indiana may be rejected by the most foolish and trivial objection unless both Houses shall concur in voting down that objection. The vote of every State may be rejected in this way. It requires no argument, therefore, to prove the absurdity, the unconstitutionality, and the danger of this rule; and, as I have had the honor to argue this question before the Senate on several occasions, I think it is not necessary to say any thing further now."

The Presiding Officer: "The question is on the amendment proposed by Senator Morton."

Mr. Bayard, of Delaware, said: "I do not know, Mr. President, that there is any rule beyond that of convenience and comity between members of the Senate that should control the

disposition of this measure. At the same time I am not aware that any reasons have been urged, any explanation given, by the Senator from Indiana for the rescission of this joint rule or for its amendment as he has proposed. Without having given the examination or consideration to this subject that its importance demands, yet I have for a long time been of opinion that the constitutionality of this rule altogether may well be doubted. I do not think that anywhere in the Constitution can be found language in any degree constituting the Senate of the United States a factor or an actor in the election of the President of the United States. The office was in the design of the Constitution to be controlled by an electoral college directly voted for by the people. The practical workings of our Government have made the office in effect subject to direct popular election. The electoral college has been a mere screen, which did not conceal in any way from the people the individual for whom their votes were cast, and in substance therefore and practical effect the President and Vice-President of the United States have been elected directly by popular vote. Although the form of the electoral college is still maintained, it is nevertheless but a thin veil between the popular wish and the result which follows its expression. Also, I may say, failing to receive a majority of all the votes cast, as required by the Constitution, the House of Representatives, the popular branch of Congress, is authorized and directed immediately to proceed to ballot for a President and for a Vice-President. But will any Senator show me any clause of the Constitution, any implication which can be argued from any clause of the Constitution, which gives this Senate one particle of lawful power in controlling the choice of a President or a Vice-President of the United States?

"This joint rule was passed in 1865. There is much to be said in criticism of it independently of the graver objection which I have sought to state, and to which it seems to me it is obviously open. The language of the Constitution providing for the office of President of the United States and vesting in him the executive power is contained in the first section of the second article. A portion of that article, what may be termed the third clause of the first section, has been superseded and annulled by the twelfth amendment, but a portion of the section still remains. It is in these words:

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

"The twelfth article, superseding the remaining clause of that section, provides:

The electors shall meet in their respective States, and vote by ballot for President and Vice-President,

one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each; which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest number, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the 4th day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed; and, if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

"Now, Mr. President, this joint rule is the rule under which the electoral votes have been counted since February, 1865, including the election of Mr. Lincoln, the election of the present President of the United States in 1868-'69, and again in 1872-'73. I confess that I do not see where the power can possibly be found which is assumed by the joint rule, either as it now stands or as it is proposed to be amended, giving the two Houses of Congress right to say whether votes shall be counted or not be counted. The Constitution declares that the electors of the States, chosen in such manner as the people in those States shall see fit to direct by law, shall have their certificates of election signed and certified *by themselves*; and when they have been so signed and certified shall then be sealed and transmitted to certain officials of the Federal Government. The duty of the President of the Senate is simply ministerial. He is not vested with discretionary or judicial functions. There is no discretion whatever vested in him. The language of the Constitution is simply mandatory, that he 'shall,' in the presence of the Senate and the House of Representatives, open the certificates. He cannot even count them. He cannot even inspect them, except in the incidental and casual manner

that is implied by the fact that his hand shall open the sealed envelope which contains the list of the electoral vote. Then the votes 'shall be counted' in the presence of the two Houses."

Mr. Morton: "Counted by whom?"

Mr. Bayard: "There is no distinct provision as to that. They shall be simply counted in the presence of the two Houses; but I apprehend from the fact of their being counted and the result declared that the members of each House are simply witnesses to the count and tally of that vote. That you could not delegate that power to another body I cannot doubt."

Mr. Anthony, of Rhode Island, said: "If the Senator will allow me—I do not wish to interrupt him, but I wish to have his view on this question, and perhaps he was going on to the point which I will bring to his attention. Suppose the Vice-President receives two packages, each purporting to be the electoral vote of a State?"

Mr. Conkling, of New York, said: "Being different from each other?"

Mr. Anthony: "Being different from each other?"

Mr. Bayard: "I can understand the great difficulty of dealing with a question of that kind, and it was in deprecation of the haste with which this question was being disposed of—called up here, read by the Senator from Indiana, and the question immediately called for in the Senate—that caused me to rise and make the objection I do to this inconsiderate method of dealing with it. I have been trying since this question was suggested by the Senator from Indiana some days ago to find, as well as I could, some method to escape from these difficulties, such as are suggested by the Senator from Rhode Island, and the truth is, that all my theories of government come just about to this: That if they are not to be honorably, honestly, and fairly administered, any laws that you make will be perfectly worthless to procure that justice and certainty, that proper record of the will of the people, which our scheme of government was intended to produce. I apprehend that there is no rule which you can frame that will not be open to defeat by some supposititious use. There cannot be the same villainy practised in regard to the electoral votes of the various States of this Union as are alleged, and I believe truly, to have been practised in regard to the returns before the returning board in the State of Louisiana, where I have seen the statement made that advantage was taken of the adjournment of the board for a public holiday, by the clerks who were the custodians of those returns, to unseal the packages, to forge false returns, to seal them up, and then have them counted by this returning board. What law can we ever have to meet such atrocities as that, should such a class of men ever be admitted in sufficient numbers in the Senate and in the Congress of the United States to do such acts as are alleged, and I believe truly, to have

been committed by the returning board of Louisiana? There is no cure for that except a public opinion that shall make it impossible for a man to hold public station without possessing those private virtues upon which society must depend for its existence. You may carry a case to the Supreme Court of the United States, you may carry it to any tribunal you choose, you may invest your judges with every responsibility that penalty can secure, and if they be not honest and honorable men your laws will be mockeries, and their decisions will be simply cunning and corrupt evasions of public justice."

Mr. Anthony: "If the Senator will allow me, perhaps I did not make myself understood. I wish his judgment upon this question. I understand him to say that the Vice-President is simply a ministerial officer; that he has simply to perform a specific duty prescribed by the Constitution in receiving the votes and in opening them and handing them to the tellers to be counted. Suppose the Vice-President receives two packages, each purporting to contain the electoral vote of the State of Louisiana, for instance, how is he to decide which one he will place before the two Houses?"

Mr. Thurman, of Ohio, said: "He must place them both."

Mr. Sherman, of Ohio, said: "Then who decides?"

Mr. Anthony: "Yes; who is then to decide?"

Mr. Thurman: "The Houses."

Mr. Anthony: "Not if the rule is repealed."

Mr. Bayard: "I apprehend that all the votes which are received must be counted, and I do not suppose that he can be expected to know what they are, except from the superscription of the sealed envelope containing them, until they shall have been opened."

Mr. Anthony: "Then, if I understand the Senator aright, the Vice-President is to deliver two, three, four packages, each purporting to contain the electoral vote of a State?"

Mr. Bayard: "Let me see what the Constitution says on the subject. I do not think it is sufficiently clear and satisfactory on that point. It provides for the meeting of the electors in their respective States. It provides for a vote by them by ballot for President and Vice-President; and, after that vote is taken in distinct ballots for the President and the Vice-President, it provides that they, the electors, shall make distinct lists of all persons voted for as President and of all persons voted for as Vice-President, and the number of votes for each. It provides that the electors in the several States shall themselves make up these lists and communicate the result, certified and signed by them, and transmit it sealed to the seat of the government of the United States, directed to the President of the Senate. Then it provides that these sealed papers, which have been directed to the President of the Senate (and as we all know are by special messengers placed in his hands and in his custody), shall on a certain day, in the presence of the two Houses

of Congress, be opened by him, and the votes shall then be counted. As a matter of fact the only knowledge that the Vice-President of the United States can have of the contents of those envelopes must be derived from the count on the day when he is instructed and compelled to open them in the presence of both Houses. I do not believe that there is any discretion given to him to open one package and not another package; but if they come to his hands purporting to be the certificates, signed and sealed by the electors in the various States, he is to open, in the presence of the two Houses, all such papers which come to him with the import of verity usual to such papers."

Mr. Frelinghuysen, of New Jersey, said: "I desire to ask the Senator from Delaware whether he has in his investigation of this subject examined to see what the practice was before the adoption of the rule in 1865; whether prior to that time, on a question arising as to the count of votes, it required the concurrence of both Houses to admit the vote, or whether the presumption was in favor of the votes, and it required both Houses to reject them?"

Mr. Bayard: "There never was a question of contest before, as I am informed."

"I think the experience of 1872 was the first in the history of this country, and no case ever arose in the presidential election where there was what may be termed conflicting votes or the attempt to have two sets of votes from the same State for the same office."

"Mr. President, it was not my object to discuss this very grave question, for I have not had the opportunity, with the various measures which have been pressing on the attention of this body, properly to prepare myself to discuss it. I am fully aware, however, that the cause of difficulties in regard to the election of the President of the United States, as the election of any other officer under the Government of the United States, is the deplorably low tone into which public and political morals have fallen. Unless there is to be a higher plane of political morality and action in this country you may make your rules as often as you please, you may change and repeal them as often as you please, but you will find that fraud will defeat constantly your efforts to repress it. I heard the Senator from Indiana the other day speak of the manner in which the votes have hitherto been counted in the presence of the various Vice-Presidents of this country. The last that he named I think was Mr. Breckenridge, and he bestowed praise upon those high officials because the vote had been honestly counted. When the time shall come that a Vice-President of this country, or the Senate or the House of Representatives of this country, shall, from any passion moving them, act otherwise than honestly, of what use are your laws or your safeguards of statutes and Constitution? They will be of no value, and the Government will have failed, and another will take its place, because in all human experience there is one

thing that will be necessary no matter what form of government may exist, and that is, that honesty and truth shall be its foundation-stone and enter into the administration of its affairs."

"I would prefer that this matter should be further considered and that time should be given for its better examination before we adopt this proposition of the Senator from Indiana."

Mr. Thurman: "I am glad that the Senator has offered the substitute, for the original resolution seems to me to be palpably wrong. Should the original resolution be adopted, we would have no rule whatsoever upon the subject; we would have nothing but the provisions in the Constitution, and those provisions, as we know from opinions expressed on this floor, receive in the minds of different Senators very different interpretations."

"In the carefully-prepared speech of the Senator from Indiana delivered at this session on his proposed constitutional amendment, he asserted his opinion to be, if I understood him correctly, that the decision of the question who has received the votes of a State for President and Vice-President rests with the President of the Senate; that the members of the two Houses who are present are but witnesses of a count to be made by the President of the Senate; thus vesting in that officer, and he perhaps a candidate himself, the power to determine who is elected the Chief Magistrate of this republic. I expressed on that occasion my dissent from that interpretation of the Constitution. I fancy that a large majority of the Senate do not concur in that view of the Constitution. I have no idea that a majority of the Senate agree with the Senator from Indiana in interpreting the Constitution so as to require that the Vice-President shall count and the Vice-President shall be the judge of all objections that may be taken to the validity of any return. That has not been the interpretation placed on the Constitution in the history of the country, otherwise the twenty-second joint rule never would have had an existence. The interpretation placed upon the Constitution has been that, as it is a duty devolved upon the Government to count the votes for President and Vice-President, and there being no express provision in the Constitution who shall count them, but an implied provision that they are to be counted by the two Houses, the matter is remitted to the legislative department of the Government to provide by law for that count, consistent always with the express provision in the Constitution that the count shall be made in the presence of the two Houses and the result declared. Therefore it would be an insuperable objection to the resolution first introduced by the Senator from Indiana that it would remove all legislation upon the subject from the books; that there would be nothing at all to determine how the votes should be counted; that we would proceed to the hall

of the House of Representatives in February, 1877, without any rule whatsoever or any statute whatsoever to prescribe what should be done after we got into that assembly. That would never do, Mr. President.

"But now the Senator proposes to change the rule and to provide that no vote shall be rejected unless by the concurrent judgment of both Houses, thus quite reversing the rule. The rule now being that no vote shall be counted unless both Houses vote to count it where there is an objection made, he proposes to reverse that and say that no vote shall be rejected unless both Houses concur in its rejection. I have on a former occasion, I have more than once, I believe, declared my opinion that that ought to be the rule, that every return ought to be considered as *prima facie* correct, and ought to be counted unless both Houses concur in rejecting it. I am aware that there is a difficulty in a case that may arise, and it is a difficulty that might arise under the present rule too, although the result would be different. For instance, take such a case as occurred at the last count—the case of Louisiana—where two sets of returns came up, each of them purporting to be the returns of the votes cast by the electors for President and Vice-President in that State. There manifestly the question was, who were the electors. They could not all have been electors. Both bodies could not have been electors. One body were electors and the other body were not electors. The question therefore really to be decided was, which one of those bodies was the electoral college for President and Vice-President in that State. Under our rule, when one of those returns was presented and objection made, unless both Houses concurred, the vote would be rejected. When the other return was presented, unless both Houses concurred, it was to be rejected. Suppose the rule had been changed and the substitute now suggested had been adopted; a return is presented, an objection is made to it, and thereupon the Houses vote upon it separately and one House votes to reject it and the other House votes not to reject; then, according to the rule as now submitted by the Senator from Indiana, in a case of that kind that return would have to be counted. Then suppose the next moment the other return is presented, the return of the election of the other body of electors, as was the case with Louisiana at the last count, and then one of the Houses votes that that shall be rejected and the other votes that it shall be received; then you would have to count both returns under that rule as the substitute now stands. You see, therefore, that the substitute will not do just as it is, but must go farther and provide for such a case as that, or at least leave it to be decided when the case shall arise.

"This is not an impossible case at all. It was the case in regard to Louisiana at the last count, as I have said. There were returns from Louisiana which purported to be the votes of

the electors who cast the electoral vote of that State for Greeley. There were other returns that purported to be the returns of electors casting the vote of that State for Grant. Under this modification suggested by the Senator from Indiana, without any provision for such a case, if you take it literally, if the two Houses had been of different politics, as they will be at the next count, the result would have been that the vote of that State would be counted twice and would be nullified, for one return would be for one candidate and the other return would be for another. That shows that the substitute offered by the Senator from Indiana, although in my judgment right in principle, that both Houses ought to concur in rejecting a return before it can be rejected, requires some modification that shall apply to a case where there are two returns from a State. That is certainly necessary, or we get into this difficulty that I suggest.

"It has further been asked here by the Senator from Rhode Island, What are you to do when there come up two returns from a State? He seemed to think, by the question he put to the Senator from Delaware, that in a case of that sort it was the duty of the President of the Senate to determine which return he would lay before the two Houses. That certainly is an impossibility. He cannot have looked at the law, or he would never have asked such a question as that. What does the law require? Section 2 of the act of 1792, on the subject of the election of President and Vice-President, provides—

That the electors shall meet and give their votes on the said first Wednesday in December, at such place in each State as shall be directed by the Legislature thereof; and the electors in each State shall make and sign three certificates of all the votes by them given, and shall seal up the same, certifying on each that a list of the votes of such State for President and Vice-President is contained therein, and shall by writing under their hands, or under the hands of a majority of them, appoint a person to take charge of and deliver to the President of the Senate, etc.

"Then the third section provides—

That the executive authority of each State shall cause three lists of the names of the electors of such State to be made and certified, and to be delivered to the electors on or before the said first Wednesday in December, and the said electors shall annex one of the said lists to each of the lists of their votes.

"You see, then, that the evidence that the persons voting are electors of President and Vice-President is to be annexed to their votes and of course sealed up with them, and the President of the Senate, when the returns come to him, has no knowledge in the world, can have no knowledge whether return A or return B is the correct return from that State, the return of the votes of the legal electors of that State. He cannot know anything about it. He gets two packages. Upon the back of each one of them is this certificate: 'This is the vote of the electors of President and Vice-President of the State of Rhode Island.' There is nothing to show that it is except that bare

indorsement, and the indorsement is as regular upon the one as it is upon the other. It can never be found out, then, which is the true return until you open them and see whether the evidence of the title of these electors is contained in the return, to wit: The certificate of the Executive of the State, under the great seal of the State, that they are the electors. Therefore it is not for the President of the Senate to decide this question in the first instance at all. He must open the returns, all that come to him in that way. If there are two from one State, he must open them both; if there are three, he must open them all, for one may be a forgery or two may be forgeries, and the third one may be the lawful and the only lawful return. So, then, you see that the question asked by the Senator from Rhode Island in nowise tends to prove that any judicial power over this subject is vested in the President of the Senate.

"Now, while in my judgment no vote that is regular on its face and that has been given by the true electors, that is to say no certificate of these electors which is substantially correct, ought to be rejected unless both Houses concur in the validity of the objection to it, and therefore the main purpose of the substitute offered by the Senator from Indiana is correct, yet the substitute is defective for the reason I have already stated. It does not provide for a case in which two returns may come from the same State, as has been the case heretofore. Some provision ought to be made for that case. It ought to be provided that where that is the case the Houses shall decide between those returns, and how they shall decide, and such a provision as that requires great care in draughting it.

"But, sir, the defect that has been pointed out is not the only defect of the twenty-second joint rule. I appeal to the experience of every Senator who has ever been at the count of a presidential vote, and especially to every Senator who was present at the last count that was made, and I ask him whether he did not find himself embarrassed beyond measure by the provision in this rule that there should be no debate in either House? The rule expressly provides that. It provides for deciding upon the returns. It provides that the Senate is to retire and decide for itself; the House of Representatives is to decide for itself; they are to meet together, and the result is to be announced, and there shall be no debate in either House. Now, I put it to the Senate the other day, and I beg leave to remind Senators again of the fact, that at the last count of the votes the question of the reception of a return from Arkansas depended upon the question whether the certificate of the Governor that the persons voting were the electors of that State was under the great seal of the State or not. It was said that it was not the great seal, but was the seal of the Secretary of State alone, and one of the Senators from that State at first thought that the State had no other seal than that, but

it turned out upon an examination that the State had a great seal; and yet no Senator was allowed to rise in his place and state to the Senate or to offer any resolution embodying the statement of the fact that that State had a great seal. The very question upon which the reception of the returns depended was to be decided without knowledge of the fact, and the only knowledge that could be communicated of it was by conversation with each other on this floor before the vote was taken. That ought not to be the case.

"Therefore, while I favor the adoption of the idea contained in the substitute, yet as I feel that it is imperfect, that it ought to go further, that further provisions are absolutely necessary, and I have perfect confidence that the Committee on Privileges and Elections can in a short time frame a proper rule, and believe that when it shall have framed it it will meet with no serious opposition but can pass, and pass both Houses at the present session, I move to refer the resolution and substitute to the Committee on Privileges and Elections."

Mr. Morton: "I will take the case of two returns from the same State. They come before the two Houses under the rule as we now propose to amend it. We must presume something in favor of the honesty and of the integrity of the two Houses. I would rather leave it to the two Houses to determine which is the forged and the spurious return than to leave it to one House. You cannot make any specific rule for a case of that kind. Here are two returns. The first is opened and read. It is objected to. The Houses separate and vote upon that question. They both agree that it is forged, that it is spurious in some form. The next one comes. That is the true one; still an objection is made, and the two Houses vote. You would not allow one House to reject both returns because one House may do it now. Take it as the rule now stands, one House may reject both returns; or, take it as the rule now stands, one House may reject one return and the other House may reject the other return, and so the State gets no vote at all. Is it not safer, if this matter is to be referred to Congress at all, that it shall be made to depend, like a law, upon the concurrent vote of both Houses, instead of leaving it to one House, without debate, without consideration, and without adjournment, to reject the vote of Massachusetts, or New York, or in fact of all the States?"

"Mr. President, see what a fearful temptation is presented to throw the election into the House of Representatives. I will not presume there is any purpose of that kind or that any House would do it, but I ask you to notice the fearful temptation. At the very next election the House will be Democratic and the Senate will be Republican. An objection is made to the vote of a State; the two Houses separate and vote upon it. The vote of that State may elect a Republican candidate for President. By rejecting the vote of that State the election

will be thrown into the House, and the House is Democratic and will elect a Democrat for President. The responsibility of that action is divided between two hundred and ninety-two men in the House. The responsibility of each one is comparatively small; there may be something in the objection, enough of form or enough of substance to make an irresponsible majority willing to reject the vote of that State; and the House, by its own action, against the vote of the Senate, may reject the vote of that State and take away from that candidate enough votes to reduce his vote below a majority of all the electoral votes, and the result is that the election goes into the House.

"Suppose, if you please, as in the case of Arkansas or in the case of Georgia or in the case of Louisiana two years ago, as the rule now stands, the two Houses being different in politics, an objection is made; we come back into the Senate and we honestly think that the objection is a good one, and we reject the vote of that State. Our vote does it. The House takes a different view of it, just as it did in the Arkansas case only two years ago. They say the objection amounts to nothing. But the House being Democratic and the Senate having rejected the vote of a Democratic State on a frivolous ground as the House think, the House under excitement—and men are the same at all times and everywhere—will then throw out the vote of the next Republican State upon some frivolous objection. Thus it goes tit for tat until the votes have gone out and the election goes to the House.

"That is the operation of the present rule. Can any one fail for a single moment to see the danger of this and the necessity of changing it? It is above all party considerations. It is trifling to talk about party, in my opinion, on such a great question as this.

"Upon the question of the power of Congress to adopt this rule I entertain very great doubts. I do not believe myself the power exists; but there is a divided sentiment here. We cannot act upon any other position except that the power does exist. I myself do not see how the power does exist, or from what provision it can be inferred; but we have got the rule. The rule in its present condition is a magazine that may be exploded at any moment. Let us therefore relieve it of its danger. It is much safer for this country—and that is the ground on which I put the whole thing—to say that the vote of a State shall be rejected only by both Houses and not by one House; and you take from one party, where the Houses are divided in politics, the power to change the result by rejecting the vote of a State. It will be in the power of our friends on the other side in the next House of Representatives—and they might act in good faith, but we take a different opinion—it will be in their power if an objection is made in the joint convention to the votes of Republican States, the two Houses separating, to throw the election into the

House, no difference what the votes may be. Under the rule the Republican party cannot elect a President. They might carry every State in the North; but they cannot elect a President. Why? Because it is in the power of the House of Representatives, under the operation of the rule, to throw out the vote of every Republican State. We on the other hand could throw out the vote of every Democratic State; but the result would be that the election would go into the Democratic House. I am casting no imputation upon any party or any body of men. I am only speaking about the possibilities; about the fearful temptation spread in the pathway of men. I am only speaking about what may take place under such a rule; and no rule which admits of such things ought to stand for one moment."

The Presiding Officer: "The Chair hears no objection, and the reference will be made. The resolution is referred to the Committee on Privileges and Elections."

Mr. Thurman: "I do not believe there will be the slightest delay. All I hope is, that the committee will consider it fully."

The Presiding Officer: "The resolution is committed to the Committee on Privileges and Elections."

In the Senate, on February 6th, Senator Morton, of Indiana, from the Committee on Privileges and Elections, to whom was referred the resolution to amend the twenty-second joint rule, asked to be discharged from its further consideration. At the same time he reported from the committee a bill on the same subject. On February 26th the bill was considered in the Senate.

Mr. Bayard, of Delaware, said: "We had from the Senator from Rhode Island (Mr. Anthony) the other day a very thoughtful disquisition on this subject. Questions were then asked in the Senate, and were not answered, as to what should be done where a double vote was returned from a State and where two sets of electors each present their suffrages for different candidates from the same State at the same election. No one gave the answer, because the Constitution had provided no means whereby such a contest could be decided. It will be seen that this bill in its second section proposes to meet this very dangerous and difficult question of a contest between two sets of electoral votes from the same State at the same presidential election. It declares that all of these returns, the false as well as the true, shall be opened, and I can construe the language of the bill in no other way than that they shall be counted unless there is a concurrent affirmative vote of both Houses rejecting them. See then the result. There is here, if not the invitation, the opportunity given to raise a false claim in order to defeat a true election—and in determining such a claim the false and the true shall stand upon the same level and be only defeated by the same means,

and if you shall between two Houses of Congress sufficiently inflame the passions of party, the two Houses of Congress differing in party affiliations—if you shall sufficiently inflame them to warp the judgments of men or to warp the conscience of men and to set party above country and duty, then the false vote will weigh equally with the true vote, and the State will be disfranchised in the result as plainly as though you gave the veto-power to either House as now. If you count ten votes for the State ticket and ten votes against the State ticket, what is the result? The one has neutralized the other; the one has annihilated the other; and the vote of the State might as well never have been cast at all. The election would then be an empty form. It is a new and a patent method for the disfranchisement of States where a contested election can be gotten up. That is the result of this second section as I read it. I shall be glad to be instructed to the contrary. I have read the section many times; I have submitted it to the judgment of others whose opinions I value more highly than my own, and have found a concurrence in the belief that this section is an opportunity, if not an invitation, for the annihilation of the electoral votes of States by having the false vote made equal in weight with the true and forbidding the rejection of either except by the concurrent affirmative vote of both Houses of Congress.

"Mr. President, I will not anticipate evil results. I only say that we should give, so far as we can give, no opportunity for evil results; that we should not give our consent to a law that would, if carried out, wrongfully make a presidential election a nullity."

Mr. Frelinghuysen, of New Jersey, said: "I simply wish to say to the Senator from Delaware, that I understand that this second section leaves the rule as it now is. I understand that by this second section if there are two sets of votes sent up from any State, then the concurrence of both Houses as to which shall be counted is required, and that is the rule at the present time."

Mr. Bayard: "If that be so, then an amendment which I have had draughted will not be objected to, to insert at the end of the second section:

And in such case the validity of any return shall be agreed to by both Houses, or the same shall not be counted.

Mr. Frelinghuysen: "I had prepared an amendment, which I was going to submit to the Senator from Indiana, to the same effect."

Mr. Bayard: "The honorable Senator from Ohio (Mr. Thurman) remarks to me *sotto voce* that that is what the bill means now. I know that I had not the benefit of his audience when this question was being discussed, and I do not propose to repeat what I have said on the subject; but I cannot conceive that the bill now means that. On the contrary, I believe the bill as it stands now, and if it passes as it

stands now, will work the result that I have stated, and I am not alone in this view. Wherever a contest can be gotten up, and wherever public opinion is sufficiently excited, wherever the tone of political morality is low enough, there the contest will be raised and then the votes coming here certified in form must be counted under this section, as I conceive, unless the affirmative vote of both Houses shall reject them.

"Mr. President, I do not think this second section meets the difficulty. It does not fill the want which we all recognize exists in the Constitution on this important subject. The Houses shall assemble; the Vice-President shall open the certificates and a count shall follow; it is not so important by whom that count shall be made, because being made in the presence of the Houses they are witnesses to a count, which means a valid, a real, a fair, an honest count; and when the time shall come that a dishonest count of such votes can be made in the presence of the two Houses, then your government will be of so little value that the sooner it passes away and makes place for another more honest, more reliable, the better for the people of the country.

"But there may well be causes why you should doubt that the ticket which is represented by these electoral votes was not fairly entitled to be so represented as the sentiment of the people of the State from which it comes, and there should be, as there is not now, some tribunal in whom a deposit of power to determine such contests should be lodged. How shall that be reached? Only by an amendment to the Constitution, and certainly by an amendment in which all men without respect to party results must join. As I have said before, in dealing with the subject within the powers confided to us by the Constitution, there never was a better opportunity to place it upon a high non-partisan basis than by awaiting the incoming of a new Congress, in which the two Houses shall not be of the same political opinion. A rule framed between a Democratic House of Representatives and a Republican Senate must of necessity be a non-partisan rule; and why, when so golden and valuable an opportunity awaits close at hand for the purpose of accomplishing an amendment so important and beneficial, should it not be embraced, and why should the regular ordinary business of this body be postponed now to accomplish in hot haste that which should be accomplished only by great care and consideration? Why, Mr. President, it is well known that measures which challenge our closest care and criticism, measures which demand from us laborious and assiduous attention for the next six days, fill the calendar."

Mr. Thurman, of Ohio, said: "I find the opinions of the Senator from Delaware who has just addressed the Senate and my own on an important section of the bill very far opposed. Knowing as I do the ability, the in-

dasty, the research, and the patriotism of that Senator, I never differ with him without doubting the correctness of my own judgment, and yet what he has said has not changed my opinion of the second section of this bill. On the contrary, I think that the point upon which he mainly relies in opposition to that section is not well taken, that the difficulty he supposes can never by any possibility exist.

"Suppose the second section were stricken out of the bill, and the bill were passed without it, what would be the effect of the bill thus enacted into a law? And here I crave the attention of the Senate, and especially of those who have been impressed by the very grave and forcible remarks of the Senator from Delaware. If that section were stricken out of the bill, then the only provision in the bill for the counting of the votes would be that a return should be counted unless both Houses concurred in rejecting it. That would be the bill applicable in every case. Mark it, Senators; in every case a return should be counted unless both Houses concurred in rejecting it.

"Now, under such a law as that, suppose the President of the Senate to lay the return from a State before the two Houses, and an objection be made to that return. The Senate retires to its Chamber, and a vote is taken in the two Houses whether that return shall be received. The Senate votes not to receive it; the House votes that it shall be received. The effect would be, under the first section of the bill, that that return must be counted. Remember that. Here is a return, we will suppose, just as there was at the last count, from the State of Louisiana. It is presented, opened by the Presiding Officer, handed to the tellers. An objection is made to its being counted. The two Houses separate in order to decide the question. One of the Houses decides to count it; the other not to count it. Then, under the first section of the bill, it would be counted. If there is another return from that same State, the Senator from Delaware seems to think you would have to go through the same process with that second return that you did with the first, and that if the Houses were reversed upon the second return, as there was not a concurrence in rejecting it, both returns would have to be received, and Louisiana would be counted at twice the number of votes to which under the Constitution she is entitled. I submit to my friend that by no possibility could such a thing occur, because when once you have counted all the votes to which a State is entitled you can count no more. It is impossible; the thing is *res adjudicata*.

"The moment you have decided, either by the difference of the two Houses as to the counting of the returns or in any other manner, that that return shall be counted, the vote of that State is given and no other vote from it can be received. Can there be any thing clearer than that? Suppose there be two returns from Louisiana, one of them is presented and an ob-

jection is made to its count. The Houses separate, and one of the Houses decides that it shall be counted. Would it not be counted then? No one will say no. Then suppose the other return is presented. What is the objection to that? 'We have counted Louisiana once; we cannot count her again. We have given her all the votes to which she is entitled; we cannot receive any further return from that State.' But now, if by our act we make a difference of opinion between the two Houses equal to a judgment of both Houses in favor of the reception of a return, it is just as plain as that two and two make four that when you have counted one return the matter is *res adjudicata*, and you cannot count another.

"Therefore, there can be no such thing as my friend from Delaware seems to suppose of heaping up the votes of a single State and giving her twice the vote to which under the Constitution she is entitled, requiring a candidate to receive more votes in order to elect him than the Constitution requires. I beg my friend from Delaware to bear in mind what would be the result. Suppose we are in January, 1877, and this second section is not a part of the law, but the first section alone is the law. Suppose the State of Alabama, the first on the list, is called, and there are two returns from Alabama, returns from two bodies claiming to be electors, as there were from Louisiana and from Arkansas at the last count. Is there any law that says which of those returns shall be first presented by the President of the Senate? No, sir; and you cannot make any law that will meet that case. It is therefore within his discretion which one he will present first, which he will open first, and hand to the tellers first; and just as certain as that he has eyes in his head, so certain will he know which one of those two returns is the return of the Republican electors and which is the return of the Democratic electors, and just as certain as human nature is human nature the return of the Republican electors will be opened first and handed to the tellers first. Then, if the House may vote to reject it and the Senate to receive it, under this first section of the bill it is received. Then the vote of that State has been counted, and there is no question upon any other return, and cannot be. So that the effect of striking out the second section of the bill is simply this: that where the two Houses are divided in opinion upon a question which shall be the true return, the whole thing is determined by the Presiding Officer by the simple fact of which return he opens and presents first. That is the result of it. The whole thing is done in that way. Whichever return the President of the Senate shall first open and first hand to the tellers, where the Houses are divided in opinion, that return, under this first section, must be received, because both Houses do not concur in rejecting it; and, that being received, no other return can be considered at all, for the question, as I said before, is *res ad-*

judicata; the State has been counted in all the votes to which she is entitled.

"It does seem to me, then, that to strike out this second section of the bill is to clothe the Presiding Officer with a power that not one of us I trust will be willing to confer upon him—to confer upon him the power, where there is a division of opinion between the two Houses, to count the votes on that side which he shall see fit first to present. That is the inevitable result.

"Again, what must you do where there is more than one return from a State, if you leave the present rule to exist? Why, just precisely what took place at the last count. The vote of three States was thrown out, Louisiana, Arkansas, Texas, and the vote of certain electors from the State of Georgia. Suppose we go on under the present rule and the vote is counted in January, 1877, and two sets of returns come from a State. The House of Representatives vote for one, the Senate for the other. Both go out, under the existing rule, and the State loses her vote. Is that right? Is that a performance of our constitutional duty? We are to determine which of the men who cast those votes were the electors in that State of President and Vice-President. That is the duty that devolves upon us. If there are two returns from two different bodies of men, it is our duty to determine between them which is the true body of men. Can we shirk that duty? Have we any right to shirk that duty? Are we not bound to decide it if we can decide it? Under your present rule you do not decide it at all. One House decides that one body of men were not the true electors and their certificate is rejected. The other House decides that the other body were not the true electors, and their certificate is rejected. Thus you come to no decision. You make no effort at a decision between these two conflicting claims.

"That is not right. It may be inevitable under any system. The same thing might happen, I grant, under this very second section, but it provides that you shall consider the votes and determine between them. What, then, is this second section? I feel bound to say this much about it because I suggested this point in the first debate that took place at this session on the resolution offered by the Senator from Indiana (Mr. Morton) to rescind the twenty-second joint rule. I suggested the very difficulty and the remedy, and I supposed that it was in some small respect owing to what I then said that the Senator has incorporated it in his bill. I thought I was right then and I think so yet. Therefore I have felt bound to make these remarks."

Mr. Edmunds, of Vermont, said: "The difficulty that meets us under the Constitution, as it strikes me, is this: The Constitution requires that the vote of each State shall be opened by the Presiding Officer, the President of the Senate. When opened the votes are to

be counted. The question on which the whole thing turns, to which our legislation is directed, except mere machinery, is what is a vote of a State? We all agree that every vote of every State ought to be counted. We all agree that whatever pretends to be a vote, or looks like a vote but is not a vote, should not be counted. So the thing which we are to provide for by this legislation is a means of ascertaining fairly and truly, according to the Constitution and the law, what is the vote, the will, of each particular State in the choice of a President. I think no man can question that I state the question fairly. That is it. Now, how are we to do it? In almost all cases in ascertaining not only in elections but in a thousand other affairs what has been done (because what has been done is the business which the Constitution requires in some way to be ascertained), a tribunal is provided, upon the philosophy of justice and jurisprudence, which is one single tribunal, and whose judgment when pronounced by a quorum of its body becomes one single judgment. The fault of the present rule is that, unless both Houses concur in counting a particular paper as a vote, the paper is not counted at all. If a State should send a vote which should be perfect in every respect conform on its face to the Constitution and to the law, be certified in the way that the law requires, sealed by the seal of the State, countersigned by the Governor and the Secretary of State, and all that, it is within the power of either House, as the rule now stands, it is true, to say it shall not be counted at all, and the constitutional right of the State in question is entirely overthrown in the vote for President. But that of course implies that one or the other of the two Houses, in such a case, has failed to perform the duty which the Constitution and the law and the rule impose upon it. We cannot presume that either House would object to the counting of a particular paper as a vote unless it should have a lawful reason for doing so, unless it appeared in some way that it did not represent the lawful and constitutional vote of the State, or unless it appeared for want of evidence, in defect of execution or certification, or whatever, that we are unable to say what was the vote of the State.

"Now, when you reverse it and take it as this bill is, which provides—leaving out the case of double returns—that every thing that comes from a State called a vote, no matter if it be from a revolutionary government, no matter if it be from an assemblage of men who have no shadow of constitutional authority, but who have got possession of the great seal, or have made another, as in the Louisiana case one of the witnesses swore that the great seals of the State of Louisiana were as plenty as blackberries and made to order, shall be counted. Here you have a paper which on the face of it appears to be proved by the great seal of the State of Louisiana; I take

that merely for illustration. It is signed by somebody who purports to be the Governor of Louisiana. Very well so far. Now, it may be known to every member of both Houses that that particular paper was really gotten up and emanated from an unlawful and revolutionary assemblage of men who, only a week before the time when the electors were to meet, had overturned the lawful and constituted government of that State, had possessed themselves of the public archives and the public seal, installed a man as Governor *de facto*, as the modern phrase is. There is your certificate. Now this bill says that those votes shall be counted. The difficulty is just as great as, if not greater than, under the existing rule. The rule as it exists declares that nothing shall be treated as the true voice of the State unless the representatives of the people and the representatives of the States, acting separately, shall agree that it is the voice of the State; and when I say that, I do not mean the voice of the State outside of the law and the Constitution, but upon the papers, following the law as a court do. Now, when you turn it over to the other side, without you say, as this bill does—leaving aside the double returns, as I say—that whatever does come which appears to be, purports to be, in form, the voice of the people of the State, shall be counted unless both Houses concur in saying that that is not the voice of the State, to my mind the latter alternative is quite as dangerous as, if not more so than, the first. What, in my opinion, the Constitution requires is a law which shall provide, for the time being, a tribunal of some sort, which is a single tribunal, which is bound to decide upon the Constitution and the law whether a particular paper which is opened by the President of the Senate in the presence of the two Houses, and which is then offered to be counted under the Constitution, is the vote which the Constitution speaks of."

Mr. Morton: "This bill provides that, if an objection is made to an electoral vote, the two Houses shall separate and consider the question. If it is a forgery out and out, there is no doubt but that it would be objected to. We must consider that both Houses act with some integrity, although they may be swayed by popular passion or by popular feeling to a great extent. If both Houses concur in rejecting the vote, the State is disfranchised. If they do not, the vote is to be counted. But there is no case that is provided for in this bill, a case here, for example, there are two rival governments in a State or where there are two sets of electors, both certified to in the same form, where there may be an actual controversy, as there has been in some of the States, and two sets of returns are sent here. How will you settle that question? This bill provides that when that question comes up it shall be referred to the two Houses, and that return which shall be the genuine return according

to the votes of both Houses shall be counted. You cannot adopt any other rule than that, in my opinion."

Mr. Wright, of Iowa, said: "I understand that where there is more than one return, as is provided in the second section of this bill, and the two Houses are unable to decide which is the true return, then the implication is that the vote of the State is not to be counted. That, I understand the Senator to say, is left to implication entirely. The section does not state what shall be the effect if the two Houses are unable to agree. It says that the return from such State shall be counted which the two Houses, acting separately, shall decide to be the true return. But suppose that they are unable to agree upon either, then what is to be the result? I understand, by implication of course, the vote is to be rejected; but I submit to the Senator whether that ought not to be put in such language as that it should not be left to implication."

Mr. Morton: "I would have no objection to an amendment making that certain, but I think that is the implication."

The Presiding Officer (Mr. Carpenter in the chair): "The amendment will be reported."

The Chief Clerk: "It is proposed to amend the bill in line 7, section 2, after the word 'return,' by inserting the word 'only,' and after the word 'shall' inserting 'each;' so as to read: 'And that return only from such State shall be counted which the two Houses, acting separately, shall each decide to be the true and valid return.'"

The amendment was agreed to.

Mr. Eaton, of Connecticut, said: "It is not in the power of this Congress to pass this law. It is a void law if passed. For three-quarters of a century the good people who represented their fellow-citizens here were satisfied with the Constitution of the United States; and let me read the Constitution to see whether there is any necessity for the bill. It is well to read it. It will not harm anybody to hear it. Article XII. of the amendments provides:

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted—

"I have no trouble about whom the count is to be by, though there has seemed to be some little trouble on that subject—

the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then

from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately—

"That means the next day—

by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote.

"That is all I care to read.

"Mr. President, I said that I did not propose to go into a lengthy discussion of this question; but I say in advance one thing, not for the purpose of casting any reflection upon any honorable member of the Senate—far be that from me—that I look upon any bill for a public act of this character, that is brought forward in this Chamber without anybody to say anything in its favor, as suspicious, to say the least. There has been no discussion, not a word, not a breath in favor of the principles contained in this bill. And has it come to this at last, that a bill is to be passed in these last hours of the session, probably unconstitutional, by the mere force of numbers, without one word of argument in its favor? I say, Mr. President, it is suspicious. For seventy-five years the people of this country acted under the Constitution of the United States. They can now. The court is here. I defy any Senator on this floor to show any state of facts where under the Constitution, without any bill for a public act, without any rule of the two Houses, we cannot go on and perform all the duties that are devolved upon us in this behalf. Some Senators say that it is impossible that it can be done. Let us hear why; give a reason for it, and do not simply rely on a large vote to pass a measure of this character.

"Again, it was alleged with great power by my distinguished friend from Delaware (Mr. Bayard) that if there was any necessity for a bill of this character it should be passed at the next session of Congress; it should not be a party measure. I appeal to every Senator on the other side of the Chamber on that point. They, with me—the mantle of charity covers us all—desire proper action, not improper. Can it be had at any better time than when this Senate is under the control of the Republicans—if terms expressing party names are to be used here? I have not been in the habit of using them in legislative assemblies; it has been forbidden by the rules of such assemblies where I have served, and it ought to be here—where and when the dominant party on this floor will be in the majority for the coming two years; while on the other floor, at the other end of the Capitol, the other party, the party to which I am attached, will be in the majority? If there be any necessity for a rule, which I deny, is there not patriotism enough in both parties to get such a rule as is proper and just? There is no President to be elected next January. Two years must elapse. Why, then, in hot haste, without proper consideration, pass this measure of doubtful constitution-

ality at the best? Will some gentleman tell us why? Give us the necessity for it. Let us know why you do it. Why, your appropriation bills, your tax bills, your other bills of importance lie upon the floor or on or under your table, and you harp away upon a measure which cannot be of use for two years. It is suspicious at least.

"I move the indefinite postponement of the bill now under consideration."

The Presiding Officer: "The Senator from Connecticut moves that the bill be indefinitely postponed."

The result was announced, as follows:

YEAS—Messrs. Bayard, Carpenter, Conkling, Cooper, Davis, Dennis, Eaton, Goldthwaite, Hager, Kelly, McCreery, Merrimon, Ransom, and Stockton—14.

NAYS—Messrs. Boreman, Boutwell, Chandler, Clayton, Conover, Cragin, Dorsey, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Harvey, Hitchcock, Ingalls, Jones, Logan, Mitchell, Morrill of Vermont, Morton, Oglesby, Patterson, Pease, Sargent, Scott, Spencer, Sprague, Stewart, Washburn, West, and Windom—81.

So the motion was not agreed to.

The bill was ordered to be engrossed for a third reading, and read the third time.

Mr. Morton: "The Senator from Connecticut (Mr. Eaton) complained somewhat that there had been nothing said in favor of this bill. I have abstained from argument because I wanted a vote. The questions involved in this bill have been discussed on this floor for several years past, and I supposed the Senate was agreed on the question that the twenty-second joint rule ought to be repealed and that there ought to be some provision made by law to prevent the imminent danger of a collision at the counting of the presidential vote. This rule was adopted in 1865, under which as it now stands a single objection, however trifling in its character, will cause the two Houses to separate and to vote separately upon that objection, and unless both Houses agree in overruling the objection the vote is lost.

"There is nothing partisan in this bill. It is as fair for one party as it is for another, and I regret that our Democratic friends have been found voting unanimously for the indefinite postponement of this bill, and I presume they will unanimously vote against the bill on its final passage. There is nothing partisan in it; and, if I were disposed to seek for motives of a party character, I might turn around and say in reply to my friend from Connecticut that at the next House of Representatives will be Democratic, and as it is in the power under the present rule of either House to throw the election into the House of Representatives by sustaining objections, therefore there was a strong Democratic interest in preserving this rule as it is; for if this rule shall stand as it is, when we come to count the presidential vote in February, 1877, and objection is made to the vote of any State, however trifling in its character, unless that objection is overruled

by both Houses, the Democratic House concurring in overruling it, the election will be thrown into the House of Representatives and the Democratic party will then elect the President. If I were disposed to hunt for party motives, I might find them in the existence of that fact. I might therefore account for a solid Democratic vote against this bill; but I have attributed no personal or partisan motives to anybody. I had earnestly hoped that there would be no party feeling about this bill. The Senator from Ohio (Mr. Thurman), who has made an argument in favor of this bill and I believe will vote for it, is certainly governed by no party considerations in the matter."

Mr. Edmunds: "As I feel obliged to vote against this bill, I wish to say a single word in justification of what I do, and I am not specially afraid of being found voting with the Democrats if they vote this way; I do not know that they will. Every man must act upon his own conviction of duty."

"To repeal the twenty-second joint rule is one thing which I may be and I think I am in favor of, because it is open to objection. To set up another rule, which is just as bad or worse, which to my mind this bill does, is quite a different thing. If this were simply a proposition to repeal the twenty-second joint rule, I think as at present advised I should vote for it. But it is a proposition not only to do that, but to set up another rule in its stead which in my opinion opens a broader ground for collision, my honorable friend from Indiana calls it, a broader ground for difficulty and doubt than the present rule. It is in effect to say that any curious or revolutionary vote which may be brought forward from people pretending to be the electors of a State shall be counted, unless both Houses agree that it shall not. It is not brought forward for decision, but it stands because it comes as the authoritative voice of the people until the two Houses concur in saying it is not a vote. The twenty-second joint rule is not open to that objection. That requires consideration. So it appears to me that the rule provided by this bill is more dangerous to the public peace than the twenty-second joint rule. But as I say it is not a choice between these two, because we can omit to pass this bill and still repeal the twenty-second joint rule."

"When the electors meet on the first Wednesday in December in each one of the States, the Constitution entitles us to know, entitles everybody to know, that the persons who thus meet are the electors. It entitles the people of the United States to know in some way under a government of law that what those who claim to be electors send to the capital is the vote of the State lawfully and constitutionally given. Now, the Senator's bill says that whatever comes from that State purporting to be this thing shall decide who shall be President, unless the two Houses concur in saying that it is inadmissible. I think that is more dangerous than

the twenty-second joint rule. I do not want to enlarge upon it, for I have not the time."

Mr. Morton: "You have under this bill the judgment of both Houses. In other words, under this bill you cannot disfranchise a State except by the concurrent vote of the two Houses. Under the rule as it now stands one House can disfranchise a State. Without any rule every vote must be counted, no matter how false, how fraudulent, how unlawful it may be. That is the simple situation, and without a rule every vote must be counted. With the rule as it now stands one House can disfranchise New York and Indiana. Under this law no State can be disfranchised except by the combined judgment of the two Houses. I say that is in analogy with our form of government. It is conformable to reason, and in my opinion it is safe."

Mr. Sprague, of Rhode Island, said: "Mr. President, I shall vote against the measure before the Senate, because it introduces the President of the United States into a matter with which he has nothing to do under the Constitution, and brings him into a dangerous innovation. He is charged with the execution of all laws. This is to be a law. He is charged with its execution. When was it contemplated that a retiring President should have any thing to do with the election of his successor? There is too much executive interference in elections now. To make it his duty to interfere is in my judgment most pernicious. I am opposed to the bill, therefore, because its tendency is such."

"And to conclude. I have listened with pain to this discussion. It is apparent that men wisest in the land, or men supposed to be the wisest, think they can carry on the Government successfully leaving the great material powers among the people untouched, to drift, to act irregularly. Why, sir, the danger mentioned in counting the vote in 1857 was not a danger of that moment, but was nearly ripe from the material condition among the people. It is the irregular action of these affairs that will soon tumble your government structure into atoms, and then these discussions of mere laws and rules will appear in their true light; simply false and weak guides to ruin."

Mr. Hager, of California, said: "I have no desire to enter extensively upon this debate, but rather to explain the vote that I shall give. It is a question of constitutional power and of constitutional interpretation that addresses itself to us as lawyers and as Senators. The view that I take is that the Constitution of itself is operative and that you cannot add to the powers conferred or diminish them. According to my view neither the twenty-second joint rule nor this bill, if it shall become a law, has any binding force upon the Congress that must act in this matter under the Constitution. In other words, we cannot here establish a rule by which we dictate to another Congress how they shall perform a constitutional duty. The Constitution is plain:

The President of the Senate shall, in presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.

"There is a plain duty imposed upon the President of the Senate and upon the Senate and House of Representatives assembled together. Can you say, sir, that you may limit your powers or add to them by any legislation here? Can you bind your successors in any matter of constitutional legislation? Turn to the powers that Congress has. Congress may 'lay and collect taxes, duties, imposts, and excises.' You might just as well undertake to pass a law here pointing out how Congress shall levy taxes and imposts, as to undertake to regulate them in the performance of a constitutional duty in regard to this matter. As well might one Supreme Court undertake to bind their successors as for one Congress to undertake to bind their successors. It cannot be done either by legislation or by any rule that you may see fit to adopt.

"I admit that there is an imperfection in this part of the Constitution as to how the joint body when assembled together shall proceed to get and determine the result of the election. But as the duty is imposed upon the Senate and the House of Representatives it is for them and each body that is called upon to act in that capacity to regulate rules for themselves.

"There is another important matter that enters into this consideration upon that point, and I should like to hear Senators answer it. If we pass this bill, in order that it may become a law it must be signed by the President. The President then to some extent enters into the counting of the electoral vote. Suppose we pass this bill and it becomes a law by the signature of the President with the intent to bind some other House, not ourselves. I admit we could pass a law here to regulate the election if we were to act in the matter. If we were to meet next week to count the electoral vote we could by the concurrence of both Houses pass a law to regulate our action in the matter; but we cannot, I say, pass a law to regulate the action of a future House or future Senate when they meet to perform a constitutional duty.

"But, as I said, suppose this bill becomes a law signed by the President, how are you to get rid of it in the future? If it is binding upon the Senate and House that meet next, it requires, in order to repeal it, not only the vote of the Senate and the House, but the approval of the President. Thus the President enters into the consideration, when the Constitution never contemplated any such thing. It is a duty imposed entirely upon the Senate and House of Representatives; and if you pass this bill, in order that it may be a law it requires the approval of the President, and hereafter to repeal it and get rid of it also requires the approval of the President, so that a future Senate and a future House of Representatives

may be entirely under the control of the President of the United States.

"Did the framers of the Constitution contemplate any such state of things as that when the twelfth article of amendment was adopted? It was the intent that the people should control the election of the President, and not the President of the United States. It was the intent that the electoral vote should be brought here and opened in the presence of both Houses, and that they there, according to such rules as they might adopt, should declare the result. The President has nothing to do with it."

The Presiding Officer (Mr. Carpenter): "The question is, Shall the bill pass?"

The roll-call having been concluded, resulted as follows:

YEAS—Messrs. Allison, Boreman, Boutwell, Chandler, Clayton, Conover, Cragin, Dorsey, Ferry of Michigan, Flanagan, Frelinghuysen, Hamilton of Texas, Harvey, Hitchcock, Logan, Mitchell, Morrill of Vermont, Morton, Oglesby, Patterson, Pease, Ramsey, Sargent, Sherman, Spencer, Washburn, West, and Wright—28.

NAYS—Messrs. Bayard, Bogy, Carpenter, Conkling, Cooper, Davis, Dennis, Eaton, Edmunds, Goldthwaite, Hager, Jones, Kelly, Merrimon, Ransom, Saulsbury, Sprague, Stewart, Stockton, and Windom—20.

ABSENT—Messrs. Alcorn, Anthony, Brownlow, Cameron, Fenton, Ferry of Connecticut, Gilbert, Gordon, Hamilton of Maryland, Hamlin, Howe, Ingalls, Johnston, Lewis, McCreery, Morrill of Maine, Norwood, Pratt, Robertson, Schurz, Scott, Stevenson, Thurman, Tipton, and Wadleigh—25.

So the bill was passed.

No action was taken upon it in the House of Representatives.

In the House on January 26th, Mr. Potter, of New York, from the Committee on the Judiciary, reported the following resolutions, fixing the term of the presidential office to six years, which was considered:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as a part of the Constitution, namely:

ARTICLE XVI.—1. From and after the next election for a President of the United States the President shall hold his office during the term of six years, and, together with the Vice-President chosen for the same term, be elected in the manner as now provided or may hereafter be provided; but neither the President nor the Vice-President, when the office of President has devolved upon him, shall be eligible for reelection as President.

Mr. Potter: "Whatever question, Mr. Speaker, there may have been upon this subject in the public mind years ago, your committee think that now, with the vastly-increased Federal patronage which has grown up of late years, the time has arrived for such a change in the Constitution as is proposed by this resolution. At any rate it is a question which has been much discussed, and probably every gentleman in the House has fully made up his own

mind upon the subject, and so I think nearly every thoughtful citizen of the United States must have done. I shall therefore proceed at once to call the previous question upon this resolution, only saying that if the proposed amendment to the Constitution shall become operative, it will in no wise affect the eligibility of the present incumbent for reelection at the next presidential election. With that statement I call the previous question."

The previous question was seconded and the main question ordered.

Mr. Garfield, of Ohio, said: "I desire to make a suggestion to the gentleman to see whether I understand this proposition, for I am in favor of it. Suppose that after the adoption of this constitutional amendment a President should die one week before his term of six years had expired, and the Vice-President should be sworn in and hold the presidential office for a week; under this provision, would not the Vice-President, serving as President for that one week, be thereby rendered forever ineligible to the office of President? I ask this question as a matter of construction."

Mr. Potter: "It is a perfectly proper question. As I understand this proposition, it would have precisely the effect suggested by the gentleman. How else are you going to prevent the Vice-President from being again eligible when, by accident, the office of President devolves upon him?"

Mr. Garfield: "I do not know that we could do it in any other way. I should be in favor myself of abolishing the office of Vice-President, and it seems to me this is a good time to do it."

Mr. E. R. Hoar, of Massachusetts, said: "If this question is not to be debated, all I wish to say on my own behalf is, that while I am not of the opinion that there is likely to be any occasion on which I should favor, or on which I believe the people of the country would favor, the continuance of any person in the presidential office beyond two terms, I do not believe the argument in regard to the corruption of the people by executive power as one upon the strength of which the people should condemn that they need such protection against such influences that they will deliberately deprive themselves of the power of selecting whom they please for their Chief Magistrate."

"I remember a conversation which I had with an eminent gentleman, standing high in office in the country, in regard to the reelection of the late President Lincoln during the war. He was very much opposed to Mr. Lincoln's renomination and reelection, and did what was in his power to prevent it. I said to him then that I believed the majority of the American people intended to reelect Mr. Lincoln, if necessary, during the rest of his life, until he was recognized in every part of this country as the President of the United States. I do not for one propose to aid in depriving the American people of the right of

determining in any exigency or emergency whom they will keep in the presidential chair.

"That we ever shall keep a man beyond the time Washington's example sanctioned, which is one of the traditions of the republic, I do not believe. But the question whether we shall deprive ourselves by constitutional amendment of the right to do so, of the power to do so, is a very grave and serious one, which I think merits the consideration of this House before they adopt it."

Mr. Butler, of Massachusetts, said: "Now, I want to say a word upon this question. I do not understand that Congress can control the American people on the matter of constitutional amendments except in one way. If we practically refuse to submit an amendment to them to vote upon, then they cannot have a constitutional amendment except by a convention of all the people of the States, for that is open to them under the Constitution. Therefore, when we offer a constitutional amendment to the whole people of the country, I do not think it a correct statement of the proposition to say that we attempt to bind the American people. We offer to them a proposition for them to dispose of in the States after full consideration without any previous question. But if we say we will not offer them an amendment, then I do not know any way in which they can secure its passage, and we can stand here in the way of constitutional amendments, but we cannot bind the people in any other way. Therefore, I should be pretty liberal in voting propositions for constitutional amendments to be sent to the people. For if they want them they ought to have them; and if they do not want them, they will take good care not to pass them in the several States."

"Now, for one I agree that the people ought to have the right to elect a man just so many times as they choose to do it, and nobody ought to interfere with that right. But then the people ought to have a correlative right, the right of saying that they will not elect a man but once."

"Therefore, I think it might be well enough to submit this amendment to the people, and not to set up our judgment that the people shall not have an opportunity to pass upon this subject. So far from attempting to bind the people upon that question by offering them the amendment, we bind them on the question when we refuse to offer them the amendment."

"Now, almost any reasonable proposition in which a large portion of the people seem to be interested for an amendment of the Constitution I should be in favor of submitting to them, in order that the people might have the opportunity to say in their primary capacity as people of the States, by three-fourths of their representatives in Legislatures chosen with reference to that proposition, if they chose to make it part of a political issue—to say

whether they will or will not have a constitutional amendment.

"Again, sir, I do not think that this looks to the corruption of the Executive. I think it looks rather, it strikes my mind, to the effect upon Congress as regards its political action. The first Congress comes in with the President under our present system, and the second Congress goes out with the President. Now, it has been said—I do not mean to repeat the saying offensively, but simply to give it as an illustration—it has been said that the first Congress is engaged in getting offices under the new President, and the second is always engaged in seeing how to make a new President, so as to get the offices. It would be well to have one session of Congress intervening to do business without having such a temptation before them. That is one of the arguments before the country on this subject; that is one of the arguments produced before us on the question of six years.

"Then, again, it is said that why we have been so unsuccessful in Vice-Presidents when they come to be Presidents—I suppose there will be a general agreement with me in the House on this subject—is that they have always looked to reelection; and, as men are very much alike all over the world, that it would be best to have the temptation of reelection taken away from the Vice-President as well as from the President."

Mr. Ellis H. Roberts, of New York: "Mr. Speaker, this is not a question of trust in the people, as of course it in no way relates to our present Executive. It is a question whether or not a great principle had better be settled in time of calm; whether or not a great principle had better be laid down independently of personal considerations.

"And it does seem to me that it is well for the American Congress to consider whether the Republic can afford to elect its Chief Magistrate twice, thrice, continuously as has been suggested by the gentleman from Massachusetts (Mr. E. R. Hoar). As I read history, republics are overthrown by the plea of necessity and in times of great excitement. And I desire that in cold blood the American people shall have the opportunity to say whether or not they are willing in any emergency to reelect a President for the third time. As I read history, dangers to republics come not, as the gentleman from Massachusetts (Mr. Butler) suggests, from below, but always from above. Always the pretense is that the country needs a strong man, always the pretense is that there is disturbance somewhere, that there is need of an army and a military chieftain. Dictators come through the plea of necessity. Tell me one republic that has ever been overthrown in any way other than that. Now, I want the American people to have at least the opportunity to see how they read history, and whether they do not believe that in that way lies murder to the republic."

Mr. Ward, of Illinois, said: "I cannot understand the arguments made by some gentlemen on this side of the House in favor of this joint resolution, nor can I quite understand some of the objections made against it. Members talk as though, if this amendment was not adopted, some great outrage would be committed in the future; as though the people were not as capable as members here to determine in the future who shall be President; as though we could determine to-day who shall or shall not be eligible to that office better than those who may come after us.

"In my examination of this subject, and with the thought I have been able to bestow upon it, I can find no reason sufficient to justify me in saying that the American people shall set up a statute so high that it cannot be readily reached; that we shall say to the people in the future, 'You shall elect only this or that man,' as if we dreaded lest some man should be elected whom we might not be willing to have elected. Members have addressed themselves to the subject here on the idea that there is a call for this proposition from the people. Now that I deny. I have heard no clamor for it; there is none that has reached my ears to justify the assertion here, at least, that it is a thing demanded by the American people.

"As a proposition standing by itself, the portion extending the term of office of President to six years might be well. But I am willing for one to trust myself in the vote which I may deposit for the next presidential candidate, and I am willing that those who follow me may trust themselves for all time. This attempt to limit the right of the people in that regard is but an evidence of a lack of confidence which gentlemen have in those who may follow them, and an assertion of their superior ability to determine who shall hereafter serve as President in this country."

The Speaker: "The Constitution requires on this question a two-thirds vote to pass the resolution."

The question was taken; and it was decided in the negative—yeas 134, nays 104, not voting 50; as follows:

YEAS—Messrs. Albert, Albright, Archer, Arthur, Ashe, Atkins, Banning, Beck, Begole, Bell, Bland, Blount, Bowen, Bright, Bromberg, Brown, Buckner, Buffinton, Bundy, Caldwell, Cannon, Cessna, Chittenden, John B. Clark, Jr., Clayton, Clymer, Comingo, Cook, Cox, Creamer, Crittenden, Crossland, Crounse, Darrall, Davis, Dawes, Dunnell, Durham, Eldredge, Field, Finck, Foster, Garfield, Giddings, Glover, Gooch, Gunckel, Gunter, Hamilton, Hancock, Henry R. Harris, John T. Harris, Harrison, Hatcher, Havens, Joseph R. Hawley, John W. Hazelton, Hereford, Herndon, Holman, Hoakins, Hunter, Hunton, Kasson, Kellogg, Killinger, Knapp, Lamson, Lawrence, Lawson, Leach, Lowndes, Luttrell, Magee, McCrary, Merriam, Milliken, Mills, Monroe, Morrison, Neal, Nesmith, Niblack, Niles, O'Brien, Hosea W. Parker, Perry, Phelps, Phillips, Pierce, Poland, Potter, Randall, Read, Robbins, Ellis H. Roberts, James W. Robinson, Ross, Sawyer, Milton Saylor, Schell, John G. Schumaker, Henry

J. Scudder, Sloss, A. Herr Smith, H. Boardman Smith, J. Ambler Smith, John Q. Smith, Southard, Spear, Stanard, Standiford, Stephens, Stone, Storm, Strait, Strawbridge, Thornburgh, Tremain, Vance, Waddell, Wells, Whitehead, Whitthorne, Charles W. Willard, George Willard, John M. S. Williams, William B. Williams, Willie, Jeremiah M. Wilson, Wolfe, Wood, John D. Young, and Pierce M. B. Young—134.

Yates—Messrs. Averill, Barber, Barry, Biery, Bradley, Burchard, Burleigh, Burrows, Benjamin F. Butler, Roderick B. Butler, Cain, Carpenter, Cason, Amos Clark, Jr., Freeman Clarke, Clements, Clinton L. Cobb, Stephen A. Cobb, Coburn, Conger, Cotton, Crutchfield, Dobbins, Donnan, Eames, Farwell, Fort, Hagans, Eugene Hale, Robert S. Hale, Harmer, Benjamin W. Harris, Hathorn, John B. Hawley, Gerry W. Hazelton, E. Rockwood Hoar, Hodges, Houghton, Howe, Hubbell, Hurlbut, Hyde, Kelley, Lewis, Lofland, Loughridge, Lowe, Lynch, Martin, Maynard, James W. McDill, McKee, McNulta, Moore, Myers, Negley, Nunn, O'Neill, Orth, Packard, Page, Isaac C. Parker, Pelham, Pendleton, James H. Platt, Jr., Thomas C. Platt, Pratt, Rainey, Ransier, Rapier, Ray, Richmond, Rusk, Scofield, Isaac W. Scudder, Sener, Sessions, Shanks, Sheets, Sherwood, Lazarus D. Shoemaker, Sloan, Small, Smart, Snyder, Sprague, Starkweather, St. John, Taylor, Charles R. Thomas, Christopher Y. Thomas, Thompson, Todd, Townsend, Tyner, Waldron, Wallace, Jasper D. Ward, Marcus L. Ward, Whiteley, Wilber, Charles G. Williams, William Williams, and James Wilson—104.

NOT VOTING.—Messrs. Adams, Barnum, Barrere, Bass, Berry, Corwin, Crooke, Curtis, Danford, DeWitt, Duell, Eden, Freeman, Frye, Hays, Hendee, Hovey, George F. Hoar, Hooper, Hynes, Kendall, Lemar, Lamport, Lansing, Marshall, Alexander S. McDill, MacDougall, McLean, Mitchell, Morey, Orr, Packer, Parsons, Pike, Purman, William R. Roberts, James C. Robinson, Henry B. Saylor, Sheldon, George A. Smith, William A. Smith, Stowell, Swann, Sypher, Walls, Wheeler, White, Whitehouse, Ephraim K. Wilson, and Woodworth—50.

So (two-thirds not having voted in the affirmative) the joint resolution was not passed.

In the Senate, on January 5th, Mr. Thurman, of Ohio, offered the following resolution, which was immediately considered:

Resolved, That the President of the United States is hereby requested to inform the Senate whether any portion of the Army of the United States, or any officer or officers, soldier or soldiers of such army, did in any manner interfere or intermeddle with, control or seek to control, the organization of the General Assembly of the State of Louisiana, or either branch thereof, on the 4th inst.; and especially whether any person or persons claiming seats in either branch of said Legislature have been deprived thereof, or prevented from taking the same, by any such military force, officer, or soldier; and if such has been the case, then that the President inform the Senate by what authority such military intervention and interference have taken place.

Mr. Conkling, of New York, said: "Mr. President, I suggest to the Senator from Ohio who moved this resolution, although it seems to be here only a matter of form, that he had better conform to the customary phraseology 'if in his judgment not incompatible with the public interests,' which very likely the Senator means to imply; but that is the rule, and I think it had better be so stated."

Mr. Thurman: "I do not agree that that is the rule. I do not agree that, on a matter

which concerns our relations with no foreign power, which merely concerns the domestic affairs of the United States upon a question in respect to the use of the Army of the United States to interfere with the organization of a State Legislature, there is any necessity or any propriety for saying that the President shall not make a communication unless, in his judgment, it is proper to do it. I say that it is for us, in our judgment, to know whether the facts are as suggested in that resolution, and if they are, by what authority this interference has taken place; and it is not for us to submit to the opinion of the President, or the judgment of the President, whether the Senate of the United States shall know the facts, and know by what authority such interference has taken place, if the fact be that there has been such interference.

"This is not, sir, a case in which we interfere with warlike movements, although it has wonderfully the semblance of war—not war made by the people, but war made I will not say by whom; I will wait for the facts. It is not a case in which the public can suffer any detriment, in which the Government can suffer any detriment from the Senate of the United States knowing fully what are the facts of the case, and by what warrant of law or pretense of law this intervention, if it has taken place, has been made."

Mr. Conkling: "Mr. President, the Senator from Ohio seemed to think that he distinguished this case not only from the mass of cases but from all other cases (for I undertake to say that this usage has not been departed from, when attention was called to it, in any instance) by observing that the topic to which the resolution relates does not concern our relations with foreign nations. Now, I humbly conceive that if there be sense and reason in the rule, which commits something to executive discretion, that reason is no stronger, nay, it is less strong, in a case which may involve facts touching our foreign relationships; than it is in many a case, this one for example, touching our domestic affairs. To what does this resolution relate? To the turbulence, to the bloodshed, to the chaos, to the serious disorder of a great community in one of the States of this Union; a community from which the most recent tidings are suggestive and ominous—suggestive of something higher than the mere strife and competition of faction or of party—suggestive of considerations which address themselves to every Senator, not as a partisan, but as he stands upon his oath in conscience to represent the constituency behind him and to be true to the great trust committed to him. Here is a resolution aimed at facts touching such a subject, and the Senator from Ohio thinks that it is too much even for to-day and for to-morrow, during that time when for aught we know turbulence and defiance to law stalk high-headed in the public way.

"Before I take my seat I will move to insert at the proper place 'if in his judgment not incompatible with the public interests.'"

The Vice-President: "The question is on the amendment of the Senator from New York, which the Secretary will read before the Senator from Ohio proceeds."

The Chief Clerk: "After the word 'Senate' it is proposed to insert 'if in his judgment not incompatible with the public interests.'"

Mr. Thurman: "Mr. President, let us come to the substance of this matter. The Senator says that it is a rule or a usage to submit it to the discretion of the President of the United States whether he will answer resolutions of inquiry like this. Sir, if there is any such usage, I do not know it. I think I am tolerably familiar—not as familiar as the Senator, for he has been here longer than I have been—with the usages of the Senate; but I was familiar with the Senate long before the Senator was familiar with it, and with the usage in Congress long before he had a seat in Congress; and if there is any such usage, I must say I do not know it. In respect to our foreign affairs, it has always been the usage; but that in respect to matters of domestic concern, in a time of profound peace—not in a time of war, but in a time of peace—our resolutions of inquiry are to be subjected to the discretion of the President; and that he is to answer them or not, according to his judgment, or his will, or his prejudices, or his feelings, or his interests, I am not ready to admit. I do not, therefore, concede that there is any such usage as the Senator speaks of applicable to a resolution of this kind; for what is this resolution? Does it ask the President what is to be done with the army in the future? No, sir; it relates simply to what has taken place, and asks the President to give us a piece of information as to what has taken place. What objection can there be to that? It is that we may not act upon mere newspaper reports; it is that we may not take mere telegraphic dispatches as the evidence of what has taken place, but that we may have official information of what has taken place. It relates entirely to what has occurred; not to movements of the army contemplated in the future, but to what has occurred—the simple, naked facts.

"Why, Mr. President, it does seem to me as if all sensibility on the subject of liberty was being lost in this land. Is Louisiana the only State in which troubles occur in organizing a Legislature? My colleague will remember when the Legislature of the State of Ohio was for more than two weeks without organization under circumstances very nearly similar to those in Louisiana, except that in that case there was no fraudulent returning board in Ohio; for, thank God, we never got to that depth of perdition in that State, and there was no military power; but there were two bodies in the House of Representatives with two Speakers and business going on before both in

the very same chamber. For two weeks the Legislature of Ohio was unable to organize by reason of that state of affairs. What would have been said if the President of the United States, if Martin Van Buren, had sent the Army of the United States into that chamber to expel some of the members who claimed seats and to seat the rest? I can tell you, sir, that that force would never have left Columbus if it had been sent there for any such purpose.

"But that is not the only instance. Who has forgotten the scenes that took place in the Legislature of Pennsylvania? Who has forgotten the trouble about organizing the Legislature of Pennsylvania on a famous occasion? There what would have been said, what would the venerable Senator before me from Pennsylvania (Mr. Cameron) have said, if at that time the President of the United States had sent the Army of the United States to Harrisburg to put up one party and put the other down?

"Well, sir, there is the same law for Ohio and Pennsylvania that there is for Louisiana. I know very well the excuse under which these things are done. I know very well that there is an idea afloat that, although Louisiana is one of the States of the Union, as much entitled to the rights of a State as Ohio or Pennsylvania or New York, yet she may be trampled into the dust; that a Governor may be foisted upon her by usurpation, by the unconstitutional edict of a Federal judge supported by bayonets, and that that first fatal step is to be maintained, although liberty and the Constitution and law may all perish in sustaining it; and that what would not be tolerated in Massachusetts, or your own State, or Ohio, or Pennsylvania, for a single moment, may be patriotism, forsooth, and the force of law in the State of Louisiana!

"I want to see the facts. I want these facts to come here. I want to know who it is that has called for the use of the Army of the United States to organize a State Legislature."

Mr. Morton, of Indiana, said: "Mr. President, it seems to me that the fervor displayed by the Senator from Ohio is rather uncalled for in view of the character of his resolution. He argues this resolution as if it was in the nature of a mandate, as if it was peremptory, as if the Senate of the United States had the power to issue an order to the President of the United States to make a certain report and that he was compelled to obey that order.

"But, sir, I come to another, which I think is a more important matter, and goes beyond the mere phraseology. If we are to have information upon this subject, let us have the whole story, and not require the President to answer upon a particular point. Let us have the whole story; let the whole truth go to the nation, and I think we can bring that out by putting the following addendum to the resolution:

And whether he has any information in regard to the existence of armed organizations in the State of

Louisiana hostile to the government of the State, and intent on overturning such government by force.

"If the attempt to organize this House yesterday is a part of a conspiracy to overturn the State government of Louisiana, to again cover the streets of New Orleans with blood and with dead bodies, to continue the murders and the massacres which have prevailed in that State for months and for years past, and what the President has done has been in the interest of humanity and to preserve the public peace and to prevent a consummation of this conspiracy; if these are the facts, let the President tell the whole story. We do not want it by piecemeal."

Mr. Saulsbury, of Delaware, said: "Mr. President, the resolution offered by the Senator from Ohio, I presume, is predicated upon the information which is contained in the public press of the country that there was yesterday in the city of New Orleans military interference with the organization of the Legislature of Louisiana. That information has been communicated to the country by telegrams sent from New Orleans, and published in almost all the papers of the country this morning; and the Senator from Ohio very properly, as I conceive, not desiring to act upon mere newspaper rumors of the day, offers in his place in the Senate-Chamber a resolution respectfully requesting the President of the United States to communicate to this body information on that subject, to tell us whether there was any interference by the military authorities of the country for the purpose of preventing or interfering with the organization of either House of the Legislature of Louisiana; and then, if that has been the fact, what is the authority, where is the law which justified such interference? That is the purport, the sum and substance of the resolution offered by the Senator from Ohio."

Mr. Logan, of Illinois, said: "Mr. President, a resolution of inquiry is offered requesting the President of the United States to give certain information to the Senate of the United States, with the amendment proposed 'if not incompatible with the public interest,' which is in accordance, as I understand, with precedents and the usage of the Senate; and another amendment is to be offered, I understand, asking that the President shall give all the facts, not only in connection with the use of the army or a portion of it yesterday in New Orleans, but the facts in connection with that which has transpired in Louisiana preceding the action of yesterday. Now, Mr. President, I am as much in favor of having that information asked for as any Senator in this Chamber, without giving any opinion as to the right or wrong, for I have none to give until I hear the facts, and I should like to hear them for the purpose of forming a judgment and deciding thereon. This is a question in reference to the exercise of certain power, whether delegated

to the officers or authorities of the Government or not, or if delegated whether exercised in accordance with that authority. I should like to know myself as to that; but at the same time that we ascertain that, I should like to know, as the Senator from Indiana has indicated by his amendment, the other facts in connection with this, and to know what the meaning of all their conduct is. Let me now say that I do not propose myself any means of arriving at power in the people or in a portion of the people except through legalized and constituted modes."

Mr. Edmunds: "Mr. President, I should like to say a word or two upon this subject, and first touching the amendment of the Senator from New York, which the Senator from Ohio so much opposes. The Senator from Ohio has discovered, as he states, that it is not of much consequence whether the amendment be adopted or not; that the President of the United States will furnish this information at the earliest possible moment, and it is a mere question of etiquette and orderly procedure whether we shall put it to him conditionally or absolutely as a request. Upon that topic it is not worth while to spend a great deal of time; but inasmuch as the Senator has cited one precedent with which I, it seems, was connected—he calls it a precedent—and one or two others, it is perhaps necessary for the rightful proceeding of the Senate that we should say something about them.

"Now, then, the point is not whether some resolution has passed through this body that did not contain these words, but whether the Senate has ever refused to insert such words when they were proposed. Upon that point I think I can safely challenge the great learning of my friend from Ohio and the great industry of the dozen people who may have been employed to hunt up these precedents, as he calls them, to produce one. He has not done it. I did not challenge the Senator from Ohio to produce one instance in which a resolution had passed without these words; but I did endeavor to ask him if he could name then an instance when the Senate had declined to do what the Senator from New York proposed should be done here. I do not know whether the language that I adopted was particularly well adapted to convey that idea or not, because I was somewhat shy of interrupting the Senator from Ohio at all, but that was the substantial point. Upon that point the Senator from Ohio, having exhausted all his ammunition, has not yet been able to show that in any instance in which the attention of the Senate was called to the topic, and such words were proposed to be inserted, the Senate ever failed to insert them, and that without a division. I suppose on this occasion we shall have a division, and we shall find on one side the solid phalanx of the excusers and the apologists and the defenders of what they call the rights of the people in the Southern States, which means

the same body of people whose rights their predecessors defended in 1860 and 1861, the old aristocracy of white men and nothing else, and white men of one political opinion and nothing else. So they will be again in solid array as they were fourteen or fifteen years ago to do the same thing. I think I can say for one, and for the people whom I in part represent, that they are quite welcome to begin.

"It is high time, Mr. President, that the people of this country (and by that term I mean the whole people, those who have become people under the amendments of the Constitution as well as those who were citizens before) should ascertain now and forever whether these amendments for liberty and for human rights are to live and have a vitality, or whether, to use a Western and a Democratic phrase, they are to be frozen out, and frozen out by Ku-klux for which there were apologists in this Chamber, in respect to whom there were denials by the minority in this Chamber of the existence of any such body, and in respect of whose conduct in assassinations and murders, which the honorable Senator from Ohio so gently calls 'homicides without authority of law'—a most sweet and gentle phrase, one that would not touch the coat-tails of any murderer in the South with the slightest derogation—and men stood up in this Chamber and with similar gentle phrases characterized that widespread conspiracy of four years ago. And now, when by a new name 'Ku-klux' has transferred itself to 'White League,' and a military organization, created, organized, ramified, extended, for the sole purpose of making war upon their fellow-men because they stand up to assert the rights that the Constitution of their country and the laws of God have given them, are again extending their hands and their forces everywhere, we find the same old story repeated by the same old allies or their successors, that these assassinations, and murders, and cruelties, when they come to the ultimate termination of death, are 'homicides without authority of law!' And from another Senator, they are 'the spirit of liberty resisting oppression and despotism;' and, as the Senator from Ohio puts it himself, a statement of these circumstances that are known here of all men is only the cry of despotism endeavoring to shield itself in its war upon liberty by saying that it does it in defense of law and order!

"Mr. President, the despotisms of which we have any account in human affairs, until this of most recent times, have been despotisms whose forces were put in play against the rights of men, against the preservation of life, against the defense of liberty; and yet here we have what the honorable Senator styles a despotism which exerts the power of government to protect defenseless and innocent men against an organized conspiracy to deprive them of liberty, and of life, and of right, because they happen to assert their right to be citizens of this republic as well as the white race. The

honorable Senators, so far as I am concerned, are quite welcome to open an issue of that kind to the people of this country. It is a momentous one, there is no doubt; it involves in its solution large sacrifices, it involves in its solution still larger consequences; but I think I can tell Senators that they need not rely upon what they suppose to be a triumph at the elections if they suppose they are going to cover up or to maintain for a single year any excuse for or recognition of that state of things which the Southern 'White League' is the exponent of, and which its dreadful and unpunished crimes are one of the means of carrying its notions into execution, without an expression of opinion by the people of the United States—I will not say of the North or of the South, but I will say without an expression of that portion of the people of the United States who fifteen years ago rallied to the unity and the liberty of the Government and its citizens, which they will learn to their satisfaction or dissatisfaction has not fallen asleep for any great length of time. I can tell Senators I think with some safety that the thirteenth, fourteenth, and fifteenth amendments of the Constitution of the United States are intended to be, and will be, whether we all live to see it or not, just as firmly planted in practice in this country as they are now in theory; and 'it will not do' to use a phrase so favorite with my honorable friend from Ohio, for him or any other Senator to say that the people of this country, who love law and order and liberty combined, are going to sit down and see thousands and tens of thousands of their fellow-citizens in any part of this country made the victims of oppression and assassination and every species of wrong, merely because of the fact that they wish in an innocent and a lawful way to assert their constitutional rights, without resisting it.

"So, then, Mr. President, the question is not precisely whether despotism is to cover itself up by acting under a pretense of supporting law, but the question is whether a powerful government, armed by the Constitution with the authority to maintain itself and protect every constitutional right of every citizen, shall exert its power in order that every right of every citizen may be respected, and that an honest and an innocent man who lives in any State shall have a right to call upon the Government of his country to protect him in the rights that the Constitution of that country has made sacred to him.

"When I see, Mr. President, as I have not yet seen, that the people, as they call themselves, the White-Leaguers, or the white Democrats, or the white Conservatives, or whatever they may be, of any State in this Union, when they find that any of their associates have committed assassination or murder or wrong upon their fellow-citizens for no cause but opinion's sake, turn upon him as in Ohio they would turn upon him, or in Vermont, without respect of party, and bring him under the heavy hand of

justice, then I shall begin to have some faith that our Southern brothers, who it seems have not yet forgotten the old manners and ways of semi-barbarous times, have thought better of it; and then I shall begin to have some faith that whatever irregularities or wrongs may exist in the autonomy of any of those States will be properly corrected.

"Mr. President, as I have said, this is the first time, I think, in human history when any man has raised his voice to condemn what he calls despotism on the part of the Government, where, when you look to find what that despotism is, you find on one side the Government exerting all the power that it is able to exert to protect human life and human liberty, instead of, as in the despotism we have read of, exerting all the power that it possesses to imprison and to get men out of the way and to destroy them and exile them, or kill them in spite of the law and against the law. That is what the White-Leaguers are endeavoring to do, and it is to resist that aggression upon government and good order and upon liberty that the forces of the Government are brought together. That is the difference, and it is a difference, I must say, that I think naturally grows out of the condition of things that existed in the Southern States. It is a difference that would not be tolerated, that could not exist, in fact, in any Northern State where society is homogeneous and intelligent and educated; and it is a difference that necessarily almost grows out of the circumstance that a hundred years of slavery, a hundred years of oppression and of wrong, have created such a state of opinion in the body of the governing classes in those States that whatever they see is done that does not suit them is to be redressed at their own free-will without any regard to law at all.

"Now, Mr. President, I am as anxious as the honorable Senator from Ohio is that we shall have this information. I am anxious on the particular topic to which he refers to know whether the White League and its aiders and abettors in Louisiana undertook in defiance of the laws of the State of Louisiana, with which the United States have something to do with respect to the organization of the State, and to which in such respects we are not strangers by any means to set up a Legislature which the statutes of that State forbade them to set up and to turn out and to ignore the only persons to whom the law intrusted the duty of receiving the certificates of election, counting them, calling the roll of the men who were certified, and organizing that body of people. That is what I wish to know, and if I am rightly informed we shall then have the spectacle of the use of power to repress an illegal but organized mob that, in defiance of law, in defiance of justice, in defiance of usage, undertook to set itself up as a Legislature to the exclusion of the right one. If that should happen to be the case, I trust that the honorable

Senator from Ohio and the honorable Senators from Missouri and Delaware, and all the other honorable Senators of that ilk, will be as glad as I shall be to know that such an operation was prevented by the exercise of legitimate constitutional power; for I suppose these lovers of liberty on the other side of the Chamber, though they seem to have somewhat queer notions of what liberty is, have not yet got so far as to be willing to maintain that it is not the business of constituted power to resist illegal aggressions, and therefore that it would not be the right thing for the Government of the United States to uphold the rightful Legislature of the State of Louisiana. If it should turn out that those whose friends are here found maintaining their cause were themselves the illegal and wrongful aggressors, not having a shadow of right to stand upon under the laws of Louisiana, then I hope we shall have taken back in this august presence of all those talks about despotism and Cæsarism and oppression which we have heard so much of to-day. But perhaps it is too early to anticipate what is to be the fact."

Mr. Thurman: "Mr. President, during the five years that I have held a seat in the Senate, speaking from recollection, according to the very best of my memory, I have heard precisely the same speech that has just been delivered by the Senator from Vermont (Mr. Edmunds) at least half a dozen times, and I have no doubt the people of Vermont have heard in every parish and corner of that State this same creed of hatred preached by that Senator. What is it, sir? It is that there is a difference that necessarily exists down South between the black and the white races, out of which these troubles arise, if I understand the Senator's proposition, and that therefore that fact, which should make us do all that we could to conciliate, shall be a reason for the General Government usurping powers not conferred upon it by the Constitution and putting the people of the South, or at least the white people of the South, under the heel of a despotism worse than exists in any portion of this globe. That is the real solution which the Senator from Vermont would give to this difficulty, which he declares is necessary and inevitable.

"What have the Ku-klux outrages or the White League to do with the subject-matter before the Senate in the resolution which is now under consideration? Suppose there have been murders; call them murders, and gross murders, if you please; call them assassinations; use the choice language of your vocabulary whenever you speak of the people of the South; denounce the people of the South as assassins, thugs, Ku-klux, as you do; do all that; and suppose that such were the fact: what has that to do with the question whether the armies of the United States were yesterday used to organize a Legislature of a State without any authority of the Constitution or the

law for that use? What has that to do with it? Why, sir, crimes have existed everywhere. Crimes have existed in New England as well as at the South. People have been hung in New England without judge and jury as well as at the South; and people have been sentenced there by judicial sentence whose punishment and execution are now looked upon as a blot upon the civilization of the age in which they were executed. Such things have taken place everywhere; but what has that to do with the question whether the Army of the United States, in violation of the Constitution of the United States, and without any authority of law, has intervened to determine who are the rightful members of a State Legislature and to organize it not by the law but by the bayonet? That is the question before the Senate. But whenever you touch any such question as that, whenever you point to a violation of law, the old answer, the stereotyped answer, the only song the bird can sing, is 'Ku-klux,' 'murder,' 'assassination,' 'outrage!' That is the whole of it, sir, and I have no doubt that if the President of the United States to-morrow were to overthrow any government in the Southern States and institute martial law there without authority of Congress, he would be defended exactly by the same cry of 'Ku-klux,' 'White League,' 'murder,' 'homicide.'

"But, sir, that will not do. The time has passed by in the United States when plain violations of law, plain violations of the Constitution, can be defended and justified by the cry of 'Southern outrages.' The gentlemen on the other side attempted to work that up last summer. There was a 'Southern outrage' mill started; the Attorney-General of the United States was the head miller; the grist was ground out; but the people rejected the product of that mill, and set their seal of condemnation upon the reiterated attempt to keep alive the fires of the late civil war and to still stimulate the hatred of one part of the country toward the other. What do you want to do with this country? What is your duty? Your duty to your country is to harmonize the people all over the Union, and not to preach sectional hatred. Your duty is to bring peace and prosperity upon the country, and not to set the people of one portion against the other by an eternal iteration and reiteration of the doctrine that the people of nearly one-third of this Union are a set of assassins and murderers.

"What warrant has the Senator from Vermont for charging the people of Louisiana—I say the people of Louisiana—with being a set of assassins and murderers? Because there have been some lives lost down there, does that make the whole people of that State assassins and murderers? Because there have been bad men down there, because there have been bad men down there reckless of their own lives and reckless of the lives of others, does that make the whole community of that great State

a set of thugs and assassins? Are the people of Nevada a set of thugs and assassins because bands of men have roamed through there and destroyed the lives of people?"

Mr. Edmunds: "I wish to ask the Senator to be good enough to repeat what I said touching the body of people down there being thugs and assassins."

Mr. Thurman: "If the Senator says they are not, then what justification is there for the General Government to interfere in this manner?"

Mr. Edmunds: "I have not said they were not or said they were. I am only asking the Senator from Ohio to quote me correctly."

Mr. Thurman: "What was the whole inference to be drawn from the Senator's speech? Why does he attempt to picture as he has pictured before—"

Mr. Edmunds: "Ah, that is another thing."

Mr. Thurman: "Does he mean to paint for the purpose of showing that there is a little band here or a little band there of bad men or murderers in Louisiana? Did he not lay it, in effect, at the door of the whole white population of that State? Did he not say, in effect, though not in words, that the whole white population of Louisiana were in revolt against the Constitution of the United States, and carrying out their revolt by assassination and murder? If not, what was the use of his speech? What was the use of talking about murders and assassinations if they were casual occurrences that have happened in all communities, and especially have happened after the end of a great civil war in every land where such wars have prevailed? But the Senator says that there are necessary differences with the white population owing to the existence of a black population after the previous existence of slavery down there. I deny that that is any justification, nor is it true in point of fact that there is any such necessary and inevitable antagonism. Where is there a more peaceful State than Virginia? Where is there a more peaceful State than North Carolina? And so of Missouri, my friend (Mr. Boggs) says; and so I might name State after State. Where is there a more peaceful State than are those States—States that were slaveholding States—that contain still a large amount of negro population?"

"No, sir; it will not do. The Senator knows the reason why Louisiana is agitated. The Senator knows that over two years ago a government was foisted upon the people of Louisiana which was not elected, that the Statehouse of Louisiana was seized under a midnight order of a Federal judge, an order which our Committee on Privileges and Elections have unanimously declared to be without a parallel in judicial proceedings and utterly void, which he had no jurisdiction to make, which was not even an order of the court, but was the order of the judge at his private house at midnight, without any parties before him, without any

motion made for the order, and the order itself not verified as every order must be to have effect; that under that order troops of the United States, at two o'clock in the morning, seized that State-house, or what was used as a State-house, and that under that order and under a subsequent order made in the case of Antoine, which our committee also reported, and as every lawyer knows who has looked at it was wholly without jurisdiction and utterly void, not a man was permitted to go into that State-house but such men as a returning board, declared by our same committee to have had no authority whatsoever in the premises, should say were entitled to take seats in that body; and that that returning board counted in Kellogg for Governor, Antoine for Lieutenant-Governor, and a majority of the Legislature, without ever having a single return before them, upon newspaper reports and other rumors, as they swore themselves before our committee, and in some cases without any reports at all, but according to their own estimate of what ought to have been the Republican majority in those parishes. And, sir, was it to be expected that you would have peace after such a usurpation as that? When that man Kellogg was put into that chair, when that Legislature was inaugurated, when those illegal proceedings took place, then were the seeds of the troubles of Louisiana laid. Had the choice of the people, the men who were elected State officers by more than ten thousand majority, been allowed to take their places in the executive offices, had the Legislature elected by the people been allowed to assemble, Louisiana would be as peaceable a State to-day as is the State of Vermont. That is the truth about it. But in violation of the rights of that people, in utter disregard of free institutions, trampling under foot the elective franchise, and by the exercise of power which your own committee have unanimously reported was unconstitutional, a usurpation was set up there, and that was the first fatal step, that fatal step of the President—that fatal step taken without waiting for the remonstrances of the people of Louisiana to be heard, without waiting for their committee on its way here to appear and represent the true state of the facts—that usurpation and that recognition of the usurpation are the source from which these terrible evils have flown; and therefore we need not be surprised that now, two years afterward, when another election comes, another returning board is found to count out the Democratic or Conservative majority of twenty-four members and count the minority into a majority in the House of Representatives of the General Assembly of that State."

Mr. Edmunds: "What authority has the Senator for saying that that is the fact?"

Mr. Thurman: "I have this authority for saying it, the authority of just as good men and a great deal better men than that returning board. I will show the Senator at the proper

time the authority I have. After we get this information the Senator shall see something that has the odor of authority."

Mr. Edmunds: "You seemed to have the authority now."

Mr. Thurman: "Yes, sir; I will show by the apologetic defense of this returning board itself that it has counted out a majority of twenty-odd against the Republican party, and counted in a Republican majority, and counted out the State officers who were elected and counted the Republican candidates in. Now, when such things as that take place and such conduct is sustained by the Army of the United States, Senators instead of being shocked at seeing it, Senators instead of feeling that their country and her institutions are aggrieved and wronged by such conduct, are here palliating it if not defending it, diverting attention from it by talking about Ku-klux, and White Leagues, and homicides. Sir, it will not do. The question before us is a question of constitutional law and of statute law, and it cannot be blinked, and it cannot be overshadowed, and it cannot be pushed aside by appeals to the passions of men or by a threat of a still greater degree of despotism upon the prostrate necks of the people of Louisiana."

Mr. Edmunds: "Mr. President, I wish not to occupy time in reply to the very eloquent effort of my friend from Ohio, and which, I am sure, I never heard before, because I have got so familiar with it that I generally go out when it has been pronounced latterly, but to call the attention of the Senate and of the Presiding Officer to one fact that the honorable Senator has stated, which has a great deal to do with this question.

"The honorable Senator says that this returning board, to whom by law the returns were sent, has counted out a Democratic majority in the House of Assembly of Louisiana and counted in a Republican majority, which he says is a very bad thing. If they have done it contrary to law, it is a very bad thing; but I believe we both agree that by the laws of Louisiana it was the business of that board to count one way or the other, and determine for the time being. Then we have, on the Senator's own statement, the fact that a Republican majority of that House of Assembly had their certificates and attended at the State-house to organize their Legislature; and yet we find him complaining of a violation of law because a mob, headed by his friends, were not allowed to organize themselves in spite of that majority who had certificates."

Mr. Bayard, of Delaware, said: "Mr. President, in my judgment the amendment proposed by the honorable Senator from New York to this resolution is quite out of place and unnecessary. The resolution itself, we all know as a public fact, was a mere formal preliminary to congressional action. It was an orderly and respectful call upon a coordinate branch of the Government to account for his

apparent exercise of unlawful power. I do not now propose to debate the question raised by the amendment of the Senator from New York, not because it is not important in itself, and touches an interesting, grave, and substantial question, but because it is overshadowed by the main subject upon which it is now sought to be ingrafted.

"Mr. President, that is a very small matter compared to the gravity of the crisis in which I believe the people of the United States find themselves this day. If I overrate it, it is because the deep solicitude which I feel in every thing touching my public duty and the welfare of my countrymen must account for the error in judgment. I do not believe that since the American colonies separated themselves from the rule of Great Britain by revolutionary action the people of this country were ever brought face to face with graver questions, needing braver, calmer, more deliberate consideration, than confront them to-day. It is not simply the question of the existence of that republican form of government which by the Constitution it is made the duty of the United States to guarantee to every State of this Union, and without which Louisiana stands to-day. It is even graver, if it be possible, more important than even that, for there are governments, of laws not republican in form, in which the objects of good government are secured and peace and safety given to the inhabitants. But the issue now to be raised between the people of the United States and those whom they have elected as their rulers is whether this Union of States shall be governed by law or by the mere personal will of the official; whether we shall have a civil government or a military dictatorship; whether we shall have a free government or a despotism. The issue is, if I mistake it not, not less grave than this. In the venerable Commonwealth of Massachusetts I find well stated the object for which, the spirit with which, these limited governments were created, and their charters reduced to writing, so that they should not depend upon the feebleness of men's memories, but should be fixed in written characters for all time. Said the people of Massachusetts in their Declaration of Rights, in the fourth section:

The people of this Commonwealth shall have the sole and exclusive right of governing themselves as a free, sovereign, and independent State; and they shall forever hereafter exercise and enjoy every power, jurisdiction, and right which is not or may not hereafter be by them expressly delegated to the United States of America in Congress assembled.

"And in the closing section of their Declaration of Rights:

In the government of this Commonwealth the legislative department shall never exercise the executive and judicial powers, or either of them; the executive shall never exercise the legislative and judicial powers, or either of them; the judicial shall never exercise the legislative and executive powers, or either of them, **TO THE END THAT IT MAY BE A GOVERNMENT OF LAWS, AND NOT OF MEN.**

"There is the soul of the declaration of rights upon which the government of the ancient Commonwealth of Massachusetts stood in 1789, and under and subject to which her people have lived to this day.

"Mr. President, absolute, unlimited power is unknown to the American system of government, or to any other system of government pretending to be called free. The people of the States, and the States as integral parts of the Federal Union, have delegated certain enumerated powers to their rulers, and reserved all others expressly in their written charter to the States and to the people. To omit the execution of just power is clearly a breach of duty of the Executive, and to assume power not delegated is a usurpation quite as dangerous as rebellion and just as promptly to be checked.

"Now, sir, in what spirit should an American Senator approach the consideration of a question like this? Should it not be gravely, moderately, restrainedly, and without excitement discussed? How unlike should it be to the remarks which we have here printed in the records of the proceedings of this body, which fell from the honorable Senator from Indiana (Mr. Morton) and from his associates from Vermont and from Illinois (Messrs. Edmunds and Logan), in which every line seems to breathe hatred, to blaze with excitement, to be filled with violent epithets, with general arraignment and indictment of the whole white population of a sister State, so that it seems to me their speeches must have been intended to obscure the real point at issue and to envelop the subject in a cloud of excitement, to awaken anew the bitterness of sectional animosity; and, by sounding the trumpet of mere party, to draw their hearers away from that standard of sworn patriotic duty to support and defend the Constitution of their Government. I shall not imitate them. My sense of indignation is strong, but it is to be silenced by my sense of sorrowful apprehension of evil to my country."

The Vice-President: "The resolution of the Senator from Ohio is before the Senate, and the question is on the amendment proposed by the Senator from New York."

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

The result was announced—yeas 32, nays 21—as follows:

YEAS—Messrs. Allison, Boreman, Boutwell, Cameron, Clayton, Conkling, Dorsey, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamilton of Texas, Harvey, Hitchcock, Howe, Ingalls, Logan, Mitchell, Morrill of Maine, Morrill of Vermont, Norton, Oglesby, Patterson, Pease, Pratt, Sargent, Scott, Sherman, Spencer, Wadleigh, West, and Windom—32.

NAYS—Messrs. Bayard, Boggs, Cooper, Davis, Dennis, Fenton, Ferry of Connecticut, Goldthwaite, Gordon, Hager, Hamilton of Maryland, Johnston, Kelly, McCreery, Merrimon, Ransom, Saulebury, Schurz, Stevenson, Thurman, and Tipton—21.

ABSENT—Messrs. Alcorn, Anthony, Brownlow,

uckingham, Carpenter, Chandler, Conover, Cragin, Gilbert, Hamlin, Jones, Lewis, Norwood, Ramsey, Robertson, Sprague, Stewart, Stockton, Washburn, and Wright—20.

So the amendment was agreed to.

The Chief Clerk: "The amendment of the Senator from Indiana is to add to the resolution the following words: "

And whether he has any information in regard to the existence of armed organizations in the State of Louisiana hostile to the government of the State and intent on overturning such government by force.

The Presiding Officer: "The question recurs on the amendment of the Senator from Indiana (Mr. Morton)."

The amendment was agreed to.

The Presiding Officer: "The Chair will be excused for asking the Clerk to read the amendment offered by the Senator from California (Mr. Sargent)."

The Chief Clerk: "It is proposed to amend the resolution by inserting after the word 'Senate,' where it last occurs in the original resolution, the words 'under what circumstances; ' so that if amended it will read: "

And if such has been the case, then that the President inform the Senate under what circumstances and by what authority such military intervention and interference have taken place.

Mr. Morton: "That is right."

The amendment was agreed to.

The Presiding Officer: "The question is on the adoption of the resolution as amended."

The resolution as amended was agreed to.

The answer of the President to the resolution consisted of an extended report on the state of affairs in Louisiana, chiefly in December, 1874. The message was sent to the Senate on January 18, 1875, and will be found under the title PUBLIC DOCUMENTS in the ANNUAL CYCLOPEDIA for 1874. See also the article LOUISIANA in the same volume.

In the Senate on December 15, 1874, Mr. Wright, of Iowa, offered the following joint resolution proposing certain amendments to the Constitution of the United States:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following amendments to the Constitution of the United States be proposed to the States for their ratification:

ARTICLE.—SEC. 1. The President and Vice-President of the United States shall be elected by direct vote of the people and by ballot. They shall hold their office for the term of six years, and the President shall be ineligible to a reelection.

SEC. 2. Every male citizen of the United States of the age of twenty-one years and upward, residing in each State, District, and Territory thereof, who shall not have been convicted of felony, shall, after registration, be a competent voter at all elections for President and Vice-President of the United States.

SEC. 3. The election for President and Vice-President shall be held at the same time in each State, District, and Territory of the United States, and it shall require a majority of all the votes cast to elect to either office. If no person shall receive such ma-

jority, another election shall be held, at which the two persons who shall have received the highest vote for either office at the previous election shall alone be voted for; and all votes cast for any other person shall be null and void.

SEC. 4. The returns of all elections for President and Vice-President shall be sealed up and transmitted to the Chief-Justice of the Supreme Court of the United States. That court shall open and canvass said returns; they shall hear and determine all questions arising thereon; they shall ascertain and declare the result of the election, and grant a certificate accordingly to the persons elected.

SEC. 5. The Congress shall have power to pass all laws necessary and proper to carry into effect the provisions of this article.

Mr. Wright: "The amendments proposed were not draughted by myself, but sent to me by a very intelligent citizen of the country, and I present them by request. I move that the resolution be referred to the Committee on Privileges and Elections."

The joint resolution was read the second time by its title, referred to the Committee on Privileges and Elections, and ordered to be printed.

This session of Congress closed on March 3d, when that body adjourned *sine die*.

The most important of the various measures passed at this session was the one to provide for the resumption of specie payments. The following is a part of the 3d section of this act:

And on and after the first day of January, *anno Domini* eighteen hundred and seventy-nine, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the Assistant Treasurer of the United States, in the city of New York, in sums of not less than fifty dollars. And to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues from time to time in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress, approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid.

CONKLING, ROSCOE, Senator in Congress from New York. He was born at Albany, October 30, 1829, and received his education at the schools and academies in that city, where he studied law and commenced his practice. In 1846 he removed to Utica, and became the attorney for Oneida County in 1850. Subsequently he was elected Mayor of Utica, 1850, and a Representative in the Thirty-sixth, Thirty-seventh, Thirty-ninth, and Fortieth Congresses. But immediately after the last election as Representative he was chosen to the Senate of the United States, to succeed Ira Harris. He has constantly been an active and prominent member of the Republican party. He took his seat in the Senate on March 4, 1867. At the expiration of his term he was reelected, and took his seat March 4, 1873. His present term will expire March 3, 1879.

CONNECTICUT. The Republicans of this State assembled in convention at New Haven on January 20, 1875, for the purpose of nominating candidates for the State offices. More than two hundred and seventy delegates were present.

For Governor two candidates were proposed in the convention, James Lloyd Greene, of Norwich, and Amos S. Treat, of Norwalk. On the first informal ballot taken, the whole number of votes being 273, Mr. Greene received 117 votes, Mr. Treat 82. On motion, Mr. Greene was then nominated by acclamation. For the office of Lieutenant-Governor, Charles L. English, of New Haven, was unanimously nominated; for Treasurer, O. B. Arnold, of Meriden; for Controller, Robert B. Crawford, of Norwalk.

The following resolutions were then passed by the convention unanimously:

1. We adhere to the doctrines and principles of the Republican party as heretofore expressed in its national platform. We have undiminished confidence in the integrity and patriotism of President Grant. We heartily indorse his recent special message to the Senate on the Louisiana question, and the principles therein contained; and we unite with him in declaring that "any military interference by the officers or troops of the United States with the organization of a State Legislature, or any of its proceedings, or with any civil department of the Government, is repugnant to our ideas of government;" and, with him, we "can conceive of no case, not involving rebellion or insurrection, where such interference, by the authority of the General Government, ought to be permitted, or can be justified;" and at the same time we thank the President for saying that "to the extent that Congress conferred power upon him to prevent, neither Ku-klux Klans, White-Leaguers, nor any other association using arms and violence to execute their unlawful purposes, can be permitted in that way to govern any part of this country." We urge our Senators and Representatives to adopt early measures for securing the peace and welfare of the people of that State.

2. We utterly condemn, as we did during the war, those unwarrantable denunciations of the General Government, which, while subverting only a selfish political purpose, tend to keep alive an insurrectionary and lawless spirit in certain States of this Union.

3. We are in favor of hard money and all necessary legislation to get it. In so far as the new finance bill means the early redemption of Government notes, we approve of it; and we believe, if its execution is left in the hands of a Republican Administration, it will achieve that end. We denounce the Democratic party as a party of inflation and repudiation; and we cite in proof of these charges their platforms in a majority of the States, their refusal in the last Connecticut Legislature to indorse or take any action upon the subject, though especially requested so to do by Governor Ingersoll; their utter failure to propose or support, as a party, in Congress, any measure looking toward a return to specie payments; and their united opposition, in the Senate and House, to the recently passed Senate currency and banking bill.

4. As to State affairs, we challenge a comparison between the Republican and Democratic administration. We arraign the Democratic party of Connecticut as having proved false to their pledges of reform, by using their power for merely partisan purposes, by interfering with the rights of municipalities, and by returning to the Senate of the United States a man who in the hour of the nation's peril

was notoriously in sympathy with those who engaged in an attempt to destroy the Federal Union.

5. We present to the electors of this State the names of the Hon. James Lloyd Greene and his associates upon the State ticket as men qualified by their ability, integrity, and character, to perform worthily all the duties devolving upon the executive officers of the State.

The Democratic Liberal party met in State Convention at Hartford on the 16th of February, to nominate their candidates for State offices. The convention was fully attended by delegates from every part of the State. The organization of the convention having been completed, a delegate moved "that an informal ballot be taken for a candidate for Governor," when another member proposed to renominate Charles R. Ingersoll for a third term by acclamation, and with him the present incumbents of all the other State offices. This proposition having been seconded, and indorsed also by the delegate who had previously moved for the informal ballot, which motion he withdrew, the chair put the question to the convention, when it was unanimously adopted with prolonged applause. Upon which the President announced that Charles R. Ingersoll and the other State officers were renominated. Their names and respective offices are as follows:

For Governor, Charles R. Ingersoll, of New Haven; for Lieutenant-Governor, George G. Sill, of Hartford; for Secretary of State, Marvin H. Sanger, of Canterbury; for Treasurer, William E. Raymond, of East Canaan; for Controller, Alfred R. Goodrich, of Vernon.

The following platform was unanimously adopted:

The Democratic and Liberal Republican Electors of Connecticut in Delegated Convention assembled, declare:

1. That free government derives its just power from the consent of the governed; that the Federal Government is vested with those powers only which are granted to it by the people and enumerated in the Constitution of the United States.

2. That the public welfare requires the supremacy of the civil over the military authority, and freedom of person under the protection of *habeas corpus*; and we demand for the individual the largest liberty consistent with public order; for the State, self-government; and for the nation a return to the methods of peace, and to the constitutional limitations of power.

3. That we view with apprehension and alarm, and solemnly condemn as subversive of free government, the recent action of the Federal Executive in reference to the States of Louisiana and Arkansas, and the avowed determination of the administration to disregard the will of the people of those States in reference to the organization of their governments, and the management of their local affairs.

4. That the use of bad money imposes an unequal and dishonest tax, which bears most heavily on those who work for wages; that irredeemable paper currency, by whatever name known, is bad money; and that it is a fraud in time of peace for the Government to make anything a legal tender except gold and silver coin of a fixed standard.

5. That the Republican party has proved itself unfit to rule, because with unlimited opportunity it has failed to make the bad money, which it has forced upon the people, equal to the good money with which it pays its bondholders.

6. That it is no time when industry is depressed, and honest labor everywhere deprived of the opportunity for regular and remunerative employment, to increase the burdens of Federal taxation; and that the present acknowledged bankruptcy of the national Treasury is conclusive proof of the incompetence of the Republican party to properly administer the local affairs of the country.

7. That the manner in which the affairs of this State have been administered during the past two years, the watchful economy with which all departments of the State government have been conducted, and the dignity and impartiality with which the executive duties have been performed, are worthy of approval by the electors.

8. That we cordially approve of the removal, by the Legislature of 1874, of embarrassments which the radical party had placed in the way of free suffrage; and we also approve of the repeal of the unjust alien law, which that party had adopted for the purpose of restricting an expression of the popular voice at the ballot-boxes.

Resolved, That we present to the consideration of the electors of Connecticut the names of Charles E. Ingersoll, George G. Sill, Marvin H. Sanger, William E. Raymond, and Alfred E. Goodrich, for reelection to the offices they have so ably and faithfully filled the past two years; and we invite all the conservative voters who prefer principle to party, and a government of freedom to military rule, to act with us in securing their election on the first Monday of April next.

Resolved, That the Democratic party, in State Convention assembled, demand in the future as in the past, for each and every citizen of the State, the right of "the exercise and enjoyment of religious profession and worship without discrimination," and that it condemns all opposition to and refusal to vote for a candidate for office, that originates and has its source solely from the religious convictions held by such candidate, and that we regard such opposition as an insult to his faith, an infringement of his right as an American citizen, as contrary to the Jeffersonian doctrine of democracy, and a violation of the letter and spirit of the constitution of the State.

The election was held on April 5th. The result was the election of the Democratic State ticket by a considerable majority over the Republican. The whole number of votes cast for Governor was 100,983; of which Mr. Ingersoll received 58,752, Mr. Greene, 44,272. Of the votes polled for the several candidates on the State ticket, the greatest number was cast for the Treasurer, it having been in the aggregate 101,243. The number of votes cast for Governor, as given above, is the largest ever polled in Connecticut. It exceeds by 1,646 the number of votes cast for Governor in 1868, which was 99,337, and previous to the election in April, 1875, had been considered the highest.

The Liquor Prohibition party also nominated a candidate for Governor, Mr. Smith, and presented him to the people for their votes. The number cast for him in the State amounted in the aggregate to 2,942, or a little more than half the number of votes given to the Temperance candidate in 1874, when it was 4,859.

Besides the general election for Governor and the other officers of the executive department, local elections were held on the same day for Congressmen, for members of the State Legislature in both Houses, and for sheriffs. The

election for Congressmen resulted as follows: In the First District—Landers, Democrat, received 13,884 votes; Hawley, Republican, 12,948; Lyon, Temperance, 214: Second District—Phelps, 15,440; Kellogg, 13,844; Harrington, 631: Third District—Foster, 8,055; Starkweather, 9,000; Palmer, 561: Fourth District—Barnum, 14,275; Hubbard, 11,646; Hodge, 608.

Of the eight sheriffs elected, five were Democrats, three Republicans.

As to members of the General Assembly, of the 244 Representatives elected for the Lower House, one hundred and thirty-six were Democrats; one hundred and two, Republicans; two, Independents. Of the twenty-one Senators, fifteen were Democrats, six Republicans.

The Connecticut Legislature convened for the regular session of 1875 on the 5th of May. In the House of Representatives, Charles Durand, of Derby, was elected Speaker on the first ballot by a majority of 28 over his Republican competitor; the vote having stood 130 to 102, seemingly a strict party vote.

The inauguration of the reelected Governor for his third term of office took place also on the 5th of May.

The financial condition of the State continues satisfactory. Her revenue during the last fiscal year ending March 31, 1875, was \$1,654,287.60, derived from the following sources:

State taxes from towns.....	\$423,154 07
Taxes from savings-banks.....	484,826 43
" " mutual insurance companies...	872,574 84
" " railroad companies.....	266,570 19
" " foreign insurance companies...	28,214 10
" " express and telegraph companies.....	2,757 66
" " non-resident stockholders.....	30,692 89
Receipts from insurance commissioner.....	19,732 09
" forfeited bonds, etc.....	24,374 59
Interests on deposits.....	23,536 87
Miscellaneous receipts.....	12,180 94
	\$1,654,287 60

The New Haven, Middletown & Willimantic, and the Connecticut Western and the Valley Railroads, owe the State arrears of taxes amounting to more than \$250,000, about which there is "little hope of present collection."

The State expenditures during the same year amounted to \$1,751,015.96; exceeding the revenue by nearly \$97,000. This is due to the extraordinary disbursement of \$314,000 made within that time for the building of the new State-house.

The bonded debt of the State remains as it was, \$5,044,000. It bears interest at the rate of six per cent. per annum, and can be redeemed at the will of the State.

The value of all the taxable property in Connecticut, as assessed for October, 1874, amounted to \$358,491,451; which is \$4,391,744 more than it was in the preceding year.

There are in Connecticut four banks of discount organized and doing business under the laws of the State. The Bank Commissioners aver in their last report that "from examination made, and by the returns given, these

institutions are fully entitled to the confidence which they enjoy."

With regard to the trust companies, during the year ending April 14, 1875, there has been no change, either in their number or condition, which appears to be satisfactory.

The number of savings-banks in Connecticut during the year was eighty-six, six more than in 1873. The amount of their deposits taken together was \$73,783,802.28; an increase of above \$3,000,000 over the deposits of the previous year. The number of depositors in the aggregate was 206,274, or 1,533 more than in the preceding year. The average amount due each depositor on the above stated sum, if equally divided, would be \$357.70. The income of all the savings-banks in 1874 amounted to \$5,065,541.90; and the dividends declared to depositors were \$4,034,583.85. By a provision of the law, the savings-banks cannot take a higher rate of interest on their loans than seven per cent. per annum, nor declare dividends exceeding six per cent.

Of fire and marine insurance companies which did business in Connecticut during the year 1874, there were thirteen of the State, and seventy-four of other States; also four mutual fire-insurance companies of other States; and eleven foreign insurance companies. The past year was a prosperous one for them generally. The thirteen Connecticut companies have a total paid-up capital of \$6,892,000; gross assets, \$15,337,448.20; liabilities, not including capital, \$5,580,019.73; surplus, as regards policy-holders, \$9,757,428.47; liabilities, including capital, \$12,472,019.73; surplus over all liabilities, \$2,865,428.47. The totals belonging to all other companies of other States and foreign countries doing business in Connecticut, were as follows: Paid-up capital, \$24,887,230; gross assets, \$73,899,327.97; liabilities, not including capital, \$31,353,924.64; surplus, as regards policy-holders, \$42,545,403.33; liabilities, including capital, \$49,349,154.64; surplus over all liabilities, \$24,550,173.33.

The totals of income of the said companies for the year ending December 31, 1874, were respectively as follows:

The thirteen stock companies of Connecticut.....	\$10,735,388 37
Stock companies of other States.....	86,115,252 71
Mutual companies of other States.....	1,128,980 05
Foreign companies.....	10,507,265 94
Total.....	\$36,486,882 07

The amounts paid by the said companies for losses, cash dividends, and total expenditures, during the same year, were as follows: The thirteen stock companies of Connecticut paid, for losses, \$4,689,138.53; for cash dividends, \$1,892,156.72; total expenditures, \$8,750,311.05. The stock companies of other States paid on the said accounts, respectively, \$15,517,430.38, \$2,663,003.18, \$28,918,125.02; the four mutual companies of other States, \$617,807.56, \$34,454.53, \$967,766.17; and the foreign companies paid, for losses, \$4,239,735.48;

for cash dividends, unreported; total expenditures, \$7,054,041.44.

The magnitude of the insurance interests of Connecticut is disclosed by the fact that the fire-insurance companies transact one-eighth of the entire insurance business of the United States, and have perpetually outstanding fire risks in force equal to twice the amount of the entire grand list of all the real and personal property of the State, and last year had a cash income of more than \$11,000,000, of which over \$10,000,000 came to companies in the city of Hartford.

The life-insurance companies doing business in Connecticut appear to be equally prosperous. The reserve held by them amounts to over \$82,000,000, being "considerably more than one-third of that held by all the other companies in the United States." Their income during the year 1874 exceeded \$25,000,000.

The expediency of enacting a law has been suggested, which shall put some restraint to their power of investment, as a precautionary measure, lest the sight of so much money accumulating in their hands should tempt and betray them into venturing on hazardous speculations, to the detriment of the companies themselves, and the people who have so great an interest in their stability and good faith.

The school-fund of Connecticut, on September 2, 1874, amounted to little less than \$2,045,000. It is invested for about one-sixth in State bonds and bank-stock, the rest being secured by contracts, bonds, and mortgages, almost all within the State.

The revenue of the school-fund, from April 1, 1874, to April 1, 1875, was \$159,572; the expenditure during the same year, \$160,014.61. On April 1, 1875, there was in its Treasury the available sum of \$39,117.77; and \$6,095.20 were reported outstanding.

The education of youth is very commendably provided for in Connecticut, both by the State government and by the citizens generally. Within the ten years last past several changes have been introduced in the public-school system of the State. There are 1,537 school districts, proportionally distributed among its eight counties; and the number of children of school-age, between four and sixteen years, in 1874, was 134,976; an increase of 1,446 over their number in 1873. The *pro rata* dividend, which the State annually pays for them, amounted last year to \$148,473.60. The average actual attendance of these children at school the State Board of Education aver in their last report to be 71,433 in winter, and 63,052 in summer.

The total receipts for schools, in 1874, amounted to \$1,619,948, an increase of \$1,159,285 over their amount in 1865. The town taxes now paid for that purpose are \$669,857, and the district tax is considerably more than \$500,000. In 1865 they were eight times and three and a half times less than at present, respectively.

The teachers' salaries have been doubled during these ten years, and the sum expended for building and repairing schoolhouses has increased more than fourfold.

The increased attention given to teachers' institutes has proved beneficial. Good results are also obtained from the Normal School, designed to educate and train competent teachers for the public schools. It is in successful operation. This school, it is said, "educates a good many teachers for the West, and for other States—sending out some fifty graduates annually."

Great attention is bestowed by the State upon her charitable and reformatory institutions, and provision made for them. For the charitable institutions alone, the following amounts were paid last year from the public Treasury:

For the insane.....	\$60,556 87
For the deaf and dumb.....	9,107 17
For the blind.....	4,675 00
For the imbeciles.....	5,700 69
For State paupers.....	3,567 06
For sick and wounded soldiers and hospital grants.....	26,139 44
For soldiers' children.....	71,019 42
	\$180,825 65

For the reception and treatment of demented people there are two places in Connecticut, the "Hospital for the Insane" at Middletown, and the "Retreat" at Hartford. The number and condition of the patients in the former institution, which is the larger of the two, are thus officially stated by the superintendent, for the past year: "The number of patients at the beginning of the year was 895—175 males and 220 females; admitted during the year, 210—122 males and 88 females; discharged, 155—78 males and 76 females; remaining in the institution at the end of the year, 450—219 males and 231 females. Of the 155 patients discharged during the year, 41 were recovered, 44 improved, 34 stationary. Thirty-six died." The death-rate during the year was 2 per cent. lower than the year before. Of the 450 patients remaining in the hospital at the date of the report, 22 males and 14 females were believed to be curable; 197 males and 217 females, incurable. The ages of the insane within the hospital vary from less than fifteen years to eighty and over.

It is stated that "since the hospital was projected the disease of insanity has undoubtedly increased," and "that in 1865 it was officially reported to the General Assembly that there were over seven hundred insane persons in the State (and this probably included only the fully-developed cases), whereas the combined capacity of the only two hospitals in the State cannot advantageously accommodate more than six hundred patients."

In the State Reform School there were at the end of April, 1874, 294 boys. The management of this institution during the last year has been equally successful with that of any previous year. Its expenses for the year amounted to about \$56,000, and its receipts to

nearly \$60,000. Of this sum the State contributed more than one-half for weekly support, as the statute prescribes.

The Industrial School for Girls has at present 91 inmates, and the place seems to want room for their accommodation. Its management and condition are stated to be every way satisfactory. The income of this institution has been sufficient to pay for its current expenses, and leave a surplus in its treasury. During the past year the State Treasury paid something over \$16,000 on account of this school.

Concerning the criminals confined in the State-prison, the following details are from official statements for the year: "The whole number of prisoners in confinement, March 31, 1874, was 181. Received during the year, 132. Discharged during the year, 77—leaving in confinement, March 31, 1875, a total of 236. The General Assembly pardoned 7; Secretary of the Navy discharged 13; 3 died. Of the 236 prisoners, 200 were white males, and 3 white females; 31 colored males and 2 colored females. The nativity of the prisoners is given as follows: Connecticut, 95; Massachusetts, 22; New York, 33; Ireland, 25; England, 18; Germany, 1; France, 2; Canada, 4; Prussia, 2; St. Helena, Australia, Russia, Scotland, Sweden, one each. The others came from the different States of the Union. Twenty-seven are imprisoned for life; 34 were under twenty years of age when sentenced, and 13 were over fifty years of age; 15 were convicted for attempt to kill; 56 for burglary; 8 for burning barns; 8 for arson; 8 for breaking and entering; 12 for horse-stealing; 15 for murder; 16 for robbery; 18 for theft from person; 41 for theft. The others for the usual list of crimes."

The expenses of the State penitentiary during the year amounted to \$23,548.58; its income to \$26,255.75.

The managers of the Hartford Orphan Asylum, in their last annual report, dated June 14, 1875, officially state as follows: The whole number of children during the year ending June, 1875, has been 117; the number received 48; new home provided for 40; the present number 65. There has been no death the past twelve months, and no illness which required medical treatment, until very recently, when a slight sickness summoned one of the city physicians.

The current expenses of this institution seem to be met mostly from free contributions made to it in money, or in kind, by private citizens outside, and by the managers themselves.

There are twenty-three railway companies in Connecticut. Their financial condition, amount of business, and earnings for the year 1874, were as follows: The capital paid in, up to September 30, 1874, amounts in the aggregate to \$36,733,244.62; an increase of \$664,550 over that of 1873. Funded and floating debt, \$20,032,241.38; which is \$498,029.02 less than in the previous year. Of this debt \$12,850,896.90 is for Connecticut. The total cost of road and

equipment to September 30, 1874, is \$55,383.045.16; an increase of \$778,952.96, of which \$656,697.14 was for extension, or alteration of roads. The additions made in 1874 to the rolling stock of the roads, in engines, passenger, baggage, merchandise, and other cars, cost in the aggregate \$197,272.43. Total number of miles run on all the roads during the year, 6,388,503, or 87,000 miles more than in 1873. The total number of passengers carried in 1874 was 10,405,512, or 137,309 less than in 1873; and the number of tons of merchandise transported in 1874 was 3,141,348, or 289,193 less than in 1873. The total amount of the operating expenses in 1874 was \$7,825,891.34, or \$560,667.23 less than in the previous year. This seems due in a great measure to the reduction effected in the number of employes, which in 1874 was 6,189, or 177 less than in 1873. The total receipts in 1874 were \$560,667.23 less than in the preceding year, or \$11,451,225.82; yet the total net income for 1874 was \$2,557,867.34, or only \$28,595.66 less than the total net income in 1873. The number of accidents on all the roads during the year was 83, or 27 less than in 1873, namely, 14 passengers, 85 employes, 25 trespassers, and 9 at highway crossings. Thirty-eight of the said accidents resulted fatally, comprising 4 passengers, 16 employes, and 18 trespassers. In 1873 the fatal accidents on the same roads numbered 59.

The construction of the new State-house at Hartford is progressing. The two Legislative Halls, it is estimated, will be ready for use by May, 1877. The sum of \$434,331.66 was expended on it last year, making a total expenditure on that account, from the beginning, of \$705,445.80. Of this amount, \$470,500 have been drawn from the State Treasury, and \$229.50 from that of the city of Hartford.

The militia of Connecticut is known under the appellation of the National Guard of the State. The whole active force, on March 1, 1875, consisted of a brigade of four regiments of infantry, comprising thirty-five companies, and one section of light artillery, numbering in the aggregate 147 officers, and 2,206 enlisted men, and making a total of 2,353. A new company was organized at Pawcatuck on the 17th of March, 1875, which increases the number of companies to thirty-six, and of officers and men to 2,393. The number of the inactive militia in the State, as shown by the military enrollment in 1874, was 61,488, an increase of 4,574 over the number returned in the previous year. The whole number of persons assessed for the commutation tax of \$2 in the several counties the past year was 38,493. The amount collected on this tax is sufficient to defray all the ordinary expenses of the military force of the State.

The constitutional amendment submitted to the people, whereby all towns having five thousand inhabitants, or more, are entitled to two members in the House of Representatives, was

voted upon at the October election of 1874, and approved by the people; and is now a part of the organic law of the State.

The amendment was carried by a large majority; and, in consequence of it, the towns of Bridgeport, Derby, Meriden, and Vernon, which before could send only one representative each to the General Assembly, now have two in it.

The boundary-line between New York and Connecticut, on the western side of the last-named State, is yet unsettled. The commissioners, whom the two States respectively appointed to fix it in 1856 and in 1859, having failed to agree, the Legislature of New York in 1860 adopted that line, by way of fact, which the New York commissioners had reported to them, but which the commissioners for Connecticut would not concur in, and which the authorities of the State have refused to recognize. The General Assembly, at its session of 1874, conferred on the Governor certain powers tending to the settlement of the dispute; and the Governor brought the subject to the attention of the Executive of the State of New York, with the hope that he would be vested by the Assembly of that State with authority similar to that possessed by the Executive of Connecticut to adjust the disagreement.

Of much greater importance to the State is the defense of her southern boundary-line, which is at present judicially contested by the State of New York. The origin of the contest was as follows: In May, 1873, a New York vessel, found engaged in taking oysters on the shore of Long Island Sound, at Stratford, was seized, condemned, and sold, by the authorities of Connecticut, under legal proceedings of her courts, "for a violation of the statute of Connecticut by the owners of the vessel, in taking oysters in the waters of the State." In consequence of this confiscation, a suit in law was instituted by the aggrieved party in the Supreme Court of the State of New York, and thence removed into the United States Circuit Court for the Southern District of New York, where it is now pending. As this suit involves a question of jurisdiction, and this depends on the boundary-line between the two States on the Sound, the Legislature of New York has taken action in the matter, and directed her Attorney-General to assume the prosecution of the suit, and made an appropriation for its expenses, with special view to a judicial decision by the Supreme Court of the United States on the boundary question.

The Joint Standing Committee on the Judiciary, in the Legislature, presented a report on the subject on June 30, 1875, in which they aver that Connecticut is manifestly in the right, and append to their report the following resolution:

Resolved by the General Assembly, That the sum of two thousand dollars be, and the same is hereby, appropriated for the defense of a suit now pending

in the Circuit Court of the United States for the Southern District of New York, wherein a citizen of this State is defendant, and in which the southern boundary-line of this State and the validity of a statute of this State entitled "An act for encouraging and regulating fisheries," are drawn in question; and the Controller is hereby authorized and directed to draw his order on the Treasurer of this State for said amount in favor of his Excellency the Governor, in such sums and at such times as the Governor shall request in writing.

The General Assembly of 1875 continued its session for about eleven weeks, and was formally adjourned on the 23d of July.

Among the public acts of the Legislature at its session were two amendments to the constitution of the State, which, having been passed in 1874 by the House of Representatives, and in 1875 by both Houses of the General Assembly by a two-thirds vote, were now, by an act approved July 23, 1875, submitted to the people for approval or rejection at a general election on the first Monday in October, 1875.

The first of the said amendments is as follows:

SECTION 1. A general election for Governor, Lieutenant-Governor, Secretary of State, Treasurer, Controller, and members of the General Assembly, shall be held on the Tuesday after the first Monday of November, 1876, and annually thereafter for such officers as herein and may be hereafter prescribed.

SEC. 2. The State officers above named, and the Senators from those districts having even numbers elected on the Tuesday after the first Monday of November, 1876, and those elected biennially thereafter on the Tuesday after the first Monday of November, shall respectively hold their offices for two years from and after the Wednesday following the first Monday of the next succeeding January. The Senators from those districts having odd numbers elected on the Tuesday after the first Monday of November, 1876, shall hold their offices for one year from and after the Wednesday following the first Monday of January, 1877, the electors residing in the senatorial districts having odd numbers shall on the Tuesday after the first Monday of November, 1877, and biennially thereafter elect two Senators who shall hold their offices for two years from and after the Wednesday following the first Monday of the next succeeding January. The representatives elected from the several towns on the Tuesday after the first Monday of November, 1876, and those elected annually thereafter, shall hold their offices for one year, from and after Wednesday following the first Monday of the next succeeding January.

SEC. 3. There shall be a stated session of the General Assembly in Hartford, on the Wednesday after the first Monday of January, 1876, and annually thereafter on the Wednesday after the first Monday of January.

SEC. 4. The persons who shall be severally elected to the State offices and General Assembly on the first Monday of April, 1876, shall hold such offices only until the Wednesday after the first Monday of January, 1877.

SEC. 5. The General Assembly elected in April, 1876, shall have power to pass such laws as may be necessary to carry into effect the provisions of this amendment.

The second amendment was as follows:

The General Assembly shall have power, by a vote of two-thirds of the members of both branches, to restore the privileges of an elector to those who

may have forfeited the same by a conviction of crime.

The following amendments to the State constitution, to be proposed to the people for their approval or rejection, were passed by separate resolutions in the House of Representatives at the session of 1875, and each of them ordered to be continued to the next session of the General Assembly, and published with the laws passed at this session:

To increase the number of senatorial districts and of Senators from twenty-one, as it now is, to not less than thirty-five or more than forty-five; to fix the number of inhabitants entitling any newly-incorporated town to a representative in the General Assembly at not less than twenty-five hundred; to render certain provisions of the constitution applicable "to all elections held on the Tuesday after the first Monday of November, 1876, and annually thereafter;" to fix the duration of office of judges of certain specified courts at four and two years respectively; to make the elections for judges of probate biennial, and the term of their office two years, commencing with their election in November, 1876; to fix the compensation of members of the General Assembly "at three hundred dollars per annum, and one mileage each way at the rate of twenty-five cents per mile;" to prohibit all counties, cities, towns, or other municipalities, "ever to subscribe to the capital stock of any railroad corporation," or loan their money on credit to it, directly or indirectly; to amend Article VIII. of the amendments to the constitution by erasing the word "white" from the first line.

An act was passed, submitting to the people the question of calling or not calling a convention, and choosing delegates to it, for the purpose of framing a new organic law of the State, under certain limitations and restrictions specified in the act, the votes of the electors on that question to be polled on the first Monday in October, 1875, and the result declared by the Governor by proclamation not later than the 5th day of November, 1875; the delegates to the convention, if called, to meet together at the State-house in Hartford on the 5th day of January, 1876, and the new constitution to be submitted to the vote of the people for adoption or rejection within a time not less than one month, nor more than three months subsequent to the day of final adjournment of the convention." The committee to whom the consideration of this act was referred having reported on July 22d that it "ought to be continued" to the next General Assembly, the report was accepted, in concurrence, and the act ordered to be published with the laws passed at the session of 1875.

A bill abolishing the Bureau of Labor Statistics was passed.

A bill relating to the election of presidential electors, allowing women twenty-one years of age, and over, to vote for such electors, was

introduced. The Joint Select Committee on Female Suffrage reported on the subject. The House of Representatives rejected the bill by a vote of yeas 82, nays 102; and the Senate concurred with the Lower House in its rejection. For the Centennial Exhibition of 1875 \$25,000 was appropriated, which is \$15,000 less than the amount recommended for that purpose by the special committee appointed to consider that subject.

The Supreme Court of Connecticut was called upon to decide the question whether the provision in the license-law, which makes the granting of licenses for the sale of intoxicating liquors to depend on the option of the citizens residing in the place where such licenses are to take effect, was constitutional or unconstitutional; the court in July, 1875, decided that it was constitutional.

At the general election held on the 4th of October, 1875, the two amendments to the State constitution, before mentioned, were presented to the people for their adoption or rejection. Both of the amendments were adopted by a very large majority, the first amendment much more emphatically than the second. In Litchfield County only, which gave the smallest vote, the second amendment was rejected, the vote having been yeas 239, nays 352; while on the first amendment the vote in the same county stood—yeas 573, nays 18.

COQUEREL, ATHANASE JOSUÉ, a French Protestant pastor and author, was born at Amsterdam in 1820, and died at Paris in July, 1875. He was the son of the late Athanase L. C. Coquerel, who died in 1868. First known as the editor of the *Lien*, and afterward of the *Nouvelle Revue de Théologie*, he at length attained some notoriety by the rationalistic doctrines he advocated. By reason of some views which he expressed in favor of M. Renan's "Vie de Jésus," he was, in May, 1855, suspended from his functions by the Consistory of Paris, but the Consistory of Anduze (Gard) at the same time voted him an address of sympathy. With the aid of the Protestant Liberal Union he resumed his duties. He was decorated with the cross of the Legion of Honor August 14, 1862, and was the author of several works, the most important of which are, two series of "Sermons et Homélies" (1858); "La Saint-Barthélemy" (1860); "Le Catholicisme et le Protestantisme" (1864). M. Coquerel spent the winter of 1871-'72 in the United States on a preaching and lecturing tour in aid of the suffering citizens of Paris at the close of the Franco-Prussian War.

COROT, JEAN BAPTISTE CAMILLE, a distinguished French artist, died in Paris, February 23, 1875. He was born in Paris, July 20, 1796. His father was an official, his mother a dealer in ladies' dresses. The son, after spending a few years at a school in Rouen, was placed with a cloth-merchant, but, instead of learning the trade, he would draw from models in secret. When this was discovered, young Corot was

sent to the studio of Michallon who taught him to sketch from Nature with all possible exactness. He also studied under Bertin. The first money he earned he spent on a journey to Rome in 1826. In the following year he painted his first picture for the exhibition, a view of Narni. In Italy he busied himself in rapid notation of effects and drawing of masses. The studies he made in Italy were, as critics think, wrought into rather too many of his later pictures. On returning from the South he wandered through France and finally fixed himself at Ville d'Avray, in the valley of the Seine. One of his early successes was a little landscape painted there, but he remained in comparative obscurity and poverty for fifteen years in that place. During this time his pictures sold for sixty and one hundred francs. At length, in 1847, Louis Philippe bought one of his pictures and gave him the cross of the Legion of Honor. He now became better known; and yet as late as 1853 a picture of his sold for no more than 135 francs. From this date, however, his works rapidly increased in value and are now sold at 10,000 and 15,000 francs. His struggle with poverty was long; he did not make a comfortable living until he was sixty years old. To the last he dressed like a peasant, and was simple and plain in his manners. He had his portrait taken representing him with an old pipe in his mouth. He was at once tall and strong, yet genial and companionable. Among younger artists he was called "Father Corot," and was known for his generosity, lending them hundreds of his best painted studies. Ultimately they made him a grateful return; for when, a few years since, the Art-committee gave the first prize to Gérôme, a number of artists exclaimed against the injustice done Corot, and started a subscription for conferring upon him a gold medal, and presented it to him but a short time before his death. He is the acknowledged originator of that style of landscape which has been so successfully followed by Diaz, Troyon, Rousseau, and others. As a man Corot was generous to the poor. He gave liberally to needy young artists; and his last act was to send 10,000 francs to the widow of his old friend Millet, who had passed away little more than a month before him. Among the most noticeable pictures by Corot are, two "Views of Italy," which formed a part of the gallery of the Duke of Orleans; another "View of Italy" (1834), in the gallery of Douai; "Souvenir of the Vicinity of Florence" (1839), in the gallery at Metz; "Dance of Nymphs," in the gallery of Luxembourg; "Christ in the Garden of Olives" (1849), in the gallery at Langres; "Sunset in the Tyrol" (1850), in the gallery of Marseilles; "Souvenir of Marcoussy," bought by Napoleon III.; "Morning;" "Evening" (1855); "The Burning of Sodom;" "A Nymph flying with a Cupid;" "A Concert;" "Sunset" (1857); "Dante and Virgil;" "Macbeth;" "An Idyl;" "The Italian Tyrol;" "Studies at

Ville d'Avray" (1859); "An Eastern Sun;" "Orpheus;" "A Lake;" "Souvenir of Italy;" "Repose in Egypt" (1861); "Study at Méry" (1863); "Souvenir of Monte-Fontaine;" "Gust of Wind" (1864); "Morning;" "Souvenir of the Neighborhood of Lake Nemi" (1865); "Evening;" "Solitude" (1866); "St. Sebastian" (a landscape); "Ruins of a Château;" "Morning;" and "Evening." These last mentioned, with many others of his works, appeared at the Universal Exposition of 1867. Another remarkable picture, "Morning at Ville d'Avray," was finished in 1868.

CORSSEN, WILHELM P., a German philologist, was born January 20, 1820, in Bremen, and died June 18, 1875, near Berlin. In 1844 he was appointed adjunct at the "Landesschule" at Pforta, and in 1846 professor in the same school. He remained in this position until 1866, in which year he was pensioned and went to Berlin. His exhaustive work on the pronunciation of Latin ("Aussprache, Vokalismus und Betonung der lateinischen Sprache," second edition, Leipsic, 1870), and also his "Kritische Beiträge zur lateinischen Formenlehre" (Leipsic, 1863), and "Kritische Nachträge zur lateinischen Formenlehre" (Leipsic, 1866), have considerably aided the researches on the construction of the Latin language. He was also eminently successful as a teacher. The last years of his life were devoted to very comprehensive and thorough researches on the language of the Etruscans. He indulged the hope, which was shared by many scholars, that the work which he was preparing would treat the subject in an exhaustive manner and be accepted by the literary world as the long-lost key to this most difficult among the extinct languages. The first volume of the eagerly-expected work appeared in 1874 ("Ueber die Sprache der Etrusker," Leipsic), and contained no less than 1016 pages. The second volume had not been published at the time of his death. The main result arrived at by Corssen is, that the Etruscan language, in regard to inflections and word-building, stands on the same basis with the old Italic language. The work met in Germany with a favorable reception, and not a few scholars believed that the enthusiastic expectations of the author had been fully realized. In England and France, the correctness of Corssen's views was emphatically denied by Aufrecht, Taylor, and Bréal; and, in Germany, Dr. Deecke, the revisor of O. Müller's works on the Etruscans, published a pamphlet against Corssen ("Corssen und die Sprache der Etrusker," Stuttgart, 1875), in which he undertook to show that the argumentation of Corssen was in a great many cases fallacious, and that his view of the origin of the language is radically wrong. Deecke agrees with Taylor in assuming that the Etruscan language cannot be counted among the Indo-Germanic languages.

COSTA RICA (REPÚBLICA DE COSTA RICA), one of the five independent states of Central

VOL. XV.—15 A

America, lying between 8° and 11° 5' of north latitude, and 81° 20' and 85° 53' west longitude. It is bounded north by Nicaragua, east by the Caribbean Sea, south by the United States of Colombia, and south and west by the Pacific Ocean. The boundary question with Nicaragua is still pending. As late as December, 1875, Nicaragua protested against the stationing of Costa Rican troops on the right bank of the San Juan River, as a measure which, whatever might be the motive thereof, was an encroachment on the territorial rights of Nicaragua. To this Costa Rica replied that she had the right to station a military force in the position alluded to, and that it should remain there until the limits should be finally adjusted; adding, however, that the measure was not intended to be offensive to Nicaragua, and was resorted to merely in the exercise of the rights granted to Costa Rica by the treaty of April 15, 1858.

The territory is divided into the five provinces of Alajuela, Cartago, Guanacaste, Heredia, and San José, with an estimated area of 21,490 square miles, and a population of some 185,000, of whom 5,000 are civilized and 10,000 uncivilized Indians. The capital is San José, with a population of 25,000. The President is General Tomás Guardia; the first *Designado* (first Vice-President), Señor Joaquín Lizano; the second *Designado*, Señor Rafael Barroeta; the Minister of the Interior, Justice, War, and the Navy, is Dr. V. Herrera, who is also, provisionally, Minister of Foreign Affairs, Public Instruction, and Public Worship; Minister of Public Works, Joaquín Lizano, who is likewise Minister of Finance and Commerce. The National Congress, by the terms of the Constitution of 1871, consists of a single Chamber, the members of which (deputies) are elected for a period of four years. Speaker, Señor Manuel A. Bonilla.

The President (*Regente*) of the Supreme Court is Señor Vicente Saenz.

The commander-in-chief of the army is the President of the Republic.

The consul-general of Costa Rica in New York is Señor J. M. Muñoz.

The armed force comprised in 1875, 900 men in active service, and 16,880 militia, being the number of male inhabitants between the ages of eighteen and thirty years.

According to the returns of the Minister of Finance and Commerce, laid before Congress in May, 1875, the (gross) national revenue for the year ending on the 30th of last April amounted to \$2,588,027, or less than that of the year before by about \$250,000; and the expenditure to \$2,781,106, constituting a deficit of \$193,079.

In the estimated budget for 1875-'76, the revenue is set down at \$2,541,000, and the expenditure at \$2,481,626, shewing a consequent surplus of \$59,374.

In the finance report already referred to, the Treasury account stood as follows in April, 1875:

ASSETS.	
Real estate.....	\$663,199
Tobacco and spirits in government warehouse.....	397,591
Deposits in national bank.....	1,115,400—\$2,076,190
LIABILITIES.	
To Peru.....	\$140,500
To the cities of Heredia and San José	104,513
To sundries.....	182,337
Exchanges, etc.....	269,184— \$697,054
Surplus.....	\$1,379,136

It is, however, allowable to suspect an error in these figures, and that on good grounds, inasmuch as one can scarcely accuse Costa Rica, so long remarked for her punctuality in that respect, of having about two and a quarter million dollars deposited in the national bank, and yet remain deaf to the clamorous outcry of her European creditors.

Here follows a transcript of the report published in London, early in 1875, by the corporation of foreign bondholders, on the subject of Costa Rica's indebtedness to Great Britain:

In their last annual report, the council referred to the appointment of a committee of seven-per-cent. bondholders. It was then hoped that the united endeavors of all parties interested would result in an arrangement satisfactory to the bondholders and honorable to the Government of Costa Rica.

In consequence of the prolonged default, and in the absence of any steps on the part of the Government to come to any arrangement with the bondholders, a special meeting, under the terms of the general bond, was convened by Messrs. Knowles and Foster, the agents for the loan, for the 7th of August last, and Messrs. T. Farrer and E. R. Meugens, the former an English merchant, long resident in the country, the latter H. B. M. consul at Costa Rica, were appointed receivers of the revenues generally hypothecated to the bondholders, under the supervision of a commission of six bondholders.

The necessary legal documents were prepared, and dispatched to Costa Rica, duplicates being sent through the Foreign Office; at the same time, Lord Derby consented to authorize Mr. Sidney Locock, H. B. M. minister-resident in Central America, to support, unofficially, the interests of the bondholders.

The documents above referred to were addressed to the President of Costa Rica, but the Government of that country declared itself unable to take official cognizance of the appointment of the agents, on the plea that the communications in question should have been addressed to the Minister of Finance.

The object of the Government appears to be to gain time by any possible excuse, and in the mean time to propitiate the bondholders as far as possible by courteous treatment of their agents.

Arrangements have been made by the commission with the agents for the remuneration of the latter, and with the council of foreign bondholders for the provision of the necessary expenses of the agency, as well as those incident to the appointment of the special commission. Messrs. Knowles and Foster have liberally contributed toward this outlay.

Señor Nanne has returned to Costa Rica in order, it is stated, to consult his Government and to obtain further powers; meanwhile there is no immediate prospect of an arrangement.*

Additional light is thrown upon the question of the foreign debt in the following extract from a British financial publication, bearing date November, 1875:

There is some satisfaction in finding that one

* For a detailed statement of the national debt, see ANNUAL CYCLOPEDIA for 1874. †

among the defaulting debtors of England profess honest intentions. The Costa Rican ambassador, smarting under his contumelious usage by the Lord Mayor,* declares that "the one desire of his Government is to fulfill, to the very utmost, its obligations legally contracted." More than this: "It has not, and will not, repudiate its just debt," being only "anxious to ascertain where its responsibility commences, and where that of the other party ends." As there is no reason to believe that Don Manuel Peralta does not mean what he says, perhaps we may be allowed to point out a very easy way of compensating the end he has in view. When Costa Rica issued her loans, she empowered certain commissioners to manage the matter in such manner as they considered would be most advantageous for her own interests. They were her legal agents, and by their acts she was and is bound. The bondholders, therefore, have no part in the quarrel between the two parties. Money was sent to Costa Rica on the strength of certain promises and hypothecations of revenues entered into by duly-accredited agents of the state. Her responsibility thus clearly begins with the payment of interest and sinking-fund charges to the bondholders, irrespective of any grievance she may have against the contractors. If Costa Rica has been defrauded by her agents, it is open to her Government to take whatever steps it deems most judicious to recover the amount. Her creditors, however, have nothing to do with this. They lent their money on certain definite conditions, proposed by the authorized contractors for the loans, and they look to the Government, and not to any one else, for payment of their dues. When Don Manuel Peralta considers the matter dispassionately, we feel assured he will see it in this light. In former times, Costa Rica was celebrated among Central American states for the scrupulous punctuality with which she fulfilled her obligations. Will she not return into this virtuous path, now that, according to her own ambassador's showing, she possesses a sufficient surplus of revenue to meet the service of her loans! He says that the Treasury, "by dint of some sacrifices," paid during the last financial year the sum of £194,000 over and above current charges, being sufficient "to pay the yearly interest on both loans." These exceptional debts are given as the expenses for completion of the railway,† protested bills, and a mysterious item styled "concomitant liabilities." Whether similar charges will occur in future, Don Manuel omits to state. If they do, it perhaps may be allowable to hint that the bondholders stand at present in the position of parties possessing bills protested by Costa Rica, and that their claims should, in common justice, receive equal consideration. We press these suggestions on Don Manuel, because if Costa Rica can be induced to set a good example in fulfilling her national obligations, other defaulting states may follow in the same path. Repudiation has proved catching—perhaps honesty may display the same characteristic.

The exports in 1874 were of the value of \$4,906,000, of which coffee alone figured for \$3,711,553; the other chief articles being hides, \$68,094; India-rubber, \$18,730; deer-skins, \$14,480; and cedar and mahogany wood, \$83,768.

The shipping movements for the year 1873-'74 were as follows: Entered at Punta Arenas 92 steamers and 47 sailing-vessels, with an aggregate of 136,801 tons, and 911 passengers.

* Señor Peralta's name was omitted from the list of members of the foreign diplomatic corps invited to the inaugural banquet of the Lord Mayor of London.

† In the year 1873-'74, the outlay on account of the railway was reported at \$2,127,890 (see ANNUAL CYCLOPEDIA for 1874); but in the year 1874-'75 there figures in the financial report a sum of but \$559,457 expended for that purpose.

and cleared at the same port, 91 steamers and 43 sailing-vessels, with an aggregate of 136,180 tons, and 811 passengers. Entered at Limon, 13 steamers and 63 sailing-vessels, with an aggregate of 31,384 tons, and 639 passengers; and cleared, 12 steamers and 60 sailing-vessels, with an aggregate of 33,954 tons, and 497 passengers.

The completion of the Costa Rica Railway at an early day was reported as almost beyond doubt, Señor Lara having concluded a contract for the same with M. Nicolas Lescaigne Perdoux, one of the leading railway men in France, the bases of which contract were as follows:

The road is to be built in the style of European railways, with a gradient not to exceed 2½ per cent., and with curves of a maximum radius of 820 feet. The stations are to be constructed after the style of those in Paris, with iron pillars and framework, and the roof of glass. That part of the road already finished is to be altered so as to conform with the specifications of the new contract, and an iron wharf, 600 feet long, is to be built at Port Limon. Costa Rica, on its part, agrees to pay \$50,000 monthly in gold, and the balance in bonds of from four to seven years' time.

Señor Lara returned to Costa Rica late in the year, accompanied by a French engineer of high standing.

A later report, direct from Central America, is to the effect that—

The offers from Paris are pronounced to be ruinous to the country, and have been, it is understood, promptly and unanimously rejected. The revenues of the republic are quite inadequate to meet the cost of building the road, and at the same time provide interest on the loans already incurred. With the capitalists of England and France the Congress has been unable to come to terms.

One of the most important subjects of deliberation in Congress, in the second half of the year, was that of a motion to admit Jesuits to residence in the republic. Señor Aguilar, after expressing astonishment on learning that three Jesuit fathers had established themselves at Majuela, delivered a lengthy speech against the society alluded to, whose members he regarded "as the recognized enemies of all liberty, all progress, and all public and private tranquillity." Another significant paragraph of the speech was:

When the people of Costa Rica are as truly enlightened as they are free, when laws extend real and positive protection to all alike, then I would be the first to wish the Jesuits among us, with their absurd doctrines, in order to see them combated by men at least as learned as themselves. But before that is the case, I would sooner leave my native country, with my wife and children, whose con-

sciences I am bound to preserve pure and safe from the dangers that are now threatening them; dangers the more insidious as they pretend to be based on the religion of our forefathers.

The only disturbance during the year was produced by an attempt made by the exile Don Joaquín Fernandez to organize a revolution at Punta Arenas, by proclaiming himself President of the Republic.

The rebellion was promptly suppressed.

The official organ of San José published a list of charges brought against the British consul Meugens, who was ordered to quit the country. The charges were:

His (Mr. Meugens's) assertions that the commerce of the country was diminishing to an alarming extent, owing to want of intelligence and integrity on the part of the Government, in matters relating to the railway and the loans; that the Government makes no effort to pay even a part of its debts; and that, finally, the country was in a state of bankruptcy; enormous sums were spent in maintaining a large military force for the purpose of sustaining the actual Government; that the country in general was in a state of discontent, as proved by various attempts having been made to overturn the Administration. Further, that an angry correspondence was all the time going on between Costa Rica and Nicaragua, on the question of limits, without any good result.

CRÉTINEAU-JOLY, JACQUES, a French writer, born September 23, 1803, at Fontenay; died January 8, 1875, in Paris. After finishing his studies at the seminary of St.-Sulpice, he traveled through Italy and Germany, and made his first appearance in literature as a poet. His poems "*Chants romains*" (1826), "*Les Trappistes*" (1823), and "*Inspirations poétiques*" (1829), were less remarkable for their imagination and their poetical inspiration than for their orthodox fervor. After the Revolution of 1830, he was very active as editor of Legitimist journals in the provinces. He wrote, in the interest of the Legitimist party, "*Épisodes des Guerres de la Vendée*" (1834), "*Histoire des Généraux et des Chefs vendéens*" (1838), "*Histoire de la Vendée militaire*" (4 vols., 1840-'41), and "*Histoire des Traités de 1815 et de leur Exécution*" (1842). His "*Histoire religieuse, politique et littéraire de la Compagnie de Jésus*" (6 vols., 1844-'46) is the principal work on the history of the Jesuits which is written in the interest of the order. From the same standpoint he wrote "*Le Pape Clément XIV*" (1853), "*Scènes d'Italie et de Vendée*" (1853), and "*L'Eglise romaine en Face de la Révolution*" (2 vols., 1859).

D

DAHIREL, FRANÇOIS HYACINTHE MARIE, a French Legitimist, was born October 15, 1804, at Plœrmel; died in February, 1875. He practised, since 1830, as a lawyer at Lorient, and was there for several years a member of the Municipal Council. After the Revolution

of February, 1848, he was elected a member of the Constituent Assembly. With most of the members of his party, he supported the anti-revolutionary policy of the President, Louis Napoleon, in home affairs and his Roman expedition. As member of the Legislative

Assembly, he showed himself opposed to the republican form of government, and to the *coup d'état* of Louis Napoleon. During the Empire he withdrew from political life, but in 1871 he was again elected to the National Assembly. He again showed himself an outspoken Legitimist, and voted in all important questions with his party.

DAKOTA. This Territory lies between 42° 30' and 49° of north latitude, and is bounded north by British America, east by Minnesota and Iowa, south by Nebraska, and west by Wyoming and Montana Territories. It is about 400 miles in length and breadth, and contains about 60,000 inhabitants.

It occupies the most elevated land between the Arctic Ocean and the Gulf of Mexico, and its rivers run both north and south. The Missouri is the principal river, running more than a thousand miles through the Territory, and is navigable by steamboats quite a distance beyond its limits. There are also the Red River of the North, the Big Sioux, the Big Cheyenne, White Earth, and the Dakota. These are all important streams, and bordered by the richest lands. The soil is extremely fertile, and large tracts of land are adapted to grazing, being productive of the finest grasses.

The Territory is believed to be very rich in minerals. Gold, silver, iron, and copper, have been discovered, and coal also exists in vast quantities. The Government is of the Territorial form usual in the United States. The capital is Yankton, situated on the Missouri River, in the southeast corner of the Territory. The famous Black Hills are within the Territorial limits.

DAUMER, GEORG FRIEDRICH, a German writer and poet, was born at Nuremberg, March 5, 1800, and died in December, 1875. He studied at the Gymnasium of Nuremberg, of which the philosopher Hegel was at that time the director. In 1817 he went to the University of Erlangen, to study theology, and for a time held pietistic views; but after attending the philosophical lectures of Schelling, he abandoned theology, and devoted himself to philology. In 1822 he was appointed as teacher at the gymnasium of his native city, and remained in that position until 1827, when a disease of the eyes compelled him to resign. Henceforth he devoted himself wholly to literary labors. He took great interest in the mysterious founding Caspar Hauser, who was educated at his house. From 1826, when his first work appeared ("On the Course and Progress of our Mental Culture since the Reformation," Nuremberg), until his death, he was a most prolific writer. As an imitator of the Persian love-poetry of Hafiz he gained many admirers. He wrote, in prose, on a variety of subjects, but in none did he take so profound an interest as in the philosophy of religion. He showed an open and violent opposition to Christianity, and charged the early Christians with heinous crimes. At the same time, how-

ever, he had a controversy with Feuerbach, against whom he defended the essence of religion. He believed in a religion of the future, the "religion of love and peace," the structure of which he undertook to delineate in the work "Religion des neuen Zeitalters" (3 volumes, Hamburg, 1850). In the progress of his studies, he changed his opinion concerning the origin of Christianity, and withdrew his charges which he had brought against it in his earlier writings. In 1858 he joined, at Mayence, the Roman Catholic Church, and nearly all the works published by him since were written in the interest of this Church. His special attention was given to mystical phenomena, in the Church and out of it, and he intended to have published an exhaustive work on mystical occurrences ("Der Mystagog," vol. i., "Das Geisterreich," 1867), but it was not completed. His works on Caspar Hauser ("Mittheilungen über Kaspar Hauser," Nuremberg, 1832, and "Enthüllungen über Kaspar Hauser," Frankfurt, 1839) attracted, of course, great attention on account of the intimate relation of Daumer to the founding. In 1872 his interest in the Hauser controversy was revived by the publication of new official documents, by means of which a Bavarian jurist, Julius Meyer, endeavored to prove ("Authentische Mittheilungen über Kaspar Hauser") that Hauser was an impostor. Daumer once more defended his foster-son, in an exhaustive work, entitled "Kaspar Hauser, sein Wesen, seine Unschuld, seine Erduldungen und sein Ursprung" (Ratisbon, 1873). Daumer still adhered to the theory set forth in his former works, that Hauser was the son of the Grand-duke Charles of Baden and his wife Stephanie, and that the Countess of Hochberg and Major Hennehofer were the authors of the crime which was designed to secure the succession in Baden to the children of the Countess and the Grand-duke Charles Frederick. (See HAUSER, KASPAR, controversy on.)

DELAFIELD, Dr. EDWARD, was born in 1794, and died February 13, 1875, aged eighty. He was a son of Mr. John Delafield, a merchant of New York City. He graduated at Yale College in 1812, and studied medicine in the office of Dr. Samuel Bonowe. After graduating at the College of Physicians and Surgeons in 1815, and passing the regular term of service at the New York Hospital, he went to London, where he was the pupil of Sir Astley Cooper and Dr. Abernethy. After a year's absence he returned to New York City, and in 1820, in connection with Dr. J. K. Rodgers, he established the New York Eye and Ear Infirmary. Of this institution he was attending surgeon until 1850. Soon after the foundation of the infirmary he became a partner of Dr. Bonowe, and commenced a large and lucrative practice. In 1834 he was appointed one of the attending physicians of the New York Hospital. In 1838 he was appointed Professor of Obstetrics and Diseases of Women and Children in the Col-

lege of Physicians and Surgeons, but his increasing private practice compelled him in the same year to resign his professorship and his position at the hospital. In 1842 he became one of the chief founders and the first president of the Society for the Relief of the Widows and Orphans of Medical Men. In 1858 he was elected President of the College of Physicians and Surgeons, a position he held at the time of his death. By virtue of this office he became a member of the Board of Governors of the Roosevelt Hospital. As president of the board and chairman of the Building Committee of this hospital, he took a leading part in the details of the edifice and the organization of the institution.

DELAFIELD, HENRY, merchant of New York City, was born at Ravenswood, L. I., July 19, 1792, and died in New York City, February 14, 1875, aged eighty-two. He was the last surviving son of John Delafield, who came to New York from England in 1778, and established himself there as a merchant and underwriter. Early in life Henry Delafield commenced business with his brother William, trading with England, but soon added a commerce with the West India islands, China, India, and South America. At length they confined their commercial relations to the West Indies, and finally to Hayti. His brother William dying in 1853, he retired from the business in favor of two of his nephews. He held many positions of trust, and was for a long time consul for Hayti under the Emperor Souleouque. He was the twin-brother of William, whom he closely resembled in features and voice. The three brothers Joseph, Edward, and Henry, all died of diseases of the lungs, the last two of pneumonia, on three successive days, February 12th, 13th, and 14th; at very advanced ages—Joseph eighty-five, Edward eighty, Henry eighty-two; and the funerals were solemnized on the same day, February 16th, and in the same places, in Trinity Church and at the family-vault in Greenwood. Of the two other brothers, Rufus R. died two years before, aged seventy-two; and Major-General Richard died about a year previous. The united ages of the five brothers, whose portraits had been photographed together, make an aggregate of more than four hundred years.

DELAFIELD, Major JOSEPH, a retired officer of the U. S. Army, was born in New York City, where he died, February 12, 1875, at the age of eighty-five, the oldest of five brothers. He served in the War of 1812 as captain in Hawkins's Regular New York Volunteers. He remained with the regiment until it was disbanded, when he was made major of the Forty-sixth U. S. Infantry. At the close of hostilities he was sent to Europe, to authenticate certain claims against the British Government growing out of the war just ended, the commission having been appointed in pursuance of the Treaty of Ghent. Upon his return he received the thanks of the Government for his services.

Major Delafield was at one time President of the Lyceum of Natural History.

DELAWARE. The Delaware Legislature began its session on the 7th of January, 1875. On the 15th the vote for Governor was canvassed in joint convention, and it was found that 12,488 votes had been cast for John P. Cochran, the Democratic candidate, and 11,259 for Dr. Isaac Jessup, showing a majority of 1,229 for Cochran, who was declared elected. He was inaugurated on the 20th, and delivered an address to the Legislature. On the 27th, Thos. F. Bayard was declared in joint convention to have been elected to the United States Senate, for the full term of six years from the 4th of March, having received a majority of the votes of both Houses. The session closed on the 27th of March. By far the greater part of the time had been occupied with special and local legislation.

Early in the session the following resolutions were adopted:

Resolved by the Senate and House of Representatives of the State of Delaware in General Assembly met, That Ulysses S. Grant, President of the United States, in causing the invasion of the State of Louisiana, by Federal soldiers, the arrest and the dispersion of the members of the House of Representatives thereof, and the subsequent illegal and forcible organization of a body of men to act as the representative of said State, was guilty of an act of criminal usurpation which has no parallel in the history of the republic; that such action was not only unauthorized, but in plain violation of the Constitution of the United States, and tends directly to the subversion of constitutional government and the destruction of the Federal Union.

Resolved, That we, the representatives of the State of Delaware, which was the first to adopt the Federal Constitution, do in their name and in their behalf record our most solemn protest against this dangerous act of usurpation by the Federal Executive, and invoke the authoritative mandate of the people of the whole country, that the constitutional limitations upon the exercise of the executive power shall be observed; that usurpation shall immediately cease; that constitutional government shall be preserved; and civil liberty shall be maintained in every sovereign State of the Union, and that the military in fact, as it is in law, be made subservient to the civil power.

Resolved, That we heartily sympathize with the people of Louisiana in their oppressed condition, and commend the patience and forbearance with which they have borne the unprovoked assaults upon their constitutional rights and liberties by the military power of the country.

Resolved, That our Senators are hereby instructed, and our Representatives in Congress requested, to use all legal means in their power to secure to the State of Louisiana her just rights under the Constitution of the United States, as a sovereign State of the Federal Union.

The important subjects of legislation which engaged attention related to the public schools, the regulation of the liquor-traffic, granting State aid to railroads, increasing representation, and a few others of less note. After considerable discussion a school-bill was passed, making the President of Delaware College, the Secretary of State, and the State Auditor, a Board of Education, the Auditor to be the Secretary, with a compensation of \$100 a year.

The Governor was authorized to appoint a Superintendent of Public Education, with a salary of \$1,800 a year. The Superintendent was required to examine teachers, visit each school once a year, and to hold a teachers' institute in each county. Teachers are required to pay two dollars each for their certificates. School directors are to be chosen by the people in each district, and these directors are required to levy a tax of not less than \$100 in each district in Newcastle and Kent Counties, and \$60 in Sussex County. The Board of Education must hold a meeting on the first Tuesday in January of each year, and the superintendent is required to submit a report on the condition of the schools. Another act provides for a tax of thirty cents on each hundred dollars of the property of colored persons on the assessment-lists, to be set apart as a separate fund for the maintenance of colored schools. This fund is to be paid over by the County Treasurers to the Treasurer of the "Delaware Association for the Education of Colored People," to be applied by the Association for the support and maintenance of colored-schools throughout the State.

Many petitions were received on the subject of new legislation for the regulation of the liquor-traffic—some asking for a prohibitory law, some for local option, some for a more stringent license system, and some for a more liberal license law. Several bills were introduced, that for a more liberal license system meeting with most favor, but all of them were finally defeated. The subject of increased representation had been recommended to the attention of the Legislature in the Governor's inaugural address, and several bills on the subject were introduced and discussed. The general purpose was, to add to the representation of Newcastle County in both branches of the Legislature, giving an additional senator and three or four new representatives to the city of Wilmington, and making that a district by itself. It was also proposed to divide Newcastle County, but all these propositions were defeated. As the matter now stands, the three counties of Newcastle, Kent, and Sussex, have an equal representation of three in the Senate, and seven in the House of Representatives, although the population of the first-named is greater than that of the other two together, and the assessed value of its property is more than three times that of the other two. The city of Wilmington has no representative of its own in either the Senate or the House, although its population is greater than that of either Kent or Sussex County, and its valuation and taxes greater than those of both. The present apportionment has been retained without change since the adoption of the first constitution in 1792, when the population of the three counties was nearly equal, and that of the whole State was considerably less than that of Newcastle County now.

The efforts to secure a loan of the State

credit to various railroad enterprises also failed. An amendment of the constitution permitting a general incorporation act, which had been adopted by the previous Legislature, was ratified at this session, and a general act was passed providing for the incorporation of associations for religious, charitable, literary, and manufacturing purposes, for the preparation of animal and vegetable food, for building and for loan purposes, and for the drainage of low lands. This cuts off the necessity for a large class of special legislation. Among the other acts of the session was one ceding to the United States title to and jurisdiction over land for sites for lighthouses, a beacon life-station, and other aids to navigation on the waters of the State; one incorporating the city of Newcastle, and one allowing married women to have control over their own property, whether in their possession at the time of marriage or acquired afterward. This last also allows married women to make a last will and testament without the consent of their husbands. The town of Newcastle, which was incorporated as a city, had 2,800 inhabitants. A separate act established a Board of Education for the city of Newcastle, as the general school law already mentioned does not apply to that city or to the city of Wilmington.

An act passed shortly before the adjournment, entitled "An act in relation to hotel-keepers and others pursuing a public occupation," authorizes keepers of hotels, proprietors of places of amusement, steamboat and railroad companies, and "others pursuing a public occupation," to provide separate accommodations for any class of persons who may be "obnoxious" to their patrons or passengers. Although there was no mention of "color" in this act, its purpose was to offset the "civil-rights bill" of Congress, and authorize separate accommodations for colored persons.

Though no action was taken by the Legislature directly affecting the finances of the State, that subject was brought under discussion during the session, and some important information elicited. It was shown that the cost of the executive and judicial departments of the government in 1874 was as follows:

Salaries of the judges	\$12,000 00
Attorney-General	1,500 00
Governor	2,500 00
Secretary of State	1,000 00
Auditor and Treasurer	3,573 00
Librarian	150 00
Expenses of legislative committee	210 54
Printing Auditor's report, 1874	204 40
Sundry expenses	250 00
Total	\$21,288 94

This aggregate was reduced for 1875 to \$19,400. The cost of the last preceding Legislative session was \$25,500, and it was claimed that the cost of this session would not exceed \$23,000. The extraordinary appropriations this year amounted to \$17,800, consisting of \$10,000 for the Centennial Exhibition, \$4,000 for legal services in railroad cases, \$1,500 for

the fishing commission, and \$1,800 for binding the code. The outstanding liabilities of the State were given as \$1,224,000, on which the interest is \$73,440, besides which two notes given by the late Treasurer, and amounting to \$40,000, were to be paid. State bonds amounting to \$10,000 were due and to be paid, while \$14,000 in State bonds belonging to Delaware College, which were due, were to be replaced by other bonds. Thus the demands on the Treasury for 1875 were calculated to be as follows:

In executive and judicial departments.....	\$19,400
In legislative session, 1875.....	23,000
In extraordinary appropriations.....	17,300
Interest on State and bonded debt.....	73,440
Notes.....	40,000
Bonds due and to be paid.....	10,000

Total sum of.....\$138,140

The revenue to be derived from various sources was stated as follows:

State tax on county assessments.....	\$50,000 00
Process tax.....	9,000 00
Tax on railroads.....	44,000 00
Interest from Junction & Breakwater Railroad.....	24,000 00
Interest from Breakwater & Frankford Railroad.....	12,000 00
License fees.....	45,790 00
Interest on bank stock.....	4,545 00
Tax on banks and insurance companies.....	7,287 33
From Secretary of State.....	712 00
Fines and miscellaneous.....	1,164 16
Cash on hand January 23, 1875.....	19,181 04

Total.....\$220,609 52

This would leave a surplus of \$37,469, which it was thought would be increased by at least \$10,000 by payments from the counties of taxes in arrears. As there is to be no legislative session in 1876, it was estimated that there would be a saving of expense in that year amounting to \$38,500, or the amount of the legislative expenses and extraordinary appropriations of 1875, which would leave a probable surplus for that year of \$75,000. A committee appointed to examine into the investments of the State reported them to be in a perfectly satisfactory condition. The cost of remodeling, improving, and refurnishing the State-House was \$23,438.99, or \$3,446.68 more than was appropriated for the purpose in 1873.

The State Board of Education was organized in April, and consists of William H. Parnell, President of Delaware College, J. C. Grubb, Secretary of State, and Nathan Pratt, State Auditor. The superintendent appointed by the Governor is James H. Groves. The assessments for the benefit of colored-schools under the new law, it was estimated, would not exceed \$3,200 for the three counties. There are twenty-eight colored-schools in the State outside of Wilmington, where the control of educational matters is altogether in the hands of the city. These were attended during the year by between 1,100 and 1,200 colored children. The "Delaware Association for the Moral Improvement and Education of the Colored People," of which Alfred Lee is president, gives about six dollars a month to each of these schools, besides the amount to be raised by taxation of the colored property-holders. Probably the most important industrial inter-

est of the State is that of peach-growing. The peach-growers held several meetings during the summer, and had conferences with the managers of the principal lines of transportation from the State to the chief markets of the Atlantic coast and the interior. Special arrangements were made for shipping the crop as expeditiously as possible to these markets. The whole marketable product of the year amounted to 8,782,716 baskets. Of these 2,471,500 baskets were shipped by the Delaware Railroad to Jersey City, 501,000 by the same route to Philadelphia, 323,000 to Boston; by the Baltimore & Ohio Railroad, 575,500 baskets; by the Philadelphia & Reading, 204,000; by the Pennsylvania, 164,000; to Western New York, 55,500; to other points by rail, 123,000, making 4,117,500 baskets sent by the Delaware Railroad at the point of shipment. There were sent to New York by ocean shipment, 800,000 baskets; to Liverpool, 2,000; by water to Philadelphia, 1,586,730; by water to Baltimore, 1,887,000; other shipments, 58,432 baskets; consumed in Wilmington, 80,000; consumed in canneries and drying-houses, 576,054; consumed in distilleries, 225,000. The aggregate returns to the producers over the cost of shipment are calculated at \$1,693,944. This does not take into account the cost of picking and hauling, and the loss on baskets and crates, which would reduce the net profits on peaches shipped to \$753,944. The profits of the canneries, dry-houses, and distilleries, added to this, would make the net value to growers of the peach-crop of 1875, \$1,018,944.

The whipping-post as a legal means of punishment has not yet disappeared from Delaware, though condemned by the public opinion of the whole country. Seventeen persons were publicly lashed at Newcastle in May, mostly for stealing. There was another similar exhibition in the same place in December, when one man received twenty lashes for stealing a chicken. It is the general testimony that the class of crimes punished in this way is on the increase, and it is certain that more persons were pilloried and lashed at Newcastle this year than for several years before. It is also stated, as showing that this mode of punishment is not so effective as is sometimes claimed, that there are generally some victims brought to the post who have suffered the same penalty before.

DENMARK, a kingdom in Northern Europe. Reigning sovereign, Christian IX., fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and of Princess Louise of Hesse-Cassel; appointed to the succession of the Danish crown by the Treaty of London, of May 8, 1852, and by the Danish law of succession of July 31, 1853; succeeded to the throne on the death of King Frederick VII., November 15, 1863; married, May 26, 1842, to Louise, daughter of Landgrave William of Hesse-Cassel. Heir-apparent, Prince Frederick, born June 3, 1843; married, July

28, 1869, to Princess Louisa, only daughter of the late King Charles XV. of Sweden; offspring of the union are two sons, Christian, born September 26, 1870, and Charles, born August 8, 1872. The King has a civil list of 500,000 rigsdalers, and the heir-apparent 60,000 rigsdalers. The new ministry, appointed on June 11, 1875, consisted of the following members: President of the Council and Minister of Finance, J. B. S. Estrup; Minister of Foreign Affairs, Count F. G. G. Moltke, of Bregetved; Minister of War and of the Navy, General W. Haffner; Minister of the Interior, E. V. R. Skeel; Minister of Public Education and Ecclesiastical Affairs, J. C. A. Fischer; Minister of Justice and for Iceland, Prof. J. M. V. Nellesmann. The Minister of Foreign Affairs, Count Moltke, died on October 1st. He was succeeded by the Baron Rosenörn-Lehn, who occupied the same position five years ago in the cabinet of Count-Holstein-Holsteinborg. The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Faroe Islands and Iceland), 40,268 square miles; of American possessions (Greenland, St. John, St. Thomas, and St. Croix), 759,900 square miles. The population, according to the latest dates, was as follows:

DIVISIONS.	Census of 1870.	Official Calculation, 1874.
DENMARK.		
City of Copenhagen and Fredericksberg.....	197,576	216,000
Islands.....	799,046	896,000
Jutland.....	788,119	882,000
DEPENDENCIES.	1,794,741	1,874,000
Fär-Oer (17 inhabited islands)....	9,999	10,600
Iceland (inhabitable).....	69,768	71,100
Greenland (exclusive of the glaciers).....	9,825	9,800
St. Croix, St. Thomas, } in the W. Indies..	87,821	87,700
St. John.		
Total.....	127,401	129,200

Nearly the entire population of Denmark proper, namely, 1,769,583, or 99.15 per cent., is connected with the Lutheran Church; of the remainder there were, in 1870, 1,433 Reformed; 1,857 Catholics; 3,223 Baptists; 1,211 Free Congregations; 2,128 Mormons; 4,290 Jews; 260 Methodists; 349 Irvingites; 74 Anglicans; 28 Friends; 12 Greek Catholics; 88 of various other sects; 205 without definite creed. The number of emigrants from Denmark was, in 1874, 3,322; in 1873, 7,200; in 1872, 6,893; in 1871, 3,906; in 1870, 3,525; in 1869, 4,360: nearly all the emigrants went to the United States. The actual revenue and expenditure of the state for the two years 1871-'73 (the financial year ending March 31st) were as follows:

	Revenue.	Expenditure.
1872-'73.....	49,889,970 Rigsdalers.	47,856,026 Rigsdalers.
1873-'74.....	48,408,570	46,704,408

In the budget for the year 1875-'76 the revenue was estimated at 23,024,326; the expenditures at 22,799,200; the surplus, 225,026 rigsdalers (1 rigsdaler = \$0.5463.) The public debt, on March 31, 1874, amounted to 105,936,192 rigsdalers, of which 80,653,954 were home debt, and 25,282,238 foreign debt. The state assets were 50,773,635, leaving 55,162,557 as the real amount of the indebtedness of the state. The debt has been in the course of reduction since 1866, when it amounted to 132,000,000 rigsdalers. It was expected that in the spring of 1875 this debt would be reduced to 93,000,000 rigsdalers, and that when, on March 31, 1875, the English loans would be paid off, the foreign debt would only amount to 13,000,000 rigsdalers. Five and a half million rigsdalers of the foreign debt were again to be paid in 1877.

In the budget of the Danish islands in the West Indies the revenue is estimated at 191,335 rigsdalers, and the expenditure at 206,987 rigsdalers. The deficit is to be made up by Denmark.

The army, in time of peace, numbers 15,258 men; and on the war-footing, 52,656. The navy, in 1875, comprised 33 steamers, 6 of which are iron-clads, and 2 sailing-vessels. It was manned by 800 men, and officered by 1 admiral, 15 commanders, 34 captains, 47 lieutenants, and 20 sub-lieutenants.

The commerce of Denmark during the financial year 1873-'74 was as follows (value expressed in rigsdalers):

COUNTRIES.	Imports.	Exports.
Germany.....	86,898,000	84,213,000
Great Britain.....	80,514,000	95,041,000
Sweden.....	11,844,000	10,853,000
Norway.....	5,079,000	6,255,000
Holland.....	3,458,000	638,000
Belgium.....	1,417,000	1,857,000
France.....	2,263,000	192,000
Russia.....	4,681,000	324,000
Iceland.....	1,194,000	1,290,000
Greenland.....	619,000	225,000
United States.....	1,710,000	125,000
Danish Antilles.....	918,000	70,000
The other Antilles.....	1,460,000	21,000
Brazil.....	5,218,000	21,000
Faroe Islands.....	201,000	167,000
Other countries.....	7,458,000	1,929,000
Total.....	115,864,000	85,596,000

Of this amount there are:

For provisions.....	89,400,000	71,842,000
For raw materials.....	21,504,000	5,958,000
For manufactured articles.....	31,857,000	2,883,000
For other commodities.....	21,600,000	5,892,000

The following table exhibits the condition of the commercial navy during the years 1872 to 1874:

MARCH 31,	SAILING-VESSELS.		STEAMBOATS.			TOTAL.	
	Number.	Tons.	Number.	Tons.	Horse-power.	Number.	Tons.
1872.....	2,655	178,444	91	15,683	5,748	2,746	190,077
1873.....	2,639	175,657	109	21,602	6,919	2,738	197,239
1874.....	2,728	185,219	123	27,881	7,968	2,846	212,600

The movement of shipping during the year 1878-'74 is shown by the following table :

VESSELS.	SAILING-VESSELS.		STREAMERS.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
ENTERED. { Coasting-vessels.....	16,990	167,800	6,545	172,450	23,535	339,750
{ Ocean-vessels.....	15,879	686,833	5,909	246,933	21,778	933,320
CLEARED. { Coasting-vessels.....	18,166	178,940	6,083	144,883	24,199	323,592
{ Ocean-vessels.....	16,554	204,907	6,188	211,708	21,692	416,610

The aggregate length of railroads in operation on January 1, 1875, was 1,024.5 kilometres (1 kilometre = 0.62 English mile), of which 665 kilometres were state railroads, and 359.5 kilometres private roads. The length of telegraph lines was 2,545.9 kilometres, of wires 7,049 kilometres; the number of telegraph-offices, 174. The post-office forwarded in the year 1873-'74, 16,487,000 letters, and 15,184,000 newspapers.

The statistics of live-stock were, according to the latest reports, as follows :

Sheep.....	315,570	Sheep.....	1,842,281
Sorted cattle.....	1,233,598	Hogs.....	412,421

The latest (1871) official reports on mutual-aid societies give the following information : Societies, 528; members, 57,288; capital, 421,-875 rigsdalers.

The Danish Legislature resumed its sessions on January 6th. The President and Vice-presidents of the Folkething in the preceding sessions, Krabbe, Høgsbro, and J. A. Hansen, were reelected. Several speakers of the Left, especially Berg and Schjörning, severely criticised Minister Hall for incurring too large expenses in building the new Royal Theatre. The voyage of the King to Iceland, and the mission of General Raasloff to Eastern Asia, were also censured as too expensive. On January 12th the Government introduced a bill providing for the construction, within eight years, of one fort each on the Sound and on each of the two bays, and for the establishment of a naval station on the Agersøe Sound. The expense was estimated at 10,000,000 rigsdalers. The Landsting, the higher branch of the Legislature, which is in sympathy with the Government, while in the Folkething, or lower branch, the opposition has a majority, declined to concur in the raising of the pensions for invalids which had been voted by the Folkething. Several bills introduced by the Government, among them one relative to teachers' salaries, were rejected by the Folkething, which substituted their bills of its own. During the debate relative to the proposed erection of forts, Bøwen, in the name of the Left, wished the Government to establish as friendly relations as possible with Germany, and the majority of the Folkething not only shared this view, but postponed its vote on the bill until the ministry could have given full information on the past relations of Denmark to foreign powers, especially to Germany. A special committee was appointed to confer with the ministry. The latter declared its readiness to give all the de-

sired information, but insisted that the Landsting should appoint a committee for the same purpose. On January 23d the Folkething, by forty-seven against forty-two votes, rejected the amount asked by the Government for the construction of a large iron-clad frigate, although the president of the Ministerial Council threatened that the Government would dissolve the Diet. As the ministry feared that an understanding with the Folkething, relative to the budget, would not be reached in time for the beginning of the new financial year (April 1st), a provisional budget for April and May was introduced, and on February 8th approved by the Folkething. The Landsting emphatically censured the opposition made by the Folkething to the Government in the discussion of the budget, and, by forty-two against eight votes, resolved to appoint a committee to guard the constitutional rights of the Landsting. The military committee of the Folkething declared its readiness to vote thirty million kroner for the erection of forts, of new war-vessels, and a naval station, if the Government would consent to introduce previously, for meeting this extraordinary expense, an income and property tax yielding three million rigsdalers annually. The prime-minister declared that the Government could not accept this condition, as it regarded the proposed tax as unnecessary. As it was found impossible to effect an agreement between the Landsting and the Folkething, a joint committee was appointed, consisting of nine members of each "Thing," and numbering nine members belonging to the ministerial party, and nine members belonging to the opposition. This committee agreed, by sixteen against two votes, upon a compromise, which the Folkething at once adopted by a large majority, only twenty members, headed by J. A. Hansen and Berg, voting against it. On May 15th the Diet was adjourned to October. Shortly before the adjournment three radical members of Jutland introduced a motion, which was supported by a petition covered with 11,714 names, chiefly of socialists, that the Government be requested to exert itself in behalf of the establishment of a European Court of Arbitration, for the peaceable settlement of international difficulties. The motion was referred to a special committee, which reported, soon after the adjournment of the Diet, that the establishment of such a court was very desirable, especially if it could be so constituted as to offer a security for the rights of the smaller estates, but

that the ability of the Danish Government to bring about the desired arrangement was very doubtful. It therefore proposed to the Diet to pass the following resolution: "While the Folkething expresses the expectation that the Danish Government will support any movement that may be made for the establishment of a Court of Arbitration for International Affairs, it passes to the order of the day."

In June a new ministry was formed under the presidency of Estrup, a rich land-owner. All the members belong to the Conservative party of the Landsting. The task of forming the new cabinet had previously been offered to Count Frijs of Frijsenborg.

In July the King made a journey through his dominions, in the course of which he everywhere received the strongest proofs of the attachment of the people to their King and to his royal house. Fierce as party strife may have been of late, the traditional loyalty of the Danes appears not to have been affected by it. At Odensee, the capital of the isle of Fionia, which the King had not visited for ten years, the residents made the greatest efforts to make a goodly show of banners and flowers. When the King, who was accompanied by the crown prince and princess, Princess Thyra, and Prince John, arrived at Odensee, the streets were lined by the various trades with their banners, as well as by members of various societies, all the way to the palace, where the notabilities and functionaries of the town awaited the arrival of the King. The *fêtes* were very splendid, and one of the most interesting was the inauguration of the recently-restored church of St. Kanut, one of the oldest and finest monuments of mediæval architecture. At this ceremony all the clergy of the province were present, and after its termination the King descended the crypt, which had been discovered during the work of restoration, and in which were found the coffins of several of the ancient Danish kings. A grand banquet was given in the evening in the town-hall, when both the King and the crown-prince rose to propose or to respond to toasts. After the banquet the King and royal family proceeded to a wood, outside the town, to assist at a popular *fête*, where fireworks were exhibited; and on the return of the royal party to the palace, a torchlight procession passed through the illuminated streets to the building, where the King appeared on the balcony to greet afresh his loving people. All the deputies of Fionia, the majority being members of the opposition, were presented to the King personally at the palace. Similar demonstrations greeted the King in Jutland. From Fredericia the King proceeded to Ribe, on the western side, near the frontier of Schleswig, then along the western coast to Vard, whence an excursion was made southward to Esbjerg, to inspect the new harbor at that place. The King then turned northward through the *landes*, to view the progress made by the plantations, and then

crossing Jutland to Hordens, proceeded thence to Veile, where the steamer *Slesvig* waited to convey his Majesty to Copenhagen. Everywhere the King was met with the most loyal demonstrations, and addresses couched in the most fervent spirit were presented.

The Diet was reopened by the President of the new ministry on the 4th of October. The former President and Vice-Presidents, Krabbe, Høgsbro, and Hansen, were reelected. The Government at once adjourned the Diet to November 29th. This measure was very distasteful to the party of the Left, and the split which had existed in this party since the adoption of the financial compromise at the close of the last session was at once healed. The reunited opposition issued a proclamation to the country denouncing the ministry. When the session was opened, on November 29th, the Minister of Finance laid before the Diet the financial budget which estimates the revenue for the coming year at 50,008,842 krone (1 krone = \$0.268), the expenditures at 46,885,045 krone. The sum demanded by the Minister of War is 8,605,221 krone. The minister again declared that there was no need of a new tax to meet the extraordinary expenditures—the proposed forts, war-vessels, and naval stations—as the amount required was distributed among eight years, and only 6,000,000 krone annually were needed.

The King and Queen of Sweden visited Copenhagen on their way to Berlin, May 23d, and were received by the royal family of Denmark, all the ministers, and the civil and military authorities. The King of Sweden received an address from the civil governor of Copenhagen, and replied to it as follows:

My most earnest wish has been that my first visit should be to the capital of Denmark. With my sincere thanks for the splendid reception you have given me, allow me to express my true friendship toward the King of Denmark, the royal family, and Denmark herself. I confidently hope that the fraternal feelings which have long united Denmark with her two closely-related neighbors may be still further strengthened, to the profit of the people and their sovereign.

Subsequently, a painful impression was created at Copenhagen by the speech which the King of Sweden was reported to have made at the banquet given to him in Berlin. The King, when toasting the Emperor William, was reported to have expressed the hope that the old comradeship which had existed between the Swedish and the Prussian armies might be renewed and strengthened. Attention was naturally called to the fact that the last time when the Swedes and Prussians fought side by side was in the year 1814, that the common foe on that occasion was Denmark, and that the war resulted in the cession of Norway by Denmark to Sweden. The King of Sweden was never popular in Denmark, as he is supposed to sympathize with the Germans against the Danes, but he had, at least in certain circles, made a favorable and pleasing personal impression during his recent visit.

The report of this Berlin speech more than neutralized this impression, and even produced a bad feeling in regard to Sweden.

The twenty-fifth anniversary of the establishment of the Danish Diet was celebrated on January 30th. The Presidents of the Lands-thing and the Folkething, Liebe and Krabbe, received, in honor of the event, the order of Danebrog.

The Supreme Court of Denmark decided, in January, that the director of the police has the right to forbid public meetings to be held by the Internationals in the open air.

The son of the late Dr. Grundtvig published, in January, a letter against the party of the Left, in which he declared that they had no right to invoke in their support the authority of his father, as he had no sympathy with their tendencies.

The Northern Telegraph Company of Copenhagen, on May 21st, concluded, at Foochow, a treaty with the Chinese Government, in virtue of which the latter is to indemnify the company for the destruction of the telegraph between Foochow and Amoy; to construct a telegraph between those two cities, and to transfer the management of the telegraph to the company.

On June 5th, the twenty-sixth anniversary of the fundamental law of the kingdom, the Socialists of Copenhagen arranged an immense procession in honor of their leaders, Geleff, Pir, and Pio, who had been amnestied by the King.

The Colonial Council of the islands of St. Thomas and St. John, in the West Indies, was, on January 9th, dissolved by the Governor, on the ground that by voting a want of confidence in the Governor it has transcended its powers. The islands of St. Thomas, St. John, and Trinidad, were, in February, connected by a submarine cable. The Colonial Council of St. Croix resolved to contract a loan of \$50,000 for the relief of the planters. The resolution was approved by the King of Denmark.

The Althing of Iceland met, in accordance with the new constitution, for the first time, on the 1st of July. Each of the two Chambers adopted an address to the King. The Government laid before the Althing sixteen bills, among them a new electoral law and a budget for two years. The Althing declared itself on the whole satisfied with the new constitution, and expressed the wish that the Minister of Iceland be not a member of the Danish cabinet, and that Iceland have nothing in common with Denmark but the King. After a session lasting about eight weeks, the Althing was closed on the 26th of August. The budget for the years 1876 and 1877 estimates the revenue at 79,593 krone, and the expenditures at 451,896 krone. On the 19th of November the statue of Thorvaldsen, which the city of Copenhagen has presented to the city of Reikjavik, was solemnly unveiled.

A grand eruption of the mountain called

Trolladynjar, in the north of Iceland, occurred in December, 1874. It was preceded by earthquakes. The weather during the month was very foggy, and the flames from the burning mountain could not be seen to advantage until the 2d of January, when the sight presented was magnificent. Columns of fire, lava, and stones, were shot straight up into the air to a great height, and fell back into the crater, or in so narrow a circumference outside it, that the formation of new lava only extended twelve miles from northwest to southeast. Some members of the exploring party state that from the sides of the ravine, at a point as near as they could get from the burning lava, they could see down through the volcanic fissures the lurid flames, like vast reeking rivers of fire, playing in wild confusion among the wreck of matter. Fortunately, no damage was done, either by the earthquakes or by the eruption. On the morning of the 30th of March the west coast of Norway, up to the Swedish border at Trysil, was found covered with a pretty thick layer of curious dust, which had fallen during the previous night. The dust lay so thick that less than a pint of snow, scraped together and put into a glass to melt, left a good tablespoonful of the atmospheric precipitate. Several samples were collected and forwarded to different chemists for analysis. Under the microscope it appeared as irregular, small-grained, and sharp-cornered ashes, for the greater part colorless, but some pieces had a brownish tinge. Under chemical treatment it turned out to be a combination of silicates, the bases of the compound varying. Lime, iron, and alumina, were extracted by treatment with acids. Prof. Waage at once declared that the precipitate must be ashes from some volcanic eruption carried across to Norway, probably from Iceland. Profs. Fearnley and Kjerulf, of the Mineralogical Cabinet of the University of Christiania, shared this belief, the more since they found one sample of ashes analyzed to be exactly identical in composition with the pumice-stone of Mount Hecla.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The relations of the United States with other nations have been peaceful during the year, and the correspondence with them contains few points of importance.

Coolieism as it exists in Cuba has at length attracted the attention of the Chinese Government. Mr. B. P. Avery, the American minister, thus writes to Secretary Fish under date of June 12, 1875:

The attention of the Chinese Government has lately been called by the discussion of Cuban coolieism, growing out of the pending issue with Spain, to the necessity of adopting careful port-regulations with reference to emigration.

Being questioned by the Tsungli Yamen as to the character of American laws on the subject, I made some general statements verbally, embodying information which subsequently, at the request of the ministers, I wrote out more in detail, accompanying

it with translations of portions of our statutes controlling the transportation of passengers, and prohibiting the coolie traffic.

The Yamen received the information thus afforded with expressions of gratitude. Copies of the correspondence on the subject are inclosed.

In my letter to the Yamen, besides giving the facts they desired, I aimed to show the exceptionally liberal treatment of Chinese subjects in the United States as an indirect incentive to more liberality toward our citizens in China, and to strengthen the disposition of the Government to insist upon the principle of free emigration in all further passenger commerce from the ports of the empire. I find the ministers of the Yamen all very anxious to prevent the revival of coolieism either openly or covertly, and have fully explained to them the position of our Government on this subject, with which they are in hearty sympathy.

The legality of marriages celebrated at the legations of the United States has been a question of interest, and is presented in a letter to Secretary Fish by Mr. W. Hoffman, the secretary of legation at Paris. After referring to the legality of such marriages between Americans under the laws of France and of the United States, he presents the question as to their validity under the laws of the States. He says:

Two residents of Massachusetts come to this legation desiring to be married. The minister quotes to them your instruction, and declines to permit the marriage except under the conditions therein prescribed. They reply that in this matter they have nothing to do with the United States law; that they are citizens of Massachusetts; that the statute of Massachusetts is supreme for them in this matter; that this statute prescribes that "marriages celebrated in a foreign country by a consul or diplomatic agent of the United States shall be valid in this State; and a copy of the record, or a certificate from such consul or agent, shall be presumptive evidence of such marriage." (Mass. Gen. Stats., ch. 106, § 23.) They ask to be married under this statute. Is the United States minister to refuse them the courtesy of the legation for this purpose? And, if so, could he not with equal propriety refuse to take their acknowledgment to a deed, under the power conferred upon him by the statute of Massachusetts and not by any United States statute?

Secretary Fish, in reply, says:

It may be stated as a general rule, subject to few and rarely-occurring exceptions, that a marriage, solemnized according to the laws of the country in which it is celebrated, will be recognized as valid and binding under the laws of all other civilized or Christian nations; hence, while it was deemed proper to gratify the natural wish of American citizens to have a contract of such interest to them solemnized under the flag of their own country, and that the hospitality of the legation should be extended to them for that purpose, the Department at the same time considered it only safe and prudent to advise them that "a ceremony of marriage performed within the precincts of a legation may nevertheless be deemed to be performed in the country within which the legation is situated, and therefore ought, in all respects, to comply with the requirements of the laws of that country, in order to insure its validity."

Mr. Hoffman supposes a case of two citizens of Massachusetts presenting themselves at the legation for the purpose of having a marriage ceremony performed, and, upon their being informed of the minister's instructions from this Department, insisting that in that matter they have nothing to do with the

United States law; that for them the statute of Massachusetts is supreme.

It is scarcely supposable that citizens of Massachusetts would, at any period in the history of this Government, have advanced that doctrine, and it is scarcely to be expected that so extreme a practical assertion of State sovereignty will henceforth be put forward from any section of the country. Nor is it probable, especially with reference to the marriage contract, and the relations resulting therefrom, that any prudent persons would willingly put themselves in such an attitude with reference to a law of the United States; but, should such a case arise, it is only necessary to say that a Federal officer is not bound to execute a State statute unless required so to do by act of Congress, and in the case supposed by Mr. Hoffman, it would be an answer to the imaginary citizens of Massachusetts, who might thus insist upon forcing themselves into the legation, to require from them the production of their right to the use of the legation for their private or family arrangements.

When General Lafayette visited the United States in 1825, and was the guest of the nation, a watch was stolen from him, which had been presented to him by General Washington. This was recently found, and on June 22, 1874, Congress passed a joint resolution, ordering the purchase of the watch and its restoration to the family of the Marquis de Lafayette. This circumstance called out an interesting official statement of the members of the Lafayette family. It is as follows:

General Lafayette left one son, George de Lafayette, and two daughters, Madame de Latour-Maubourg and Madame de Lasteyrie.

All the above are now deceased.

Mr. George de Lafayette left five children, all of whom are now living, viz.:

Mr. Oscar de Lafayette, No. 90 rue du Bac, Paris.
Mr. Edmond de Lafayette, No. 72 rue de Eome, Paris.

Madame Adolphe Périer, now a widow, No. 43 rue Barbet de Jouy, Paris.

Madame Bueaux de Pusy (widow), No. 42 rue Barbet de Jouy, Paris.

Madame Gustave de Beaumont (widow), rue Barbet de Jouy.

Madame de Latour-Maubourg left two daughters, viz.:

The Baroness de Brigode, No. 43 rue de Grenelle Saint-Germain.

The Baroness de Pennon, Maison Vernon, Turin, Italy.

Madame de Lasteyrie left four children, viz.:

Mr. Jules de Lasteyrie, deputy, No. 1 rue Beaumont, Paris.

Madame de Rémusat, No. 24 avenue Gabrielle, Paris.

Madame de Corcelles, Colonna Palace, Rome.

Madame Charles d'Assailly, No. 13 rue Lascasse, Paris.

The correspondence with the American representative in Germany contains two or three points of considerable interest. The first which Mr. Bancroft Davis presents relates to the liability of American citizens residing in Germany to taxation there.

From the official returns it was estimated that there were in Germany in December, 1871, 14,263 Americans; and the number of those whose residence in Germany had been of a long continuance, and seemed to be indef-

nite in its intended duration, was estimated at 10,000; and that at least three-quarters of these had become citizens by naturalization. Apart from this estimate, and with no necessary relation to it, the investigation disclosed that 15,000 Americans arrived every year in Germany and 13,000 departed therefrom in the same year, leaving 2,000, of which 1,500 had a fixed purpose to remain for only a brief time, and 500 each year remained to be added to those already there with no definite plan of return. The 10,000 Americans residing permanently in Germany, or rather with no definite plan of return to the United States, are divisible into three classes—one, those residing there for the purpose of education; another, those residing there for the purpose of business; and a third, those guilty of evasive naturalization in the United States, which is a naturalization with no purpose of living in the United States, but of using the certificate of naturalization to avoid disagreeable obligations, military or other, in the country of their birth and residence. In regard to the first class, Mr. Bancroft Davis says:

Whole families live here for years, drawing their means of support from American investments, educating their children in German ideas and spending here the income which otherwise would go to enrich the United States. The evil is not without great counterbalancing advantages; but whether the preponderating effect be for good or for ill it is not probable that the fact itself will be changed until America shall offer as cheap education, as reasonable cost of living, and as agreeable amusements to idlers and pleasure-seekers, as Europe affords. Many families come here solely for the purpose of educating their children. Dresden, Munich, Heidelberg, and Stuttgart, have been favorite centres for those who come with such objects. There are quite large colonies of Americans in each of these towns, probably more native-born citizens than anywhere else in Germany, but the native-born Americans form only a comparatively small portion of the citizens of the United States permanently or indefinitely residing in Germany.

Of the third class, holding evasive certificates of naturalization, Mr. Davis remarks:

There is still another class of naturalized citizens residing in Germany, not so numerous as the others, but by no means insignificant, who have sought American citizenship solely for the purpose of avoiding the duties of citizenship here, but, having acquired it, have returned here without any intention of residing again in America or of performing any duties of citizenship there. The position of the German emigrant naturalized in good faith who returns here and who stays here temporarily, but without an intention to remain permanently, is materially affected to his disadvantage by the odium caused by such cases as I have described. No effort will be spared to make this legislation here a complete protection to every naturalized German citizen who has remained temporarily in Germany with the intent to return to America.

Secretary Fish, in reply, says:

As a general rule the power to impose taxes is an attribute of sovereignty, and where the person or the property in question is a proper subject of taxation, the species of tax and the amount which should be collected may fairly be left to the state or government exercising this power.

By the act of March 2, 1867, it was provided—

That there shall be levied, collected, and paid annually upon the gains, profits, and income of every person residing in the United States, or of any citizen of the United States residing abroad, whether derived from any kind of property, rents, interest, dividends, or salaries, or from any profession, trade, employment, or vocation carried on in the United States or elsewhere, or from any other source whatever, a tax, etc.

Such provision does not materially differ from the corresponding provision of the previous acts on the same subject. It applies in terms to all persons, aliens as well as citizens residing in the United States, and to all citizens residing beyond the limits of the United States.

So far as the subjects of taxation are concerned, the income-tax referred to in your correspondence does not appear to differ from the income-tax imposed by this Government.

On the ground, therefore, that the parties complaining in these cases are all residents of Germany, and so long as the tax is uniform in its operation and can fairly be deemed a tax and not a confiscation or unfair imposition, it is not believed that any successful or consistent representation can be made to the German Government in their behalf.

It is true that in some cases a party may be liable to double taxation, but such instances are exceptional, and this fact cannot alter the rule. No income-tax, as such, is at present collected in this country.

Some of these statements complain of excessive taxation, even under the provisions of the German laws, but such matters would seem more properly to be questions for submission to the German courts.

The next point of interest relates to military service in Germany, by all persons native-born who come to the United States, become naturalized, and return with the certificate. The correspondence of Mr. Davis contains valuable information about the military law of the German Empire. From this it appears that *every* German is liable to serve in the army: 1. For three years from the commencement of his twentieth year, in active service; 2. For four years more as a reserve, being still on the army-roll and regarded as in active service, and liable at any moment to be called into the same; and, 3. For the further term of five years, as a member of the Landwehr. The critical inquiry heretofore has been, At what point, or by reason of what act, does this military duty *begin*? Can the German, or any one liable, wait for a notice from the Government? Mr. Davis says that the German Government declares that no notice is necessary, but the person must *report himself* for military service on the prescribed day after he attains the requisite age; and if he does not so report himself, he renders himself liable to be proceeded against for failure to do so. But this is not all: under the laws of Germany there is provision made for proceedings against the defaulting person, in his absence, *par contumace*; if the proceedings are regular they may be carried to final judgment, and the defendant condemned by fine or imprisonment in his absence, and if he has property in Germany the fine may be collected out of it. The court which imposes such fine and sentences to such imprisonment is partly military and partly civil, and by this tribunal a plea of naturalization by the United States, even when estab-

lished, cannot be entertained, and will not bar the fine or sentence, even where treaties with the United States apply; but the fact of naturalization must be brought to the attention of the Foreign Office at Berlin, when the Ministers for War and for Foreign Affairs will jointly decide, as a *diplomatic question*, whether the accused is entitled to the benefit of the treaty.

In respect to the military service of those persons born in Germany who are apparently residing there, but claiming the protection of American certificates of naturalization, Mr. Davis says:

The very stringent laws respecting military service in Germany are about to be made still more stringent. The authorities to whom their execution is intrusted look, not unnaturally, with suspicion upon every person of German birth of a requisite age for military service whom they see residing in Germany as a citizen, with no apparent purpose of leaving it, and not claiming exemption as a foreigner from duties required of Germans by German laws. It is to be remembered that Congress has declared in the statute the right of all persons to expatriate themselves and elect a new nationality, and that the naturalization treaties with the German powers have provided that this right may be regarded as exercised by a German, who has been naturalized in the United States, when he returns to the land of his nativity and dwells there for two years. The treaties do not provide that such a residence *shall* work an expatriation, and I understand that both Governments are agreed that the Imperial Government is not, by an *ex-parte* decision, to determine that the facts in any particular case constitute such an expatriation without affording to the United States an opportunity to inquire into them.

But the most interesting part at the present time of the correspondence of Mr. Bancroft Davis with the State Department is that in which he relates the proceedings of the German Government on the questions which now agitate Prussia, and in fact all Germany. As it presents a most complete summary of the action of the German Government, it is inserted here:

LEGATION OF THE UNITED STATES, }
BERLIN, March 13, 1875. }

SIR: The relation between the Roman Catholic Church and the state, which now agitates Prussia, and, in fact, all Germany, is no new question. It early attracted the attention of that acute political observer, my distinguished predecessor, Mr. Wheaton, from whose dispatches I venture to make one or two extracts, in order to elucidate more clearly what I have to say about the present condition of affairs. Writing from Berlin on the 6th of December, 1837 (No. 55), he said:

The disputes which have recently taken place between the Prussian Government and the Archbishop of Cologne have at last been terminated by the forcible removal of the prelate from his post to the fortress of Minden in Westphalia. . . . The principal points in dispute between this prelate and the Government relate to the following subjects:

1. *Education.*—A theological faculty annexed to the University of Bonn is provided for the education of the Catholic clergy. In Prussia the entire matter of education, in all its branches, is monopolized by Government, and supported by ample endowments, extending its benefits to all classes of the people. Among the theological professors of Bonn was the celebrated philosopher Hermes, who died in 1832, and who asserted for the Catholics the right of free examination, for the purpose of confirming them in the faith; a doctrine novel and alarming to the Church of Rome, and which was accordingly condemned by the Pope as heretical. From this source arose various disputes, a minute detail of which would be tedious, respecting the right of the Catholic prelates to refuse

confirmation to candidates for holy orders who had been educated in the schools of Bonn, and many other intricate questions growing out of this anomalous union between a Catholic Church and a heretical state.

2. *Mixed Marriages.*—By the civil law of Prussia, the children born of a marriage between Protestants and Catholics are to be educated in the faith of the father, or in such as he may prefer. The archbishop requires them all to be educated in the Catholic faith whenever either of the parents is Catholic.

3. *The Publication of the Papal Bulls.*—In every Protestant country of Europe which maintains relations with the See of Rome for the benefit of its Catholic subjects, every bull of the Pope must be submitted to the inspection of the Government of the country before its publication. In order to guard against the possible abuses of such an intercession, the Archbishop of Cologne makes a distinction in this respect between bulls which relate merely to dogmas and matters of faith and those which relate to matters of civil legislation, and the connection of the Church with the state. He asserts his right to receive, publish, and execute the former without submitting them to the inspection of the local Government. It is easy to see that under this pretext the Catholic clergy might interfere with and defeat the execution of the laws of the country respecting education, marriage, divorce, and, in short, all the relations of life which are ordinarily regulated by the civil magistrate. In the course of these discussions the Prussian Government has proceeded with great moderation and circumspection.

And in a dispatch (92) dated the 2d of January, 1839, in speaking of "the conduct of the Prussian Government in its intercourse with the Papal See and its proceedings toward the Catholic prelates," Mr. Wheaton said:

This question still continues to be a constant source of uneasiness and debility to Prussia. . . . The Austrian Government is more successful in managing the clergy in its dominions. Being a Catholic power, its measures are not viewed with such jealousy by that body, while its influence at Rome enables it to control them through the head of the Church. Measures which on the part of a Protestant sovereign are regarded as proofs of the spirit of proselytism and persecution, may be, and in fact are, accepted with docility without proceeding from the house of Austria. . . . This fact tends to confirm the suspicion indulged by many persons here, that the religious dissensions in Prussia have been, if not fomented, at least regarded with no unfavorable eye by Prince Metternich, who seeks to weaken the increasing influence of Germany obtained by Prussia through the commercial union by opposing moral to material interests, and engaging Prussia, which, ever since the Thirty Years' War, has continued to be the representative of the Protestant party in Germany, in an embarrassing conflict with a religious faction from which Austria has not only nothing to fear, but upon whom she might count as her natural ally in a struggle for political influence and power.

The contest described in these graphic and well-considered periods was still undetermined when King Frederick William III. died on the 7th day of June, 1840. His eldest son succeeded him as Frederick William IV. This monarch, through the intermediary of the late Chevalier Bunsen, succeeded in adjusting, or rather suspending, the difference between Berlin and Rome. Among other things he gave up the right of the royal "placet," by virtue of which all the correspondence between the Vatican and the Prussian bishops of the Roman Church passed through the Foreign Office, and under the control of the Minister of Foreign Affairs. He also continued the arrangement made by his father (Frederick William III.) for the sanctioning of the dispositions of the Papal bull known as "*de rebus avarum*," and for the dotation of the Roman Catholic clergy.

In 1850, a new fundamental or constitutional law was enacted, that the ecclesiastical organizations named in the law, among which was the Roman Catholic Church, should have the right of managing their own affairs. This law continued in force until 1873, and under it the Roman Catholic Church in the Rhine provinces prospered greatly. It increased its religious organizations, and gathered to itself great wealth. A Roman Catholic friend estimated the increase at the incredible sum of two millions thalers a year.

Meanwhile, the antagonism between Berlin and

Rome remained in no respect diminished by the worldly prosperity of the Church on the Rhine, or by the political and military successes of the government at Berlin. The opinion of Prince Bismarck has been made public that the Emperor of France was forced into the great war of 1870-'71 by ecclesiastical influences from Rome. The antagonism found its natural expression in the legislation of Prussia.

On the 5th day of April, 1878, the fundamental law of 1850 was amended, so as to give to the state a supervisory control over the ecclesiastical organizations. The right of the Evangelical, Roman Catholic, and other religious organizations to manage their own affairs was to remain, "but subject to the laws of the state and to a legally organized state inspection" (*über den Staatseinsicht und der geistlichen Gemeinden Aufsicht des Staates unterworfen*).

The next law, passed upon the 11th of May, 1878, related to the education of priests and religious teachers. It required all priests to be educated in Germany, and it gave to the state authorities a power of examination and rejection of unfit persons. It also established at Berlin an ecclesiastical court for the purpose of hearing and finally determining cases arising under these ecclesiastical laws, or from violations thereof. This court was to consist of eleven members, six of whom were required to be regular judges; and they were authorized to order, in cases of adjudged violations of these laws, the several measures of punishment provided by the laws.

In the same session a law was passed limiting and defining the measure of ecclesiastical punishments within the religious orders, and also a law providing a mode for leaving a church.

In the session of 1874 there was still further legislation. By the law of the 4th of May provision was made in case of a vacant bishopric for authorizing a person to perform the functions of the office, and to administer the temporalities. The new bishop, when appointed, was required to give the upper president of the province notice of his appointment, and to prove to the satisfaction of the proper officer that he possessed the personal qualifications for the office required by law; and, further, to take an oath of allegiance to the sovereign. In case of his rejection by the civil authorities, he had the right of appeal to the ecclesiastical court at Berlin, whose decision was to be final. If, however, he should undertake to exercise his office without authority, he was to be punished in the manner prescribed by the law.

The same statute made provision for filling vacancies. Upon a vacancy by judicial determination, the upper president was to summon the cathedral chapter, in order that the vacancy might be filled by election; and in case no election should be had, the minister for church-affairs was authorized to appoint a commissioner to manage the real and personal property.

It was further provided that the same laws should apply to bishoprics filled by bishops not recognized by the state, and also to vacancies in bishoprics which exist for more than a year.

Provisions were also made for filling vacancies in the orders of the priesthood. The persons appointed under the provisions of the law were authorized to cause this to be done by election by the congregation, and provisions were made for holding elections, and for investing the persons elected in the offices.

On the 30th of the same May another law was passed concerning the management of the vacated Catholic bishoprics.

These several laws gave great offense at Rome. On the 6th day of February last the Pope issued an encyclical letter, addressed to "his venerable fathers the archbishops and bishops in Prussia," which, among other things, he said:

In order to fulfill the duties of this apostolic seat, we declare fully by the present encyclical, to all whom it concerns, as

well as to the entire Catholic world, that these laws are null, because they are contrary to the divine constitution of the Church; for it is not to the powers of the earth that the Lord has committed the bishops of his Church in what concerns his sacred service, but to Peter, to whom he has committed his lambs and his sheep.

The gauntlet thus thrown down was taken up at once at Berlin. Two bills are now pending in the Landtag, and will undoubtedly become laws. The first, which was introduced before the encyclical, in anticipation of it, is a project of a law for the management of the property of the Catholic Church (*über die Vermögensverwaltung in den katholischen Kirchengemeinden*). It provides for an election of church-wardens in each parish by the congregation, the number to be fixed by the bishop, in conjunction with the Government. This body can be called together at any time, either by the bishop or by the Landrath, or, in cities, by the mayor, or by one-half of the board, or by the congregation, acting in the manner indicated in the act.

The second act was introduced on the 8d of March, and, like the former, bears the name of Dr. Falk. It is entitled "An act concerning the suppression of the payment of the state aid to the Roman Catholic bishops and clergy" (*betreffend die Einstellung der Leistungen aus Staatsmitteln für die römisch-katholischen Bischöfe und Geistlichen*). It absolutely suspends such payments, but the suspension is to be removed so soon as the archbishop, or bishop, etc., pledges himself in writing to obey the laws of the state. The revocation of such a pledge, once given, is to involve dismissal from office by judicial sentence, and incapacity for the exercise of office hereafter.

These various measures and proceedings have excited a deep interest. The subject has been discussed at length, not only in the journals of Berlin, but in London and Paris. The Roman Catholic Church in Germany is divided. One branch sends a deputation to the Pope with an address, in which they—

Declare before you, most Holy Father, that no human force shall separate us from our lawful Pope, for we remember that it is an eternal truth that one of the conditions of salvation is to be subject to the Pontiff of Rome. . . . Prostrate before your feet, most Holy Father, we are your obedient children of Germany.

On the other hand, many Roman Catholic members of the Reichstag and Landtag have joined in a protest, in which it is said that—

We dispute in the most decided manner that the ecclesiastical laws of the German Empire and of the Prussian state entirely overthrow the divine government of the Church, and reduce to nothing the inviolable jurisdiction of the bishops; and we protest solemnly, first, against all principles set forth in the Papal document, which are dangerous to the authority, the constitution, and the existence of the state, and most especially, secondly, against the claim of the Pope to declare invalid state laws which have been enacted by constitutional means. We are, moreover, of the opinion that the teaching of the Catholic Church expressly commands every Catholic to recognize as fully valid and binding all state laws enacted in constitutional manner, and to give his obedience to them.

As if to make the parallel between this controversy and the one detailed by Mr. Wheaton more complete, the very number of the London *Times* which contains a translation of the proposed law for the suspension of the state subsidies has another telegram, in which it is stated that the Austrian bishops are permitted by the Pope to comply with the terms of an Austrian law which compels them to mention to the authorities the names of the priests appointed to livings. And it is further said that the concession to Austria is regarded as another proof that the resistance to the laws of Prussia is prompted by political motives.

I inclose copies of the several laws and projects of laws referred to, together with other documents and papers, and extracts from the press.

And have, etc.,

J. C. B. DAVIS.

The public-school question, as it exists in the Netherlands at present, is reported in the following letter of Minister Gorham to Secretary Fish:

LEGATION OF THE UNITED STATES, }
THE HAGUE, June 12, 1875. }

SIR: The Constitution of the Netherlands provides that the Second Chamber of the States-General shall be partially renewed every alternate year by the election of one-half of its members. This body, since the election of two years ago, has been equally divided between the Liberals on one side, and Conservatives, orthodox Protestants, and Catholics, on the other; the religious sections, though differing essentially on religious dogmas generally, practically unite in an effort to change the Government's system of primary instruction.

Under a law of 1857, children of whatever creed, or of none at all, are admitted to equal advantages in the public schools, with a view to a secular education, but nothing more. The schools are maintained at the expense of the municipalities, except in a few localities where the General Government aids pecuniarily to a limited extent. School-teaching is a career entitling a superannuated teacher to a moderate pension.

The system appears to have given satisfaction for a while, and it is difficult to understand why complaint should be made of it now. Each annual report bears proof of its efficiency in showing a decreasing per cent. of untaught children, and of unlettered persons below a certain age. Still, here, as in most countries in Europe—and to a small extent in our own—an idea is cherished that in some mysterious but positive sense the state and Church are divinely wedded, and that fearful calamities will sooner or later be visited upon all governments sanctioning their divorce. The times are not propitious for securing directly more intimate relations between them, but the principle is involved in the school-question now at issue in so many quarters, and hence the effort being made by the religionists referred to—here called clericals—to increase their political power in the hope of controlling the educational interests of the country in a manner to serve equally well their sectarian aims.

The orthodox Protestants say, "Our children must be accustomed to the daily reading of the Bible." "Ours must be educated in the faith of the Catholic Church," say the Romanists; "and since they cannot be under the present arrangement, refund the money we now pay for educational purposes that we may support schools consistent with our creed," say both, thus practically uniting to enfeeble, if not destroy, the common-school system of the country.

It is a noticeable circumstance that the fiercest attacks are from orthodox Protestants. Though less numerous than the Catholics, who dominate in at least three of the eleven provinces, they supply in zeal what they lack in numbers. They are ably represented at this time by Dr. Knyper, formerly a clergyman at Amsterdam, now a member of the Second Chamber. Some months ago he published in a leading journal of his party a detailed plan, under the title of "Restitution," for paying back to the "clericals" taxes collected for school-purposes. A little later, venturing to interrogate the minister in order to determine the prospect of his scheme, he was distinctly informed that "restitution" would receive no encouragement from the Government.

It is creditable to the several cabinets through which the Government has been administered during the past few years, embracing ordinarily members of different creeds, that no encouragement has been given to sectarian schemes or disposition evinced to direct legislation in a narrow or illiberal sense.

There is, however, an impression on the part of many that a settled purpose pervades the Catholic

portion, now comprising two-fifths of the population of the Netherlands, to secure political control at whatever expense. Recent events have more than ever brought the papacy into consideration as a political power capable of interfering with the lives of nations—as a force which may become a powerful ally to one, a relentless foe to another. People are saying that the Ultramontanes have a hand in every intrigue; that there is settled mischief in the counsels of the Vatican, and that the next war will be so far a religious war that the priesthood, and all who obey them, will be found, actually or in sympathy, on the same side.

True or false, these impressions are dividing the people into clerical and anti-clerical parties, obligating other distinctions and forcing men desiring official positions to choose between the two. The election held on the 8th instant was sharply contested on this basis, though nominally under old party banners.

Neither side will have gained or lost, however, if the three or four ballotings to be repeated on the 22d result according to general expectation. The liberals claim a moral victory in gaining two members at Amsterdam against two lost in places of less importance. Dr. Knyper was reelected at Gouda by the united efforts of the clericals. The ministry is likely to be, as in the last Parliament, without a majority for or against it. How long it will be able to endure the anomalous situation is a question for the future.

I am, etc., CHARLES T. GORHAM.

Little prospect for emancipation in Cuba existed at the close of 1874, in the opinion of Mr. Caleb Cushing, minister at the court of Madrid, in Spain, who writes:

It has been my aim to confer fully with the most undoubted and characterized persons of emancipation opinions to be found in Madrid. This I have done.

These persons assure me that at the present moment all attempts at action, or even agitation, would not only be vain, but prejudicial even. The Government, they say, is powerless in this respect, in view of what may be considered the double rebellion in Cuba, that of the creoles in the eastern department, and that of the Peninsulars in the western; and they say, further, that it would require a large army from Spain to enforce the submission of the latter than of the former.

In this view it is that the Emancipation Society itself is at the present time quiescent and still awaiting the arrival of some change in political circumstances which may enable it to resume its public labors and manifestations.

In these circumstances it is difficult to see how anything in this relation can be usefully done by the minister of the United States.

The correspondence with Mr. Cushing brought down only to September 15, 1875, the documents laid before Congress with the President's message.

DISCIPLES OF CHRIST. The General Christian Missionary Convention of the Disciples of Christ met in Louisville, Ky., October 19th. Elder Isaac Everett presided. The Board of Managers reported that the aggregate of moneys raised for missionary purposes since the last convention was \$61,900.86; that the whole number of additions to the churches by missionary effort was 3,420; and that the number of new churches established was 46. The whole amount of money raised for missions since the organization of the convention

was effected, six years before, was \$371,524.29; the whole number of additions was 35,460; and the number of new churches established, about 200. Missions among the colored people in Alabama, Mississippi, and Texas, and the Bible-school at Louisville, Ky., had been started and were directly under its care and support. The Bible-school for colored ministers at Louisville, Ky., had completed its second year successfully, and was entering upon its third. Funds were pledged in the meeting to pay off the debt of this school, and steps were taken for the appointment of a special agent to raise an endowment fund of \$10,000 for it. It was decided that the existing missions among the freedmen be continued, and others be organized as rapidly as practicable; that in the establishment of new missions, preference be given to those places where there is a willingness to give the missionaries at least a partial support; and to employ for active labor among the freedmen, "except in very special cases," colored ministers under the supervision of white brethren, as far as practicable.

Consent was given to the organization of a Foreign Missionary Society, which will operate in harmony with the General Board, and report yearly to the General Convention. Its meetings will be held at the same time and place with those of the General Convention. Several persons were reported as ready to engage in the foreign work under the direction of the society, and between \$11,000 and \$12,000 had been pledged toward the support of foreign missions for five years. The society was organized during the meeting of the convention.

The special committee who had been appointed the year before to confer with a similar committee of the Free-will Baptists, with reference to a union of the two denominations, reported that they had held several conferences on the subject, and had made encouraging progress, giving strong hopes that a basis of union would be ultimately agreed upon, but had not yet reached such definite conclusions as would justify a detailed report. The committee was continued for another year. The teachers present in the convention pledged to devote two weeks during the ensuing year to gratuitous missionary labor at some destitute place. All the preachers in the denomination were urged to do the same.

The convention advised that there be raised during the centennial year, for missionary purposes, colleges, orphan-schools, and such other benevolent objects as might be agreed on in any State or district, not less than \$500,000. A recommendation was made to the churches to observe the first Sunday in December as a day of fasting and humiliation, and prayer—a public teaching to have special reference to a revival of the churches—and to devote the following week to special meetings for the conversion of sinners. Measures were taken to hold a national Sunday-school convention

at the same time and place with the meeting of the next General Convention.

The first annual meeting of the *Woman's Board of Missions* was held in connection with the meeting of the General Convention. The board had on hand \$1,448.42, and intended to dispatch a missionary to Jamaica in a short time.

DOMINION OF CANADA, a federation of British provinces, comprising the whole of British North America, except the colony of Newfoundland. It is divided into the provinces of British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario (formerly Upper Canada or Canada West), Prince Edward Island, and Quebec (formerly Lower Canada or Canada East), and the unorganized Northwest Territories. New Brunswick, Nova Scotia, Ontario, and Quebec, formed the original federation in 1867; Manitoba and the Northwest Territories were acquired from the Hudson Bay Company in 1870; British Columbia entered in 1871, and Prince Edward Island in 1873. The following table gives the area and the population in 1871 of the several divisions:

PROVINCES.	Area in Square Miles.	Population.
British Columbia.....	220,000	* 50,586
Manitoba.....	14,840	11,968
New Brunswick.....	27,323	285,504
Northwest Territories.....	2,750,000	† 70,000
Nova Scotia.....	21,781	387,800
Ontario.....	107,780	1,620,851
Prince Edward Island.....	2,178	94,021
Quebec.....	198,355	1,191,516
Total.....	3,336,701	3,712,381

The aggregate population of the four principal provinces (New Brunswick, Nova Scotia, Ontario, and Quebec), which alone were included in the census taken by the Dominion authorities, was 3,485,761. Some of the more important particulars returned by the census were as follows:

Occupied dwellings.....	572,713	Methodists, New Connection.....	82,486
Families.....	622,791	" Bible Christians.....	18,554
Males.....	1,764,311	" Other.....	1,397
Females.....	1,721,450	Presbyterians.....	76,757

The Dominion is governed by a Governor-General, assisted by a cabinet of 13 members (Minister of Public Works, Minister of Justice, Minister of Marine and Fisheries, Minister of Agriculture and Statistics, Minister of Finance, Minister of the Interior, Secretary of State, Minister of Customs, Postmaster-General, Receiver-General, Minister of Inland Revenue, Minister of Militia and Defense, and President of the Privy Council); a Senate of 77 members—3 from British Columbia, 2 from Manitoba, 10 from New Brunswick, 10 from Nova Scotia, 24 from Ontario, 4 from Prince Edward Island, and 24 from Quebec; and a House of Commons of 206 members—6 from British Columbia, 4 from Manitoba, 16 from New Brunswick, 21 from Nova Scotia, 88 from Ontario, 6 from Prince Edward Island, and 65 from Quebec. An act of the Dominion Parliament was passed in 1875, known as "The Supreme and Exchequer Court Act," which establishes a Court of Common Law and Equity, in and for the Dominion of Canada, to be called "The Supreme Court of Canada," and a Court of Exchequer, to be called "The Exchequer Court of Canada."

The Supreme Court is composed of a Chief-

Justice and five puisne judges, who also compose the Exchequer Court. They are appointed by the crown by letters-patent under the great seal of Canada, and hold office during good behavior, but may be removed by the Governor-General upon the request of the Senate and House of Commons. The Chief-Justice receives an annual salary of \$8,000 and the puisne judges \$7,000 each. The act further says:

SECTION 13. The said Supreme Court, for the purpose of hearing and determining appeals, shall hold annually, at the city of Ottawa, two sessions, the one beginning on the third Monday in January, and the other beginning on the first Monday in June, in each year, and each of the said sessions shall be continued until the business before the court shall have been disposed of.

SEC. 15. The Supreme Court shall have, hold, and exercise an appellate civil and criminal jurisdiction within and throughout the Dominion of Canada.

SEC. 17. Subject to the limitations and provisions hereinafter made, an appeal shall lie to the Supreme Court from all final judgments of the highest court of final resort, whether such court be a Court of Appeal or of original jurisdiction now or hereafter established in any province of Canada, in cases in which the court of original jurisdiction is a Superior Court; provided that no appeal shall be allowed from the province of Quebec, wherein the sum or value of the matter in dispute does not amount to two thousand dollars.

SEC. 47. The judgment of the Supreme Court shall in all cases be final and conclusive, and no appeal shall be brought from any judgment or order of the Supreme Court to any Court of Appeal established by the Parliament of Great Britain and Ireland, by which appeals or petitions to her Majesty in Council may be ordered to be heard; saving any right which her Majesty may be graciously pleased to exercise by virtue of her royal prerogative.

SEC. 49. Any person convicted of treason, felony, or misdemeanor, before any Court of Oyer and Terminer or jail delivery, or before the Court of Queen's Bench in the province of Quebec on its crown side, or before any other Superior Court of criminal jurisdiction, whose conviction has been affirmed by any court of last resort, or in the province of Quebec by the Court of Queen's Bench on its appeal side, may appeal to the Supreme Court against the affirmation of such conviction; provided that no such appeal shall be allowed where the court affirming the conviction is unanimous.

SEC. 55. When the Legislature of any province forming part of Canada shall have passed an act agreeing and providing that the Supreme Court, or the Exchequer Court, as the case may be, shall have jurisdiction in any of the following cases, viz.: 1. Of controversies between the Dominion of Canada and such province; 2. Of controversies between such province and any other province or provinces, which may have passed a like act; 3. Of suits, actions, or proceedings in which the parties thereto by their pleadings shall have raised the question of the validity of a Dominion act, when in opinion of a judge of the court in which the same are pending such question is material; 4. Of suits, actions, or proceedings in which the parties thereto by their pleadings shall have raised the question of the validity of a provincial act, when in the opinion of a judge of the court in which the same are pending such question is material; then this section and the three following sections of this act shall be in force in the class or classes of cases in respect of which such provincial act may have been passed.

SEC. 56. The procedure in the cases firstly and secondly mentioned in the next preceding section shall be in the Exchequer Court, and an appeal shall lie in any such case to the Supreme Court.

Szo. 57. In the cases thirdly and fourthly mentioned in the next preceding section but one, the judge who has decided that such question is material, shall order the case to be removed to the Supreme Court in order to the decision of such question, and it shall be removed accordingly, and, after the decision of the Supreme Court, the said case shall be sent back, with a copy of the judgment on the question raised, to the court or judge whence it came, to be then and there dealt with as to justice may appertain.

Szo. 58. The next two preceding sections apply only to cases of a civil nature, and shall take effect in the cases therein provided for respectively, whatever may be the value of the matter in dispute, and there shall be no further appeal to the Supreme Court on any point decided by it in any such case, nor on any other point unless the value of the matter in dispute exceeds five hundred dollars.

Szo. 59. The Exchequer Court of Canada shall have and possess concurrent original jurisdiction in the Dominion of Canada, in all cases in which it shall be sought to enforce any law of the Dominion of Canada relating to the revenue, including actions, suits and proceedings, by way of information, to enforce penalties and proceedings by way of informa-

tion *in rem*, and as well in *qui tam* suits for penalties or forfeitures as where the suit is on behalf of the crown alone, and the said court shall have exclusive original jurisdiction in all cases in which demand shall be made or relief sought in respect of any matter which might in England be the subject of a suit or action in the Court of Exchequer on its revenue side against the crown, or any officer of the crown.

Szo. 60. The said court shall also have concurrent original jurisdiction with the courts of the several provinces in all other suits of a civil nature at common law or equity, in which the crown in the interest of the Dominion of Canada is plaintiff or petitioner.

Under certain circumstances an appeal lies from the Exchequer Court to the Supreme Court. The seat of the Dominion Government is Ottawa, in the province of Ontario. Each province has its own local government and controls its own domestic affairs.

The receipts and expenditures since the organization of the Dominion have been as follows:

RECEIPTS.

South America.....	864,080	1,701,603	1,634,508
China and Japan.....	438,070	1,705,556	1,363,728
Switzerland.....	110,932	120,514	139,674
Australia.....	31,936	430,174	96,788
South Africa.....	5,618	102,977	
Other countries.....	437,805	566,947	829,010
Goods (not produce) exported.....	*12,798,192		
Total.....	\$190,343,779	\$317,304,516	\$316,756,097

Vessels on the registry-books at the different ports of registry in the Dominion, on December 31, 1874:

PROVINCES.	No.	Tons.
New Brunswick.....	1,144	294,741
Nova Scotia.....	2,757	479,669
Quebec.....	1,887	315,946
Ontario.....	615	118,008
Prince Edward Island.....	812	45,853
British Columbia.....	85	3,611
Total.....	6,930	1,158,263

Of these, 286 were ships, measuring 267,107 tons; 546 barks, 320,843 tons; 25 barkentines, 10,769 tons; 62 brigs, 15,708 tons; 542 brigantines, 114,689 tons; 3,643 schooners, 280,383 tons; 142 woodboat schooners, 8,889 tons; 56 woodboats, 2,761 tons; 916 barges, 102,737 tons; 45 sloops, 1,788 tons; 1 yacht, 45 tons; 80 scows, 6,088 tons; 2 steamlifts, 69 tons; and 634 steamers (gross tonnage, 122,836), 76,487 tons.

The third volume of the census of 1871 was published in 1875, and from it we compile tables of agriculture, manufactures, etc.

FOREST PRODUCTS.

ITEMS.	New Brunswick.	Nova Scotia.	Ontario.	Quebec.	Total.
Square pine:					
White, cubic feet.....	330,990	238,633	14,791,208	8,976,000	94,296,321
Red, cubic feet.....	60,189	22,020	1,524,893	947,515	1,904,572
Square oak, cubic feet.....	7,380	96,494	3,144,554	58,685	3,302,045
Tamarack, cubic feet.....	360,325	116,816	1,223,444	3,994,878	5,695,463
Birch and maple, cubic feet.....	327,345	518,727	92,290	500,995	1,399,357
Elm, cubic feet.....	1,250	900	1,777,095	53,299	1,582,454
All other timber, cubic feet.....	2,192,723	3,090,503	10,942,721	10,482,704	26,708,651
Pine logs,† number.....	1,214,485	477,187	5,718,304	6,011,582	12,416,400
Other logs,† number.....	3,533,152	897,595	1,355,090	3,638,720	9,314,557
Masts, spars, etc., number.....	11,356	10,681	4,876	94,522	121,635
Staves, thousands.....	747	11,811	20,964	1,184	34,704
Lath-wood, cords.....	2,490	924	15,095	7,143	25,652
Tan-bark, cords.....	23,223	12,338	80,854	91,061	167,481
Firewood, cords.....	545,679	526,472	4,519,320	3,121,612	8,713,083

* The distribution of this amount would add about \$5,000,000 each to Great Britain and the United States in 1871.

† The standard log of the census contains 100 feet of lumber in board-measure.

FARM-PRODUCTS, ETC.

ITEMS.	New Brunswick.	Nova Scotia.	Ontario.	Quebec.	Total.

Total.....	\$77,964,020	187,942	\$40,861,009	\$124,907,846	\$221,617,773

The value of the fisheries in 1878 was \$10,754,998.44; in 1874, \$11,681,886.20. The number of post-offices on the 1st of January, 1875, was 4,706, of which 2,943 were in Ontario and Quebec, 633 in New Brunswick, 868 in Nova Scotia, 36 in Manitoba, 47 in British Columbia, and 179 in Prince Edward Island. The number of miles of postal route for the year was 38,087, and number of miles traveled over, 13,929,180. The number of letters and postal-cards carried was 39,358,500; newspapers, 29,000,000; registered letters, 1,562,900; free letters, 1,432,200; and parcels, 102,800. The revenue was \$1,476,207, and the expenditure \$1,695,480. The number of money-order offices was 705, and the orders issued covered an amount of \$6,815,329. Post-office savings-banks are established in Ontario and Quebec. The number of such on the 30th of June, 1874, was 266; the number of depositors, 24,968, and the amount at the credit of depositors, \$3,204,965. Since 1870 the number of post-offices has increased twenty-five and one-half per cent. During the same period the letters and postal-cards transmitted have increased sixty per cent. The revenue has increased during these five years forty-six per cent. The correspondence with the United States shows a marked increase, the amount of postage collected on it during the year having been \$478,516.

DONNER, JOHANN JAKOB CHRISTIAN, a German translator of the classic poets, was born October 10, 1799, in Orefeld; died March 29, 1875, in Stuttgart. From 1817 to 1822 he studied philology, philosophy, and theology, at Tübingen, became in 1823 lecturer at the Theological Institute in the same place, in 1827 professor at the Gymnasium in Ellwangen, and in 1843 professor in Stuttgart. He resigned his professorship in 1852, to devote himself entirely to literary labors. Encouraged by Voos in Heidelberg, and Conz in Tübingen, he set himself to the task of rendering the works of the Greek and Roman poets into German in their original metres. The first of his translations were those of the satires of Juvenal (1821), and of Persius (1822), which were followed, in 1833, by a translation of the "Lusiad" by Camoens. His talent as a translator was clearly proved by these first attempts, but he achieved a still higher reputation by the translation of the tragedies of Sophocles (1839), which has already appeared in its seventh edition. This was followed by the works of Euripides (1841-'43), Æschylus (1854), Aristophanes (1854), the Iliad (1855), the Odyssey

(1859), and Pindar (1865). He then again turned his attention to the Romans, published Terence (1864), Plautus (1864), and Quintus Smyrnaeus (1867).

DRESSEL, ALBERT, a German writer, was born July 9, 1808; died November 11, 1875. He studied philology and theology in Berlin, and in 1836 accompanied Herr von Bunsen, the Prussian ambassador to Rome, as his private secretary. In consequence of his assiduous literary labors he contracted a disease of the eyes, which in the course of three years resulted in total blindness. He nevertheless continued his studies with the aid of a secretary, and in this way produced the highly-valued critical editions of the Apostolic Fathers ("Patres Apostolici," Leipsic, 1857; second edition, 1863), of the poems of Aurelius Prudentius, the epistles of Clemens Romanus, of the Clementines, and of other works. He also published from Roman archives four important documents, relative to the history of Protestantism before, during, and after the Reformation (Berlin, second edition, 1872). He was at the same time a correspondent of the *Cologne*, the *Voss*, and the *Augsburg Gazette*, and by his communications to these papers gave great offense to the Papal Government, and particularly to the Jesuits, so that in 1869 the Pope ordered his expulsion; but, owing to the protection afforded him by the Prussian Government, his expulsion was never effected. During the last years he suffered much from disease.

DUFOUR, HENRY, a Swiss general, was born September 15, 1787; died July 14, 1875. With the annexation of Geneva, in the early part of the century, he became a French citizen, and as such entered, in 1807, the Polytechnic School in Paris. In 1809 he was appointed a lieutenant in the engineer corps. He took part in the campaigns of Napoleon, and, when in 1815 Geneva was again united with Switzerland, he entered the Swiss engineer corps, and from 1817 to 1827 served as instructor in the Military School at Thun. In 1831 he was appointed quartermaster-general of the Federal army, and in 1832 chief of the Military School, in which capacity he for a time instructed Louis Napoleon, afterward Emperor of France, with whom he formed an intimate friendship, which lasted until the death of the emperor. In the mean while the differences between the Catholic and Protestant cantons had assumed a threatening aspect. The Catholic cantons formed the "Sonderbund," which defied the laws of the Confederation. A call

for 100,000 soldiers was instantly made by the Federal cantons, and on October 21, 1847, Dufour was placed at the head of this army. He accepted the command, and by isolating the rebellious cantons, and crushing them separately, he soon brought the rebellion to an end. This rapid and successful overthrow of the rebellion has given him a lasting reputation in the military history of modern times. His country honored him by the presentation of a sword and a donation of 40,000 francs. In 1857 the Emperor of France created him grand-officer of the Legion of Honor. In 1867, after having served his country for fifty years, he asked for his discharge, which was granted

him with the thanks of the nation. He was not a politician, but a true patriot, who placed the interests of his country above those of his party. He was elected to the "Nationalrath" several times, and that body elected him their vice-president in 1849, which honor, however, he declined. His funeral, on July 16th, was attended by all the Federal and cantonal officials, as well as by many officers and private persons, while the streets were lined by a dense mass of people, who had come to do honor to the remains of the dead hero. He has written several hand-books for military instruction, which are considered standard works in their line.

E

EARTH, THE AREA AND POPULATION OF THE. Owing to the great progress of statistical science in recent times, it is now possible to estimate the area and population of the five large divisions of the globe with a degree of probability to which former statements had no claim whatever. The estimates of the area may from time to time undergo great changes, not only from a more accurate survey of the various countries, but still more from the discovery of new lands in the arctic regions; but as it is highly improbable that countries or islands, with any notable number of inhabitants, are at present unknown, the estimates of the population of the globe can only be affected by a greater accuracy in counting or estimating the population of the countries now known. In all the countries of Europe, with the exception of Turkey, in most of the countries of America, in the European colonies with a number of independent states in the other large divisions of the globe, an official census is taken from time to time which establishes the actual population with a certainty hardly admitting of any improvement. During the time from one census to another, it is now common, in many of these states, to make annual estimates of the increase of population, based on the official lists of births and deaths, of immigrants and emigrants. For the countries of Asia and Africa in which no official census has yet been taken, the reports of intelligent explorers and missionaries now give us figures vastly superior in point of trustworthiness to those found in geographical works of an earlier date. In 1866 the Geographical Institute of Perthes, in Gotha, Germany, established a "Geographical Year-book," with the distinguished geographer E. Behm as editor, in which for the first time the attempt was made to search the entire geographical literature of the world, including travels and missionary reports, for the latest account on the population of every town, island, district, province, and country of the globe, to obtain, in this way, trustworthy figures for the popu-

lation of the several divisions of the globe as well as of its aggregate population. As the source of information from which every figure is derived is mentioned, it is within the power of every intelligent reader to examine the method pursued by the editor, and to form an opinion as to its accuracy. In the second and third volumes of the "Year-book," which were respectively published in 1868 and 1870, the figures given in the first volume were carefully revised, on the basis of the new geographical literature of the entire world. In 1872, the section of the "Year-book" devoted to the area and population of the earth and its divisions was separated from the remainder, and published as an independent periodical, under the title "Die Bevölkerung der Erde" ("The Population of the Earth"), which was to be published annually. Whoever has taken the successive volumes of the "Geographical Year-book" and "The Population of the Earth" with the statements previously given in the geographical text-books and other works, must have been astonished at the utter recklessness which formerly prevailed in the majority of school and other books in regard to statistics of population. The merits of the two periodicals just mentioned have been recognized by every one who has seen and examined them, and they are gradually, though still too slowly, acquiring the well-deserved reputation of being the standard authority in this field. The ANNUAL CYCLOPÆDIA, has ever since 1866, when the first volume of the "Year-book" was published, made use of the results of the two German periodicals, and adopted them, except in rare cases when later or more accurate information was at hand. From the ANNUAL CYCLOPÆDIA, the new and trustworthy figures on the population on the earth and its divisions have passed into a number of text-books used in American schools, though many works may still be met with containing statements which are not only unsupported by any good authority, but can now be shown to be utterly false and absurd. In former vol-

umes of the *CYCLOPÆDIA* we have repeatedly given the latest estimates of the aggregate population of the large divisions of the globe. This year we present for the first time some general and comparative statistics relative to the earth as a whole:

I. *Present Area and Population of the Earth.*—Behm and Wagner, in volume iii. of their periodical, "The Population of the Earth" (Gotha, 1875), give the following estimates of the area and population of the five large divisions of the earth.*

CONTINENTS.	Square Miles.	* German Quadratmeilen.	Population.
Europe.....	3,824,455	179,884	302,978,000
Asia.....	17,800,445	818,780	793,907,000
Africa.....	11,567,575	543,927	206,007,000
America.....	15,984,628	750,429	84,392,000
Australia and Poly- nesia.....	3,426,072	161,099	4,568,000
Total.....	52,062,470	2,448,769	1,396,842,000

It will be seen that the divisions of the globe in point of extent rank as follows: 1, Asia; 2, America; 3, Africa; 4, Europe; 5, Australia; while their order in regard to population is as follows: 1, Asia; 2, Europe; 3, Africa; 4, America; 5, Australia. This order is, however, far from indicating their relative power and influence. The great states of Europe hold under their control as colonies and dependencies a large number of territories, while at present no Asian, African, American, or Australian state has any possessions outside of its own division of the globe. We subjoin a table exhibiting the colonies and dependencies of the European states. It will be seen that the aggregate area of the territories ruled by European governments amounts to 18,585,900 square miles, with a population of 325,877,700; that Great Britain exceeds all others in territory and population; that Russia is next in territory, but Turkey second in population:

STATES.	ASIA.		AFRICA.		AMERICA.		AUSTRALIA.		TOTAL.	
	Sq. Miles.	Population.	Sq. Miles.	Population.	Sq. Miles.	Population.	Sq. Miles.	Population.	Sq. Miles.	Population.
Great Britain.....	1,614,377	240,451,500	260,526	1,978,018	3,671,966	5,185,189	3,006,513	2,362,860	8,682,407	248,971,100
Turkey.....	744,100	18,186,000	1,040,300	10,544,000					1,784,300	22,730,000
Netherlands.....	615,909	22,756,600			46,508	96,161			662,417	22,538,000
Russia.....	6,376,578	12,128,000							6,376,578	12,128,000
Spain.....	67,341	6,088,600	489	35,000	49,478	2,060,870			117,308	8,159,000
France.....	54,292	2,418,000	259,580	2,752,000	48,065	860,680	11,185	92,700	878,082	3,623,500
Portugal.....	7,135	877,500	697,700	2,514,300					704,835	2,891,700
Denmark.....					34,100	47,500			34,100	47,500
Sweden.....					8	2,398			8	2,398
Total.....	9,879,800	299,124,200	2,258,500	17,922,300	3,850,100	7,763,800	3,097,700	2,455,000	16,585,900	325,877,700

If we add the area and the population of Asiatic, African, American, and Australian territories under European rule, to the total area and population of Europe, and, at the same time, deduct them from the total area and population of the divisions of the world to which they geographically belong, we obtain the area and population of the territory respectively ruled by European, Asiatic, African, American, and Australian governments. The following table, which presents these figures, may therefore be regarded as an indication of the aggregate power of the governments belonging to the several grand divisions of the earth:

COUNTRIES UNDER	Square Miles.	Population.
European governments.....	22,410,355	628,850,700
Asiatic ".....	7,920,545	479,862,900
African ".....	9,299,375	188,188,800
American ".....	12,104,528	76,688,700
Australian and Polynesian govern- ments.....	347,372	2,108,000

II. *Former Estimates of the Total Population of the Earth.*—The great value of the estimates of the population which are now

* The German work gives the area in German *Quadratmeilen* and in square kilometres. We have reduced one set of these figures into English square miles. A table for reducing German *Quadratmeilen* in the most accurate manner into English square miles may be found in Behm's "Geographische Jahrbuch," vol. ii.

attainable will appear in the clearest light, if they are compared with the vague and unfounded guesses made by former geographers.

One of the editors of the periodical "Die Bevölkerung der Erde," Dr. Wagner, gives in his second volume an historical review of former estimates, which is introduced on next page. The authors whose estimates are given are arranged into four groups, chiefly according to the similarity of their estimates. They follow each other in chronological order, with the only exception of the Italian naturalist Ricciotti, who, though the earliest in point of time, is placed in the second group, as his estimate is the same as that of Süssmilch and Black. The estimates made before Ricciotti are not worth mentioning. The opinion of Ricciotti was violently opposed by the learned Isaac Vossius, who assumed for all Europe only 30,000,000 people, while Ricciotti had given to it 100,000,000. Nothing can better illustrate the total absence of official information than this discrepancy. The steady increase of the subsequent estimates of the European population is an indication of the growing certainty which was derived from the progress of geographical and statistical science, and more recently from the official census and enumerations. At present the population of Europe is so well established that a geographical work giving a total largely varying from 300,000,000

would thereby forfeit its claim to trustworthiness. The population of Australia and Polynesia is so small that large variations in the several estimates are not possible. For the whole of the continent of Australia we now have the statements of the official census. In regard to America, it is amusing to notice the discrepancy between the writers of the second and third group. After a long period of uncertainty, almost every state of North and South America now provides from time to time for a census, and the present estimate of 84,000,000 may be said to be as well vouched for as the population of Europe. The greatest discrepancies still occur in Asia and Africa. Between the estimates of the African population by

Berghaus and Reden, there is a difference of more than 200,000,000. The trustworthy accounts which of late have been received about several countries in Asia and Africa agree in showing in many countries as dense a population as had been assumed by the highest former estimates. Thus British India, for which, in 1861, a population of 185,000,000 was assumed, had, according to an official census taken in the several provinces in 1869 to 1871, more than 190,000,000. At all events, the arguments given for the highest estimate of the population of Asia and Africa appear to be well grounded, and the low figures which still appear in many geographical works not to be warranted.

AUTHOR.	Year.	Europe.	Asia.	Africa.	America.	Australia.	The Earth.
Isaac Vossius.....	1685	80,000,000	300,000,000				500,000,000
Ricciotti.....	1672	100,000,000	500,000,000	100,000,000	200,000,000	100,000,000	1,000,000,000

J. Berghaus.....	1828	223,000,000	521,000,000	107,000,000	40,500,000	2,500,000	898,000,000
A. Balbi.....	1828	223,000,000	409,000,000	60,000,000	39,000,000	1,400,000	787,000,000
Von Koon.....	1840	237,000,000	454,000,000	122,000,000	49,000,000	2,000,000	864,000,000
H. Berghaus.....	1843	296,000,000	652,000,000	275,000,000	47,000,000	2,000,000	1,272,000,000
Von Reden.....	1854	264,000,000	783,000,000	46,000,000	56,000,000	3,900,000	1,185,000,000
Dietrich.....	1859	272,000,000	755,000,000	200,000,000	59,000,000	2,000,000	1,283,000,000
E. Behn.....	1866	355,000,000	799,000,000	168,000,000	74,500,000	8,900,000	1,850,000,000
E. Behn.....	1868	293,000,000	805,000,000	181,000,000	81,400,000	4,000,000	1,875,000,000
E. Behn.....	1870	295,000,000	782,000,000	193,000,000	84,400,000	4,300,000	1,959,000,000
Behn and Wagner.....	1872	301,000,000	794,000,000	193,000,000	84,600,000	4,300,000	1,877,000,000
Behn and Wagner.....	1873	300,000,000	795,000,000	203,000,000	84,500,000	4,300,000	1,891,000,000
Behn and Wagner.....	1875	308,000,000	799,000,000	206,000,000	84,400,000	4,600,000	1,897,000,000

III. *Density of Population.*—If we compare the area of the grand divisions of the world with their population, we see that the average number of inhabitants on a square mile is 80 in Europe, 47 in Asia, 18 in Africa, 5 in America, and 1.5 in Australia and Polynesia. If the density of the population of the earth equaled that of Europe, the total population would be 4,164,960,000; if it equaled that of Belgium, the most densely peopled country of the world, it would be 23,504,000,000. Almost three-fourths of the inhabitants of the earth, that is 946,000,000, live in Europe, India, and China, that is not even one-seventh of the earth's surface. For the other six-sevenths there remain about 445,000,000 inhabitants, or 10 to the square mile. Assuming that even one-half of this thinly-settled country, including the large

and small deserts, the steppes, the northernmost parts of Asia and America, is unable to support a larger population, there still remain about 21,000,000 square miles which are fully able to support a much larger population than at present. If this territory had the mean density of Europe, or 80 to the square mile, its population would be 1,470,000,000 more than at present, an increase exceeding the entire present population of the earth.

If we divide the earth with regard to the density into three groups, one with more than four hundred inhabitants to the square mile, one with from one hundred to four hundred to the square mile, and one with less than one hundred inhabitants to the square mile, we obtain the following table, giving Asia the largest number of inhabitants and Europe the next:

CONTINENTS.	OVER 400 INHABITANTS TO THE SQUARE MILE.				100 TO 400 INHABITANTS TO THE SQUARE MILE.				LESS THAN 100 INHABITANTS TO THE SQUARE MILE.			
	Population.	Per-cent- age.	Square Miles.	Per-cent- age.	Population.	Per-cent- age.	Square Miles.	Per-cent- age.	Population.	Per-cent- age.	Square Miles.	Per-cent- age.
Europe.....	45,538,000	15	58,500	1.5	174,060,000	58	1,032,200	28.5	81,100,000	27	2,668,900	70
Asia.....	832,717,000	49	588,800	8.5	893,706,000	41	1,980,700	11	186,797,000	17	14,777,700	85.5
Africa.....	7,907,000	4	14,900	0.1	15,938,000	8	177,500	1.6	179,275,000	68	11,968,400	98.3
Australia.....	328,000	8			53,000	1	340	0.01	4,050,000	91	8,494,700	99.99
America.....	8,081,000	9.5	1,700	0.01	4,260,000	5	84,900	0.23	72,251,000	85.5	15,988,900	90.77
The earth.....	894,500,000	28.5	668,400	1.8	523,000,000	37.5	8,225,000	6.2	478,500,000	84	48,168,600	92.5

The following table gives the principal states and parts of the world arranged according to their density of population:

STATES.	Inhabitants on 1 sq. m.
1. Belgium.....	478
2. England and Wales.....	408
3. Netherlands.....	286
4. Great Britain and Ireland.....	286
5. China proper.....	281
6. Italy.....	285
7. Japan.....	227
8. British India.....	204
9. Germany.....	196
10. France.....	177
11. Switzerland.....	167
12. Ireland.....	161
13. Austro-Hungary.....	149
14. Denmark.....	138
15. Scotland.....	115

STATES.	Inhabitants on 1 sq. m.
16. Portugal.....	111
17. Chinese Empire.....	106
18. Spain.....	85
19. Greece.....	77
20. Morocco.....	28
21. Sweden and Norway.....	21
22. Turkish Empire.....	21
23. Chili.....	16
24. Mexico.....	12
25. United States.....	11
26. Russian Empire.....	10
27. Colombia.....	9
28. Brazil.....	8
29. Argentine Confederation.....	8

IV. *Independent States of the Earth.*—In the following table will be found all the independent states of some note, including their colonies and dependencies, arranged according to

population and territorial extent. The figures are from the latest official censuses or estimates. The difference between the Chinese and British empires and the other states is surprising:

ACCORDING TO POPULATION.		ACCORDING TO TERRITORIAL EXTENT.	
STATES.	Inhabitants.	STATES.	Square Miles.
1. Chinese Empire.....	425,000,000	1. British Empire.....	8,750,159
2. British Empire.....	288,604,841	2. Russian Empire.....	8,583,142
3. Russian Empire.....	85,656,000	3. Chinese Empire.....	8,973,000
4. Turkish Empire.....	44,000,000	4. United States.....	8,611,544
5. France.....	41,736,000	5. Brazil.....	8,238,100
6. German Empire.....	41,060,864	6. Turkish Empire.....	3,200,000
7. United States.....	33,535,988	7. Argentine Confederation.....	3,885,847
8. Austro-Hungary.....	33,904,485	8. Mexico.....	741,522
9. Japan.....	33,110,945	9. Portugal.....	741,622
10. Italy.....	26,801,154	10. Netherlands.....	741,100
11. Netherlands.....	26,569,000	11. Persia.....	685,000
12. Spain.....	25,196,100	12. France.....	577,115

V. *The Creeds of the World.*—The greater accuracy obtained for the statistics of population makes it also possible to estimate more correctly than formerly the population professing the various creeds. Most of the civil-

ized states include in the census questions one in regard to the religious profession. Where this is not done, as in the United States, in England and Scotland, the religious denominations generally publish annual accounts of

adult membership, of number of churches and ministers, and other facts, from which inferences as to the total population which more or less is influenced and controlled by the doctrinal tenets of a particular religious denomination, may be made. It is interesting to observe, in the religious statistics of those states which include the religious profession of the inhabitants in the official census, the small number of persons who avow themselves as atheists. In Prussia, which by friends as well as by foes is sometimes looked upon as the El Dorado of atheists and opponents to the belief in a personal God, avowed atheists can only be looked for in the columns of "persons of unknown religions," who number 4,495, and free religions, of whom there were 2,531. Thus no more than about 7,000 in a total population of 24,600,000 made a statement that might cause them to be looked upon as atheists. In France, 81,951 persons were returned as "without religion" or "religions unknown," in a total population of 36,000,000. In the Dominion of Canada, according to the official census of 1871, of a total population of 3,486,000, only 20 persons claimed to be atheists, 409 deists, and 5,144 to have no religion. Facts like these indicate that, however large the number of persons in Christian countries may be, who are indifferent in religious matters, or have discarded a belief in a personal God and in Christianity, the population continues to be almost a unit in its outward connection with Christianity. This includes the Christian character, more or less explicit, of laws, of customs, of literature, and of education. The countries of Europe, America, and Australia, may therefore be looked upon as representatives of the Christian religion and of Christian civilization to as high a degree as at any former period of their history.

According to the latest information accessible, we estimate the Christian population of America at about 80,000,000; of Europe, at 299,000,000; of Australia and Polynesia, at 3,000,000; of Asia, at 16,000,000; of Africa, at 6,000,000; of the entire globe, at 398,000,000.

Christianity is commonly divided into three large groups, viz., 1. The Roman Catholic Church; 2. The Eastern Churches; 3. The Protestant Churches: the latter embracing all Christian sects not belonging to the first two groups. According to the latest calculations, the population connected with each of the three groups is about as follows:

COUNTRIES.	Protestants.	Roman Catholics.	Eastern Churches.
America.....	38,000,000	47,000,000	
Europe.....	73,000,000	143,000,000	69,000,000
Asia.....	2,000,000	8,000,000	9,000,000
Africa.....	2,000,000	1,000,000	3,000,000
Australia and Polynesia	2,300,000	800,000	
	111,300,000	201,800,000	81,000,000

It will be seen, from the above table, that the Roman Catholic Church embraces a con-

siderable majority of the total population of America, and nearly one-half in Europe. It exceeds the Protestant population in Asia, but is exceeded by it in Africa and Australia.

The remarks just made apply with still greater force to Mohammedan, Buddhist, and other countries, where the number of independent thinkers and skeptics is less and the influence of the state religion upon national life greater than in Christian countries. By far the most prominent among the creeds of the world are Christianity, Buddhism, Brahmanism, Mohammedanism, the religion or ethical system of Confucius, the Shinto religion, and Judaism.

1. *Christianity*.—Three of the five large divisions of the globe may be set down as almost wholly Christian. Every country of America, without exception, every country of Europe, except Turkey, the Australian continent, with many of the Polynesian islands, profess Christianity as the national religion, and even in Turkey the Christians constitute the large majority of the population in the European dominions, and the entire expulsion of the only non-Christian government of Europe appears to be near at hand. In Asia, more than one-half the entire area (9,379,000 square miles) is under the rule of Christian governments, chiefly Russia and Great Britain, and the extent of this territory is increasing every year. In Africa, the possessions of the Christian powers are likewise steadily increasing. In addition to Abyssinia, which has been nominally a Christian country for fifteen hundred years, Liberia, the Transvaal Republic, the Orange Free State, and Madagascar, are independent African states with Christian governments. In all the countries of America, Europe, and Australia, in the dependencies of the European powers in Asia and Africa, the Christian population is either officially enumerated in the census, or can be estimated with a high degree of accuracy; and if it is only kept in mind that statistics of Christianity, or any other creed, can only mean the population nominally connected with, and actually influenced and controlled by, its doctrines, the estimates of the present number of Christians may be accepted as being a comparatively near approach to the real facts; nearer, at all events, than any former estimate of Christianity, or any present estimate of the other large creeds.

2. *Buddhism*.—This form of religion is commonly represented as having a larger number of adherents than any other form of religion, and some estimate the population connected with it as high as 500,000,000. Other estimates are, however, much lower, some being as low as 800,000,000. The impossibility of making accurate estimates arises from the fact that Buddhism in China has so much conformed itself to the old Chinese religion, and in Japan to the national religion of Shintoism, that the marks of difference have become almost imperceptible. The present sovereign of Japan is

making great efforts to repress Buddhism, and to clear Shintoism from its Buddhistic admixtures; but the latest accounts from Japan agree in representing Buddhism as being still the popular religion of the country, and the same report is made on China. Buddhism, in an un-mixed form, is the recognized state religion in Siam, Burmah, Anam, Thibet, and it prevails in Ceylon, in some parts of British India, where, according to the latest census, the Buddhist population amounted to about 9,300,000; in Mongolia, and among some of the Kirghee tribes subject to the rule of Russia. Buddhism is confined to Asia, with the exception of about 250,000 nomads in European Russia.

3. *Brahmanism*.—This religion only prevails in British India and in the islands of Bali and Lombok. According to the latest census taken in the provinces of British India, the number of Brahmanists amounted to about 140,500,000. The total population connected with this religion is not likely to exceed 145,000,000.

4. *The Religious System of Confucius and the Shinto Religion*.—The former is the state religion of China, the latter that of Japan. Both, as has already been stated, have been overgrown by Buddhism to such an extent as to make it nearly impossible to recognize the boundary-lines. The population by which the moral precepts of Confucius are accepted as the highest authority, is vaguely estimated from 60,000,000 to 120,000,000, and that which worships in the Shinto temples, from 12,000,000 to 20,000,000.

5. *Mohammedanism*.—Asia has a Mohammedan population of about 95,000,000, nearly one-half of whom are subjects of the British Government. The Mohammedan population prevails in Asiatic Turkey, in Persia, in Afghanistan and Beloochistan, in all the independent states of Central Asia, in the islands of Java and Sumatra, and in Arabia. Russia had, in 1875, in its Asiatic possessions a Mohammedan population of about 5,000,000, which may be expected to increase rapidly by the progressing absorption of the states of Central Asia. The Mohammedan population of China is undoubtedly larger than was formerly assumed, as has been proved by the Mohammedan rebellion in the northwestern and southwestern provinces. It can certainly not be less than 3,000,000, and may be much larger. In Europe, the Mohammedan population of Turkey has been for some time on the decline, and is not supposed to exceed 4,000,000. Russia, in its European provinces, has about 2,259,000. In Africa, Mohammedanism not only rules in the states of the northern and eastern coast, Morocco, Algeria, Tunis, Tripoli, Egypt, but it has gradually conquered nearly the whole interior of Africa, having advanced westward to the borders of Liberia. It is thought that nearly one-half of the total population of Africa, or about 100,000,000, may be set down as imbued with Mohammedanism.

6. *Judaism*.—Judaism is neither the predom-

inant religion, nor the religion of the government, in any particular country of the globe, but it is represented in every civilized and in many uncivilized countries. The Jews number more than 5,000,000, of whom about one-half live in Russia and Poland. They are also numerous in China, in Morocco, and other countries of Northern Africa, and are increasing rapidly in the large cities of the United States. Their aggregate number may be about 7,000,000.

Of the independent states of the world enumerated above forty-four are under Christian governments. Of these Europe has nineteen, America nineteen, Africa five, and Australasia one. To these we must add the three Christian principalities of Roumania, Servia, and Montenegro, tributary to Turkey. These states, with their colonies and dependencies, have an area of 32,419,900 square miles and 685,459,000 inhabitants. Of the other states, four, Turkey, Morocco, Zanzibar, and Persia, are under Mohammedan governments, and have an aggregate area of 8,115,000 square miles and 52,000,000 inhabitants; three, Anam, Siam, and Burmah, are Buddhistic, with an area of 698,000 square miles and 20,250,000 inhabitants. China and Japan have each its own state religion.

ECUADOR (REPÚBLICA DEL ECUADOR), an independent state of South America, extending from latitude 1° 5' north to 5° 30' south, and from longitude 69° 52' to 80° 35' west. Its boundaries are: on the north the United States of Colombia and Brazil, on the east Brazil, on the South Peru, and on the west the Atlantic Ocean. (For the territorial division, area, and population of the republic, see ANNUAL CYCLOPEDIA for 1878.)

The President of Ecuador is Dr. Antonio Borrero, inaugurated on December 8, 1875.

The new cabinet, formed on December 10, 1875, is as follows: Minister of the Interior and of Foreign Affairs, Señor Manuel Gomez de la Torre; of the Treasury, Señor Francisco P. Icaza; of War and the Navy, General Julio Saenz.

The Commandants-General of Quito and of Guayaquil, both appointed simultaneously with the cabinet, are Señor José Martinez de Aparicio and Colonel Teodoro Gomez de la Torre.

The armed force of the republic is estimated at 1,500 men.

To give an instance of the conflicting character of the reports on the subject of Ecuadorian finances, it may be stated that the national revenue (as given in the late President Garcia Moreno's message to Congress) amounted in 1873 to \$3,064,180, or \$154,782 (?) more than in the year immediately preceding; and that for 1874, owing to a notable diminution of imports, determined by the general commercial crisis, did not exceed \$2,944,647.

Of the various returns, official and non-official, of the revenue, none are regarded as absolutely correct. We, however, give the following table as that supposed most nearly to approximate the truth for 1872, and which will

serve at the same time to show the various sources of the national income:

REVENUE.

Branches.	Amounts.
Custom-house	\$1,707,408
Tobacco tax	19,084
Spirit tax	111,420
Salt monopoly	812,785
Gunpowder monopoly	30,477
Stamped paper	114,895
Income tax	67,451
Tax on sales of lands	216,110
Tithes	871,811
Pawn-office	1,159
Post-office	96,280
Government lands	52,568
Sundries	512,297
Total	\$3,613,386 *

The following table shows the amount of the revenue (as set down in the message above referred to) for the six years from January, 1869, to December, 1874:

Years.	Revenue.	Years.	Revenue.
1869	\$1,673,759	1873	\$2,909,848
1870	2,248,908	1874	3,964,551†
1871	2,488,350	1874	2,944,647

A detailed statement of the national debt will be found in the *ANNUAL CYCLOPEDIA* for 1874.

In the matter of the national debt it was affirmed, in the message already alluded to, that the Anglo-American and Mackintosh debts had been paid off; that \$558,000 had been paid on account of the inscribed debt, and \$112,558 on account of the floating debt; also, that the sum of \$142,708 had been invested in public benevolent institutions, \$609,841 in the cause of public instruction, and \$1,943,732 in public works; further, that there still remained to be liquidated "the only foreign debt that Ecuador has, and that had its origin in the heroic period of the independence;" that the Government had never repudiated it, as alleged by its detractors; and that the authority granted to the Executive to contract for a loan in Europe, for the purpose of completing the Yaguachi Railway, had not been used, the President seeing that, under the (then) existing circumstances, common to all the South American republics, no loan could be obtained except on ruinous conditions.

The following extract is from the report of the council of foreign bondholders, on South American states, published in London, in 1875:

It was stated by the council last year that they entertained strong hopes of receiving a proposition from the state, which hopes were strengthened by the failure of an intended local loan for the construction of a railway to Guayaquil. Several interviews were had with General Salazar, the minister at Paris, and Señor Gonzales, the consul in London; but, as the proposed arrangements were based on the condition of a new loan, for the railway, at fixed terms, these negotiations led to no satisfactory result, although the increasing revenue of the country afforded the means of an equitable adjustment of the debt, and of restoring the credit of the republic.

After the news of the assassination of García Moreno had reached London, the annexed

article, signed by "An Ecuador Bondholder," appeared in a prominent journal of that city:

Now that the late President is no more, it is to be hoped that his successor may see the necessity of coming to some satisfactory settlement with the unfortunate bondholders who have been deprived of dividends since 1867 by the confiscatory decree of the late President. In the message to Congress last year by Señor García Moreno, he described the condition of Ecuador as very prosperous, the revenue having doubled itself, or nearly so, since 1868. The proportion of the customs duties appropriated to the bondholders produced in that year £28,000 or thereabouts, and in 1874 no less than £58,000 was the proportion they were entitled to and arbitrarily deprived of. Lord Derby promised the deputation of Ecuador bondholders who recently waited upon him (the writer of this being one) that he would write to the British minister there to urge upon the President to come to some arrangement with the bondholders. If the statement is correct that General Salazar will succeed to the presidency, it is to be hoped that his acquaintance with France, England, and Europe generally, may have enlightened him to see the need of rescuing his country from the ban placed upon it by the cruel treatment the bondholders have undergone.

The receipts of the Guayaquil custom-house in 1873 were reported at \$1,672,650, or \$80,000 more than the year just preceding. It would appear from a comparison of the custom-house returns of the same port for the twelve years ending December 31, 1873, that the receipts of this department had almost tripled in the course of that period.

No returns of the imports have been published since 1871; the quantities and value of the exports for the year 1874 were as follows:

ARTICLES.	Quantities.	Value.
Cacao	25,031,648 lbs.	\$2,752,381
India-rubber	1,063,989 "	213,798
Coffee	1,065,281 "	245,015
Peruvian bark	931,182 "	196,226
Hats		91,200
Copper		88,943
Total		\$3,567,463

Precious metals of the value of \$267,088 were shipped in 1873.

In a non-official report published in 1875, the value of the exports through Guayaquil in 1873 was set down at \$5,500,000, or \$805,720 more than the official value published in the *ANNUAL CYCLOPEDIA* for 1874. Before quitting the subject of commerce, it may not be inopportune to mention here that among the articles forwarded to the Chilean exposition were samples of excellent silk from Puenbo, and of very good wines. The grape finds a genial soil and thrives well in many parts of the country.

For some time past, the inhabitants of Cuenca have been exploring the antique *huacas*, or Indian graves, and discovered therein numerous figures in gold, copper, and stone, together with copper hatchets well hardened, and somewhat resembling those used in the Old World in the mediæval ages. A painted

* In Ecuadorian pesos, = 71 cents each.

† The difference between these figures (for 1873) and those given above is not accounted for in the message.

shield with hieroglyphic inscriptions has likewise been found in one of those sepulchres of the ancient Quitas.

The shipping movements at the port of Guayaquil in the year 1873 were as follows:

VESSELS.	Sailing-Vessels.	Tons.	Steamers.
Entered.....	123	118,034	91
Cleared.....	118	110,662	91

Locomotives were reported to be running over a distance of some thirty miles on the Southern Railway. The highway from Loja to Santa Rosa had been completed, and several others were in rapid course of preparation. According to García Moreno's message heretofore alluded to, Ecuador possesses thirty miles of railway, and rails for fourteen miles more; nearly 200 miles of cart-roads, with good, substantial bridges, and about 250 miles of macadamized roads. It can boast of a magnificent penitentiary, an astronomical observatory, an orphan asylum, a foundling hospital, and a conservatory of music and of fine arts. Many other enterprises were recommended and sketched out, among them a normal school and a school of medicine. Ninety-three schools have been established, with an attendance of 82,000. To put primary instruction within the reach of all, in a sparsely-inhabited country, is difficult, but perseverance was recommended to Congress, inasmuch as, without a Christian education, society is sure to fall into a state of barbarism. Trial by jury was pointed out to be unsuitable for many sections of the republic, and the Government ought to be authorized to suppress it in such places, as it has the power of ordering its establishment wherever convenient. A hospital for the cure of inebriates was strongly recommended to be built somewhere on the banks of the river Toachi, where inveterate lovers of strong drinks could be put on diet and made to do out-door work.

The Academy of Ecuador was duly inaugurated at Quito on May 4, 1875, in accordance with the decree of the Spanish Academy of Madrid; Don Pedro F. Ceballos having been appointed director, Don Pablo Herrera censor, and Don J. Modesto Espinosa secretary.

The year 1875 was fraught with events of transcendental importance to the political existence of the Ecuadorian republic, and foremost among these rank the melancholy fate of García Moreno, murdered in one of the Government buildings on the very eve of the inauguration of his third presidential term; and the establishment of an entirely new order of things under Dr. Antonio Borrero, the chosen candidate of the non-official party, incomparably the most numerous in Ecuador.

The assassination of the late President was briefly related by a correspondent, under date, Guayaquil, August 14, 1875, as follows:

On Friday, the 6th instant, the President of Ecuador, Don Gabriel García Moreno, was assassinated in the corridor of the Public Treasury, in Quito,

between two and three o'clock in the afternoon. Passing from one office to another in the same building, he was met by three men, who, having saluted him as they passed, turned and attacked him; one, a Colombian, with a *machete*, and the other two, natives of Quito, with revolvers. In the struggle, the President fell over the balcony into the public square, and report says that the Colombian descended the stairs and then further maltreated him. The President died a few hours after the attack, and the Colombian was shot on the spot by a sentinel then on guard at the barracks, opposite the Treasury. An unarmed aide-de-camp of the President, on hearing the shots, rushed out, and also received a bullet-wound, but not a severe one. The two Quitenos escaped, and it is not yet known whether they have been apprehended. The name of the Colombian is Faustino Rayo; Manuel Cornejo, and Roberto Andrade, are those of the Quitenos. It is doubtful as yet what action of the President called forth the revengeful feeling which prompted the attack, but it is reported to be of a private nature, and ascribed to personal animosity. Rayo, the Colombian, had been Governor of the Napo, and it is said his animosity arose from the mode in which he had been degraded from that position. The President has done so much to create bitter feelings against himself since he descended to banish the women of Ecuador, after having shot or exiled their fathers, brothers, or lovers, that it is a wonder there has not been found even one of their own sex brave enough to have dispatched him, and little short of a miracle that he has lived so long.

Immediately upon receiving the news of the assassination, Señor Vicente de Santiesteban, Governor of Guayaquil, published a proclamation, of which the following is a translation:

TO THE ARMY AND PEOPLE.

Fellow-countrymen: The decree published to-day has brought to your knowledge the grave event which has taken place in the capital of the republic, on the 6th inst., in which the chief of the Supreme Government was attacked and fatally wounded.

We do not yet know the fate of the President, Señor García Moreno, but, in any case, you know that, in view of this unexpected event, the executive power will be exercised by the Designado appointed by the Constitution; and it becomes us to trust that he will dictate measures which shall conciliate the liberty and rights of Ecuadorians with the respect due to the laws.

Fellow-countrymen: The republic being declared in a state of siege, and powers extraordinary being conferred on me, by the terms of our Political Code, I invite your patriotic aid to preserve the public peace, the only source of personal security.

Chiefs, officers, and soldiers: Faithful supporters of individual guarantees, your behavior under these circumstances will secure the gratitude of the people. Let me remind you of the loyalty and moderation which have always been the pride of the national army.

Friends and countrymen all: While I remain constitutionally at my post, as governor of the province, you may depend that it will be always my principal object to preserve public order.

VICENTE DE SANTIESTEBAN.

GUAYAQUIL, August 9, 1875.

After the death of García Moreno, the political community was divided into two grand parties: the *official* and the *non-official*. The latter chose for their candidate Dr. Antonio Borrero; and the former was subdivided into the three following parties: the *Catholic*, with Dr. Luis Antonio Salazar as candidate; the *Liberal Conservative*, under Dr. Antonio Flores;

and the *Peace* party, whose candidate was General Julio Saenz.

The contest, however, though conducted peacefully and with the greatest fairness, soon proved to be an unequal one; Dr. Borrero was elected by a vast majority of votes in all the provinces, and took the oath of office and possession of the presidential chair on December 8th.

EDUCATION IN THE UNITED STATES.

The state of education in this whole country, with all the principal facts brought together under one view, and as complete as it has been possible thus far to make it, has been presented in the last report of the Commissioner of Education at Washington. It forms a volume of 935 octavo pages, and is made up in the year 1875, and contains the facts for 1874. Education and the general effect of the public-school system is now the great topic of public interest, and in examining a summary of these details it should be remembered that they are not wholly complete. One or two States and Territories have failed to make returns, so that the aggregates are somewhat short of entire correctness. The Commissioner remarks:

That education is unworthy of the name which disregards science. Not only are the knowledge and practice of scientific methods of culture essential, but all the administrative work of the educator must be brought to the test of science and practice. Equally necessary is it that all facts and statistics should be properly grouped and recorded, all methods and systems scrutinized and compared, and all the fruits of experience garnered for future instruction. These give, when understood, the science of education. In the universal adoption of this method will be found the remedy for the defects in educational systems now everywhere the subject of complaint. To reach and apply it, observations and records must be accurate, complete.

A summary of the details then proceeds as follows:

STATE AND TERRITORIAL REPORTS.

All the States and Territories are able now to report their school population, and the increase for the year is 416,126. This increase becomes apparent only in those States which annually enumerate a school population, and not those which unfortunately use for each decade the returns of the United States census. Four States (one less than in 1873) cannot report the number enrolled in the public schools, and yet there will be noticed an increased enrollment of 164,885. Only thirty States can report the number in daily attendance (one less than in 1873), and yet an increase of 321,825 is reported. Thirty-five out of thirty-seven States, and eight out of eleven Territories, report the number of teachers. The increase—exclusive of 148 from two Territories not reporting last year—is 24,223. Thirty-seven States and eleven Territories report the public-school income, which shows an increase for the year of \$1,323,456; but only thirty-five States and nine Territories can show their school expenditures.

EXPENDITURE FOR PUBLIC SCHOOLS.

Massachusetts heads the list with an expenditure *per capita* of school enumeration of \$14.70; of pupils enrolled in public schools of \$14.48. The remaining States report the following:

STATES.	Per Capita of Enumeration.	Per Capita of Enrollment.
Ohio.....	\$11 40	\$8 57
Louisiana.....	11 00	
Nebraska.....	10 72	18 50
Rhode Island.....	10 40	11 55
Connecticut.....	9 47	10 38
Vermont.....	7 04	8 89

Cherokee Nation.....	7 40	15 25

The Diversity of School Age.—If each State furnished by accurate census the number and average attendance of children between 6 and 16 (the usual limits of school age), most valuable comparative lessons could be drawn. Ohio provides by law for such an enumeration, and in the last report of her School Commissioner the number of school population, 6 to 21, was given as 985,947, while the number between 6 and 16 was 787,272, being about 75 per cent. of the legal school population.

The legal school age in the several States and Territories is: In Connecticut and Utah, 4-6; Oregon and Wisconsin, 4-20; Maine, New Hampshire, Montana, and Washington, 4-21; Massachusetts and Rhode Island, 5-15; California, 5-17; New Jersey, 5-18; Michigan, Vermont, and Wyoming, 5-20; Alabama, Arkansas, Delaware, Iowa, Kansas, Minnesota, Mississippi, Missouri, Nebraska, New York, Virginia, Colorado, Dakota, and Idaho, 5-21; South Carolina and Indian Territory, 6-16; District of Columbia, 6-17; Georgia, Nevada, Tennessee, and Texas, 6-18; Kentucky, 6-20; Florida, Illinois, Indiana, Louisiana, Maryland, North Carolina, Ohio, Pennsylvania, West Virginia, and Arizona, 6-21.

NEW ENGLAND STATES.

Maine, without the stimulus of an influx of population, shows an increase of only 40 in children of school age during the year; but the enrollment in public summer schools was 5,708 in advance of 1873, and the average attendance in the schools 4,980 in advance. The increase in the public-school income was \$223,178; in expenditure, \$167,042; in the number of schoolhouses, 14; in the value of school-property, \$104,075. The normal schools have trained during the year 587 pupils, and 163 towns and cities, availing themselves of the provisions of a recent act, have established that number of additional free high-schools, imparting, without charge, to 14,828 students good secondary training. The State College had, at the close of 1874, 121 students; other colleges, 355; professional schools, 145.

New Hampshire reports an increase of 6 in the number of schoolhouses, but a decrease of 696 in the number of scholars registered; though the number from 4 to 14 years of age not attending any school was brought down from 3,680 in 1873 to 2,598 in 1874. There is a decrease of 45 in the number of male

teachers, and an increase of 34 female teachers; the average monthly pay of the former (including board) has increased from \$40.78 to \$44.87, and that of the latter from \$23.84 to \$24.90. The methods of instruction are said to be better than they have been, and drawing and vocal music receive more attention in many schools. The State Normal School reports 122 pupils and 28 graduates in 1874. Secondary instruction has been given in 34 high-schools and 52 academies; and the one college, with its associated scientific and agricultural departments, reports 54 professors and tutors and 281 students, besides 8 professors and 78 students in the medical department. The State has made a direct contribution to the Normal School and State Agricultural College, but out of the appropriation for teachers' institutes.

Vermont, with an increase of 6,056 in school population (5 to 20), shows a decrease of 16,557 in attendance on all schools. At the same time, the number of teachers was 292 greater than in 1873, there were 90 more schoolhouses and 133 more in good condition, and \$80,399 were expended on new schoolhouses, against \$58,429 in 1873. The State Board of Education has been abolished, and a State Superintendent of Public Instruction substituted for it. The 3 State normal schools report 401 students, of whom 90 were graduated. Secondary instruction has been given in 87 incorporated academies and county grammar-schools. The 3 colleges give an aggregate of 186 undergraduates, with 51 medical students, in the autumn of 1874.

Massachusetts shows an increase of 7,270 in the attendance on public schools, and in all schools of probably 9,000; also, an increase of \$364,157.37 in receipts from taxation for school purposes. The average monthly pay of male teachers has been about double that in the two adjacent Northern States, and that of female teachers about \$9 more. The sum of \$1,646,670.35 was spent during the year for building and repairing schoolhouses. Instruction in drawing (now general in all the city schools) has made most encouraging advance. The 4 older normal schools report 1,133 pupils, of whom 182 were graduated, and the new one at Worcester 69 pupils. In the Normal Art School were 188 pupils, 56 more than the preceding year. Secondary instruction was given in 209 high-schools, in at least 60 academies, and in 21 preparatory schools, to perhaps 20,000 pupils. In 2 universities and 5 colleges were 1,517 collegiate students; in 4 scientific schools, 547 students; and in theological, medical, and legal courses, 1,020.

In *Rhode Island*, the receipts for public schools were \$155,900.28 more than in 1873; the increased expenditure for them, \$88,089.25; the registration of pupils, the same for the two years; the number of teachers, greater by 264 than in 1873, and their average pay larger; the number of evening schools and of their pupils, both considerably larger. Secondary instruction was given in 12 high-schools, 4 academies, 5 preparatory schools, and 1 business-college. The State Normal School had 141 students, and the 1 college of the State, 253.

Connecticut shows an increase of \$99,820.19 in receipts for school purposes, an increase of \$70,357.51 paid for teachers' wages, an aggregate of \$226,705.78 expended for new schoolhouses, and a greater registration by nearly 4,000 in her public schools, though other schools show a considerable decrease. The one normal school had 180 students; the high-schools and academies, upward of 5,000; the colleges, 955 in collegiate and 249 in scientific courses; the professional schools, 265 studying theology, law, and medicine.

MIDDLE STATES.

New York reports a gross receipt of \$12,988,762.98 for public schools, \$582,725 more than for the preceding year. Of this sum, \$7,415,181.39 was expended for teachers' wages, \$1,994,182 for school-house sites and buildings, \$294,145.68 for school apparatus, \$27,903.79 for school-district libraries, and

\$74,611.49 for schools for colored children. To ninety-eight academies, in which 1,661 students were being trained as teachers, \$47,861.98 were given; and to eight State normal schools, with 2,913 normal pupils, \$150,037.79, this not including, it is believed, what New York City gave its normal schools, which had in them 1,800 pupils. The number of pupils in public schools was 1,080,779; in private schools, 185,956; in normal schools, 6,319; in academies, 27,887; in colleges, 3,414; in professional and scientific schools, about 3,600.

In *New Jersey*, the number of pupils in the public schools was 186,392, an increase of 6,949 over the previous year. The whole revenue for maintenance of the schools, besides \$618,287.84 for building schoolhouses, was \$1,691,160.29, a decrease of \$145,192.82 from that of the preceding year, owing to a deficiency of local tax to supplement the State appropriation. There were 85 more teachers than last year, 13 more school-buildings, and 194 more school departments; and the cost per scholar was \$3.38 less. In private schools there were 36,527 pupils, and 71,895 children of school age are supposed to have attended no school. The State Normal School had 269 pupils; the Farm Preparatory School, 12; and in three city normal schools were nearly 80 candidates for teachership, besides 250 teachers preparing for higher work. The number of high-schools and pupils does not appear, but 3,013 pupils are reported in thirty-six academies and four preparatory schools; 253 in three business colleges; 110 in the preparatory classes of colleges; 645 in the collegiate classes; 181 in three scientific schools, and 295 in four theological seminaries.

Pennsylvania reports an increase in school-districts of 21; in schools, of 886; in graded schools, of 279; in teachers, of 238; in pupils registered, of 16,754; in average attendance, of 81,608; in expenditure for tuition, of \$201,510.66; for buildings, fuel, and contingencies, of \$301,298.91; and for all school purposes, of \$502,108.47; the total for the last-mentioned, including normal schools and orphan-schools, reaching \$9,408,819.87. Of this sum, \$110,000 went to the eight normal schools, which had 2,915 normal pupils, besides 941 in model schools. About 40,000 pupils appear to be engaged in secondary studies; about 2,300 in classical courses, and about 300 in scientific courses of the colleges; 570 in theological, 56 in legal, and 1,109 in medical studies.

Delaware remained, in 1874, under her old and ineffective school-law, the chief educational activities developing themselves in the city schools of Wilmington, which enrolled nearly 6,000 children; in the Association for the Education of Colored People, which maintained twenty-eight schools, with 1,200 pupils; in a few academies and seminaries, which gave secondary training to from 400 to 500 pupils; and in the State College, which had 45 students. A new school-law was, however, enacted early in 1875, in which the modern improvements in organization, including State supervision, were adopted.

Maryland appears to have received for public schools \$59,699.71 less than in the preceding year, but to have expended on them \$108,824.70 more, increasing her schools by 60 and her teachers by 184. There has been considerable increase in the expenditure for teachers' salaries, for building schoolhouses, and for books. The State Normal School had, during the year, 174 pupils, and the School for training Colored Teachers, 246. In the Baltimore City College, in eighteen academies aided by the State, in seven preparatory schools of colleges, and in twenty independent schools, about 4,600 pupils have been in secondary studies; in seven colleges there have been 477 in collegiate; in two schools of science, 373; and in eleven professional schools, 732 have been studying theology, medicine, or law.

SOUTHERN STATES.

Virginia shows an increase in receipts for public schools of \$54,570.97; in expenditures on them, of \$58,651.21; in the number of schools, of 205; in the

number of graded schools, of 32; in the number of new school-buildings, of 263; in the number of teachers, of 305; and in the enrollment of pupils, of 13,016. There has been a slight advance, too, in teachers' wages; an improvement in school-buildings and furniture, and, in the absence of a normal school for whites, an increased instruction of teachers at county institutes. Two schools for training colored teachers have had about 300 pupils. In 27 academies, 11 higher female seminaries, 7 preparatory schools, and 1 business-college, 3,034 students have been under training. In 8 colleges and universities there were 1,309 undergraduates; in 2 scientific schools, 484; and in 9 professional schools, 338.

North Carolina made no report for 1874. It is believed, however, that about 3,500 public schools were taught, and attended by over 100,000 white and over 50,000 colored children. In 3 normal schools there were 94 students; in 28 schools for secondary training, 1,500; in 4 colleges, 267; and in 2 professional schools, 75.

South Carolina reports a net receipt of \$478,767.37 for public schools, and an expenditure of \$431,500.34 upon them; with an enrollment of 44,470 white and 56,249 colored children. There was an increase of 162 teachers, of 196 schools, and of 192 new school-houses. From 6 academies, 1 institute, and 7 higher schools for females, 395 pupils were reported; in the university and 6 colleges, 436 preparatory and 287 collegiate, with 20 students of agriculture, 126 of theology, 16 of law, and 61 of medicine.

Georgia reports 2,233 free schools for white and 663 for colored children, with an enrollment of 84,673 whites and 37,267 colored; 617 private elementary schools, with 25,745 pupils; 86 private high-schools, with 4,957 pupils; 11 colleges, with 833 students; to which number the bureau can add at least 800 more in female colleges and 721 in scientific and professional schools.

From *Florida* the information is imperfect, in consequence of the death of State Superintendent Gibbs, before the report for the year could be made. Still, there appears to be improvement, the receipts for school purposes being \$5,735.23 more than the previous year, and the expenditure \$28,461.61 more. The increase in the number of schools was 46, and of pupils 1,586. The State Agricultural College was still in abeyance, its funds locked up in State securities.

In *Alabama* the embarrassments of 1872-'73 continued, greatly affecting all the lower schools. The normal schools, private and public, seem, however, to have gone forward, having about 500 pupils. In 7 secondary schools, 782 pupils were reported, and in 3 colleges 831 preparatory students, 274 collegiate, 103 agricultural and mechanical, 8 theological, and 95 medical.

In *Louisiana* the State Superintendent of Instruction speaks hopefully of the educational condition, though he admits that in many instances treasurers have been unfaithful, directors negligent, and teachers miserably ill paid. Race prejudices have also sometimes interfered with the action of the school-laws. Still, there is a gain in the receipts for schools of \$110,595.43 over the preceding year; in attendance, of 16,866; in the number of schools, of 175; and of teachers, 18. The value of schoolhouses and sites, of school apparatus and school furniture, is also reported to have increased, though, out of New Orleans, there are said to be few schoolhouses in good condition. Three normal schools, not under State control, have had over 200 pupils. In private schools, 22,306 scholars are reported, with about 1,400 under secondary training, 392 in preparatory schools of colleges, 232 in the colleges themselves, and 196 in professional schools.

Texas, with a rapidly-increasing population, shows great inadequacy of educational provisions. An indebtedness of nearly half a million to the teachers

is reported; there was also difficulty in obtaining schoolhouses, the law not authorizing the payment of rent and not providing funds enough to build. The establishment of 3 normal schools is recommended, there being none at present. In 11 academies and seminaries, 2 business colleges, and 8 preparatory schools of colleges, 2,265 pupils were reported; in 8 colleges, 701 students; in 8 schools for superior instruction of females, 245 in studies equivalent to collegiate; and in 2 professional schools, 25 students of theology and medicine.

In *Arkansas*, the public schools were prostrate for the year, awaiting action of the Legislature for their revival. But in the normal department of the State Industrial University, 53 students were preparing to be teachers; in 3 schools for secondary training there were 258 students; in the preparatory department of the university and 2 colleges, 248; in collegiate classes, 119.

In *Mississippi* the opposition to the public-school system is said to be steadily diminishing, the idea of popular education to be more and more favorably entertained, and the free schools to be now receiving very general support. The receipts for these schools were over \$900,000 for the year; the number of schools, 8,846; the average attendance, about one-third of the children of school age; the value of school property, \$505,790.56. In 3 normal schools there were 300 students. Returns from 2 out of 8 schools for secondary training show 117 pupils; preparatory schools of colleges, 558. In 6 colleges there were 292 students; in 7 institutions for superior instruction of females, 789; and in 1 school of theology, 10.

Tennessee reports a receipt of \$998,459.10 for public schools, more than half the school population enrolled in them, and more than one-third in average daily attendance; the number of teachers, 5,551, and their average salary, \$33 per month. The city school systems appear to be working well, through extra aid received from the Peabody fund. Through the same means 10 teachers' institutes were held during the year, doing much toward training good school-teachers, there being yet no normal school under State direction. In 3 city high-schools there were about 500 pupils; in 46 private schools, 4,866; in 4 business colleges, 554; in preparatory schools of colleges, 1,920; in 15 colleges, 699; and in 6 professional schools, 471.

Kentucky presents imperfect statistics, owing to the meagre returns from local officers to the State Superintendent; but enough appears to show that although, from want of funds, her school term has been short, and the enrollment in schools proportionately less than in Tennessee, still, there has been a perceptible advance. Public sentiment is more in favor of free schools; provision for the education of the colored population in them has at last been made, so far as the income from tax on the property of colored persons and any moneys that may be received from the United States will go; 141 new school-houses have been built; a more general organization of teachers' institutes has been effected; the establishment of a State Normal School has been pretty well resolved upon; in 3 private normal schools, 2 colleges, and 2 city training-schools, about 300 persons have been preparing to teach; about 4,000 have received secondary training; about 1,000 appear in 12 colleges, not counting in the female colleges; and in 11 professional schools were 225 students of theology, 16 of law, and 616 of medicine.

West Virginia reports a receipt of \$740,938.69 for public schools, an expenditure greater by \$138,689.40 than in 1873, a school attendance 27,256 greater, 218 more school-buildings, 857 pupils in 4 of the 7 normal schools, 834 in secondary schools, 414 in college studies, and 48 in theological.

It should be observed in general, with reference to the Southern States, that much aid is received from other quarters. Considerable donations have been

made to higher institutions of learning. Several religious denominations have been active in organizing schools of all grades; among the most notable are those of the American Missionary Association. The Peabody fund has continued to extend its most efficient aid in the States designated for its benefactions.

GREAT LAKE AND NORTHERN MISSISSIPPI STATES.

A prominent educational feature in these States, with the exception of Ohio and Illinois, is their crowning of the free-school system with State universities, to which graduates from the higher grades of free schools may be admitted without other examination than they have passed with approval in the schools.

Ohio reports a school population of 985,947; an enrollment in public schools of 707,943; an average attendance of 429,680; receipts, \$8,300,594; expenditure for school-buildings, \$1,474,083. There are no State normal schools, but 10 under private or collegiate or city auspices report 2,220 pupils; high-schools, 24,229; private academies, 5,151; preparatory schools, 4,771; business colleges, 2,441; 13 higher schools for women, 1,842; 2 scientific schools, 148; 12 schools of theology, 332; 2 law schools, 67; 11 medical schools, 1,177.

Michigan shows an enrollment in public schools of about 330,000 out of 436,694 of school age; an average attendance of 170,000; a sum of \$4,094,776 received for school purposes, and \$586,307 expended for school-buildings. Among the signs of progress are better school-buildings, improved school-furniture, and increased pay to more fully-educated teachers. The State Normal School has had 829 pupils, and the State University and 4 colleges have maintained normal classes. In private and parochial schools there have been some 20,000 pupils; in schools for secondary training, 8,286; in the State Agricultural College, 121; and in 6 professional schools, 826.

Indiana reports 489,044 pupils enrolled in public schools, only 2,010 less than the whole number between 6 and 16. The school fund reached \$8,711,819; the school revenue, \$2,211,328; the number of schools, 9,105; the number of teachers, 13,005; and 479 schoolhouses were built during the year. In 2 normal schools there were 1,026 pupils, and 19,033 in schools for secondary training. The State University and 16 colleges report 1,613 students; 9 institutions for superior instruction of females, 149; the State Agricultural University, 19; 2 law schools, 58; 2 medical schools, 138.

Illinois reports an increase of \$191,556 in her permanent school fund, but shows the effect of the financial troubles of the year in a decrease of \$1,365,850.80 in receipts for public schools and a decrease of \$1,398,759.80 in expenditures. Still, \$1,009,980 were expended on school sites and buildings, and there was an increase in enrollment of 17,466, in average attendance of 81,830, and in the number of teachers of 354. The whole number of public schools was 11,649, with an average daily attendance of 388,384; the number of pay-schools, 541, with an enrollment of 51,092. In the two State normal schools and others there were 1,800 normal pupils, and 11,886 in schools for secondary training, exclusive of high-schools, in which there were probably as many more. In colleges there were 2,835 students; in schools of science, 486; in schools of law, theology, and medicine, 985.

Wisconsin raised for her 5,118 public schools \$2,667,050; employed in them, notwithstanding a somewhat less attendance, 429 more teachers than in 1878; increased her school sittings by 4,306; trained in her 3 State normal schools about 700 pupils; in secondary schools, 2,200; in college classes, 405; in professional schools, 150; and in special schools, 556.

Minnesota reports an increase of \$122,502 in her permanent school fund, of \$19,205 in the interest of

this fund apportioned to the schools, of \$368,478 in total receipts for school purposes, of \$302,497 in expenditures for them, of 14,129 in school population, of 4,319 in attendance upon public schools, of 276 in the number both of schools and teachers, of 187 in the number of schoolhouses, and of \$1.48 to \$4.46 in the monthly pay of teachers. The number of pupils in public schools is 128,902; in normal and other schools for secondary training, 4,920.

Iowa reports an increase of \$307,598.62 in receipts for public schools, and of \$200,423.62 in expenditures. The increase in school population was 15,001; in the enrollment in public schools, 17,558; in average attendance, 22,947; in number of schoolhouses, 352; in value of school property, \$1,337,750. The normal departments of the university and Whittier College had 63 students; such secondary schools as were reported, 5,543; colleges, 1,127; professional schools, 414; 8 special schools, 284.

MISSOURI RIVER STATES.

The system here continued in 1874 the same as in the preceding year, a State Superintendent of instruction, with county superintendents under him, presiding over and supervising public schools in each State, while a State university, as in the last-named section of States, stood at the head of the free schools to receive their graduates, though with less definite arrangements in respect to their admission.

Missouri shows an increase of 2,537 in school population, of \$72,198.41 in receipts for school purposes, and of \$714,648.53 in permanent county school funds. But in other particulars there appears no change, except in St. Louis, where the advance is continuous and great. The normal schools (State, city, collegiate, and independent) had 1,887 pupils; the secondary schools, including business colleges, 9,765; the university and colleges, 1,268 collegiate and 145 scientific students; professional schools, 544; two special schools, 246.

Kansas reports a decrease of \$18,340.28 in receipts for public schools, but an increase in expenditures of \$7,882.19 in permanent school fund, of 410 in the number of schoolhouses, and of 1,020 in the number of teachers. In four normal schools, one of them for the colored race, there were 574 pupils; in secondary schools, 2,215; in collegiate classes, 415; in the institution for the blind, 40.

Nebraska increased her receipts for public schools from \$901,190 in 1873 to \$988,740 in 1874, and the expenditure for them from \$751,904 to \$1,004,937. The number of schoolhouses was increased by 373. The number of teachers by 513, and the number of enrolled pupils by 9,846. The State Normal School had 87 pupils, and, as far as can be gathered from returns received, there were 786 students in secondary schools, 67 in collegiate classes, and 2 in a professional school, with 53 in the State Institute for the Deaf and Dumb.

STATES ON THE PACIFIC SLOPE.

Nevada, in her third biennial report, shows improvement in almost every particular. The school funds have increased from \$104,000 to \$250,000; the school population from 5,675 to 6,315; the school attendance from 77 to 84 per cent. More than \$50,000 has been expended upon schoolhouses; 13 new districts have been formed; 39 more teachers employed; a preparatory school for the future university erected, and the few deaf and dumb trained in the school at Oakland, Cal.

Oregon.—The first biennial report from Oregon states that, notwithstanding great embarrassments growing out of the scattered settlement of a comparatively poor and scanty population over a large extent of country, the public schools have enjoyed considerable prosperity and have made commendable progress. The work of organization is going forward; the examination of teachers is being made

more uniform; \$46,608.96 was spent on schoolhouses in 1873-'74, against \$4,352.45 the preceding year; and out of a school population of 40,898 there were 20,680 enrolled in schools, a larger proportion than in several much older States. In her colleges were 734 preparatory students, 235 collegiate, and 14 medical.

California, with a population spread over a vast territory, but with several well-grown cities, reports 117,870 enrolled in schools out of 159,427 of school age. The increase of enrollment over 1873 was 20,189, about keeping pace with the growth of population. There was a decrease of \$73,734.94 in the receipts for public schools, and of \$34,982.09 in expenditures. The State Normal School reported 234 pupils; secondary schools, 3,077; the university and colleges, 632 preparatory and 752 collegiate, besides 131 in the agricultural department of the university, and 114 professional students.

THE TERRITORIES.

For the second time every Territory has been heard from, and the report is, on the whole, encouraging. In all, except Alaska, some school system is in operation, with a Territorial Superintendent of instruction, and generally county superintendents also, while in the newly-settled ones the citizens seem to be manfully contending with the great difficulty of educating children in regions where wide, waste areas form the rule and fixed settlements the few exceptions.

The *District of Columbia*, compact and populous, led the list last year in enrollment of children in schools, and Colorado in the amount raised for educational purposes. This year, Utah, vast in territory but scanty in population, reports 10 more than the District on her list of pupils in the public schools and 306 more in average daily attendance, while Colorado, rich as she is in mines, falls not only below her former self, but also below the District in school revenue.

The enrollment in the Territorial schools is, as reported—though the returns are said to be in some instances imperfect—for Arizona, 348 out of 2,584 children of school age; for Colorado, 9,995 out of 19,309; for Dakota, 4,006 out of 6,312; for the District of Columbia, 17,839 out of 31,671; for Idaho, 2,030 out of 4,010; for Montana, 1,985 out of 3,758; for New Mexico, 5,420 (in all schools, 6,578) out of 23,000; for Utah, 17,849 out of 33,297; for Washington, 7,592 out of 11,937; for Wyoming, 1,000 out of 1,300. The returns from the Indian Territory are too meagre to admit of a comparison of them with others, each Indian tribe there acting independently.

SCHOOL STATISTICS OF ONE HUNDRED AND TWENTY-SEVEN CITIES.

A summary is presented of the statistics of the public schools in 127 cities with a population of 6,637,906. The summaries in the twenty different items reported for each city contain some most suggestive lessons. Some cities cannot tell the number of their school population; some have not counted their sittings, and do not know whether they are adequate to their necessities. The number enrolled in private schools can only be approximated. The statistics show that these cities contain 1,344,028 children of school age, and 2,136 school buildings, having 631,498 sittings, or not quite half enough for the children entitled to attend school. This apparent deficiency is in part due to the fact that twenty-five cities are unable to tell their sittings. The amount expended in these cities for public schools for the year was \$19,122,323, while the total receipts for the year were \$19,150,514.

NORMAL SCHOOLS.

Statistics are given of 124 normal schools, having 703 instructors and 24,405 students. Of these schools, 73 are supported by State appropriations.

The largest appropriation for any one normal school for the year was for the Normal University of the State of Illinois, \$28,987. Next to this is the appropriation for the State Normal School of New Jersey, \$20,000. Each of the 6 State Normal Schools of New York received \$13,000, and the Michigan State Normal School \$17,500. The other appropriations range from \$1,000 to \$15,000. Pennsylvania claims the largest number of normal schools, reporting 11; Ohio, 10; New York, 9; and Illinois and Missouri, 8 each.

COMMERCIAL AND BUSINESS COLLEGES.

Statistics have been received of 125 institutions of this character, having 577 instructors and 25,892 students, an increase over the number reported last year of 14 institutions, 63 instructors, and 3,495 students. In the number of schools New York takes the lead, reporting 17; Illinois, 16; Ohio, 13; and the remainder are distributed among 24 States and 2 Territories.

KINDERGARTEN.

Information is given in a table of 55 of these schools, having 125 teachers and 1,635 pupils. Of the whole number of these gardens reported, Massachusetts claims 14 (6 of which are in Boston) and New York 10.

SECONDARY INSTRUCTION.

The report presents a summary of the statistics of 1,031 of this class of schools, having 5,466 instructors and 98,179 students. Of the whole number of schools, 195, with 13,592 pupils, are for boys; 275, with 20,456 pupils, are for girls; and 561, with 64,129 pupils, for both sexes. It is noticed that although 1,031 institutions, with 408 more teachers, are reported in 1874, as against 944 in 1873, there were 20,391 less students. This diminution of the number of students is probably attributable to the financial embarrassments of the year, which have, in many States, largely affected the attendance on private schools of the academic class.

The Commissioner, alluding to the efforts of the Bureau to collect full statistics of secondary instruction, says: "At present there is a painful deficiency of information respecting secondary instruction in State and city systems.

PREPARATORY SCHOOLS.

The number of these schools reporting to the Bureau for 1874 is 91, with 697 instructors and 11,414 students. This is an increase over 1873 of 5 institutions and 7 instructors, but a decrease of 1,073 students. The number of students preparing for the classical course in college is 3,655; for the scientific course, 951.

SUPERIOR INSTRUCTION OF WOMEN.

The report embraces statistics of 209 of these schools, 4 more than in 1873. The number of instructors reported is 2,285, 165 more than in 1873; and the number of students, 28,445, a decrease of 1,168.

Six thousand one hundred and ninety of the students were in the preparatory departments, 10,760 in the regular collegiate course, 1,093 in special or partial courses, and 138 in the post-graduate course.

UNIVERSITIES AND COLLEGES.

Statistics of 343 colleges and universities are given. The number of instructors reported is 3,783; the number of students, 56,692. The number of institutions reported is greater by 20 than in 1873, the number of instructors by 677, and the attendance by 4,639. The number of students in preparatory classes was 28,529; number of unclassified students, 1,648; number of students in regular college classes, 26,515, of whom 15,598 were in the classical course, 4,664 in the scientific course, and 238 in post-graduate studies. The number of females in preparatory classes was 6,685; in collegiate classes, 2,787.

Of the 343 colleges, 300 report libraries, the aggregate number of volumes being 1,830,455; 158 report 406,144 volumes in society libraries; 152 report an increase in libraries during the year of 78,495 volumes. The value of grounds, buildings, and apparatus reported by 303 colleges was \$39,170,223; the amount of productive funds reported by 173 colleges, \$28,080,309; the income from productive funds reported by 168 colleges, \$1,801,890; the receipts from tuition fees for the last year in 208 colleges, \$1,768,929; the amount of State appropriations received by 25 colleges, \$611,676; and the aggregate amount of scholarship funds reported by 58 colleges, \$1,999,388.

SUMMARY OF STATISTICS OF SUPERIOR INSTRUCTION.

The whole number of students reported in institutions for superior instruction is 48,855; of whom 26,515 are in colleges, 5,085 in schools of science, and 17,255 in schools for the superior instruction of women.

In connection with these statistics is presented a summary of students in classical and scientific preparatory courses. The number preparing for a college course is 11,032; preparing for classical course in college: in academies 5,112, in preparatory schools 3,655; preparing for scientific course in college: in academies 2,705, in preparatory schools 951, in preparatory departments of scientific schools 1,584—total number in preparatory courses, 25,089.

COLLEGE ENTRANCE EXAMINATIONS.

In 1871, an effort was made to collect statistics of college entrance examinations. It turned out, however, that very few colleges kept a record of such facts; only six colleges were able to report with any degree of definiteness. This year the effort has been renewed, with the following valuable result from 62 universities and colleges. It appears that the total number of candidates for these several institutions was 3,515; that of the total number admitted without conditions was 2,015; that 436 were conditioned in Latin, 471 in Greek, 559 in mathematics, 227 in history and geography; and that of those rejected, 58 failed in Latin, 62 in Greek, 144 in mathematics, 74 in history and geography, and 346 in two or more subjects of examination.

SCHOOLS OF SCIENCE.

The number of institutions and departments of this class, as reported to the Bureau, is 72; the number of instructors, 609; number of students, 7,244. The number of institutions reported in 1874 is greater by two, the number of instructors less by 140, and the attendance less by 1,606, than in 1873. The number of students in preparatory courses is 1,252; in regular courses, 4,037; in partial courses, 268; in post-graduate courses, 51.

The Commissioner alludes to an inquiry instituted by order of the House of Representatives into the condition and management of the colleges of agriculture and the mechanic arts established under act of Congress, July 2, 1862, and gives some facts furnished by the committee concerning the sales of land and land-scrip, and the investment of the proceeds in the different States. The following States are mentioned as having received noticeably large prices for their lands: Minnesota, \$5.62 per acre; California, \$5; Michigan, \$3.25; Iowa, \$2.27; Missouri, \$1.84; Wisconsin, \$1.25. The price for which land-scrip was sold ranged from 41 cents per acre, in the case of Rhode Island, to 95 cents per acre, in the case of Virginia. The interest has been paid in Alabama, Arkansas, Georgia, Mississippi, and Virginia, while in Tennessee, by the failure of the State to pay the interest, a loss of \$10,065.25 was incurred. In North Carolina the bonds have yielded no income. In South Carolina the committee find that the management of this trust has been equally reprehensible; and that in the States of Nebraska, Nevada, and Oregon, the lands granted by the United

States have not yet been sold, and consequently no investments have yet been made. The colleges are generally free from debt.

SCHOOLS OF THEOLOGY.

The number of schools of theology, including theological departments, reporting to the Bureau in 1874 was 113, with 579 professors and 4,356 students. The number of institutions is three more than in 1873, the number of professors six more, and the attendance 518 greater.

These theological schools and departments are distributed among the denominations as follows: Roman Catholic, 18; Baptist, 16; Presbyterian, 15; Lutheran, 13; Protestant Episcopal, 12; Congregational, 8; Methodist Episcopal, 7; Reform, 3; United Presbyterian, 3; Christian, 2; Free Baptist, 2; Methodist, 2; Universalist, 2; African Methodist, Episcopal, Cumberland Presbyterian, German Reformed, Methodist Episcopal (South), Moravian, New Jerusalem, Union Evangelical, United Brethren, Unitarian, and unsectarian, 1 each—total, 113.

SCHOOLS OF LAW.

The Commissioner furnishes statistics of 38 schools of law, having 181 instructors and 2,585 students, one more school than in 1873, 23 more instructors, and 411 more students. The number of students who have received a degree in letters or science is 542. The number of graduates in 1874 was 917.

SCHOOLS OF MEDICINE.

The number of schools of medicine (including dentistry and pharmacy) appearing in the report is 99, with 1,121 instructors and 9,095 students. The year shows an increase of 5 schools, a decrease of 27 instructors, and an increase of 414 students. The schools are classed as follows: 63 "regular," with 780 instructors and 6,888 students; 4 "eclectic," with 36 instructors and 803 students; 7 "homoeopathic," with 122 instructors and 565 students; 11 "dental," with 183 instructors and 431 students; 14 "pharmaceutical," with 50 instructors and 908 students.

The Commissioner remarks that, considering how closely these schools affect the life of every individual in the country, many of the details reported will excite surprise. Of the 9,095 students reported, only 738 are shown to have received a degree in letters or science. The total number of volumes for consultation in these schools is only 66,611. In contrast with these, the library of the Surgeon-General's Office at Washington has 37,000 volumes and 36,000 pamphlets.

While the total benefactions to education in the country for the past year were, so far as ascertained, \$6,058,304, these several schools, which so directly affect human life, have received for the year only \$308,466, and a total income of \$24,219 from permanent funds, being almost entirely dependent upon their tuition fees, which amount to \$520,592.

LIBRARIES.

The number of libraries reported in 1870 was 132; in 1871, the number was 180; in 1873, 251; in 1874, 351. In the report for 1874, information is presented in regard to 340 libraries, embracing 1,091,550 volumes, 88,740 pamphlets, and 11,545 manuscripts, concerning which no detailed statistics have been previously given in the reports, and 336 libraries which furnished detailed statistics in 1872 or 1873. The number of volumes in these libraries is 4,663,166; the number of pamphlets, 764,944; the increase in books during the last fiscal year was 299,767, and in pamphlets, 88,423.

RELATION OF ART TO EDUCATION.

A list of 27 art museums and art collections of colleges, historical societies, etc., is given. Of these, 7 are in New York, 6 in Massachusetts, 2 each in Connecticut and Pennsylvania, and 1 each in Il-

lincoln, Indiana, Louisiana, Maryland, Michigan, New Hampshire, Ohio, Rhode Island, Vermont, and the District of Columbia. The 7 in New York report an income the past year of \$94,288; the 6 in Massachusetts, \$16,137; 1 in Connecticut, \$13,180; 1 in Illinois, \$2,500; 1 in New Hampshire, \$469; 1 in Ohio, \$300; 1 in Vermont, \$750; while the 1 in the District of Columbia reports the princely amount of \$70,000.

These reports of income, however, are not in all cases reports of annual fixed incomes, but of exceptional contributions or gifts.

The Corcoran Art Gallery has a productive fund of \$1,000,000; the Metropolitan Museum of New York reports an expenditure of over a quarter of a million in the purchase and care of its collections; the Yale School of the Fine Arts reports an endowment fund of \$38,000; the National Academy of Design, New York, one of \$50,000; Vassar College, one of \$50,000.

As showing the very recent awakening and rapid growth of interest in art in this country, it is observed that, with the exception of the Boston Athenæum, founded as a library in 1807; the New York Historical Society, 1804; the Penn Historical Society, 1824; and the Redwood Library, 1780, none of which were founded as art museums, the 27 institutions reported have all been established since 1842, with the very important exceptions of the two great art academies, that of Philadelphia having been founded in 1805, and the present National Academy of New York in 1826. Of the 11 collections enumerated as connected with colleges, 5 were established since 1872, and 8 since January, 1864.

A list of 26 institutions affording art instruction is given. Of these, 10 are for special training of artists. These art-schools, exclusive of the Pennsylvania Academy and the Chicago schools, report 56 instructors and 594 pupils. This portion of the report closes with facts and statistics concerning some of the schools for art-training in the United States.

SCHOOLS FOR THE DEAF AND DUMB.

Forty of these schools are reported, with 275 instructors, of whom 37 are semi-mutes, and 4,900 pupils. The whole number who have received instruction in these institutions since their organization is 14,782. The State appropriations for the support of these schools during the past year amounted to \$1,064,406, and the sum received from tuition fees was \$127,946. The value of grounds, buildings, etc., is reported as \$6,185,264.

SCHOOLS FOR THE BLIND.

Twenty-seven States report 29 schools for the blind, having 525 instructors and other employes, and 1,942 pupils. The whole number of persons who have been under instruction in these schools since their opening is 6,684. There are, in the various institutions, 187 blind employes and workmen.

REFORM SCHOOLS.

Statistics are given of 56 of these schools. The number of commitments during the year was 9,846; the whole number since the schools were established, 110,622. The number of inmates at the time of reporting was 10,848. The cost of 54 of these institutions for the year was \$1,541,799; the earnings of 49 of them, \$305,127. The number of volumes reported in the libraries of 54 schools was 35,012.

The Commissioner reviews the special educational and reformatory features of several of these schools, giving prominence to what the history of a number of them has established as a fact, that "education is reformatory."

Statistics indicate that 75 per cent. of all the youth sent to these institutions have been reclaimed and restored to society; and they also show that the greatest success is achieved in efforts for the reformation of those under 14 years of age.

ORPHAN ASYLUMS, MISCELLANEOUS CHARITIES, ETC.

The Commissioner presents in a table statistics of 269 institutions, of which 156 are classed as orphan asylums, 21 as soldiers' and sailors' orphans' homes; 9 as infant asylums, 28 as industrial schools, and 57 as miscellaneous charities. The whole number of inmates of these institutions, as reported, is 26,860, under the supervision of 1,678 teachers and officers. The income for last year, as reported, was \$2,725,616, and the expenditure, \$2,169,079. These fall short of the real amounts, as several institutions failed to report receipts and expenditures.

The peculiar features of several of these institutions are presented, those in which industrial training is afforded being especially noted. These, however, are few in number; and the Commissioner, after referring to the large number of institutions which take children from the lowest classes, give them the rudiments of an education, teach them sewing, etc., says: "The great need now seems to be that these schools, which lay so good a foundation, shall be supplemented by special training-schools, where instruction shall be given in various industries."

CRIME AND IGNORANCE.

The Commissioner's reports from year to year have contained statements concerning the relations between crime and ignorance. These reports afford special facilities for collecting the educational facts respecting forty millions of people, and contrasting them with the records of crime. If these facts are kept, reported, and generalized with sufficient accuracy and fullness, they will eventually furnish a safe basis for inference. Facts can alone settle the question whether education, used and applied in its largest sense, renders the industry of the hand and brain more productive, prevents pauperism, crime, and other ills, or affords a means of avoiding them.

Place is given to extracts from the Forty-fifth Annual Report of the Inspector of the State Penitentiary for the Eastern District of Pennsylvania, of which the Commissioner says: "It is doubted if in any State, or indeed in any country, forty-four volumes containing the annual statistical tables of a penal institution, covering nearly half a century, can, on examination, be regarded as more complete. Crime, crime-cause, social conditions, individual character, are ascertained, recorded, and treated as constitutional, chronic, or sporadic superinducements to that abnormal state in each individual convict which produced or resulted in crime-punishment. It is believed no more interesting study can be given to the scientist than the results which are collected in these reports. They touch upon the limits of two generations of people, and exhibit in some degree the effects of that social condition called civilization which has grown up and out of the means adopted for its advancement."

Allusion is also made to the labors of Dr. Elisha Harris and Mr. E. L. Dugdale, in investigating the genealogy of a family of ignorant criminals and paupers, from which it is shown that the proportion of paupers in the family under consideration to the whole number in the family was seven times as great as the proportion of paupers in the State to the total population in the State, and similarly that the proportion of criminals in the family to the whole family was ten times as great as that of criminals in the State to the population of the State. Certain cases in this family of effectual reform to reputable life occurring before the thirty-fifth year of age are also noticed as of great significance, because the facts accord with the laws of mental development, under which the will and moral force are the last faculties to mature, and are therefore longer amenable to the processes of regulation.

SCHOOLS FOR THE FEEBLE-MINDED.

Statistics are presented of nine schools for the instruction of feeble-minded youth, having 1,265 in-

mates, under the care of 312 instructors and other officers. The whole number of inmates since the opening of these institutions has been 8,408. The expenditure for seven of these schools during the year was \$256,134. Three are located in Massachusetts, and one each in Connecticut, Illinois, Kentucky, New York, Ohio, and Pennsylvania.

EDUCATIONAL BENEFACTIONS IN 1874.

The whole amount of benefactions for educational purposes, of which the Bureau has received information, is \$6,053,304, against \$11,326,977 in 1873. Of the benefactions in 1874, universities and colleges received \$1,845,354; schools of science, \$481,804; schools of theology, \$1,111,629 (the one point of increase, the amount in 1873 having been only \$619,801); schools of medicine, \$44,531; institutions for the superior instruction of women, \$241,420; preparatory schools, \$723,040; institutions for secondary instruction, \$272,281; libraries, \$75,422; institutions for the deaf and dumb, \$7,823; miscellaneous, \$1,250,500.

EGYPT,* a country of Northeastern Africa, nominally a pashalik of the Turkish Empire, but virtually an independent state since 1811. The ruler of Egypt, who has the name of Khedive, is Ismail Pasha, born at Cairo in 1830, second son of Ibrahim, the son of Mehemet Ali; succeeded to the government at the death of his uncle, Said Pasha, January 18, 1868. The eldest son of the Khedive, Mohammed Tefwick, born in 1852, is President of the Privy Council; his eldest son, Prince Abbas Bey, was born July 14, 1874. The second son of the Khedive, Prince Hussein Kamil, born in 1853, is member of the Privy Council, and Minister of War and Colonies. The third son, Hassan, also born in 1853, is lieutenant *à la suite* in the Prussian army.

By the annexation of Darfour and other territories Egypt has largely increased in both area and population. At the beginning of 1875 the area and population of the large divisions of which Egypt is now composed were as follows:

DIVISIONS.	Square Miles.	Population.
1. Egypt Proper	312,606.7	5,352,000
2. Nubia	323,792.53	1,000,000
3. Egyptian Soudan	322,992.10	10,670,000
Total	869,381.33	16,922,000

The population of that part of Soudan which belonged to the Khedive previous to the recent annexation was estimated, in 1874, by Munzinger Bey, the governor of the coasts of the Red Sea, at 5,000,000, divided as follows:

Khartoum	750,000	mostly Arabs.
Farashoda	250,000	mostly negroes.
Sennaar	500,000	Arabs and negroes.
Faogel	500,000	Arabs and negroes.
Kordofan	1,000,000	one-half Arabs and one-half negroes.
Berber	250,000	Arabs.
Dongola	250,000	Arabs and Barabara.
Taka	1,000,000	three-fourths Hadendoa, one fourth Tigré.
Suakin	250,000	Hadendoa.
Massawah	250,000	mostly Tigré; a few Dankali.
Total	5,000,000	

* For latest statistics of foreigners, of population of large cities, of exports, of commerce of Alexandria, of movement of shipping in the principal ports, see ANNUAL CYCLOPEDIA for 1874.

The new acquisitions of Egypt in Soudan embrace the land of the Bari, of which Colonel Baker took possession on May 26, 1871; of Darfour, annexed in 1874; of Shegga, with the neighboring districts, which, in 1874, was transferred by its ruler to the Khedive; the Basen or Kunama country; the Danakil coast as far as Bab-el-Mandeb, with Berbera (occupied in 1873), and other points on the coast near Berbera. The area and population of these territories, according to the latest estimates,* were as follows:

TERRITORIES.	Area.	Population.
Land of the Bari	6,378.20	120,000
Darfour	104,808.25	5,000,000
Shegga and neighboring districts.	85,042.68	400,000
Land of the Basen	6,208.11	15,000
Danakil coast, with Berbera	6,378.20	
New acquisitions	210,810.54	5,670,000
Former possessions	112,681.55	5,000,000
Total	323,492.09	10,670,000

The revenue of Egypt for the financial year commencing September 11, 1873, and ending September 10, 1874—year 1590 of the Coptic calendar—was calculated in the official budget estimates at 1,982,200 purses (1 purse = \$21), and the expenditure at 1,763,200 purses, leaving a surplus of 219,000 purses.

The public debt of Egypt is divided into two classes, the funded debt of the state and the personal debt of the Khedive. There is, besides, a floating debt. In October the funded debt was estimated at £49,000,000, the floating debt at £7,000,000; total state debt, £56,000,000. The personal debt of the Khedive was estimated at £13,000,000. The real amount of his debt is, however, not yet fully known. On August 1, 1875, an English authority estimated the floating debt at £15,900,000, or, including the floating debt of the Khedive, secured on his personal property, the "daira," at £22,000,000.

Egypt is bound to pay an annual tribute of £700,000 to Turkey. She has also to furnish a contingent of 15,000 men to the Turkish army. She cannot make treaties other than those of a commercial character, name ambassadors at foreign courts, or build iron-clads; but she raises and expends her own revenue, appoints her own officials, from ministers down to policemen, and, in fact, in all that relates to her home government she is entirely free.

In 1874, the aggregate length of railways which were in operation was 1,528 kilometres (1 kilometre = 0.62 mile). The telegraph-lines had, in 1873, a length of 6,486 kilometres, and the telegraph-wires of 13,750 kilometres.

The aggregate number of letters and newspapers received and dispatched were:

MAIL.	Letters.	Newspapers.
Egyptian	1,694,857	373,957
Austrian	373,166	
Italian	324,500	184,100
Grecian	53,723	27,373

* See Behm and Wagner, "Bevölkerung der Erde," II. p. 113.

The following table exhibits the nationality, number, and tonnage of the vessels passing through the Suez Canal in the year 1874:

NATIONALITIES.	Vessels.	Tonnage.
English.....	898	1,797,795
French.....	57	922,945
Dutch.....	58	104,423
Austro-Hungarian.....	61	84,159
Italian.....	62	84,496
Spanish.....	27	50,417
German.....	31	59,543
Turkish.....	15	18,793
Russian.....	8	11,978
Norwegian.....	8	13,489
Others.....	20	19,685
Total.....	1,274	2,422,970

The movement of shipping in the preceding years was as follows:

YEAR.	Vessels.	Tonnage.
1870.....	486	425,911
1871.....	765	761,467
1872.....	1,082	1,489,189
1873.....	1,178	2,065,078

The total expenditures for the construction of the canal and the first arrangements amounted, up to the close of the year 1873, to 471,769,980 francs. The value of the buildings and the inventory belonging to the company was estimated in 1874 at 21,795,545 francs. The income of the company was, in 1871, 13,276,000 francs; in 1872, 18,325,000; in 1873, 24,831,127; in 1874, 26,726,145. The expenditures were, in 1871, 15,918,000 francs; in 1872, 16,253,000; in 1873, 17,346,109; in 1874, 18,667,568. Surplus in 1872 (the first year which showed a surplus), 2,071,279 francs; in 1873, 7,485,077; in 1874, 8,059,577.

The dispute about the frontier line between Abyssinia and Egypt led, in 1875, to a new war between the two countries. In August, three men-of-war, with a force of troops and marines aboard, were dispatched hastily to that portion of the Egyptian coast bordering on Abyssinia, to punish a body of Abyssinians invading Egyptian territory. The Egyptian force numbered about 2,000 men, armed with the Remington rifle, and commanded by Colonel Arendrup, a Danish officer in the Egyptian service, much esteemed for his military capacity. The troops were landed at Massowah, at the entrance of the Red Sea, and ordered to march into the interior. Rakel Bey, the Governor of Massowah, and nephew of Nubar Pasha, commanded the rear-guard, Colonel Arendrup, the leader of the expedition, having charge of the main body, while Count Zichy, an Austrian officer, the nephew of the Austrian ambassador at Constantinople, who accompanied the expedition as a volunteer, led the van. They reached Gundet, ten days' march from Massowah, without difficulty, and there they received orders to march on Asawa, in the interior of Abyssinia. On the way they encountered the whole Abyssinian army, stated to consist of 30,000 men, armed, many of

them, with the Snider rifle, and led by King John in person, who was accompanied by his English General Kirkham, an English non-commissioned officer who fought under Gordon in China, and subsequently, having come to Abyssinia with the English, remained behind after the taking of Magdala. The Egyptian vanguard was first attacked. Colonel Arendrup pushed forward with two companies to their assistance, but he could not make head against the superior numbers, and fell back, followed by the enemy. The fighting was severe, and when with difficulty he reached his main body he had only five men left. Rakel Bey, in the rear, was attacked, and fell fighting bravely at the head of his men. Then Arendrup, with the remainder, formed in square, and the Egyptians held their own as long as their ammunition lasted. The enemy was well armed and the carnage was great. Finally Arendrup fell, shot dead in the breast; but, notwithstanding the loss of their leader, the Egyptian troops stood firm, and at last, when the cartridges were all expended, an Arab colonel, though already wounded, led them on against the enemy in the final bayonet charge, and was killed at the head of his men. They were almost all shot down or cut to pieces.

The Abyssinians suffered severely, and had the numbers been at all equal, Egypt must have won the day. As it was, they fought without hope from early morn to afternoon, and only a mere handful was taken prisoners. These, with unusual magnanimity, were sent to Massowah to tell the tale by way of warning. Egypt suffered almost more by the loss of officers than by the loss of troops. Rakel Bey was one of the most promising of the younger generation of Egyptian officials. He was a man of education, and possessed of great courage and determination. Colonel Arendrup was a man of great capacity. He had a thorough military training as an engineer in Denmark, and, having come to winter in Egypt for his health five years ago, he was induced to enter the Egyptian service. His military training and capacity at once secured him the confidence of the Government, who showed the trust they placed in his powers by giving him the command of the troops in this unfortunate expedition. On receiving the news of the disaster, great efforts were at once made to concentrate all available troops at the seat of war. Five thousand men left Suez, with some elephants recently imported from India. Two American generals, Loring and Reynolds, went in command.

A still greater loss for Egypt was the death of Munzinger, the Governor-General of the coasts of the Red Sea, who, on a march from Tajurra to Cuhuosa, was, in November, led by the treachery of his guides into an ambush, surprised by hostile Gallas tribes, and slain with about 140 of his men. (See MUNZINGER.) The remainder of his forces, which consisted of about

3,000 men, succeeded, after an uninterrupted struggle of five days, in returning to Tajurra.

Another Egyptian corps, which was destined to extend the Egyptian frontier in the south, occupied on the 11th of October Harrar, in the Somaui country. A circular from the Minister of Foreign Affairs, Nubar Pasha, officially informed the representatives of the foreign powers of the conquest of the country. It states that the troops which occupied the town, about 1,200 in number, left Zeyla on the 19th of September, under the command of Reuf Pasha. The Emir of the country did not await the arrival of the Egyptians, but sent his son to meet them and to announce to them his submission. In accordance with his request, he was appointed by the Egyptian Governor as president of a court of justice. Several other tribes, through whose territory the expedition had to march, also announced their submission. The Gallas twice attempted an armed resistance, but were defeated, and sent their wives to sue for peace. The town of Harrar has a population of about 80,000 persons. The population of the territory consists chiefly of Somauiis, and a mixture of Arabs and Gallas, in all about one and a half million. The population is industrious and devoted to commercial pursuits. The country is fertile, and produces, besides all the products of Egypt, myrrh, incense, and an excellent kind of coffee.

The port of Zeyla, opposite Aden, was in 1875 placed under the suzerainty of the Khedive of Egypt by the Sultan. Zeyla is situated on the Somaui coast, and is a place of some importance, being the only port on what is known as the Essak coast—from one of the two great divisions of the Somaui family, the Essak being again divided into three tribes—and has some trade with Mocha and neighboring ports. It is built on a low, sandy point, called Ras Hamar, and consists of a mosque, twelve to fifteen stone houses, and probably two hundred huts, the whole inclosed within a mud wall, which is in a most ruinous state. The population was, some years ago, something under 1,000 souls. Its chief importance lies in the fact of its being considered the port of Harrar, a city larger than Mocha, the capital of the province of that name, from which it is distant eight days' journey for camels. Large vessels cannot, however, approach within a mile of the town, as the anchorage is shallow. The old Sheik of Zeyla, Shirmaki, was well known to the officers of the Indian Navy frequenting the coast, and often proved his friendship for the British Government by keeping the peace among his savage and restless subjects, and saving shipwrecked crews. The town is now under the authority of the Scherif of Mocha, who has the power of displacing the Governor, should he think fit, but receives no part of the revenue, the Governor paying a tribute of 750 German crowns.

In November, Egyptian troops occupied the districts of Juba and Kismayo, belonging to

the dominions of the Sultan of Zanzibar. They disarmed the Zanzibar forces and hoisted the Turkish flag. When they occupied the town of Brava, Mr. Kirk, the British consul in Zanzibar, who went to seek explanations, was obstructed, in entering the town, by Egyptian troops. As the commandant refused to apologize for the insult, Mr. Kirk threatened to order up the British man-of-war *Thetis*, and bombard the town. The Egyptian commandant sent an apology to the consul an hour before the notice of bombardment expired. The *Thetis* had already taken up her position, and was cleared for action.

The solemn inauguration of the new International Court of Appeal, in Alexandria, was held on the 28th of June. The Khedive, who was surrounded by his ministers and other officers of state, delivered an address to the judges, in which he said :

With the aid of the Sultan and the support of foreign powers, I have been able to install the new tribunal. I rejoice to see around me so many eminent and honorable men to whom I can, with every confidence, intrust the administration of justice. I am convinced that all interests will find in their wisdom perfect security, and that the new tribunal will thus obtain obedience and respect. This is a day that will be marked in Egyptian history as the commencement of a new era of civilization. God aiding, I am persuaded that the prosperous future of this great work is assured.

The Khedive then received the congratulations of the representatives of foreign powers and the diplomatic body. A reception was held subsequently, which was very numerously attended by the leading members of the banking and commercial community, all of whom offered their congratulations to the Khedive. The success of the scheme for the establishment of the International Court of Egypt has been due in a great measure to the action of the British Government, whose confidence has not only reassured the British subjects abroad, but induced other nations to withdraw their objections. It has long appeared possible to obtain the willing submission of the various foreign communities to a single system of law. The interests of the residents and traders are almost wholly commercial, and no one would have any difficulty in adapting his transactions to any reasonable provisions, provided the latter were plainly laid down and consistently acted upon. In fact, custom has already made particular methods prevalent, and transactions are generally carried on in conformity to French law. The real opposition has been to the transfer of power from tribunals which seemed to represent national independence, and the country the jurisprudence of which would be dominant under the new system has been one of the last to accept the change. It is a singular comment upon the international legal condition of the world that the first great step—having a truly international and official character, and having for its object the establishment of a permanent court of inter-

national law, composed of members representing the principal civilized nations—should have been taken in Egypt.

On the 26th of November it was officially announced that the British Government had purchased, for £4,000,000, from the Khedive, 177,000 of the 400,000 shares into which the capital of the Suez Canal is divided. The news created an extraordinary excitement, and was no less a surprise to England than to Germany, France, Russia, and other countries. An official account of the negotiations preceding the purchase had not been published at the end of the year. It was reported that the Khedive had offered his shares also to the French Government, which, according to a statement made by M. Décazes, French Minister of Foreign Affairs, refused to purchase them, from fear that such an act might lead to fresh complications with Germany. The French ambassador in London, the Duke d'Harcourt, in a dispatch to the Duke Décazes, French Minister of Foreign Affairs, stated that Lord Derby told him England had bought the Khedive's shares solely to prevent a preponderance of foreign influence in the Suez Canal, and would neither propose nor oppose an arrangement to place the canal under the management of an international syndicate.

The purchase of the shares by the English Government is subject to parliamentary approval, but the announcement was received in England with so universal favor that the consent of Parliament was looked upon as certain. The comments of the French, German, and Russian papers expressed fear that the possession of this important canal would give to England the virtual suzerainty of Egypt. Much regret was expressed by the English at the very limited representation England is entitled to under the statutes of the company.

Besides selling the shares of the Suez Canal to the English Government, the Khedive also applied officially to England to send him two gentlemen competent to undertake the full charge of Egyptian finances. The fullest power and every information were promised to the new officials. The English Government complied with the request, and intrusted the mission to Mr. Cave. The commissioner, accompanied by Colonel Stokes, one financial and two political secretaries, and a number of clerks, arrived at Alexandria in the latter part of December, and was received with great marks of honor. The Governor of Alexandria waited upon him immediately on arrival, and the Minister of Finance came down from Cairo with a special train, which he placed at his disposal, and by which he proceeded at once to the capital.

The Sultan of Darfour, who is now a captive of the Viceroy of Egypt, arrived in Cairo on June 17th, after a journey of four months by way of Khartoum, Suakin, and Suez. He is tall of stature, very intelligent in appearance, and of dignified demeanor. He wore wide

trousers drawn together at the ankles, red slippers, and a long scarlet coat of silk, handsomely embroidered in gold. Over his shoulder hung a long white scarf, also richly embroidered. He was received at the railway-station by the prefect of the town, who escorted him and the three princes who accompanied him to a carriage, where a photographer was in waiting to take his portrait. The Sultan had brought his wives with him. They wore their hair in short woolly locks, and their ornaments consisted of glass beads, large silver rings, and corals fastened to the right nostril. They were all besmeared with coconut-oil, the odor of which filled the station. After some debate between the officers and the railway officials it was ascertained that the women refused to leave their carriages until all the men had left. Every man in the station was then sent away, and the women, accompanied by their eunuchs and children, entered the closed carriages which were to take them to the Sultan's palace at Darbel-Achmar. This building has been painted in very bright colors to suit the taste of the Darfourians.

The United States consul at Cairo has written to the State Department at Washington, reporting the preparations which are being made in Egypt for a representation at the Centennial Exhibition in Philadelphia. He states that a commission has been appointed to attend to the matter in Egypt, for which \$5,000 has been appropriated; also one to attend in Philadelphia, for which \$60,000 has been appropriated, and if this sum is insufficient more will be added. One of the commissioners is now in Vienna, taking casts of all the specimens of art which were left in that place after the close of the exhibition there, and they will be forwarded to Philadelphia. All the arts, products, and industries of Egypt will be represented, as well as many things pertaining to her ancient history. The Egyptian Government regrets that it cannot erect separate buildings at Philadelphia as it did at Vienna, but has abandoned that purpose chiefly for lack of a competent person to send there to superintend their construction.

ELLIOT, Sir CHARLES, an English admiral, born in 1801; died September 9, 1875. He entered the Royal Navy in 1816, took a part in the battle of Algiers, and served afterward in India, on the coast of Africa, and in the West Indies. In 1835 he was appointed Chief Superintendent of Trade and British minister in China, and as such was present at all the operations in that country during the following years. He was *chargé d'affaires* in Texas from 1842 to 1845, Governor of Bermuda from 1847 to 1852, of Trinidad from 1853 to 1856, of St. Helena from 1863 to 1869, when he retired from the service. He was created a K. C. B. in 1856.

EUROPE. The relations between the great powers of Europe continued in 1875 to be of a friendly character, and no international war

disturbed the general peace. The official papers of Berlin, Vienna, and St. Petersburg, represented the three Emperors as being in full accord on all questions of an international character, and as fully determined to maintain the continuance of peace in Europe. The interviews of the Emperor of Austria with the King of Italy and the Emperor of Russia, and of the latter with the Emperor of Germany, strengthened the belief in a peaceful future.

The most important war-cloud on the political horizon of Europe was the insurrection of the Christians in the Turkish province of Bosnia. It seemed to reopen the intricate Eastern question, and to be another step toward the overthrow of Turkish rule in Europe. Embarrassed by financial difficulties, the Government in Constantinople was at first disposed to regard the insurrection as a local disturbance without any importance, and not needing any serious military effort for its suppression. Thus the insurgents gained time to organize and to develop a strength which not only successfully resisted the Turkish army, but compelled the great powers to step in and to prevent by diplomatic interference more general and serious complications. The sympathy of the Governments and the entire population of Servia and Montenegro was so outspoken that it needed the threats of Austria, Russia, and Germany, to prevent them from openly supporting the cause of the insurgents and declaring war against Turkey. As the Turks were unable to put down the rebellion, unsupported as it was by any foreign power, it cannot be doubted what would have been the issue if Servia and Montenegro had been permitted to carry out their intentions. The three Emperors do not believe the time to have yet come when the dissolution of the Turkish Empire can be allowed to take place, and a proposition emanating from Austria met their approval, according to which some kind of provincial self-government, under the direction of a Christian governor, was to be conceded to Bosnia. The Christian insurgents are far from being satisfied with this progress, and indulge the hope that in the spring of 1876 disturbances will break out in the other provinces of European Turkey, and that the Governments of Servia and Montenegro will be compelled by public opinion to join them. Their hope is greatly encouraged by the financial troubles of the Turkish Government, which alone are great enough to drag a country to the brink of ruin. (*See TURKEY.*)

While the three Imperial Governments of Europe appeared to be desirous to postpone the overthrow of Turkish rule in Europe, the English Government surprised the world by purchasing from the Khedive of Egypt his shares of the Suez Canal Company. This movement, which was entirely unexpected, was generally construed as a determination to secure a controlling influence upon Egypt, and to retain a firm hold of the shortest route to In-

dia. In order to strengthen the influence of England in its Indian possessions, the Prince of Wales was prevailed upon to undertake a voyage to India. The English Government claimed to be entirely satisfied with the reception which the native population gave to the first representative of the royal house of England who has crossed the ocean to visit them. The complications which England had with the Governments of China and Burmah were likewise solved to the satisfaction of the English Government. These successes in foreign questions to some extent calmed the dissatisfaction with the home policy of the ministry, which appears to be on the increase, and which might have proved a serious danger, if the division of the opposition into Liberals and Radicals had not for the present made the overthrow of the Tory cabinet impossible. (*See EGYPT, BURMAH, CHINA, and GREAT BRITAIN.*)

In France the Monarchists have found it impossible, in consequence of their division into three irreconcilable parties, to restore any form of monarchy; and the outspoken Republicans, strengthened by a moderate wing of former liberal Monarchists, have succeeded in finally securing the adoption of a definite republican constitution. Though this constitution contains a clause regulating a revision and leaving the way open for a restoration of monarchy whenever the Senate and the Legislative Assembly agree upon it, the republican form of government has undoubtedly gained many friends, and was at the close of 1875 considerably stronger than at any previous time since the overthrow of the Napoleonic rule. An important event in the current history of France is the remarkable increase of the influence of the Catholic Church upon society, which is particularly noticeable in the department of instruction. (*See FRANCE.*)

In Germany, on the other hand, the Catholic Church has been unable to obtain the least concessions from the Imperial Government, and finds it difficult to maintain her ground. Several bishops of Prussia were again, as in 1874, sentenced to imprisonment for refusing to comply with the laws of the state, and two of them left the country. A number of priests have submitted to the Prussian church laws, notwithstanding their condemnation by the Pope and the bishops. The Catholic party in the German Reichstag has, however, not lost any of its strength, and in Bavaria it even succeeded, at the general election, in securing a majority in the new Second Chamber. The King, however, emphatically refused to dismiss his Liberal ministry, and the Liberals find a consolation for their defeat in the fact that the Ultramontane majority in the Chamber is only two, and that the representatives of all the large towns are Liberals. (*See GERMANY.*)

The Government of Austria is still conducted by a ministry taken from the ranks of the Liberal party, but it is anxiously intent upon avoiding any open conflict with the Church. The

influence of Austria in general questions of European politics has considerably increased in consequence of the skillful moves of the Austrian Chancellor, Count Andrassy, and, in the serious complications arising in Turkey, Austria even succeeded in taking the lead. In Hungary the leaders of the former opposition, who refused to recognize the present dualistic basis of the empire, are now at the head of the Government, and have given their entire adhesion to the permanence of the intimate relations between cis-Leithan Austria and Hungary. (*See ARABO-HUNGARIAN MONARCHY.*)

In Switzerland the general elections have left the ascendancy of the Liberal party in the Federal Council unchanged. The same policy as before will, therefore, be pursued in Church questions, and the legislation on this subject will continue to be fully as unfavorable to the demands of the Catholic Church. In the Catholic districts the Catholic party appears, however, not only to hold its own, but to make steady progress, and the most liberal of all the Catholic cantons, Ticino, was by the cantonal election, in 1875, lost to the Liberal party.

In Belgium the Government and the majority of both Chambers still belong to the Catholic party, and their ascendancy remained unchanged. The encouragement given by Belgian bishops to the Catholic party of Germany, the violent attacks made by the Catholic press of Belgium upon the German Government, and the outspoken design of a Belgian mechanic to assassinate Prince Bismarck, led to sharp diplomatic remonstrances on the part of Germany. The threatening complication was, however, peaceably adjusted.

The relations of Italy to Germany and Austria appeared to assume a still more friendly character than before in consequence of the visits paid by the Emperors of Austria and Germany to the King of Italy. The relations between Church and state cannot be expected to become of a friendly character as long as the Government is determined to maintain and strengthen the national unity, and to reject all demands for a restoration of the temporal power of the Popes. The Government is, how-

ever, anxiously intent upon avoiding harsh measures, like those adopted by the Governments of Germany and Switzerland, and it is only the party of the Left which unreservedly approves the Church policy of the German Government. (*See ITALY.*)

The restoration of the Bourbons in Spain has not produced any change in the disorganized condition of the country. The Carlist war continued throughout the year, and at its close the country was no nearer the restoration of peace than it had been at any time during the short existence of the republic. The young King deemed it safest to postpone the election of the new Cortes, and the year closed without any sanction of the *coup d'état* to which the King owes his throne by the representatives of the people. (*See SPAIN.*)

The war of the Netherlands against Acheen was not yet brought to a close, and, although it can hardly be doubted that the ultimate result of the war will be the annexation of the whole island of Sumatra to the Dutch dominions, the sacrifices required for this purpose prove to be much greater than was expected. Difficulties with the republic of Venezuela led to a rupture of diplomatic negotiations between the two states. (*See NETHERLANDS.*)

The Scandinavian states, Sweden, Norway, and Denmark, are in a very flourishing financial condition. Sweden and Denmark no longer agree in the policy pursued with regard to Germany. The King of Sweden exhibits an earnest desire to enter into the closest and most friendly relations to Germany, and has thereby given great offense to the Danes. (*See SWEDEN AND DENMARK.*)

The Government of Roumania is making great progress in developing the resources of the country. By concluding a commercial treaty with Austria, in spite of the protests of Turkey, Roumania for the first time exercised the rights of an independent state. (*See ROUMANIA.*)

The area and population of the geographical and political divisions of Europe were, according to the latest dates, as follows (*see "Bevölkerung der Erde,"* iii., 1875):

EUROPE.

The following table (from Behm and Wagner, "Bevölkerung der Erde," ii.) gives a very full exhibit of the various density of population in the several countries of Europe. It will be seen that the densest population is found in Belgium, where 64 per cent. of the total area has more than 400 persons to the square mile,

and the aggregate population of this part of the area is 86 per cent. of the total population. The remainder of the area (86 per cent.) has an average population of from 100 to 400 persons to the square mile. The last country of the table (Iceland) has nowhere more than two persons to the square mile:

EUROPE.

EVANGELICAL ALLIANCE. A special meeting of the council of the *British Branch* of the Evangelical Alliance was held in London, February 22d, when the report of a deputation

who had been appointed to visit Constantinople for the purpose of presenting a memorial on the subject of persecutions which had been suffered by Christian converts at Latakia and Marash, in

Turkey, was read. The petitions related particularly to the cases of two Christians who had been expelled from their home at Marash and were not permitted to return, and to those of certain Ansairiyeh, or Christians of Ansairiyeh—Christians who had been seized and punished as deserters from the army for not having presented themselves for enrollment, while it was claimed in their behalf that they were not liable to conscription. The deputation sailed from Marseilles on the 16th of January, having letters of introduction from official personages in England to the representatives of different courts at Constantinople. They arrived at Smyrna, January 21st, and had an interview with the two Christians who had been expelled from Marash, obtaining from them their statement of their own case. They reached Constantinople January 23d, and through the British minister sought a direct audience with the Sultan. They had been promised such an interview, but the minister who had given them the promise was now out of office. On the same day, they received a deputation and an address of welcome from the Protestant community of Constantinople. Monseigneur Étienne Azarian, head of the Armenian Roman Catholic Church, also called upon them with complaints of persecutions and annoyances suffered at the hands of the Turkish authorities at Erzeroum and Angora. They received assurances of sympathy and approval of the object of their visit from the American, French, German, Austrian, and other embassies.

The deputation had an interview on the 26th of January, at the Sublime Porte, with Safvet Pasha, Turkish Minister of Foreign Affairs. Relating the object of their mission, they represented that very serious feelings of indignation had been aroused in England and other countries by what had recently taken place in the Turkish Empire, and suggested that it was desirable, in the interest of Turkey, that the deputation or some members of it should have the opportunity of presenting to his Imperial Majesty in person the document, which, they stated, bore the signatures of eminent personages well known in connection with the affairs of Turkey.

The minister replied that for his Majesty to receive a foreign deputation was without precedent, and might be followed by consequences which the committee themselves would be the first to reject; that religious liberty was guaranteed throughout Turkey, and that the Turkish army must be maintained, and no exemption on religious grounds could be admitted. With all respect to the deputation, only two cases had been mentioned in the memorial, and these were not sufficient, in the judgment of the Turkish Government, to cause them to depart from established usage, as they were small matters about which to trouble his Majesty.

On the 28th of January, the Grand-Vizier gave his decision, to the effect that his Majes-

ty the Sultan, being Caliph, or religious head of the Mohammedan religion, could not receive a foreign deputation coming to him on religious grounds without seriously offending his Mussulman population; and that, as regards the cases of alleged persecution, the Turkish Government would now give orders that Mustapha and his family (the Christians expelled from Marash) should be allowed to leave Smyrna for any other place they pleased, but not to return to Marash for the present. With regard to the Ansairiyeh conscripts, no alteration in their condition could be promised.

The deputation then addressed a remonstrance to the British minister, and subsequently one of the same effect to the Grand-Vizier, expressing their disappointment at the refusal of the latter officer to solicit for them an audience with his Majesty, especially after an assurance had been officially communicated to the Earl of Derby by the predecessor of his Highness that such an audience should be arranged for them, and protesting against the refusal as disrespectful to the distinguished noblemen and gentlemen who had signed the address which they brought with them. They said, furthermore, that they could not hold themselves responsible for the unfavorable impression that would be produced in England and elsewhere by the failure of their mission.

On the 2d of February the British minister informed the deputation that the Porte declined to modify its resolution, as already communicated to them, saying further:

The Sultan having been duly informed of your arrival, and of the object of your mission, left it to his ministers to follow the course which they might think proper, and they do not consider it expedient to recommend to his Majesty so great an innovation upon established usage as to consent that an address to his Majesty, in reference to matters belonging to the internal administration of his empire, should be personally delivered to him at an audience granted to a foreign deputation. The Porte, in declining to accede to your request for an audience, are anxious to disclaim all intention of showing the slightest discourtesy to yourselves, or disrespect to those who signed the address, but they have felt it incumbent upon them to avoid establishing a precedent likely to be productive of much inconvenience. Although you have been denied the privilege of personally presenting the address to the Sultan, you may at least have the satisfaction of feeling that the principal object of your mission will have been attained. The evidence that has been afforded of the indignation with which everything approaching to religious persecution is regarded by the best friends of Turkey, cannot fail to have a beneficial effect upon the Ottoman authorities throughout the empire, and the Government will be desirous of preventing them from giving cause for further remonstrance.

The committee remarked, at the conclusion of the report:

We desire to remind our Christian brethren of the pledge given by Sultan Abdul Medjid, that "no subject of the empire shall be hindered in the exercise of the religion that he professes, nor shall he be in any way molested on that account;" and that upon this pledge Turkey was regarded as having adopted the sentiments of the most civilized nations, and has largely profited by her alliance with

Christian powers of Europe. This pledge, as we were informed, had been repeated on several occasions by the reigning Sultan, and to this day the Turkish Government declares its policy to be one of perfect religious liberty. Judging from the reception our respectful representations met with, and from the information obtained during our stay in Constantinople, we are constrained to record the deliberate conviction that this policy is not carried out—that the treatment of Christian converts on the part of local authorities is often insulting, and, at times, in the highest degree cruel, and that there is a failure on the part of the officers of the Porte to rebuke their subordinates when convicted of intolerance and an abuse of the powers intrusted to them.

The report of the deputation was formally communicated to the council at its regular meeting held on the 8d of March. At the same time a letter was read from the Rev. Dr. Beattie, of Latakia, sustaining the positions taken by the deputation as to the unlawfulness of the seizure of the Ansairiyeh Christians. The council decided to call a meeting of the persons who had signed the memorial intrusted to the deputation, for the purpose of seeking their counsel as to what further action should be taken on the matter. This meeting was held March 18th. Resolutions were adopted opposing the course of the deputation in leaving the address in the hands of Sir Henry Elliot, British minister at Constantinople; directing that the Earl of Derby be communicated with and requested to instruct Sir Henry to present the address to the Sultan, and support the prayer of the memorial; recommending that a public meeting be held to call general attention to the subject; and requesting the council of the Alliance "to continue their efforts for the release of their persecuted brethren in Syria, and for the maintenance of religious liberty throughout the Turkish Empire."

The deputation appointed for that purpose called on Earl Derby, April 6th, to represent that the deputation of the Evangelical Alliance had been refused an audience with the Sultan, and to request him to instruct the British ambassador at Constantinople to present a memorial to the Sultan against the persecution of Christians in the Turkish dominions. Earl Derby replied that he apprehended that he had no right to insist upon the Sultan's receiving a deputation. The Sultan never received deputations of his own subjects, but lived a very secluded life, seldom transacting business with any but his own ministers. Lord Derby said the deputation could not doubt his own sympathy with their object. Freedom of thought, of speech, and of action, so far as that was compatible with the requirements of civilized society, was the very basis of English society, and Englishmen were naturally anxious that those principles should be extended as far as their influence could be felt. At the same time, it must be recognized that in a vast empire, not having an effective system of police, not having a strong central authority, an empire in which religious and national sentiments

were blended, as it were, in one, and in which very strong, even fanatical, feelings prevailed among the mass of the population, there were very grave difficulties to be encountered, which it was not fair to the Porte and its advisers that the British Government should not bear in mind.

The seventh annual meeting of the *Evangelical Alliance for the United States* was held in New York City, January 25th. One branch Alliance had been formed during the year, that of Wisconsin, organized at Appleton, December 21, 1874. The coöperation of the Alliance had been asked by the British branch in the case of the religious persecution of the converts to the Christian faith in the Turkish Empire. A special committee had been appointed, with power to act in the premises. The committee found, after accurate examination of the subject, that the attitude of the American branch would necessarily differ in some points from that of the British and Continental branches, as the Government of the United States was not a party in the treaties concluded after the Crimean War, for the protection of Christian subjects of the Sultan. They had therefore drawn up a memorial of their own, which was presented to the Turkish minister at Washington by the Hon. Peter Parker and Dr. Joseph Henry, and secured from him the promise of an impartial examination into the nature of the case, and a careful consideration of the argument presented. This paper gave a temperate exposition of the doctrine of the liberty of the conscience as held by American Protestants, with an endeavor to show it to be in harmony with the fundamental principles of the Mohammedan religion. In it the attention of his Excellency was especially called to the fact that—

The interpretation put upon the treaty of 1856 by the British ambassador, specially prominent in its negotiation, is the interpretation which Christian men and nations must recognize in its provisions. Its wording must, of course, have been framed in harmony with the traditional policy of the Mohammedan empires, and also in keeping with the precedents of the Turkish dominion. To suppose the contrary is inconsistent with the dignity and self-respect of the Government of the Sublime Porte. Yet more, it is in accordance with natural right, which is the foundation of all law and government.

The committee added:

The stipulations of the Hatti Scherif of 1856 are in fact the restoration of the ancient and traditional Mohammedan policy as interpreted from the first by its wisest and best doctors. If the English Government insist upon this interpretation of the treaty, because of their military alliance with the Turkish power, the American people ask its recognition on grounds of natural right belonging to all men, and of international comity now controlling the counsels of all states.

Subscriptions had been instituted under the direction of the American branch of the Alliance to secure a fund for the relief of the families of the Rev. Messrs. C. Pronier, A. Canasco, and Emile Cook, foreign delegates to the

General Conference of 1874, who died during their return home or shortly afterward by or in consequence of a disaster to the steamship *Ville du Havre*, on which they were passengers. The funds obtained had been invested in New York City bonds, and amounted, including premiums, at the time of making the report, to the following sums: Cook fund, \$3,421.71; Premier fund, \$5,956.18; Canasco fund, \$5,914.18. The Alliance expressed its preference for Edinburgh as the place for holding the next General Conference.

The *Annual Conference of the British Branch* of the Evangelical Alliance was held at Belfast, beginning October 19th. The proceedings began with a meeting for prayer, over which Sir Thomas McClure, Bart., V. L., presided. A *conversazione* was held in the evening. Lord Waveney presided, and delivered an address in which he dwelt upon the craving for closer union among Evangelical Christians, and showed how the Alliance satisfied this yearning, while yet fully recognizing individual liberty in thought and action. The Rev. Dr. Henry, of Queen's College, delivered an address of welcome to the foreign delegates and visitors. Replies were made by Lord Alfred Churchill on behalf of the council of the Alliance, the Right Hon. Martin William Brooke for the Irish branch, Mr. Findlay Anderson for the Scottish branch, the Rev. Mr. Hitchcock, of Paris, for the American branch, Pastor Auguste Fisch for France, Pastor G. Rochedieu for Belgium, Pastor van Audel for Holland, Mr. C. Faithful for Spain, the Rev. J. O. Asten for Germany, and the Rev. Teofilo Gey for Italy. The two succeeding days, Wednesday and Thursday, October 20th and 21st, were occupied with business conferences. The annual address was delivered by the Rev. J. W. McKay. The annual report of the Alliance spoke of the rapid growth of the body and the formation of new branches; of some results of the General Conference held in the city of New York in 1873; of the organization and meeting of the Dominion branch at Montreal in 1874; of the visits of deputations of the Alliance to the embassadores from Japan, the Shah of Persia, and the Emperor of Russia, who had visited England; of the successful results of the efforts which had been made in behalf of a better observance of the Sabbath in Switzerland; of efforts which had been made in behalf of religious liberty or toleration in Russia, Turkey, and Persia; of movements to promote a more free exchange of pulpits between ministers of different denominations; and of other movements in which the Executive Committee had taken a more or less active part. The most important paper presented by the meeting was one which had been prepared by the Dean of Canterbury on the subject, "The Communion and Coöperation of Christians in all Lands an Increasing Obligation on the Universal Church." The dean was prevented by illness from being present, and the

paper was read for him by the secretary of the Alliance.

Other papers were read upon "The Life of the Church and how to quicken it" (Rev. J. P. Ohown); "The Revealed Will of Christ that his People should be manifestly One, for a Testimony to Doctrine, as well as for United Action in evangelizing the World" (Rev. Donald Fraser, D. D.); "The Headship of Christ in his Church the True Bond of Union among its Members" (Rev. Canon Battersby); "The Signs of the Times as regards the Position and Progress of Evangelical Religion throughout the World" (Rev. Alexander McOauley); "Religious Liberty and the Means of guarding it" (Rev. William Wright, from Damascus); and "Infidel and Superstitious Tendencies of the Present Age, and how best to meet Them."

The Right Hon. Master Brooke gave an account of the Old Catholic movement, and of the congress held at Bonn in the preceding August, which he had attended. The Rev. Dr. Aveling, of London, the Rev. Auguste Fisch, of Paris, the Rev. J. Duncan, laboring for the Spanish Evangelization Society in Spain, the Rev. G. Rochedieu, of Belgium, and the Rev. Teofilo Gey, of Rome, spoke of the state of religion, particularly of Evangelical Protestantism in the countries which they represented. Mr. Gey presented a request in the name of the four thousand Protestants in Rome, to have the next General Conference of the Alliance held in that city. It was referred to the consideration of the council. Mr. Wright, of Damascus, made a strong representation of the persecutions which had been inflicted upon subjects of the Turkish Empire in Syria, who had renounced Mohammedanism and become Christians.

The first *Biennial Conference of the American Branch* of the Evangelical Alliance met at Pittsburg, Pa., October 26th, and continued in session four days; Mr. William E. Dodge, President, was unable to be present, and Mr. Felix R. Brunot, presided in his stead. The meetings began on the evening of October 26th, with religious services, addresses of welcome by the presiding officer and gentlemen representing the city in which the conference was held, and replies by members of the Alliance. The regular discussions began Wednesday, October 27th, when papers were read as follows: 1. "Reunion of Christendom," the Rev. W. I. Budington, D. D., of Brooklyn, N. Y., the Rev. H. D. Gansse, D. D., New York; 2. "Increased Efficiency of Sunday-Schools," Rev. J. H. Vincent, D. D., Plainfield, N. J.; 3. "Bible Revision," the Rev. E. V. Gerhart, D. D., of Lancaster, Pa., the Rev. Philip Schaff, D. D., of New York; 4. "The Best Way of reaching the Masses," the Rev. G. W. Heacock, D. D., of Buffalo, N. Y.

The topics and papers for the third day, Thursday, October 28th, were: 1. "Art in Relation to Worship," the Rev. E. A. Washburn, D. D., of New York; 2. "Ultramontaniam and

Civil Power," the Rev. G. W. Sampson, D. D., of New York, the Rev. W. I. Budington D. D., of Brooklyn, N. Y.; 3. "The Suppression of Intemperance," the Rev. James M. Buckley, of Stamford, Conn., the Rev. W. M. Taylor, D. D., of New York.

On the fourth day, Friday, October 29th, papers were read on—1. "The Sabbath Question," the Rev. M. Valentine, D. D., of Gettysburg, Pa., the Rev. S. M. Hopkins, D. D., of the Auburn Theological Seminary, N. Y.; 2. "Religion in Common Schools," the Rev. John Cotton Smith, D. D., of New York, the Rev. E. S. Porter, D. D., of Brooklyn, N. Y.; 3. "The American Sabbath-School of To-day and the Future," the Rev. W. J. R. Taylor, D. D. It was resolved that the Biennial Conference be continued. The formation of branch Alliances in every community was recommended. Detroit, Michigan, was selected as the place for the meeting of the next Conference (1877).

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of this denomination as they were reported in September, 1875:

CONFERENCES.	Itinerant Preacher.	Local Preacher.	Member.	Churches.
East Pennsylvania.....	102	78	14,730	195
Central Pennsylvania.....	80	65	11,008	157
New York.....	87	13	4,056	61
Pittsburg.....	57	40	7,784	112½
Kansas.....	27	10	1,876	16
Canada.....	33	11	8,946	66
Michigan.....	35	28	4,268	58
Illinois.....	88	70	8,831	107½
Iowa.....	69	40	5,700	68
Wisconsin.....	56	86	9,123	110
Ohio.....	63	65	7,975	139
Minnesota.....	36	7	8,076	38
Indiana.....	56	52	6,631	112
Germany.....	36	9	6,093	15
California and Oregon.....	4	..	175	3
Total.....	779	519	95,247	124½

Number of Sunday-schools, 1,535½; of officers and teachers in the same, 17,166; of Sunday-school scholars, 92,086; probable value of churches, \$3,034,891; number of parsonages, 353; probable value of the same, \$418,935; amount of conference contributions, \$4,698.80; of contributions for missions, \$65,165.40; of contributions for the Sunday-school and Tract Union, \$2,108.80; number of children baptized, 7,057; of adults baptized, 1,484. The tables show an increase of 4,998 members from 1874.

The sixteenth session of the General Conference of the Evangelical Association was held in Philadelphia, beginning October 14th. The bishops presided in rotation. An "Episcopal Address" was presented by the bishops, giving a review of the progress of the interests of the Church since the General Conference held five years before. It stated that the statistics of the past four years showed the following increase: in ministers, 164; in mem-

bership, 17,850; in churches, 266; in Sunday-schools, 366; in catechumens, 1,000; and proportionately for other items. The ratio of increase, about 22 per cent., was smaller than that for the preceding five years (1867 to 1871, more than 29 per cent.). The Missionary Society had extinguished the debt of former years, and had materially extended its undertakings. The missions on the Pacific coast showed increased strength, and the missions in Europe enjoyed continued prosperity. The number of members had increased 100 per cent., and twice as much territory was occupied as at the preceding General Conference. The publishing interests of the Church, the Sunday-schools, and the Charitable Society, were mentioned as being in a favorable condition.

The Committee on Missions reported upon the missionary money received during the past four years as follows:

For home and German missions.....	\$235,154 51
Heathen mission.....	5,469 96
Requests to the standing fund.....	26,822 13
Total.....	\$267,507 01
Expended for home and German missions.....	\$254,232 19
Total standing missionary fund.....	\$40,167 55

The Conference unanimously decided that a heathen mission be established in Japan.

The report of the Charitable Society showed that it had received bequests since its organization in 1836 to the amount of \$23,225.87, and had distributed of interest in the same period, to superannuated ministers and widows of deceased preachers, \$20,693.92. It had now assets valued at \$23,445.80.

The orphan asylum contained 215 inmates. It had a farm of 170 acres, which yielded yearly \$3,000' worth of products. The property was worth \$100,000. The Committee on the Orphan Institute were instructed to consider the propriety and practicability of founding a home for the aged and infirm members of the church. Two German Conferences were established: one to be composed of the German appointments in the East Pennsylvania and Central Pennsylvania Conference, and to be called the Atlantic Conference; the other to be composed of the German appointments in the Pittsburg, Ohio, and New York Conferences, and to be called the Erie Conference.

The constitution of the Board of Publication was arranged by a provision, that the territory of the Church be divided into six districts, from each of which should be elected one member, the six district members, with one of the bishops, to constitute the board. Four bishops were elected for the next quadrennial term, viz., J. J. Esher and R. Yeakel (re-elected), R. Dubs, and T. Bowman. The subject of changing the name of the church had been considerably discussed before the meeting of the Conference, and was considered in its deliberations. No name was found on which a majority could agree, and the subject was indefinitely postponed.

The thirty-ninth annual meeting of the Missionary Society of the Evangelical Association was held in Philadelphia immediately after the close of the session of the General Conference. The reports showed that the total receipts for the year had been \$77,000.39, and the total expenditures had been \$76,983.05. The total amount of the heathen mission fund was \$25,650.17, and the amount of the standing fund was \$49,167.85. The treasury was indebted \$8,175.99. The society had received during the year bequests to the amount of \$8,335.50. The number of home and foreign missions under the supervision of the denomination was 389, of which 277 were supplied at the sessions of the Conferences within whose bounds they were situated. The number of missionaries in active service was 301. Between twenty and thirty churches had been built on the home and foreign mission fields during the year, and the majority of them had been dedicated free of debt. The prospects of the Church in California and Oregon were more promising, and considerable progress had been made during the year. Two laborers had been added to the force in Oregon. The transatlantic work (in Germany) had been developed to an extent and degree of importance not thought of when it was begun. The number of members had been doubled in four years, and 1,267 new members had been received during the year just past. Measures had been adopted for the location of a mission in Japan.

EWALD, GEORG HEINRICH AUGUST VON, one of the greatest modern Orientalists, born November 16, 1803, in Göttingen; died May 4, 1875. He studied at the university of his native place, where he became extraordinary professor in 1827, ordinary Professor of Philology in 1831, and Professor of Oriental Languages in 1835. Travels in search of Oriental manuscripts led him, in 1826, 1829, and 1836, to Berlin, Paris, and Italy. In 1837 he, together with six of his colleagues at the university, protested against the abolishment of the constitutional law of Hanover, in consequence of which he, as well as his colleagues, was dismissed from his professorship. This gave him leisure to visit England to investigate the public libraries, and in 1838 he received a call to Tübingen, as Professor of Theology, where he was ennobled by the King of Württemberg in 1841. In 1848 he returned to Göttingen, where he published a book entitled "Ueber meinen Weggang von der Universität Tübingen, mit anderen Zeitbetrachtungen." Ewald reappeared prominently in public life in 1866 as a defender of the rights of Hanover. He refused to take the oath of allegiance to the King of Prussia as a member of the university faculty, and in consequence was again removed from his professorship. He was elected in 1869 to the North-German, and in 1871 and again in 1874 to the German Reichstag. His principal work is "Geschichte des Volkes Israel" (7 vols., third edition, Göttingen, 1860-

'67). Among his theological works are, "Die poetischen Bücher des alten Bundes" (4 vols., Stuttgart, 1835-'37); "Die Propheten des alten Bundes" (2 vols., Stuttgart, 1840); "Die drei ersten Evangelien" (Göttingen, 1850), and "Die Sendschreiben des Apostels Paulus" (Göttingen, 1857). Among his philological works the best known is "Kritische Grammatik der hebräischen Sprache" (1827), an abridgment of which was published in Leipsic in 1835, under the title of "Ausführliches Lehrbuch der hebräischen Sprache," and a still more condensed epitome in 1842, entitled "Hebräische Sprachlehre für Anfänger" (fourth edition, 1874). He also wrote "Grammatica Critica Linguae Arabicæ" (2 vols., Leipsic, 1831-'33); "De Metris Carminum Arabicorum" (Leipsic, 1825), and "Die Lehre der Bibel von Gott" (Leipsic, 3 vols., 1872-'74). From 1849 to 1862 he published an annual devoted exclusively to Biblical science, entitled "Jahrbücher der biblischen Wissenschaft."

EXHIBITION, CENTENNIAL. The project for holding an International Exhibition in celebration of the one hundredth anniversary of American Independence, in the city of Philadelphia, in 1876, originated with an association of citizens of that place, in 1870. An act of Congress was obtained in 1871 creating a Centennial Commission, consisting of one delegate and one alternate from each State and Territory, to prepare and superintend the execution of a plan for holding the exhibition. The commissioners were to be appointed by the President on the nomination of the Governors of the States and Territories, and were required to fix upon a suitable site and report to Congress, at the first session after its appointment, the time and place of the exhibition, and the general features of the plan adopted. The President was required, whenever officially informed by the Governor of Pennsylvania that provision had been made for the erection of buildings and for giving the commissioners full control of the exhibition, to set forth by proclamation the time, place, and objects of the same, and to communicate the facts to the diplomatic representatives of all nations. In 1872 an act was passed incorporating the Centennial Board of Finance, and giving it the necessary powers to raise funds and direct the financial interests of the enterprise. The capital stock of the corporation was fixed at \$10,000,000, in shares of \$50 each. The proclamation of the President making formal announcement of the exhibition was dated July 3, 1873, and two days later the Secretary of State made the required communication to foreign representatives. On June 5, 1874, Congress passed an act requesting the President to extend "a respectful and cordial invitation to the Governments of other nations to be represented and to take part in the International Exposition to be held at Philadelphia under the auspices of the Government of the United States." Provision was also made for

admitting to the ports of the country free of duty all articles intended for the exhibition, unless such article should also be intended for sale in this country.

The Centennial Commission, consisting of one delegate and one alternate from each State and Territory, was duly appointed, and organized in the city of Philadelphia by the election of General Joseph R. Hawley, of Connecticut, for president; Orestes Cleveland, John D. Oreigh, Robert Lowry, Thomas H. Coldwell, John McNeil, and William Gurney, for vice-presidents; Alfred T. Goshorn, director-general; John L. Campbell, secretary; and John L. Shoemaker, counselor and solicitor. An executive committee of thirteen was appointed, with Myer Asch as its secretary, and several bureaus of administration were constituted under the following chiefs: foreign, A. T. Goshorn, Myer Asch; installation, Henry Pettit; transportation, Dolphus Torrey; machinery, John S. Albert; agriculture, Burnet Landreth; horticulture, Charles H. Miller; fine arts, John Sartain. The corporators of the Board of Finance consisted of two from each congressional district, and four from each State and Territory at large. This body was organized with John Welsh as president; William Sellers and John S. Barbour, vice-presidents; Frederick Fraley, secretary and treasurer; William Bigler, financial agent; Henry Pettit, Joseph M. Wilson, and H. J. Schwarzmann, engineers and architects; and a Board of Directors of twenty-two members.

The site chosen for the exhibition was the most eligible portion of Fairmount Park, in the city of Philadelphia, and it was decided that it should open on the 10th of May, and close on the 10th of November, 1876. The funds have been raised by subscription to the stock issued by the Board of Finance, by public appropriations, private efforts, etc. Congress appropriated \$500,000 in 1875, and \$1,500,000 more were granted at the session of 1875-'76; the city of Philadelphia appropriated \$1,500,000, the State of Pennsylvania \$1,000,000, and other States and cities various amounts. The women of the country through their efforts have raised over \$100,000. In most of the States and Territories local managers and agents have been appointed to awaken interest, furnish information, and aid generally in securing a creditable representation. All the foreign countries to which invitations were sent have appointed commissioners and will take a more or less prominent part in the exhibition. These countries with the chiefs of their commissions are as follows: Argentine Confederation, Ernesto Oldendorff; Austria, Rudolf Isbary; Africa—Orange Free State—Charles W. Riley; Belgium, Baron Gustave de Woelmont; Brazil, Gaston d'Orleans, Conde d'Eu; China, Edward B. Drew; Denmark, Jacob Holmblad; Ecuador, Edward Shippen; Egypt, Prince Mohammed Tefwink Pasha; France, M. M. Ozenne; German Empire, Dr. Jacobi;

Great Britain and Colonies, the Duke of Richmond; Canada, Senator Luc Letellier de St. Just; New South Wales, Sir James Martin Knight; Victoria, Sir Redmond Barry; South Australia, A. Musgrave, Esq., C. M. G.; Honduras, Governor Don Francisco Bardales; Japanese Empire, Okubo Toshimichi; Liberia, J. S. Payne; Mexico, Romero Rubio; Netherlands, Dr. E. H. von Baumhauer; Norway, Herman Baars; Peru, Colonel Manuel Freyre; Russia, Privy-Councilor Boutovsky; Sandwich Islands, S. G. Wilder; Siam, J. H. Chandler; Spain, the Director-General of Agriculture, Industry, and Commerce; Sweden, A. Bergstrom; Switzerland, Colonel H. Rieter; Tunis, Sidi Houssein; Turkey, G. d'Aristarchi; Venezuela, Leon de la Cova.

Fairmount Park consists of 2,740 acres, with a variegated and picturesque surface. The exhibition grounds are at the lower end, and have been inclosed with thirteen entrances from the boundary drive, named from the thirteen original States. Street-railways, from all parts of the city, terminate in the immediate vicinity, and branches from the principal steam railways have established stations near by. The principal buildings provided by the Commission were substantially completed at the opening of the year 1876, and the dates were fixed for the reception of articles in the various departments. The main exhibition building is in the form of a parallelogram extending east and west, 1,880 feet in length, and 464 feet in width. Most of the structure is one story high, the main cornice on the outside being 45 feet from the ground, and the interior height being 70 feet. At the centre of the longer sides are projections 416 feet in length, and in the centre of the shorter sides projections 216 feet in length. In these projections are the main entrances, provided with arcades on the ground-floor, and with central façades rising to a height of 90 feet. Upon the corners are four towers 75 feet high. The roof, for 189 feet over the central part, is raised above the rest, and has at each corner a tower 48 feet square and 120 feet high. The area of the ground-floor is 20 acres; that of the upper floors in projections, 37,344 square feet; in towers, 26,844 square feet; so that the whole structure covers about 21½ acres. There is a central avenue or nave through the length of the building, 1,832 feet long and 120 feet wide; on either side of this is a side-avenue 1,832 feet long, and 100 feet wide. Between the nave and side avenues are aisles 48 feet wide, and on the outer sides smaller aisles 24 feet wide. Running crosswise is a central transept 416 feet long, and 120 feet wide; on either side of this a side-transept, 416 feet long and 100 feet wide, with aisles running between, 48 feet wide. The main promenades through the nave and central transept are 30 feet wide; those through the side avenues and transepts, 15 feet wide; and the other promenades, 10 feet wide—all leading to exit doors at either

end. In the entire structure are 672 columns, varying from 23 to 125 feet in length. There are numerous offices, galleries, balconies, etc., in the building, which is constructed of brick,

iron, and glass. The main building will include the Departments of Mining and Metallurgy, Manufactures, and Education and Science.

Machinery Building.

Memorial Hall or Art Gallery. Main Exhibition Building.

Horticultural Hall.

Agricultural Hall.

THE CENTENNIAL EXHIBITION GROUNDS AND BUILDINGS.

The Art Gallery is located on a commanding site to the north of the main building, and parallel with it. It is in the modern Renais-

sance style, of granite, glass, and iron, 365 feet long, 210 feet wide, and 59 feet high, over a spacious basement 12 feet in height, and sur-

mounted by a dome. It consists of a central section, a pavilion at each end, and arcades connecting the pavilions with the centre. The dome rises 150 feet from the ground, terminating with a colossal bell, from which the figure of Columbia rises. A colossal figure typifying one of the four quarters of the globe stands at each corner of the base. It is provided with numerous halls, galleries, and promenades, and the aggregate of wall-space is over 70,000 square feet. The applications for space for fine arts have been so numerous that another building, the exact counterpart of this, is to be erected, and even then it will be barely possible to accept all the applications.

The Machinery Building is located 542 feet to the west of the Main Exhibition Building, with its north front in a line with the north front of that structure. It consists of a main hall, 1,402 feet long and 360 feet wide, with an annex on the south side, 208 by 210 feet, the whole covering an area of 12.82 acres. Including upper floors in portions of the building, there are 14 acres of floor accommodation. There are two main avenues, 1,360 feet long and 90 feet wide, through the building, with a central aisle between, and an aisle on each side, each 60 feet wide. At the centre there is a transept 90 feet wide. Shafting, steam and water power, etc., are provided. The annex on the south side is for hydraulic machinery, and contains a tank 60 feet by 160, with a depth of water of 10 feet.

The Horticultural Building is provided through appropriations of the city of Philadelphia, and is to remain as a permanent ornament of the park. It is situated a short distance north of the Main Building and Art Gallery, overlooking the Schuylkill River. It is in the Moresque style of the twelfth century, and built mainly of iron and glass. It is 388 feet long, 198 wide, and 72 feet high to the top of the lantern. There is a central conservatory, 230 feet by 80, and 55 feet high, surmounted by a lantern 170 feet long, 20 wide, and 14 high; around this are forcing-houses, galleries, etc. The building is approached by ornamental terraces and spacious stairways, and surrounded by fountains and grass-plots. The Agricultural Building stands north of the Horticultural, and consists of a nave 820 feet long by 125 feet wide and 75 feet high, crossed by three transepts, the central one 100 feet wide and the others 80 feet wide. Both nave and transepts are composed of truss arches of Gothic form, and are built of wood and glass. The whole structure will be a parallelogram 820 feet long and 540 wide, covering over 10 acres. In the immediate vicinity are stock-yards for the exhibition of horses, cattle, sheep, swine, poultry, etc.

These are the buildings provided by the Commission for the general exhibition, but there are many others designed for special purposes and provided by the representatives of different countries and States, or by associa-

tions of exhibitors. Among these is a building erected by the United States Government for a collective exhibition of articles illustrating the functions and faculties of the Executive Departments. The departments taking part are those of War, the Treasury, the Navy, the Interior, Post-Office, Agriculture, and the Smithsonian Institution. There is a Women's Building covering an acre of ground and costing \$30,000, in which are to be exhibited the products of female industry in every line. During the exhibition women will be actually employed in the building on the work requiring skill in which they specially excel. Many of the States and foreign countries will have buildings of their own for the accommodation of their representatives and exhibitors, and of their people generally. Thus far (January, 1876) fifteen States have determined to erect buildings. These will generally contain waiting-rooms and various accommodations for visitors, rooms for the meetings of associations, offices for the State managers, post-office and telegraph facilities, etc. The Ohio State building is to be constructed of contributions from all the quarries in the State. That of California will be finished wholly with pine-cones. There will be a building in which the working of the stamp-mills and mining appliances of Nevada and Colorado are to be shown. The British buildings are to be in the exact style of those of Chester in the seventeenth century. There is to be a Vienna bakery with a *café*, the partition being of glass, so that the process of baking can be seen by visitors. The Mexican commission propose to erect a building for the exhibition of Aztec antiquities. Among other foreign buildings will be a Turkish bazaar and coffee-house; a Japanese building, in which the domestic economy of the empire will be illustrated; a Swedish schoolhouse; and others showing characteristics of the architecture and modes of life of different countries. Near the Women's Building is to be a Kindergarten school in operation, under the charge of Miss Elizabeth P. Peabody, and a New England farmer's home, exhibiting the kitchen and other appliances of a hundred years ago contrasted with those of the present time. The shoe and leather trade will have a separate building 300 feet by 160, provided by the dealers and manufacturers of the United States, and intended for the exhibition of the products of the world in leather. The Dairymen's Association will also have a building, as will the wagon and carriage manufacturers, and several other special interests. Near the art buildings is a large pavilion devoted wholly to photographs. Among the other features of the grounds will be an observatory 200 feet high, mounted by cars on the outside; a tower for the illumination of the park with the Gramm light, a structure near the river containing pumping machinery to supply the numerous fountains, restaurants in the styles of different countries, etc., etc. A model of Shakespeare's house at

Stratford-on-Avon has been made and sent over by a gentleman of Manchester. The buildings will be about 200 in number, covering nearly 100 acres and grouped around an artificial pond of six acres, stocked with fish, covered with swans, gondolas, and boats of various forms.

The general exhibition is divided into seven departments, and these into numerous subdivisions. The seven departments are Mining and Metallurgy, Manufactures, Education and Science, Art, Machinery, Agriculture, and Horticulture. There will be besides various special exhibitions, some of which have been already mentioned. In connection with the agricultural department there is to be in September and October a grand live-stock display, including horses, mules, and asses, from September 1st to 15th; horned cattle from September 20th to October 5th; sheep, swine, goats, and dogs, from October 10th to 25th, and poultry from October 25th to November 10th. Living fish are also to be exhibited in both salt and fresh water aquaria. A plot of 46 acres has been secured two miles from Bristol on the Trenton Railroad for the trial of agricultural implements and machinery. In many cases collective exhibitions will be made; for instance, the manufacturers of Fall River, Mass., join in exhibiting their products, and the same thing is done in many other cases. The book-trade of the country unites in a special display of publications.

Every possible arrangement has been made by the Bureau of Transportation to facilitate the work of shipping, receiving, and disposing of articles sent to the exhibition. The city of Philadelphia has, at large expense, improved the approaches to the park, and constructed a new avenue, including a bridge over the Schuylkill, which cost over \$1,000,000. Several new hotels have been erected in the neighborhood of the park, and every effort has been made to provide amply for the accommodation of visitors. Arrangements have been made with all the leading railroads of the country for the transportation of visitors at special rates during the exhibition. Among the special arrangements worthy of mention are those of the managers of Cook's excursions, who will sell tickets good over various lines to Philadelphia with coupons attached entitling the holder to a specified number of days' accommodations at hotels named thereon.

The responses and applications which have been made quite exceed the expectations of the projectors and managers. The applications for space for machinery number 1,251, which is 300 more than have been made at any previous exhibition of the kind, though some American inventors and manufacturers have held back from sending contributions for fear of having their

devices copied. France has shown special interest and activity in preparing to contribute. Her commissioners at first applied for 10,000 feet of space, and afterward increased the demand to 16,000 feet. Two thousand applications for the department of fine arts alone have come from that country. Russia was late in accepting the invitation, but will make a choice display in iron-work, precious minerals, furs, and costumes. In Greece an Olympian exhibition was held at Athens, as a preliminary to contributing to this display, and a selection of articles was made from it to send to Philadelphia. Preparations were made by similar home exhibitions in Egypt and Australia. The little kingdom of Siam appropriated \$600,000 to secure a representation of its arts and industries. Tunis will make a choice display of silks, essences, gilt brackets, jewelry, arms, costumes, and saddlery, and sends two Arab tents to be pitched in the park. The various States of the Union will be represented by illustrations of their geology and minerals, vegetable products, wild and cultivated, animals, birds, and fishes, mechanical products in iron, wood, and fabrics, the results of skilled and artistic labor, literary productions, pictorial representations of scenery and buildings, historical and statistical information, educational appliances, associations for various purposes, etc. As incidental to the general celebration may be mentioned the erection of a monument in New York harbor, consisting of a colossal figure of Liberty, with an illuminating aureole about the head, to serve as a beacon, the figure being contributed by the French from popular subscriptions, and the pedestal being furnished by Americans. During the course of the exhibition there will be an international regatta on the Schuylkill, and other athletic sports. The opening exercises on the 10th of May have not been fully determined upon at this writing (January, 1876), but there are to be an oration by William M. Evarts, of New York; a poem by Henry W. Longfellow, of Cambridge, Mass.; and musical performances under the direction of Theodore Thomas, of New York. The awards are to be decreed by the Centennial Commission on written reports of the judges, and are to consist of a diploma and uniform bronze medal, with a special report of the judges on the subject of each award. The judges are to be two hundred in number, one-half foreigners and one-half citizens of the United States, to be selected for their known qualifications, and to be experts in the several departments to which they are assigned. The judges from the United States are to be appointed by the Centennial Commission, and those from foreign countries by the commission of each country, in accordance with an allotment to be made to each.

F

FERDINAND I., ex-Emperor of Austria, was born in Vienna, April 18, 1798, and died June 29, 1875. He was the eldest son of Emperor Francis I., and his second wife, Maria Theresa, Princess of the Two Sicilies. His health was always very delicate, and his education was confided to two incompetent governors. He showed at an early age great kindness of disposition. In 1815 he undertook a journey through Italy, Switzerland, and France, which greatly benefited his health and improved his mind. After his return he devoted his time to the study of heraldry and technology, and kept aloof from public affairs. In 1830 he was crowned King of Hungary, in Pressburg, under the title of Ferdinand V., but did not take an active part in the affairs of the state. In 1831 he was married to Princess Caroline, daughter of King Victor Emmanuel of Sardinia. In 1832 he escaped assassination at the hands of Franz Reindl, a pensioned captain, who was incited to attack him by a refusal of some money for which he had asked the Emperor. Having succeeded his father as Emperor of Austria on March 1, 1835, one of his first acts was to relieve the condition of his Italian subjects, many of whom had been imprisoned for state offenses. Otherwise he made no change in the policy of the empire, and left its affairs in the hands of the Archduke Louis and of Prince Metternich. He was crowned King of Bohemia in Prague, in 1836, and, as he had done in Pressburg, he devoted the customary crowning-present of the Diet to objects of public charity. On the day of his coronation as King of Lombardy (September 6, 1838) he issued an almost general pardon for all state offenses committed in his Italian provinces up to that date. The revolt in Galicia, in 1846, was followed by the annexation of the free city of Cracow to Austria. During the revolutionary movement of March, 1848, he granted the dismissal of Metternich, a more liberal constitution, and the appointment of a responsible ministry. But, as these concessions were deemed insufficient by the people, they revolted in May, and the Emperor fled to Innsbruck. He returned in August, but, in consequence of the revolt of October, he went to Olmütz, where he abdicated in favor of his nephew Francis Joseph, on December 2, 1848. After that he made his permanent residence at Prague, where he died. His funeral took place at Vienna, July 5th. For forty years no Emperor's funeral had taken place in that city. Immense crowds filled the streets from the Imperial Castle to the Convent of the Capuchins, the vaults of which contain all the deceased members of the Hapsburg family. The public buildings and principal streets were heavy with huge black flags. The balconies were hung with black and silver. All

the military wore mourning emblems. The coffin was brought from the Imperial Castle, the state hearse being drawn by eight black horses. Every regiment was represented. The procession went through long files of troops amid the deep, respectful silence of thousands of spectators. In the convent church the coffin, which was covered with a black-and-yellow velvet pall, was placed on a dais of gold brocade. All the Austro-Hungarian ministers were present, as well as most of the members of both of the Diets, and all the ambassadors and generals. The church was draped in black, emblazoned with the arms and titles of the late Emperor. Cardinal Rauscher, assisted by fifteen bishops, celebrated the funeral mass, and blessed the coffin. The religious exercises were attended by the Emperor and Empress, the Archduke Francis Charles, brother of the deceased, and father of the Emperor Francis Joseph, and nearly all the other members of the imperial family, by the German crown-prince, Prince Leopold of Bavaria, Duke William of Mecklenburg, and Prince William of Württemberg. The coffin was lifted from the dais, and intrusted to the Capuchins, who carried it into the old imperial vault behind the altar.

FERRY, ORRIS S., United States Senator for Connecticut, born in Bethel, Conn., August 15, 1823; died in Norwalk, Conn., November 21, 1875. He was graduated at Yale College in 1844, studied law and was admitted to the bar in 1846. In 1847 he was appointed lieutenant-colonel of the Connecticut militia, and in 1849 he was appointed Judge of Probate for the District of Norwalk. After serving two years in the State Senate, he was in 1866 appointed State's attorney for the county of Fairfield. He retained this position until 1859, when he was elected member of Congress for the Fourth District. In the House he supported the Republican party. At the outbreak of the civil war, Mr. Ferry zealously supported the Union, and labored ardently to organize troops. He went to the field himself, and by the exhibition of his military qualities he attained the rank of brigadier-general. In May, 1866, Mr. Ferry was elected United States Senator, to succeed Lafayette S. Foster. The Republicans had at the time a majority of 51 on joint ballot. His chief competitors were Senator Foster and Governor Buckingham. During the latter part of the reconstruction period, he opposed President Johnson, and was one of the Senators who voted "guilty" at the impeachment of Mr. Johnson. In 1872 he was reelected by a coalition of Republicans and Democrats, defeating Mr. Hawley, the candidate of the regular Republicans. Subsequently, Mr. Ferry disappointed a section of his supporters by his adhesion to the Admin-

tration and opposing the "Liberal" candidates at the presidential election of 1872. He opposed the civil rights bill on the ground that it would prejudice the cause of public education. He spoke but seldom. Mr. Ferry had been in feeble health for some years, and was able to be in his seat in the Forty-third Congress only a few weeks.

FIELD, MAUNSELL B., born in 1821; died in New York City, January 24, 1875. He was the eldest son of the late Moses Field. He studied law and was admitted to the bar, but, possessing a fortune, he preferred to travel. He spent some time in London, Paris, and Madrid. For a period he acted as secretary of legation at Paris. During the civil war he held an official position at Washington, and was for several years on intimate relations with Secretary Chase. He was appointed by Governor Dix Justice of the Second Judicial District Court of New York City. In 1874 he published "Memories of Many Men and Some Women," a record of the people he had met and the entertaining incidents of his life in Europe.

FIELD, Mrs. HENRY M., died in New York, March 6th. She was born in Paris, and was left an orphan when she was young, and committed to the care of her grandfather, the Baron Félix Desportes. After receiving a thorough education at a boarding-school in Paris, she went to England and became a governess in the family of Sir Thomas Hislop, and took charge of the education of his only child, now the Countess of Minto, a lady of literary ability. An attachment was formed between the teacher and pupil which neither years nor distance could sever. During Mrs. Field's last sickness Lady Minto wrote repeatedly to the friend of her youth, expressing her gratitude and love, her sympathy and grief. Returning to France, the young governess was soon engaged in the family of the Duke de Praslin, a nobleman of the highest rank, and had charge of the education of his daughters for seven or eight years, till 1847. Some time after she left the family occurred that shocking affair, the killing of the duchess by her husband in a fit of passion or insanity, followed by his suicide. In the frenzy of the hour it was by some surmised that the late governess might have been such a cause of jealousy as led to the terrible tragedy. She was consequently detained as a witness, but, after a severe investigation before the Chamber of Peers, the suspicion was dismissed as having not the shadow of plausibility. But the unpleasant notoriety of the affair was such that, by the advice of the Rev. Frédéric Monod, in whose family she had lived, she soon after left France and came to this country, where she arrived in the autumn of 1849. Here for a year and a half she supported herself by teaching, until May, 1851, when she was married to Rev. Henry M. Field, then pastor of a church in West Springfield, Mass. It was not until November, 1854, when her husband came to New York to edit the *Evangelist*,

that she began to distinguish herself in the artistic, literary, and theological circles of the city. Her conversational powers were very remarkable. Her wit, her sound sense, her masculine logic, her extensive knowledge, her depth of soul, and courageous defense of her convictions, made her for twenty years very influential in some of the best circles. Although she wrote well, her writings did not equal her talks. "Like the celebrated Rachel Levin, and Henriette Herz in Berlin, she commanded a certain natural homage by the force of her character and the brilliancy of her endowments, without the prestige of original creations in letters or art." With a strong passion for society, her house in town was long famous for its receptions, and her hospitable summer home in Stockbridge always had a succession of visitors. It was, perhaps, in her own home circle that the great range of sympathies which marked her conversation was exhibited. Her heart was full of kindness for the ignorant and unfortunate. Her compassion for poor girls, especially young emigrants from France, led her to serve for three years as Principal of the Female Art School at the Cooper Union. She was an accomplished artist, and her crayon portraits have been often seen on the walls of the Academy of Design as well as in the dwellings of her friends. Her fatal disease was an affection of the stomach, which finally extended to the brain. Her letters, and some of her other productions, have been recently published under the title "Home Sketches in France, and other Papers" (New York, 1875).

FINANCES OF THE UNITED STATES.

The financial embarrassment which commenced in the last quarter of the year 1873 continued without any relaxation throughout the year 1875. Nevertheless the year closed with a quiet but cheerful tone pervading business circles. It was believed that the depressing influences which had been felt with such force for more than two years had nearly or quite exhausted themselves; that no measures calculated to disturb values or check the restoration of confidence were likely to be taken by Congress; and that trade and commerce, left to legitimate influences, might be expected to exhibit a satisfactory revival on the opening of the year 1876. The question of substituting the greenback currency of the Government for the bills of the local banks, and canceling the latter, was extensively agitated. The action of Congress in fixing 1879 as the time for the resumption of specie payments was very generally approved, especially in the commercial States of the Union.

In the annual report of the Secretary of the Treasury, made December, 1874, there were presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1875, and an estimate of the same for the remaining three-quarters of the fiscal year.

The receipts of the first quarter above mentioned, ending on September 30, 1874, which is the first of the fiscal year ending June 30, 1875, were as follows:

From customs	\$46,651,200 10
From internal revenue	26,814,615 88
From sales of public lands	891,465 68
From tax on circulation, etc., of national banks	8,596,148 28
From repayment of interest by Pacific Railways	217,941 97
From customs' fines, etc.	80,540 81
From consular, patent, and other fees	451,357 11
From proceeds of sales of Government property	522,546 77
From miscellaneous sources	1,255,382 57
Net ordinary receipts	\$79,481,048 87
From premium on sales of coin	1,453,287 73
Total net ordinary receipts	\$80,934,285 99
Receipts from certificates of deposit of legal tenders and coin certificates in excess of redemptions	5,247,068 24
Balance in Treasury, June 30, 1874	150,781,694 68
Total available	\$286,968,048 56

The expenditures during the same period were as follows:

For civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenues	\$20,588,410 77
For Indians	8,082,752 98
For pensions	8,918,407 18
For military establishment, including fortifications, river and harbor improvements, and arsenals	11,618,290 99
For naval establishment, including vessels and machinery, and improvements at navy-yards	8,122,728 14
For interest on the public debt, including Pacific Railway bonds	32,787,899 88
Total ordinary expenditures	\$85,818,489 43
Balance in the Treasury, September 30, 1874	151,549,569 44
Total	\$286,968,048 56

For the remaining three-quarters of the same fiscal year, ending June 30, 1875, it was estimated that the receipts would be:

From customs	\$115,850,000 00
From internal revenue	76,784,000 00
From sales of public lands	1,000,000 00
From tax on national banks	8,800,000 00
From Pacific Railways	500,000 00
From customs' fines, etc.	200,000 00
From consular, patent, and other fees	1,200,000 00
From sales of public property	1,000,000 00
From miscellaneous sources	2,100,000 00
Total	\$208,484,000 00

For the same period, it was estimated that the expenditures would be:

For civil and miscellaneous, including public buildings	\$48,060,000 00
For Indians	5,000,000 00
For pensions	21,442,000 00
For military establishment	28,500,000 00
For naval establishment	17,000,000 00
For interest on the public debt	70,000,000 00
Total	\$190,002,000 00

Thus, for the fiscal year ending June 30, 1875, from the foregoing account of actual receipts and expenditures for the first quarter, and of the estimates of the same for the remaining three-quarters, the estimates being based on the assumption that Congress would not increase the expenditures by deficiency or other appropriations, it was expected that the revenues would amount to \$284,818,285.99, and that the ordinary expenses would be \$275,815,489.42; which

would leave a surplus revenue of \$9,002,796.57 to be applied to the sinking-fund.

But the moneys received and covered into the Treasury by warrants during the fiscal year ending June 30, 1875, were as follows:

Customs	\$157,167,722 23
Internal revenue	110,007,493 58
Sales of public lands	1,413,640 17
Tax on circulation and deposits of national banks	7,268,579 16
Repayment of interest by Pacific Railway Companies	882,274 91
Customs' fines, penalties, etc.	228,570 23
Labor, drayage, storage, etc.	1,112,500 56
Sales of Indian trust-lands	248,671 66
Fees—consular, letters-patent, and land	1,518,954 29
Proceeds of sales of Government property	1,278,698 57
Marine Hospital tax	389,580 78
Steamboat fees	260,944 75
Profits on coinage, etc.	452,637 40
Tax on seal-skins	817,494 75
Miscellaneous sources	1,228,649 95
Total ordinary receipts	\$284,020,771 41
Premium on sales of coin	3,979,279 69
Total net receipts, exclusive of loans	\$288,000,051 10
Balance in Treasury June 30, 1874, including deposits of coin and United States notes represented by certificates outstanding	150,781,694 68
Total available cash	\$438,781,745 78

The net expenditures by warrants during the same period were as follows:

Civil expenses	\$17,346,929 23
Foreign intercourse	1,265,418 25
Indians	8,824,656 95
Pensions	29,456,216 22
Military establishment, including fortifications, river and harbor improvements, and arsenals	41,120,645 96
Naval establishment, including vessels, and machinery and improvements at navy-yards	21,497,636 27
Miscellaneous civil, including public buildings, lighthouses, and collecting the revenues	50,528,566 22
Interest on the public debt, including interest on bonds issued to Pacific Railway Companies	108,093,544 87
Payment of award to British claimants	1,929,819 00
Total net expenditures	\$274,628,892 94
Redemption of the public debt	19,405,986 48
Total net disbursements	\$294,039,829 33
Balance in Treasury, June 30, 1875	144,702,416 41
Total	\$438,731,745 78

This statement shows that the net revenues for the fiscal year were..... \$288,000,051 10
And the ordinary expenses (including the award to British claimants, \$1,929,819)..... 274,628,892 94

Leaving a surplus revenue, exclusive of provision for the sinking-fund..... \$13,376,656 26

The receipts for the first quarter of the fiscal year ending June 30, 1876, were as follows:

Customs	\$44,233,626 85
Internal revenue	28,199,738 50
Sales of public lands	803,641 13
Tax on circulation, etc., of national banks	8,624,065 53
Repayment of interest by Pacific Railways	262,292 57
Customs' fines, etc.	28,781 15
Consular, patent, and other fees	510,427 19
Proceeds of sales of Government property	104,278 65
Miscellaneous sources	1,722,408 90
Net ordinary receipts	\$78,995,589 67
Premiums on sales of coin	2,160,275 47
Total net ordinary receipts	\$81,155,865 14
Balance in Treasury, June 30, 1875	144,702,416 41
Total available	\$225,858,281 55

The expenditures during the same period were as follows:

Civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenues.....	\$19,678,072 68
Indians.....	2,680,474 88
Pensions.....	8,845,927 64
Military establishment, including fortifications, river and harbor improvements, and arsenals.....	11,891,476 26
Naval establishment, including vessels and machinery, and improvements at navy-yards.....	7,959,037 99
Interest on the public debt, including Pacific Railway bonds.....	84,517,554 81
Total ordinary expenditures.....	\$34,047,548 76
Redemption of the public debt.....	6,838,999 66
Balance in Treasury, September 30, 1875.....	184,972,018 18
Total.....	\$320,858,561 55

For the remaining three-quarters of the same fiscal year, ending June 30, 1876, it was estimated that the receipts would be as follows:

Customs.....	\$112,000,000 00
Internal revenue.....	92,000,000 00
Sales of public lands.....	1,000,000 00
Tax on national banks.....	3,650,000 00
Reimbursement by Pacific Railways.....	850,000 00
Customs' fines, penalties, and forfeitures.....	100,000 00
Consular, patent, and other fees.....	1,800,000 00
Proceeds of sales of public property.....	600,000 00
Miscellaneous sources, including premium on coin.....	5,200,000 00
Total net receipts.....	\$216,800,000 00

It was estimated that the expenditures for the same period would be as follows:

Civil, miscellaneous, including public buildings.....	\$49,500,000 00
Indians.....	4,400,000 00
Pensions.....	21,000,000 00
Military establishment.....	80,000,000 00
Naval establishment.....	12,000,000 00
Interest on the public debt.....	67,500,000 00
Total ordinary expenditures.....	\$194,400,000 00

Thus, for the fiscal year ending June 30, 1876, from the foregoing statement of actual receipts and expenditures for the first quarter and the estimates of the same for the remaining three-quarters, based upon appropriations already made, and also on the assumption that Congress would not increase the expenditure by deficiency or other appropriations, it was expected in the judgment of the Department that the revenues would reach the sum of \$297,456,145.14, and that the ordinary expenditures would amount to \$268,447,543.76. This exhibit gives a surplus revenue of \$29,008,601.38. During the past fiscal year it was not practicable to purchase the amount of United States bonds required for the sinking-fund, for the reason that such bonds could not be bought at par, and the Secretary was forbidden by law to pay more. But the eleventh section of the act of March 3, 1875, authorizes the Secretary, for the purpose of obtaining bonds for the sinking-fund, to give notice that he will redeem, in coin at par, any bonds of the United States, bearing interest at the rate of six per centum, of the kind known as five-twenties; and further provides that interest on such bonds shall cease at three months from the date of notification. The amount required for the sinking fund for the fiscal year ending June 30, 1875, was \$31,096,545. Of this amount \$1,096,500 six per cent. five-twenty bonds were purchased at the

rate of \$90.87½ for each \$100 in bonds; and on March 11, 1875, a call was made for \$30,000,000 of the same class of bonds. This call matured on June 11, 1875, which being so near the end of the fiscal year, a part of the bonds named in the notice were not presented for redemption during that year. Of the amount so called only \$24,073,900 were presented for payment before June 30th. Therefore, the amount which appears upon the books of the Treasury as actually applied to the sinking-fund within the past fiscal year is \$25,170,400. Under existing laws it is estimated that \$32,293,692.32 will be required to be provided for the sinking-fund for the year, and that the revenues would fall short by the amount of \$3,288,090.94 of providing for the appropriations of Congress.

During the fiscal year ending June 30, 1875, the public debt was reduced \$14,344,514.84, as will appear by the following statement:

Principal of the debt July 1, 1874.....	\$2,251,690,468 48
Interest due and unpaid, and accrued interest to date.....	88,939,087 47
Total debt.....	\$2,394,629,555 90
Cash in the Treasury.....	147,541,314 74
Debt, less cash in the Treasury.....	\$2,148,088,241 16
Principal of the debt July 1, 1875.....	2,282,264,581 95
Interest due and unpaid, and accrued interest to date.....	88,647,556 19
Total debt.....	\$2,370,932,088 14
Cash in the Treasury.....	142,248,861 83
Debt, less cash in the Treasury.....	\$2,128,688,726 82
Showing a reduction, as above stated, of	\$14,899,514 84

The amount paid into the sinking-fund during the fiscal year was \$25,170,400.

For the refunding of the national debt, the contract which was entered into July 28, 1874, was renewed January 29, 1875. The conditions of the contract were slightly modified, the contracting parties being allowed one-half of one per cent. commission, and binding themselves to defray all expenses incurred in transporting five per cent. bonds of London, and six per cent bonds, United States coin coupons, and gold coin, from London to Washington, besides the expenses of preparing the new bonds.

Under this agreement the contracting parties subscribed for \$122,688,550, the balance of "New Fives" then remaining unnegotiated; and the Secretary announces to Congress that the funding of \$500,000,000 of six per cent. bonds into those bearing five per cent. interest has been accomplished, thereby saving an annual interest to the Government of \$5,000,000.

In the opinion of the Secretary of the Treasury the success which has attended the refunding of \$178,548,300 of the national debt during the last sixteen months, with a steady improvement of the national credit, induces the belief that the remainder of the six per cent. bonds can be refunded, within a reasonable time, in accordance with the provisions of the acts of Congress. He also recommends that the period of redemption of the new bonds be fixed at thirty years.

STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES,
JUNE 30, 1875.

TITLE.	Length of Loan.	When redeemable.	Rates of Interest.	Price at which sold.	Amount authorized.	Amount issued.	Amount outstanding.
Old debt.....		On demand.....	5 and 6 p. c.				\$57,665 00

							\$2,232,264,581 95

The views of the Secretary of the Treasury, on the most important subject now before the country—the resumption of specie payments—are too important and valuable to be omitted. The imperative duty and obligation of the Government to redeem the greenback notes in coin is established, and the measures by which such redemption can be facilitated are recommended. The Secretary says:

The Government is bound, not only by economic considerations and proper regard for the interest of the people, but by express and repeated promises,

to provide for the redemption in coin of all its issues of legal-tender notes. The original legal-tender act was regarded and treated at the time of its adoption as a temporary measure, made necessary and justifiable only by the exigency of war, which taxed all the resources and energies of the nation. The first act authorizing such issues (February 25, 1862) is entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," language that significantly expresses the views of the Congress by which it was passed. It authorized the issue of \$150,000,000 legal-tender notes, and made provision for funding them in bonds issued on the

credit of the Government, bearing interest in gold, and payable at a future day. This was the best the Government could do in the midst of its struggle for existence and rightful supremacy. The state of the public credit did not admit the possibility of the immediate procurement of a sufficient amount of coin to redeem the notes absolutely. A well-settled principle of political economy forbade the issue of paper currency without providing for its redemption, and in obedience thereto Congress made the only practicable provision for the redemption of the notes which it authorized to be issued and stamped with the quality of legal tender. The act of July 11, 1862, which authorized a further issue of \$150,000,000, contained a like provision, and further provided that any notes issued thereunder might be paid in coin, instead of being converted into bonds, at the discretion of the Secretary of the Treasury. The notes thus authorized were issued and accepted by the people upon the assurance that they had the right to fund them in gold-bearing bonds of the United States, and this consideration undoubtedly constituted an important element of their value, and gave them a quality in aid of their circulation and free acceptance in all business transactions. In the opinion of wise and patriotic men, who, as the representatives of the people, were charged with maintaining the indisso- lability and supremacy of our national Union, it was necessary to resort to this extraordinary measure for the purpose of carrying the war to a successful termination. It was, in substance and effect, a national war-loan, based upon the credit of the Government, and coupled with a pledge for redemption, but the period of payment was to be thereafter determined when the public exigency would permit. It was not in the minds of those who devised and consummated the scheme, that the Government was about to enter upon the issue of an irredeemable paper currency, which should permanently take the place of the world's measure of values. Nor was it claimed by the most earnest advocate of the measure that the Constitution had given to Congress power to issue a permanent paper currency as a substitute for, and stamped by the law with, the qualities which, in the estimation of political economists, could exist only in the precious metals. In the light of the experience of the civilized world, such a purpose would have been regarded as little better than financial madness, and its avowal by the authors of the legal-tender acts would surely have caused the defeat of the plan for exerting the borrowing power of the Government by means of such issues.

But the purpose and meaning of the acts in question are not left open for forensic discussion, having been authoritatively settled by the unanimous opinion of the highest judicial tribunal known to our Constitution. As soon after the termination of the war as 1868, it was argued before the Supreme Court that the legal-tender notes of the United States were issued as money, a substitute for metallic currency, and that, having been made legal tender in payment of all debts, including (with certain exceptions) the Government's own, of course, when presented for payment, if similar notes, being legal tender, were offered in exchange for them, the debt would be discharged, by a delivery of new notes of the same kind, and so on *ad infinitum*. To this argument the court replied:

Apart from the quality of legal tender impressed upon them by acts of Congress, of which we now say nothing, their circulation as currency depends upon the extent to which they are received in payment, on the quantity in circulation, and on the credit given to the promises they bear. In other respects they resemble the bank-notes formerly issued as currency.

But, on the other hand, it is equally clear that these notes are obligations of the United States. Their name imports obligation. Every one of them expresses upon its face an engagement of the nation to pay the bearer a certain sum. The dollar note is an engagement to pay a dollar, and the dollar intended is the coin dollar of the United States—a certain

quantity in weight and fineness of gold or silver, authenticated as such by the stamp of the Government.

This authoritative declaration of the Supreme Court defines clearly and precisely the meaning and intent of Congress in the acts which authorized the issue, and should be accepted as conclusive of the obligation and duty of the Government to provide for the payment in specie of all such issues.

Nor is this all. Subsequent to this decision, and for the purpose of putting a quietus upon the mischievous discussion of the subject, Congress, on the 18th day of March, 1869, declared by public act that "the United States solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin."

These provisions of the various acts of Congress, which were passed with the approval of the Executive, the clear adjudication of the Supreme Court, as well as the plainest principles of political economy, and proper regard for the public welfare, commit the Government to the redemption in coin of the notes issued under the circumstances before stated. National faith and honor could not be more distinctly or unequivocally pledged to the performance of a plain duty.

In view of these solemn and repeated pledges, it seems idle to resort to the consideration of elementary principles of finance to prove the evils of an irredeemable paper currency. In the face of such pledges, disregard of which would bring national dishonor, and serious if not irreparable injury to the public credit, it can hardly be necessary to discuss questions of expediency, or to point out the ills which the experience of the civilized world shows must follow a violation of well-known laws of political economy.

It is among the first and most important functions of government to give to its people a sound and stable currency, having a fixed relation to the standard of values in general use among nations. The true matter with which Government has to do, is not so much a question of volume as of soundness and stability of the currency. When it has established a currency of fixed and stable value, having a known relation to that of other powers, and furnishing a uniform medium of exchange, the volume may and should be left to be determined by the wants of trade and business. Natural causes, aided by individual effort and enterprise, will regulate the volume of currency far more wisely and with greater safety to business than acts of Congress imposing artificial limits, subject to increase or diminution at every session.

The existing provision of law making United States notes legal tender for all debts, both public and private, with certain exceptions relating to transactions with Government, is an artificial barrier to the use of gold and silver, tending not only to prevent the flow of gold toward this country, but promoting the shipment abroad of our own production of the precious metals. For this reason, Congress should abolish the legal-tender quality of the notes, as to all contracts made, and liabilities arising after a fixed day. The first day of January, 1879, being already fixed by law as the time when the redemption of United States notes then outstanding shall begin, it would be proper and safe to provide that such notes shall not be legal tender for contracts made, or liabilities incurred, after the first day of January, 1877. Such an act would not too suddenly change the value of the notes, and would not affect injuriously either debtors or creditors, but would remove a present obstruction to the retention of our gold and silver production, and create a demand for the return of gold now abroad, thus promoting final resumption by preparing the country for it.

In furtherance of the purpose of the act of the last Congress to provide for the resumption of specie payments, the Secretary recommends that authority be given for funding legal-tender notes into bonds

bearing a low rate of interest. Such bonds should run for a longer period of time than those now authorized for refunding the interest-bearing debt, and should be made available to national banks for deposit to secure their circulation and other liabilities to the Government, and should bear a rate of interest so low as not to cause too rapid absorption of the notes. It seems probable that a bond bearing interest at the rate of four per cent. would invite the funding of a sufficient amount of legal-tender notes to lessen materially the sum of gold which, in the absence of such provision, must be accumulated in the Treasury by the 1st of January, 1879, to carry out the imperative requirements of the act of January 14, 1875. If it be apprehended that authority to the Secretary to fund an unlimited amount of notes might lead to too sudden contraction of the currency, Congress could limit the amount to be funded in any given period of time. The process being in no sense compulsory as to the holders of United States notes, and the rate of interest on the bonds being made low, it is not probable that currency which could find profitable employment would be presented for redemption in such bonds. Only the excess of notes above the needs of business would seek such conversion. Authority to the Secretary of the Treasury to redeem and cancel two million of legal-tender notes, per month, by this process, would greatly facilitate redemption at the time now fixed by law, and besides would have the advantage of publicity as to the exact amount to be withdrawn in any given month. Bonds issued for this purpose should be of the denomination of fifty and one hundred dollars, and any multiple thereof, in order to meet the convenience of all classes of holders of United States notes. The faith of the Government now stands pledged to resumption on and after January 1, 1879, and to the final redemption and removal from the currency of the country of the legal-tender notes as fast as they shall be presented for redemption, according to the provisions of the act of January 14, 1875. To resume on the 1st of January, 1879, without further legislation, would require the accumulation of a large amount of gold in the Treasury in order to avert the possibility of failure of the plan. Such an amount of gold can be procured with difficulty, and not without more or less embarrassing effect upon the trade and commerce of our own and other countries. The present abundance and cheapness of both currency and capital present a favorable opportunity for the withdrawal and redemption of a considerable part of the outstanding legal-tender notes, thereby making easy and effectual the redemption now pledged. Such withdrawal of legal-tender notes, thus dispensing with the necessity for accumulating gold in the Treasury in proportion to the amount withdrawn, would tend to appreciate those remaining outstanding, and make it easier to protect and keep in circulation the silver coin now authorized to be issued.

The act last referred to is an express recognition of the duty and obligation of the Government to resume specie payment at the day therein named; and, however widely different may be the views of intelligent persons upon the means adopted by Congress, it is gratifying to know that the end sought to be reached has met the concurrence of the country, and that a majority of the people, wherever the matter has been publicly and fully discussed, have signified their approval of the determination of Congress to be faithful to its pledges, and to relieve them of the ills of an irredeemable paper currency.

The act in question not only makes express provision for resumption at a fixed date, but commits the Government to the use of all such means as may be needful to that end. If experience shall show that the means provided by Congress need to be supplemented by further legislation for the easier and more certain accomplishment of the end, it must be assumed that Congress will not suffer the great purpose to be impeded for want of such additional legis-

lation. The act confers large powers on the Secretary of the Treasury, touching the issue of United States bonds for the purpose of procuring the supply of gold necessary to execute such of its provisions as go into immediate operation, and to provide for the redemption in gold of United States notes outstanding on and after the 1st of January, 1879. In this respect the power conferred on the Secretary is ample; but if, for any cause, it should be found impracticable to accumulate in the Treasury a sufficient amount of gold to carry out the provisions of the act, the Secretary is left without the choice of other means to accomplish the end. It may, perhaps, be doubted whether the process of accumulating a large amount of gold by a given time could go on without meeting opposition from the financial powers of the world. It is safe to say that so large an amount of gold as would be required to carry out the purpose and direction of the act cannot be suddenly acquired. It can be done only by gradual processes, and by taking advantage of favorable conditions of the money market from time to time.

The loss of interest on large sums hoarded in the Treasury for a considerable period in advance of January, 1879, is a consideration not to be disregarded, although it should not be permitted to outweigh the benefits to result from full and complete execution of the act.

The coinage for the fiscal year was as follows:

COINS.	No. of Pieces.	Value.
Gold.....	1,789,092	\$38,568,955
Silver.....	22,823,216	10,070,888
Minor.....	14,629,500	290,875
Total.....	39,191,778	\$48,854,708

The amount of bullion received and operated upon during the last fiscal year was—

Gold.....	\$43,152,564 50
Silver.....	15,804,406 07
Total.....	\$61,456,990 57

Deducting redeposits, bars made and issued by one institution and deposited at another, the deposits were—

Gold.....	\$38,554,298 50
Silver.....	16,070,694 94
Total.....	\$54,624,920 44

The silver coinage consisted of—

COINS.	No. of Pieces.	Value.
Trade-dollars.....	5,697,500	\$5,697,500
Subsidiary silver coin.....	17,125,716	4,372,565

The principal sources of revenue to the Government are the receipts from customs and the collections of internal taxes.

The receipts from customs for the year ending June 30, 1874, were \$168,103,833.19, and at the corresponding date of 1875 they were \$157,167,722.35, a decline of \$5,936,111.34.

The receipts for the first quarter of the current fiscal year were \$44,233,626.25, while for the corresponding period of last year they were \$46,651,200.10, showing a decrease of \$2,417,573.85.

For the months of October and November, 1875, the receipts were \$23,936,950.23, and for the same months of last year they were \$22,755,811.

The following statement of importations of the classes of merchandise chiefly concerned, is derived from the Bureau of Statistics, and to some extent serves to show the effect of the act of March 3, 1875, on the duties received:

Value of importations of cotton, glass and glassware, India-rubber and gutta-percha, iron and steel, leather, metals not otherwise provided for, paper, straw, wool (including hair of alpaca, etc.), and manufactures thereof, for the nine months ending September 30, 1874.....	\$94,917,416 00
Value of importations of same articles for corresponding period of 1873 (including the seven months next succeeding the act of March 3, 1875).....	81,228,542 00
Decrease.....	\$13,688,874 00

This decrease was occasioned principally by the falling off in two classes of importations, viz.:

Iron and steel and manufactures thereof.....	\$8,260,066 00
Wools and manufactures thereof.....	3,944,203 00
	\$12,204,274 00

Returns for the four months ending June 30, 1875, show that of importations for that period amounting to \$30,547,005, duties have been paid on \$23,629,606 withdrawn for consumption, yielding \$10,954,719 of revenue. In this amount is of course included the ten per centum restored by the act of March 3, 1875, showing an apparent increase for four months of \$1,095,471.90. But in this connection there is to be considered the fact that, for the corresponding period of the year 1874, the importations of the same classes of merchandise amounted to \$36,022,467, showing a decrease in importations for the four months ending June 30, 1875, of \$5,475,462, of which \$4,800,378 is due to the falling off of importations of iron and steel and manufactures thereof.

In the collection of duties upon importations, two evils are chiefly operative to prevent the Government from realizing the full measure of revenue—first, smuggling; and, secondly, under-valuation.

The first of these evils is more generally prevalent, especially on the northern frontier, than is commonly supposed, the difficulties attending a proper surveillance of that frontier, under

existing circumstances, being very great, if not in some respects insurmountable. Without going into full details, it may be said, by way of illustration, that in the four collection districts of Vermont, Champlain, Oswegatchie, and Cape Vincent, having a frontier line of more than three hundred miles, with eight principal ports or stations and forty-one minor stations, after deducting the number permanently employed at such principal points and four for service in Canada in connection with the sealing of cars, there are but fifty-nine officers remaining for service at the minor stations and as a coast-guard to prevent smuggling. Deducting from this number one officer for permanent service at each minor station, there remain but fourteen as a preventive force, or less than one man for every twenty-one miles of frontier.

These statistics apply to portions of the border which offer speedy and direct means of travel between Canada and the United States, and which, during several months of the year, are thronged by travelers of every condition and with every variety of object in view, from those bent merely on pleasure or legitimate business to those whose chief occupation is to defraud the revenue.

Information obtained by the Department, from trustworthy sources, renders it quite certain that systematic frauds have been perpetrated by smuggling over the border wines, brandy, and other articles of merchandise. Similar observations might be made as to other parts of our frontier.

The second general cause which operates to prevent the Government from receiving its full measure of dues is undervaluation, a source of perhaps greater loss than the direct offense of smuggling. This evil is attributable, in part, to the devices of dishonest importers, in part to the fluctuation in market values, but more, probably, to the defects of the appraisement system itself.

The following tabular statement shows the comparative receipts from the various sources of internal revenue, for the fiscal years ending June 30, 1874 and 1875, respectively:

SOURCES.	1874.	1875.	Increase.	Decrease.
Spirits.....	\$49,444,089 85	\$52,081,991 12	\$2,637,901 27	
Tobacco.....	38,242,875 62	37,303,461 89	4,060,536 26	
Fermented liquors.....	9,804,679 72	9,144,004 41		\$160,675 81
Banks and bankers.....	2,337,160 67	4,097,248 12	710,087 45	
Penalties, etc.....	864,216 84	281,107 61		83,108 73
Adhesive stamps.....	6,188,944 64	6,557,229 65	420,885 01	
Back taxes under repealed laws.....	764,880 14	1,050,111 44	815,231 80	
Total.....	\$102,644,746 98	\$110,545,151 28	\$8,144,191 29	\$243,784 04

This table is made up from the reports of collections made to the Commissioner of Internal Revenue, which include commissions on sales of stamps paid in kind, and therefore do not enter into the actual cash receipts of the Treasury. They include, also, sums reported as collected but not actually paid into the Treas-

ury at that time. Hence there is an apparent discrepancy between the totals here shown and the aggregate amount deposited on account of internal revenue as shown by warrants covering the same into the Treasury for the fiscal year.

The receipts from internal revenue for the

first quarters of the fiscal years ending, respectively, June 30, 1875 and 1876, were as follows:

First quarter of 1875.....	\$26,814,615 88
First quarter of 1876.....	28,199,728 50
Increase.....	\$1,385,108 17

The aggregate receipts for the months of October and November, of the current year, were \$19,638,907.19, while for the same months of last year they were \$17,476,202.99, showing an increase of \$2,162,704.20.

Since the last annual report to Congress, fifty-six collection districts have been abolished by consolidation with other districts, with an estimated annual saving to the Government of about \$170,000.

During the past fiscal year frauds of unusual character and magnitude were discovered in this branch of the service, which appear to have been carried on with more or less injury to the revenue for several years past.

The comparative value of the exports and imports of the United States for the last fiscal year, in coin, appears, from official returns to the Bureau of Statistics, to be as follows:

Exports of domestic goods.....	\$499,284,100
Exports of foreign goods.....	14,163,611
Total exports.....	\$513,447,711
Imports of goods.....	538,005,486
Excess of imports over exports.....	\$19,562,725
For the fiscal year ending June 30, 1874, the excess of exports over imports was \$18,876,698.	
Exports of specie and bullion.....	\$92,182,142
Imports of specie and bullion.....	90,900,717
Excess of exports over imports.....	\$71,281,425
Total excess of exports of goods, specie, and bullion, over imports of same.....	\$51,668,700

While the returns of the values of exports by sea are substantially accurate, it has not been practicable to obtain complete statements of the exports to Canada in railway-cars, owing to the fact that there is no law requiring persons exporting merchandise by land conveyance to file full manifests of the exported goods with collectors of customs:

The Commissioner of Customs of the Dominion of Canada has, however, furnished detailed statements, from which it appears that the value of exports to Canada, during the last fiscal year, was \$15,660,218 in excess of that returned by the customs officers of the United States, which would increase the total exports of the year by that amount (i. e., from \$513,442,711 to \$529,102,929), and reduce the excess of imports of merchandise over exports to \$3,902,507.

There was withdrawn from bond for consumption, in excess of that entered for warehouse during the past fiscal year, merchandise of the value of \$2,992,061.

The total exportation of specie and bullion was greater than that for the preceding year by \$25,501,787; while the exports of domestic goods have decreased in value \$70,149,321.

Importations have decreased to the amount of \$34,400,906, as compared with those of the preceding fiscal year, and of \$109,024,103, as compared with the fiscal year ending June 30, 1873.

There was an increase in the value of the importation of the following articles: Tea, \$1,561,469; fur-skins, undressed, \$664,907; fur-skins, dressed, and furs, \$486,558; argols, \$374,108; drugs, chemicals, dyes, etc., \$1,309,864; dye-woods in sticks, \$405,891; gums, \$526,364; hides and skins, \$2,092,025; silk, raw, \$650,298; silk, manufactures of, \$384,141; fancy goods, \$1,104,962; fruits, \$4,255,002; jute, grasses, and manufactures of, \$566,983; precious stones, \$1,124,803; seeds, \$2,033,766; wool and manufactures of, \$547,469.

There was a decrease in value of importations of articles brought back to the United States, of \$1,267,286; coffee, \$4,457,479; India-rubber, \$1,521,239; breadstuffs, \$1,557,840; pig-iron, \$1,829,354; bar-iron, \$1,294,174; iron rails, \$917,977; steel rails, \$6,908,148; machinery, \$596,714; band, hoop, and scroll iron, \$176,512; anchors, cables, and chains, \$97,776; old and scrap iron, \$703,006; fire-arms, \$218,226; steel bars, ingots, sheets, and wire, \$420,149; cutlery and tools, \$385,037; other manufactures of iron, \$1,770,533; barks, \$532,625; cochineal, \$353,134; indigo, \$331,152; madder, \$387,160; nitrate of soda, \$369,526; soda and salts of, \$506,137; tin, in bars, blocks, or pigs, \$853,557; wood and manufactures of, \$2,770,536; wood, unmanufactured, \$366,856; live animals, \$543,815; cotton manufactures, \$455,468; earthen, stone, and china ware, \$617,145; flax and manufactures of, \$699,146; glass and glassware, \$452,849; hair and manufactures of, \$343,986; hemp, raw, \$566,664; lead, \$714,812; opium and extract of, \$502,435; provisions, \$517,499; salt, \$531,724; sugar and molasses, \$7,816,686; tobacco and manufactures of, \$1,844,021; wines, spirits, and cordials, \$866,942.

There was an increase in certain articles exported, as follows, the values being stated in currency: Cotton manufactures, \$976,042; lard, \$3,592,503; cheese, \$1,760,608; iron manufactures, \$1,424,188; sewing-machines, \$203,633; drugs and chemicals, \$150,592; hides and skins, \$2,169,343; furs and fur-skins, \$1,062,059; leather and leather goods, \$2,538,278; brass, \$497,098; clocks and parts of, \$215,407; copper-ore, \$619,128; copper, in pigs, bars, sheets, and old, \$919,079; fruits, \$639,841; ginseng, \$210,166; hops, \$1,258,528; firearms, \$3,162,182; lead and manufactures of, \$127,265; manures, \$332,500; oil-cake, \$1,088,940; quicksilver, \$495,275; seeds, clover, timothy, and garden, \$553,293.

The exports of domestic gold and silver in excess of the imports were \$62,956,412, as against \$31,244,780, for the previous year.

There was a decrease in the value of the exportations of the following articles: Agricultural implements, \$464,381; hogs, \$886,622;

bacon and hams, \$4,771,295; Indian-corn, \$313,014; Indian-corn-meal, \$238,866; rye (1,357,884 bushels), \$1,863,772; wheat (17,992,751 bushels), \$41,813,596; railroad-cars, \$641,037; bituminous coal (158,301 tons), \$758,723; anthracite coal (85,756 tons), \$444,458; cotton, raw (98,183,400 lbs.), \$20,584,955; hemp and manufactures of, \$243,898; illuminating oils (35,668,571 gallons), \$10,530,594; spirits, distilled (1,820,222 gallons), \$813,262; spirits of turpentine, \$834,889; tallow, \$2,443,117; tobacco, leaf (94,195,891 lbs.), \$5,157,632; sailing-vessels sold to foreigners (14,745 tons), \$517,528; shooks, staves, and headings, \$1,217,062; timber, sawed and hewed, \$2,064,318; wood and manufactures of, \$332,256.

There is little change in the proportion of the foreign carrying-trade transacted in foreign vessels, about 74 per cent. of imports and exports, during the last fiscal year, having been carried in foreign vessels as against about 72 per cent. for the preceding year, and 76 per cent. for the fiscal year 1872.

The Register of the Treasury reports the total tonnage of vessels of the United States to be 4,853,732 tons, an increase of 53,080 tons over that of the fiscal year ended June 30, 1874, exclusive of the canal-boat tonnage, amounting to about 48,000 tons, exempt from enrollment and license under the act of Congress approved April 18, 1874.

The actual increase is believed to be about 141,878 tons, this amount being the excess of gains over losses during the year; but this aggregate has been reduced to 53,080 tons (the increase first above mentioned) by omitting the tonnage of the exempted canal-boats, and by corrections of tonnage returns, about 40,000 tons.

The following table exhibits the total tonnage for the last two years:

TONNAGE.	1874.		1875.	
	Vessels.	Tons.	Vessels.	Tons.
Registered	2,793	1,428,928	2,981	1,558,893
Enrolled and Licensed...	29,758	3,871,729	29,804	3,299,904
Total	32,436	4,300,652	32,255	4,853,732

The tonnage of vessels built, as given by the Register, is 297,639, being a decrease from that of the preceding year of 135,086 tons, or over 31 per centum. The number of vessels built was 1,301.

The report of the Controller of the Currency, for 1875, states that during the past year 107 banks have been organized, with an authorized capital of \$12,104,000, and \$4,794,180 of circulation; of which number two were gold banks, with \$200,000 capital and \$120,000 circulation. Five banks have failed, with an aggregate capital of \$1,000,000; and thirty-eight banks, with a total capital of \$3,920,000, have gone into voluntary liquidation by votes of shareholders owning two-thirds of their capital stock. The total number of national

banks organized since the establishment of the national banking system is 2,307. Of these 40 have failed, and 175 have gone into voluntary liquidation, leaving 2,092 in existence on November 1, 1875. Three of these banks, located in the city of New York, have no circulation, and 241 have reduced their circulation and withdrawn a portion of their bonds, under the act of June 20, 1874, 117 of them having deposited legal-tender notes and reduced the amount of their bonds on deposit as security for circulation to the minimum amount allowed by law. Included in this aggregate are nine national gold banks, located in California, with a capital of \$4,700,000, and a circulation of \$2,630,000.

The only act in relation to the banking system of the country which has passed Congress during the present year is that of January 14, 1875, which repealed all laws limiting the aggregate amount of circulating notes to be issued, and also repealed those parts of the laws above referred to which provided for the withdrawal and redistribution of a portion of the circulation already issued. This act made it the duty of the Secretary of the Treasury to retire legal-tender United States notes to an amount equal to 80 per cent. of the national-bank notes issued, "until there shall be outstanding the sum of three hundred million dollars of such legal-tender notes, and no more."

The act of June 20, 1874, authorized the deposit by any national bank of lawful money with the Treasurer, in sums of not less than nine thousand dollars, for the purpose of retiring its circulating notes, and the withdrawal by it of a proportionate amount of the bonds held as security for such notes.

The whole amount of legal-tender notes deposited with the Treasurer under the act of June 20, 1874, to January 1, 1876, for the purpose of retiring circulation, was \$37,053,538; to which must be added a balance of \$3,813,675 remaining from deposits made by banks in liquidation previous to the passage of that act, making a total of \$40,867,208. The amount of circulation redeemed by the United States Treasurer and destroyed without reissue, during the same period, was \$19,412,340; leaving \$21,454,868 of legal-tender notes on deposit on January 1, 1876, for this purpose.

From June 20, 1874, to January 1, 1876, 157 banks were organized, to which circulation was issued amounting to \$8,597,360; and the total additional circulation issued during this period to these banks, and to banks previously organized, was \$17,523,405. Circulation amounting to \$23,025,691 was retired and destroyed, without reissue, including \$3,613,351 of the notes of banks voluntarily returned by them; the actual decrease in circulation being \$5,502,286. The amount of legal-tender notes which up to January 1, 1876, has been withdrawn from circulation and destroyed, under the provisions of the law already mentioned, is \$10,172,780, leaving the amount of such notes

outstanding at that date \$371,827,220. The amount of national-bank notes outstanding at the same date was \$343,741,532, of which \$2,087,860 were notes of national gold banks.

Previous to the passage of the act of June 20, 1874, the law required the national banks in New York City to hold in lawful money, as a reserve fund, an amount equal to at least 25 per cent. of their deposits and circulation. It also required the banks in the other redeeming cities to hold an equal proportion of reserve, but provided that each of such associations might keep one-half of its lawful money reserve in cash deposits in the city of New York. Every other association was required to have on hand, in lawful money of the United States, an amount equal to at least 15 per cent. of the

aggregate amount of its notes in circulation and of its deposits, three-fifths of which might consist of balances due from approved associations in the redeeming cities. The act of June 20, 1874, repealed the requirements as to a reserve upon circulation, but made it the duty of the national banks to deposit in the Treasury of the United States, in lawful money, a sum equal to five per cent. of their circulation, to be held for its redemption, the sum so deposited being authorized to be counted as a part of the required reserve on their deposits.

The following table exhibits the circulation and deposits, together with the specie, United States notes, and other kinds of reserve, held at three different periods in each of the years 1873 and 1875:

DATES.	Number of Banks.	LIABILITIES.			Reserve required.	Reserve held.	Ratio of Reserve.	CLASSIFICATION OF RESERVE.		
		Circulation.	Net Deposits.	Total.				Specie.	Other Lawful Money.	Due from Agents.
		Millions.	Millions.	Millions.	Millions.	Millions.	Per cent.	Millions.	Millions.	Millions.

In the above table the amount of "reserve required" for the year 1875 is the amount which would have been required under the law in force prior to the act of June 20, 1874. The cash portion of the reserve held on October 1, 1875, including the redemption fund with the United States Treasurer (\$16,233,193), was \$43,523,275 in excess of the amount required by law, and the total reserve was similarly in excess to the extent of \$82,258,620.

From the date of the passage of the act of June 20, 1874, to January 1, 1876, \$248,663,533 of national-bank notes were returned to the Treasury Department for redemption. The whole amount received at the office of the Controller of the Currency for destruction, during that period, was \$185,840,292; and the amount of new notes issued during the same time was \$177,197,071, of which \$17,523,405 was to banks newly organized, or to banks increasing their capital and circulation.

The amount and different kinds of registered bonds held by the Treasurer of the United States to secure the outstanding circulation of national banks, on January 1, 1876, were as follows:

CLASS OF BONDS.

Sixes of 1881, 6 per cent. gold.....	\$32,041,500
Five-twenties of 1864, 6 per cent. gold.....	1,140,800
Five-twenties of 1865, 6 per cent. gold.....	26,104,850
Ten-forties of 1864, 5 per cent.....	97,894,800
Funded loan of 1881, 5 per cent.....	144,802,700
Pacific Railways, 6 per cent. currency.....	12,617,512

Total..... \$363,601,662

The amount of circulation secured by the bonds on the date above mentioned was..... \$321,671,814

The amount of lawful money on deposit with the Treasurer, for the redemption of national-bank notes on presentation, was..... 22,070,218

Total outstanding..... \$343,741,532

The report of the Controller of the Currency for 1875 states that the percentage of lost or unredeemed notes of 286 banks organized under the laws of New York, having a total circulation of \$50,754,575, was 2.63 per cent. of the amount issued. Of thirty of these banks which are still in operation in New York City, having a circulation of \$7,753,010, the percentage unredeemed is 1.83. Of 240 Wisconsin State banks, having a circulation of \$7,565,409, the percentage is 1.78; and of fifteen national banks which had closed business prior to 1870, it is 1.39 per cent. upon a total circulation of \$1,554,400.

The exchanges at the clearing-house in New York City for the year ending October 31, 1875, were more than \$23,000,000,000, the average daily exchanges being \$75,301,000, while the daily balances paid in money were but \$3,608,000, or only 4.8 per cent. of the amount of the settlements.

The amount of the coin and paper currency of a great nation is small in comparison with that of bank checks, certificates, and bills of exchange, which are used as credit circulation.

The law provides that the national banks shall, before the declaration of a dividend, carry one-tenth part of their net profits of the preceding half-year to surplus fund, until the same shall amount to twenty per cent. of their capital; but that losses and bad debts shall be deducted from their profits before a dividend shall be declared. The following table gives, by geographical divisions, the capital, surplus, dividends, and net earnings, and the ratios of dividends to capital, to capital and surplus, and of earnings to capital and surplus, for the year ending September 1, 1875:

GEOGRAPHICAL DIVISIONS.	Capital.	Surplus.	Dividends.	Net Earnings.	RATIOS.		
					Dividends to Capital.	Dividends to Capital and Surplus.	Earnings to Capital and Surplus.
New England States.....	\$161,195,282	\$43,291,945	\$15,548,626	\$17,799,897	9.6	7.6	8.7
Middle States.....	190,907,544	57,787,971	13,688,771	20,847,888	9.8	7.6	8.2
Southern States.....	84,160,705	4,805,819	3,002,404	3,817,961	8.7	7.7	9.3
Western States.....	110,153,801	26,956,408	11,833,800	15,971,438	10.7	8.6	11.6
United States.....	\$495,716,832	\$132,842,143	\$49,063,601	\$57,986,324	9.9	7.8	9.8

The dividends upon capital during the last year were nearly ten per cent., but the ratio of dividends to capital and surplus was less than eight per cent.

The average rate of interest in New York City for the year ending June 30, 1875, was three per cent. on call loans, and 5.6 per cent. on commercial paper. For the six months ending October 31, 1875, the average rate was 2.6 per cent. on call loans, and 5.1 on commercial paper.

The whole number of national banks which have failed since the organization of the system to October 1, 1875, is thirty-eight, with a

capital of \$9,000,100. The amount of claims proved is \$14,672,106; dividends paid upon these claims, \$8,292,877. The total loss to creditors is estimated at \$3,984,503. There has been no loss whatever upon circulation.

The following table exhibits the resources and liabilities of the national banks in New York City, and in the State exclusive of the City, on December 17, 1875; also the resources and liabilities of the State banks in New York City and State, on the same date; and of the State banks, savings-banks, and trust companies of the country, so far as they could be ascertained from official sources:

	NEW YORK CITY.		NEW YORK STATE.		UNITED STATES.

The national banks pay to the Treasurer the following taxes in half-yearly payments: one per cent. annually upon the average amount of notes in circulation, and one-half of one per cent. annually upon the average amount of deposits, and the average amount of capital stock not invested in United States bonds; and section 5219 of the Revised Statutes of the United States provides that the Legislature of each

State may determine and direct the manner and place of taxing the shares of national banks, but that such taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State. The following table gives, by geographical divisions, the amount of national and State taxes paid by the national banks, and their ratios to capital, for the year 1874:

GEOGRAPHICAL DIVISIONS.	CAPITAL STOCK.	AMOUNT OF TAXES.			RATIOS TO CAPITAL.		
		United States.	State.	Total.	United States.	State.	Total.
New England States.....	\$160,517,266	\$1,996,588	\$2,980,484	\$4,877,072	Per cent. 1.2	Per cent. 1.8	Per cent. 3.0
Middle States.....	190,162,189	3,825,425	3,911,871	7,736,796	1.7	2.1	3.8
Southern States.....	83,558,468	486,540	517,792	954,332	1.8	1.5	2.3
Western States and Territories.....	109,518,801	1,597,565	2,210,679	3,808,244	1.5	2.0	3.5
United States.....	\$498,751,679	\$7,255,098	\$9,620,326	\$16,875,409	1.5	2.0	3.5

The ratio of taxation to capital for the year 1867 was as follows: United States tax, 2.2; State tax, 2.1; total, 4.3. For the year 1869 the United States tax was 2.4, and the State tax 1.7; total, 4.1. The whole amount of United States tax paid by the national banks, since the organization of the system in 1863, is as follows: on circulation, \$30,836,937; on deposits, \$30,104,762; on capital, \$4,082,151; total, \$65,023,850.

The returns from the State and savings banks and trust companies are very incomplete, for the reason that the laws of many of the States do not require periodical reports to be

made. The United States laws, however, require returns of capital, circulation, and deposits, to be made by all of these institutions, and by private bankers, to the Commissioner of Internal Revenue, for purposes of taxation; and from these returns, and from the reports made to the Controller of the Currency, the following statement has been prepared, showing, by States, the amount of circulation of all the national banks on January 1, 1876, and the amount of capital and deposits of the national banks and of the State and savings banks, trust companies, and private bankers, in May, 1875:

STATES AND TERRITORIES.	NATIONAL BANKS.				SAVINGS-BANKS, STATE BANKS, AND PRIVATE BANKERS.		
	Circulation, January 1, 1876.	No. of Banks, May 1, 1875.	Capital, May 1, 1875.	Deposits, May 1, 1875.	No. of Banks, May, 1875.	Capital, May, 1875.	Deposits, May, 1875.

The average capital and deposits of the State and savings banks and private bankers, for the six months ending May 31, were—capital, \$17,706,226.35; deposits, \$1,232,595,233.46.

The legislation of Congress relative to the currency, at the session of 1874-'75, consisted in releasing the banks from the restriction on the amount of their circulation, and fixing January, 1879, as the period when the resumption of specie payments should commence (*see* CONGRESS, UNITED STATES).

The subject of the expansion or contraction of the currency extensively occupied the public. The question of expansion was presented under the form of the substitution of the legal-tender notes of the Government as the paper currency of the country, and the withdrawal of all bank-notes. The following letter from Mr. B. F. Butler, member of Congress from Massachusetts, indicates the views of the advocates of a legal-tender currency:

Boston, August 13, 1875.

MY DEAR SIR: Engagements long since made would make it impossible for me to be present on September 1st at the meeting at Cooper Institute. I need not tell you, or my friend Mr. Schell, how much I sympathize with your movement. All my utterances, public and private, have been in that direction. I am unable to comprehend, appreciate, and much less admire, that system of government finances which has so wrought upon the business and production of the country that over 2,000,000 working men and women who desire productive employment have not had it for the last two years, and by which the production which they would have added to the wealth of the country during that time is lost. How the country is to grow rich enough to pay its debts by the non-production of its able-bodied workers, is something that I cannot comprehend. Assuming that each one of that number, skilled and unskilled, could have averaged \$2 per day for the working days of the past year—and I suppose you will agree with me that that is little enough—there we have lost \$1,200,000,000, or about equal to half of the national debt, for this enforced idleness, to say nothing of the loss of the morals of the working men and women. How long men in active business, and property-holders, and holders of those kinds of property which are open to the tax-gatherer, will permit a system of financial administration to go on by which their

property shall depreciate 33 per cent. in its value, while the owners of property such as notes, mortgages, and bonds, which are untaxed, because not open to the tax-gatherer, have their property appreciate and escape taxation, is a problem which the good sense of the people of this country will solve at the coming presidential election.

I regret that I cannot be with you and elaborate these views, as I should be glad to do in New York City, whose docks are deserted by shipping, whose stores are unrented, and whose dwellings have been so depreciated as hardly to meet the mortgages on them, and where, I think, sound financial doctrines are as much needed as anywhere. My necessities compel me to forego this, which would be a pleasure to me and, I trust, a profit to others. I am informed that Mr. Duncan, of Duncan, Sherman & Co., went to Washington when the currency bill was before the President to advise him to veto it because it was necessary to depreciate values. The President did veto the bill; values have been depreciated, I trust to an amount entirely satisfactory to Messrs. Duncan, Sherman & Co., however little their creditors may relish the process.

I have the honor to be, very truly yours,

BENJAMIN F. BUTLER.

To EUGENE BREEB, Secretary of the Legal-Tender Club, New York.

The question, among others, was made an issue in the State election in Ohio. But the result of the election could not be considered as seriously altered by it, as the majority was small on the side of the opposition, and might have been partly produced by other issues.

The aggregate yield of gold for the year ending December 31, 1875, is reported by Mr. Valentine, of Wells, Fargo & Co., San Francisco. The amount was \$26,349,476, against \$26,358,776 in 1874. The production of silver shows a notable increase. It is reported at \$54,539,561, against \$48,042,279 in 1874. Altogether the whole yield of the mines of this country amounts to more than \$80,000,000 of gold and silver, which is a greater sum than that of any previous year. In 1853 the aggregate supply of the precious metals was \$65,000,000, and this total was not exceeded till 1873, when the aggregate was \$72,258,693, or \$8,500,000 less than in 1875. Subjoined are the statistics of 1875 and those of 1874:

STATES AND TERRITORIES.	Gold Bullion, etc., by Express.	Gold Bullion, etc., by other Conveyances.	Silver Bullion, by Express.	Ores and Base Bul- lion, by Freight.	1875.	1874.
					Total.	Total.
California	\$14,842,010	\$1,494,201	\$937,768	\$1,089,172	\$17,758,151	\$20,300,581
Yerada	196,868	19,685	85,238,193	4,978,683	40,478,369	35,452,283
Oregon	759,183	495,913			1,185,046	609,070
Washington	74,517	7,415			81,932	158,685
Idaho	1,163,898	116,898	230,535	44,000	1,554,903	1,880,004
Montana	2,235,669	500,000	68,000	750,000	3,573,669	3,439,498
Utah	43,686	4,368	764,041	4,875,399	5,687,484	5,911,273
Arizona	32,500			55,598	109,093	26,066
Colorado	2,637,444		2,610,266	1,062,107	6,299,817	4,191,406
Nevada	68,117		1,716,194	624,870	2,408,671	793,578
British Columbia	1,615,412	161,541			1,776,958	1,686,567
Total	\$23,649,934	\$2,699,492	\$41,030,237	\$12,459,274	\$80,389,087	\$74,401,055

If we add these figures to the tables of Mr. Rosster Raymond, Commissioner of Mining, we shall find that the total production of the precious metals in this country from 1848 to 1875 will amount to \$1,582,090,092. Of this

sum the gold product has been \$1,298,458,252, and that of silver \$288,631,830.

The following estimate of the taxes in the United States is from the message of Governor Tilden, of New York. It is a comparison of

the public expenditures of 1870—five years after the close of the war—with those of 1860 and 1850:

TAXES IN THE UNITED STATES.

TAXES.	1850.	1860.	1870.
	Gold.	Gold.	Currency.
Federal	\$40,000,000	\$60,010,112	\$450,000,000
State, county, city, and town	43,000,000	94,186,746	230,591,521
Total	\$83,000,000	\$154,196,858	\$780,591,521
Population	23,191,876	31,443,821	38,556,371
Taxes per Head.			
Federal	\$1 72	\$1 91	\$11 67
Local	1 85	2 99	7 24
Total	\$3 57	\$4 90	\$18 91

The aggregate Federal taxation of the eleven years now closing, computed in currency, from the official statements, is more than \$4,500,000,000. The local taxation, assuming the census statement for 1870 as an average, is more than \$3,000,000,000. The aggregate taxation exceeds \$7,500,000,000.

The number of failures in the United States for the nine months ending September 30, 1875, was 5,334, and the aggregate liabilities were \$131,172,503. This is greater in number than has ever been recorded before during the same period.

The range of prices in New York for Government securities for the year 1875, and the amount of bonds of each class outstanding on the 31st of December, were as follows:

BONDS.	RANGE IN 1875.		AMOUNT DECEMBER 31.	
	Lowest.	Highest.	Registered.	Coupon.
6s. 1881.....regular.....	118 Jan. 5....	122½ May 26....	\$193,378,000	
6s. 1881.....coupon.....	118½ Jan. 8....	126½ June 17....		\$90,335,350
6s. 5-20's, 1864.....coupon.....	114½ Nov. 12....	121 April 27....	14,218,550	16,444,150
6s. 5-20's, 1865.....coupon.....	115½ Dec. 28....	122½ June 18....	88,368,450	118,611,650
6s. 5-20's, 1865, new.....coupon.....	117½ Jan. 8....	124½ June 17....	59,408,900	143,362,300
6s. 5-20's, 1867.....coupon.....	118½ Jan. 9....	125½ June 25....	89,157,300	221,465,550
6s. 5-20's, 1868.....coupon.....	118 Jan. 9....	125½ June 18....	14,680,500	22,648,500
6s. 10-40's.....regular.....	118½ March 5....	118½ June 18....	141,644,600	
6s. 10-40's.....coupon.....	118½ March 4....	119½ Aug. 28....		52,921,700
6s. funded, 1881.....coupon.....	118½ Jan. 2....	119 June 28....	216,470,100	257,063,250
6s. currency.....regular.....	117½ Jan. 4....	125½ Nov. 28....	64,623,512	

The range of prices in London, during 1875, was as follows:

SECURITIES.	Lowest.	Highest.
United States 6s, 5-20's, 1865, old.....coupon.....	108½ November 8	108½ April 5
United States 6s, 5-20's, 1867.....coupon.....	106½ June 18	109½ May 9
United States 6s, 10-40's.....coupon.....	102½ February 13	107 August 13
New 6s.....coupon.....	103 April 19	106½ August 19

The following comparisons, from the circular of Messrs. Fisk & Hatch, of New York, on January 6, 1876, show the relative price of Government bonds, and some of the other prominent first-class securities, at two periods:

BONDS.	December 31, 1874.	December 31, 1875.
New York Central sevens.....	115	126
New Jersey Central first-mortgage bonds.....	108	115
Central Pacific gold bonds.....	97	108½
Western Pacific gold bonds.....	88	100
Union Pacific first-mortgage bonds.....	94½	106
Morris & Essex first-mortgage bonds.....	108	115
Delaware & Hudson Canal stock.....	117	124
Delaware, Lackawanna & Western stock.....	109½	120½
United States five-twenties of 1867.....	122	123
United States sixes of 1881.....	122½	124½
United States ten-forties.....	115½	118½
United States fives of 1881.....	114	117

The highest price of gold during the year was on October 5th, 117½ to 117¾, and the lowest 111½ to 112½ on January 15th.

"The course of foreign exchange," says the *Financial Chronicle*, "was not seriously disturbed during the year by any irregularity in the commercial transactions between the United States and foreign countries, but rates were greatly depressed at times by speculative operations in the New York gold-market,

which led to excessive stringency in gold loans, and also advanced the premium. As all the transactions in exchange are done on a gold basis, the result of such manipulations was to put a check on dealings in exchange, for the time being, and to force rates down to unnaturally low figures; thus, on the 16th of March the rate for prime sixty-days bankers' sterling was down to 4.79, and again on the 20th of October down to 4.77. Aside from the local and temporary influence here referred to, the tendency of exchange was strong in the first eight months of the year, frequently ruling above specie-shipping point, and admitting of the export, prior to September 1st, of \$61,877,998 of specie from the port of New York. The principal financial transaction between this and foreign countries was the negotiation of United States five per cent. bonds abroad, by the syndicate of bankers, and the calling in of like amounts of the 5-20 six per cent. bonds for redemption, all of which was done without any material derangement of the exchanges. In the first two months of the year there were negotiated in London some \$36,000,000 of loans, mostly for railroads, of which \$12,000,000 was to replace prior loans then outstanding. Subsequently in the year, there were

very few loans placed abroad, except for cities, of which the aggregate amount was not large.

The range of prices of a few leading State and railroad bonds for 1875 has been as follows:

BONDS.	RANGE FOR YEAR 1875.	
	Lowest.	Highest.
% Tennessee, new series.....	88½ Dec. 23	55½ Jan. 5
% North Carolina, old.....	16 Dec. 10	39 Jan. 18
% North Carolina, new.....	11 June 12	16 Jan. 7
% Virginia, consolidated.....	55½ Jan. 26	69½ Oct. 2
% Virginia, second series.....	86 Mch. 28	50 Oct. 9
% South Carolina, Jan. and July..	29½ Sept. 23	38 Dec. 15
% Missouri long bonds.....	94½ Jan. 14	108½ Dec. 23
New York Cent. & Hud. 1st Ts.....	111½ Jan. 18	129½ Dec. 31
Central Pacific, gold 6s.....	90½ Jan. 6	106½ Dec. 29
Union Pacific 1st 6s.....	90 Jan. 6	106½ June 30
Union Pacific land-grant Ts.....	90 Jan. 8	102½ Sept. 20
Union Pacific S. F. 8s.....	80½ Jan. 5	97½ Aug. 25
Erie 1st-mortgage Ts.....	100 May 29	107½ May 6
New Jersey Central 1st Ts.....	107½ Feb. 1	115½ Dec. 8
Fort Wayne 1st Ts.....	104½ Jan. 7	116 Nov. 5
Rock Island 1st Ts.....	105 Jan. 5	111½ June 5
Central & Northwestern gold Ts.....	79 June 15	89½ Nov. 27

The range in prices of the most active railroad stocks, during the year, has been as follows:

STOCKS.	Lowest.	Highest.
New York Central & Hud. River.....	100 May 28	107½ May 8
Huron.....	127½ Jan. 12	138 April 27
Erie.....	132 June 31	85½ Mch. 29

American Express.....	50 June 25	65 Jan. 15
United States Express.....	41½ Aug. 11	65 Jan. 11
Wells, Fargo & Company.....	71 Aug. 23	92½ April 30

From the reports of the Department of Agriculture it appears that the decrease in the monthly rates of wages (without board) of farm-laborers engaged by the year, from 1869 to 1875, in various sections of the country, is as follows: Eastern States, from \$32.03 to \$29; Middle States, \$29.15 to \$26.98; Western States, \$27.01 to \$23.25; and California, \$46.38 to \$44.50. In Pennsylvania, Ohio, Indiana, and Illinois, the average falling off was much less than that above indicated. Monthly wages, with board, are from \$8 to \$10 below the quoted rates, and show about the same decrease compared with 1869. Wages per day for transient service differ greatly in different States. In the South they touch the low point of 72 cents to \$1.15, while in Michigan they

are \$2.00, in Minnesota \$2.30, and Wyoming \$3.62—with board in every case. The average in the Middle and New England States is not far from \$1.50. The slackness of immigration for the past two years has had some effect in staying the decline of farm wages, and this cause will probably continue to operate a year or two longer.

FINLAY, GEORGE, a British historian, and the last of the Philhellènes that followed Byron to Greece, was born in 1800; died January 26, 1875. His hopes, like those of Byron, for the regeneration of the Greeks, were not fulfilled. But, true to the cause which he had once taken up, he bought some land and a house near Athens, where he settled. Finding his attempts to promote agriculture in Attica futile, he turned his attention to history, not only to that of the Greek Revolution, but to that of modern Greece in general. His "History of the War of Independence" is a valuable political study, in which he fearlessly criticises the mistakes and shortcomings of the Greeks, the Turks, and the allies. His "History of Greece under the Romans" (second edition, 1857), "History of Mediæval Greece and Trebizond" (1851), and "History of the Byzantine and Greek Empires, from 716 to 1057" (2 vols., 1853-'54), were also useful for an estimate of the Greeks, and particularly for the Oriental question. It was his opinion that the regeneration of Greece was not to be brought about by a revival of classic forms, but by a rational development of the people. These views he expressed in a series of letters to the London *Times*, which have done a great deal to check the spread of Russian influence. His last work is an edition of the diary of Brue, a French interpreter in Constantinople, who accompanied the Grand-Vizier Ali in 1715 in the campaign in the Morea.

FINNEY, Rev. CHARLES G., evangelist, reformer, and long President of Oberlin College, born in Warren, Litchfield County, Conn., August 29, 1792; died at Oberlin, August 16, 1875. In early life he studied law in Jefferson County, N. Y., but, having been converted in a revival in 1821, he entered the Congregational ministry in 1822, and began to labor as an evangelist in 1824. His first successes were in Central and Western New York. From the country Mr. Finney transferred his labors to the city of New York, where he preached to large audiences. The Chatham Theatre was bought for his use, and transformed into a church, and the *New York Evangelist* (now an able organ of the Presbyterians) was established as the advocate of the revival. In 1835 he accepted a professorship in Oberlin College, which had been founded by his friends, and the same year became pastor of the Congregational church in that town. In 1848 he visited England, where he preached as a revivalist for three years, effecting many conversions. While there he had the hearty and influential cooperation of Rev. Dr. Campbell, then the leader of Congregationalism in Great

Britain. In 1852 he became President of Oberlin College, and held that position until 1866. More than once during his pastorate at Oberlin he entered the field again as evangelist. In 1857 he preached a series of sermons in Rochester, and a revival followed. A later visit to New York City, however, was followed by no very marked results. But his labors in the Park Street Church, Boston, led to many conversions. He had great faith in doctrinal preaching, and aimed to keep down animal excitement. His preaching was plain, logical, unimpassioned, and direct. Mr. Finney was apt to hold advanced opinions, having been an abolitionist, an anti-mason, and an advocate of teetotalism. Among his writings are "Lectures on Revivals," "Lectures to Professing Christians," "Sermons on Important Subjects," and "Lectures on Systematic Theology." They have all passed through numerous editions, both in this country and in England.

FLORIDA. The eighth regular session of the Florida Legislature, under the constitution of 1868, began at Tallahassee on the 4th of January, and continued until the 26th of February. The greater part of several days was occupied in electing a United States Senator, to succeed Abijah Gilbert, Republican. The prominent candidates were Horatio Bisbee, Jr., Republican, and Charles W. Jones, Democrat. At length, on the twenty-third ballot in joint convention of the two Houses, Mr. Jones was elected, receiving 41 votes out of a total of 77. He is a native of Ireland, born in 1834, and coming to this country when ten years of age. He spent some years in Alabama, Louisiana, and Mississippi, and in 1854 settled down at Pensacola, Fla. He acquired a fair education by his own exertions, was admitted to the bar in 1857, and rose to the first rank among the lawyers of the State. In 1872 he was a member of the National Democratic Convention, held at Baltimore, and the same year was the Democratic and Liberal candidate for Congressman from the State at large, and was defeated by W. J. Purman, who had a majority of 1,726 votes in a total of 83,348. He was elected to the State Assembly from Escambia County in 1874, and was a member of that body when chosen to the United States Senate. He is a liberal Democrat of first-class abilities and unquestioned integrity.

Charges of bribery having been circulated against members of the Legislature in connection with the senatorial election, a special committee was appointed in each branch to investigate them. The Senate committee reported, as the result of a careful examination, that "not even a whisper of suspicion has been shown to exist as to any member of the Senate." Six out of seven members of the House committee reported that after the most searching examination they had "failed to obtain legal evidence sufficient to sustain any of said charges." The other member submitted a minority report,

in which he said that "the evidence produced before the committee to investigate certain charges relative to corrupt influences having been used to move members of this body in voting for United States Senator, has been of such character as to induce the belief that such influences have been used, but direct evidence has not been produced to convict any particular person or persons."

The seat occupied in the Senate by E. T. Sturtevant was contested by Israel M. Stewart, and, after due examination and report by the Committee on Privileges and Elections, was awarded to the contestant. According to the committee's report, Mr. Sturtevant had been one of the inspectors of election in the only precinct in Dade County, and as such had certified, with two others, that of the 80 votes cast for Senator Stewart had received 16, and afterward as one of two county commissioners set aside the return which he himself had signed, on the ground that three persons voting for Stewart had no right to vote; then, as judge of the county court and one of the board of canvassers, sat in judgment on his own case, rejected the three votes, and declared himself to have received a majority. In the two counties forming the twenty-first senatorial district, the committee concluded that 52 votes were cast for Stewart and 44 for three other candidates, Sturtevant receiving only 14, though he had obtained the seat and held it through one session and part of another.

The following joint resolution was adopted regarding the independence of Cuba:

The people of the State of Florida, represented in Senate and Assembly, do resolve as follows: That the citizens of Cuba, in their struggle to free themselves from tyrannic, foreign, despotic rule, and establish a republican government based upon the principle that the people are sovereign, and in them, and then alone, reside the inherent powers of governing themselves, are illustrating the ideas, opinions, and principles enunciated and proclaimed by the people of these United States when they achieved independence and established their own government.

That their fortitude and perseverance, manliness and magnanimity, but above all their strict and persistent adherence to the rules of warfare recognized and established among and by all Christian and civilized nations and peoples, have won our approval and challenged our admiration.

That their adherence to the cause of human freedom for six years, baffling for that period and holding at bay the entire force brought by despotism to crush out and overpower them, evidences not only a fixed purpose to continue the contest and make it a success, but the ability likewise to accomplish that success.

That it is the deliberate opinion of the people of the State of Florida that the Government of the United States should acknowledge the republic of Cuba as a free and independent government, and one of the family of nations.

That our Senators in Congress be instructed, and our Representatives therein requested, to lay these resolutions before their respective bodies and urge the adoption of the principles thereof by Congress.

That his Excellency the Governor forward a copy of the same to the President of the United States, and to each of our said Senators and Representatives.

Memorials to Congress were adopted, asking

for an appropriation of \$25,000 for the construction of a navigable canal connecting the waters of the Indian River and Mosquito Lagoon, a distance of 900 yards, on the ground that it would "secure to the State of Florida an inland navigation of about 800 miles, through a section of country admirably adapted to semi-tropical and varied productions, now almost unknown and useless for want of proper transportation;" and praying for the extension of liberal aid in the construction of the Texas Pacific Railroad.

The general legislation of the session was unimportant. "An act to enlarge and extend the corporate powers and privileges of the Atlantic & Gulf Railroad Company in the State of Florida" was vetoed by the Governor. This is a corporation organized under the laws of Georgia, to which the Pensacola & Georgia Railroad Company had been authorized in 1866 to sell its franchises and privileges on certain conditions which had never been fulfilled. The object of this act was to give the corporation control of this latter road, notwithstanding the breach of the conditions of the former grant, and to extend its powers and privileges so that they would be equal to those of any company organized under the general railroad act of 1874. The Governor's main objection to this was that it would interfere with the development of Florida's own system of internal improvements, and make her tributary to Georgia. The scheme of internal improvements devised in 1855 contemplated two main lines of railroad, one running from east to west and connecting Fernandina and Jacksonville on the Atlantic coast with Mobile and other western Gulf ports, and one running from north to south and connecting Fernandina and Jacksonville with Cedar Keys and Tampa. The carrying out of this plan had been interrupted by the war and never resumed, but the Governor thought it should not be abandoned, and the transportation system of the State made merely tributary to the port of Savannah.

Among the acts of the session was one providing for taking a census of the inhabitants of the State by the ex-assessors of the several counties, returns to be made to the Secretary of State before the 1st of December; one amending the act establishing a uniform system of municipal government, so as to limit the rate of taxation to one and a half per cent. on the value of real and personal property; one providing for the collection of damages from railroads for the destruction of cattle and other stock; one authorizing married women to convey their separate estate and release dower by attorney; and one prohibiting the attachment of money due as wages to any laboring-man who is the head of a family.

The amendments to the State constitution proposed by the Legislature of 1874 came up for consideration, as it was necessary for them to be approved by a two-thirds vote at this session before they could be submitted to the

people for ratification. Articles VI., VII., VIII., IX., X., XI., XII., XIII., and XIV. of these amendments were approved by the necessary vote. The first of these changes section 2 of Article IV. of the constitution making the sessions of the Legislature biennial, beginning on the Tuesday after the first Monday of January, 1877. The second modifies section 29 of Article IV., providing for the impeachment of certain executive and judicial officers and their trial before the Senate as a court of impeachment. The third amends section 7 of Article XII., prohibiting the State from loaning its credit to any individual, company, corporation, or association, or becoming a stockholder therein; also forbidding the Legislature to authorize any county, city, or town, to become a stockholder in or appropriate money for or loan its credit to any such corporation or association. The next amends Article VI., and defines the jurisdiction and powers of the Supreme Court, Circuit Court, county courts, and justices of the peace. The next changes section 12 of Article VII., and declares that grand and petit jurors shall be taken from the registered voters of the respective counties. The next changes section 24 of Article XVI., declares that the property of all corporations shall be subject to taxation unless held and used for religious, educational, or charitable purposes. The next modifies section 22 of Article V., so as to give the Governor power to veto certain items of appropriation bills while approving of other items. The next changes section 14 of article V., providing for the election of Lieutenant-Governor and defining his duties. It also declares that the Governor shall not be out of the State in time of war without the consent of the Legislature, and abrogates altogether the 15th section of Article V. The next and last amends section 16 of Article V., authorizing the Governor to require the opinion of the justices of the Supreme Court at any time on the interpretation of any portion of the constitution affecting his powers and duties.

An act was passed providing for the submission of these amendments to a vote of the people at a special election to be held on the 4th of May. The vote at this election was a very light one, but all the amendments were ratified by large majorities; the sixth by a vote of 4,746 to 418; the seventh, 5,007 to 177; the eighth, 5,017 to 174; the ninth, 4,306 to 873; the tenth, 4,697 to 381; the eleventh, 5,001 to 185; the twelfth, 4,799 to 270; the thirteenth, 4,985 to 174; and the fourteenth, 4,937 to 257. The Governor issued his proclamation on the 8th of June, declaring that the amendments had been duly ratified and approved and that "the same are, each and every of them, a part of the constitution of the State of Florida."

Among the bills left over from the last session of the Legislature, which will regularly come up for action at the next, is one provid-

ing for the removal of the capital of the State from Tallahassee to Jacksonville.

In March, the county commissioners of Escambia County applied to the Attorney-General to know whether "under existing laws" they were authorized "to levy and collect a special tax for the erection of a court-house and jail, when no issue of bonds is contemplated, but when the tax itself is to be applied directly to the purpose named." The answer was, that the law required them "to build and keep in repair county buildings, roads, and bridges," and "to issue bonds in their respective counties for the purpose of erecting a court-house, jail, and to prescribe the rate of interest thereon: *Provided*, That no bonds shall be issued except the same be ordered by a majority of the registered voters of their respective counties." In view of this the Attorney-General was of opinion that no other course than that prescribed in this provision could be followed. He said:

It is true the law does not prohibit the direct levy and collection of a tax for building a court-house and jail; but it is important to consider that it does not authorize it, and that the county commissioners are restricted in their duties to the authority they have under the law; and that the law does prescribe the exact manner of raising funds to build a county court-house and jail. The requirements of the law are just; and the registered voters have a right to be consulted through the merits of the ballot-box, whether they, and the other tax-payers, will be taxed or not, for the necessity of which they are not only permitted but required to vote on, that the measure may be vitalized by the sanctity of the law. It is my opinion that you can only tax the people of the county by ascertaining whether or not, by a vote of a majority of the registered voters of the county, such a tax should be levied by authorizing the issue of bonds in accordance with the statute in such cases made and provided.

The United States Circuit Court held at Jacksonville in the spring was occupied for some time with the case of Francis Vose against the trustees of the internal improvement fund, which has not yet been finally determined. It appears that in 1859 the firm of Vose & Livingston, of New York, sold iron to the Florida Railroad, and took its note indorsed by D. L. Yulee, and secured by \$195,000 of internal improvement bonds. On the dissolution of the firm some years ago, the note and bonds came into the sole possession of Mr. Vose. He sold the bonds for a small sum and himself became the purchaser, applying the proceeds as a credit on the face of the note. He then brought suit in New York against the Florida Railroad and Mr. Yulee, and recovered judgment for \$165,000, the amount due at that time. In 1871 he went to Florida and demanded of the trustees payment of the bonds and overdue coupons amounting to nearly \$400,000; this was refused on the ground that the Florida Railroad had been sold under the internal improvement law, and the amount of the proceeds due on these bonds, some \$40,000, had been paid to Moses Taylor, of New York, for their redemption, and the trust fund

was no further liable. Suit was brought against the trustees in the United States Circuit Court, and a judgment recovered for the full amount, and a decree was obtained requiring the trustees to sell lands for cash only, to be exclusively applied to the payment of overdue coupons. In 1872 Mr. Vose obtained an order from the court placing the trust fund in the hands of a receiver, and directing a public sale of the sinking fund. This latter consisted of \$100,000 in bonds and securities, which were disposed of at a forced sale, and bought by Mr. Vose for \$45,000. In 1873 he obtained a decree appointing agents to sell public lands to satisfy his claims. His last suit against the trustees was for an alleged violation of the decree of the court in reference to the disposal of public lands, and Mr. Justice Bradley decided that the course of the trustees had not been in violation of such decree. The whole amount of Mr. Vose's claim for a debt on which judgment was rendered in 1870 or thereabouts for \$165,000 seems to be the amount of said judgment with interest, something over \$200,000, principal of 150 internal improvement bonds, \$150,000, past-due coupons and interest \$310,000, coupons to become due \$168,000, or considerably over \$800,000 in all. The Legislature at its last session, in accordance with the recommendation of a special committee, adopted the following resolution:

Resolved, That his Excellency the Governor is hereby requested to bring suit at once in the name of the State in the Supreme Court of the United States against the said Vose, restraining him from proceeding further, and the board of trustees from paying to the said Vose any further sums of money which they may receive from the sale of the swamp and overflowed lands, and to prevent any further misapplication of the funds or of the diversion of the lands from their legitimate and lawful purposes, until the legality of his position is fully established and the said court otherwise determine: *Provided*, That said suit shall not cost the State of Florida any sum of money or thing or things whatever.

A case came before the United States Court in May involving the construction of the homestead provision of the State constitution. A debtor had a house and forty acres of land, and a sawmill in which he carried on the business of a lumber-manufacturer. He claimed exemption of his sawmill from sale for debt as a part of his homestead. The court decided that he was entitled to it, as the constitution exempts one hundred and sixty acres of land as well as the dwelling-house in the country, and the "business-house" as well as residence in cities. It was the intent to leave the man his means of pursuing the occupation by which he gains a livelihood. Mr. Justice Bradley said:

In the case under consideration the debtor claimed to follow the business and trade of sawing lumber and asks to have his mill, which adjoins his dwelling, reserved as part of his homestead. In my opinion this claim is supported by the constitutional provision. The mill, in the sense of that constitution, is appurtenant to and part of the debtor's homestead. If it be objected that the value is un-

reasonably great, we answer that the constitution prescribes no limit of value, and the courts cannot prescribe one. As before stated, we think that a man's shop, store, or mill, in which he pursues his usual trade or avocation (as well as the farmer's farm), if connected with and adjacent to his dwelling, is intended to be included in his homestead. It is the stand or place on which and by means of which he may continue to pursue his industrial labor and be a useful citizen, and is within the object which the constitution has in view.

On the night of July 21st, Dr. E. G. Johnson, a member of the State Senate, was shot and killed, near Hart's Road, on the line of the Atlantic, Gulf & West India Transit Company's Railroad. Dr. Johnson was a Republican in politics, and an outspoken partisan, and his assassination is supposed to have been prompted by political enmity. A reward of \$1,000 was offered by the Governor for the apprehension of the perpetrator of the deed, and an additional reward of \$1,000 was offered by Nassau County for the same purpose. A man named Harney Richard was arrested, and was indicted for the crime, after one grand-jury had failed to find an indictment.

In November, Governor Stearns referred to the justices of the Supreme Court the question whether the Legislature would meet in regular session in January, 1876, under the operation of the amendment to the constitution. The constitution, before amendment, provided for annual sessions, and the amendment declared that "from and after the first Tuesday after the first Monday in January, A. D. 1877, the regular sessions of the Legislature shall be held biennially, commencing on said day, and on the corresponding day of every second year thereafter." Chief-Justice Randall replied that "the original section 2 of Article IV., which provided for annual sessions of the Legislature, having been abrogated by the amendment, and there remaining no provision anywhere for a regular session in January, A. D. 1876, such session would be unauthorized. The original section provided that the Governor might convene the Legislature in extra session by his proclamation, and this provision is not changed, but reiterated, by the amendment. If a session of the Legislature is to be held before 1877, it must be in virtue of such proclamation.

Mr. Justice Westcott gave an opinion to the same effect, saying further:

There are many cases in which the letter of an act of the Legislature is made to yield to the spirit and intention of the law-making power. The rules to ascertain this spirit and intention are, for the most part, simple in their nature. In this case, however, admitting the application of the rule to changes in the organic law, the Legislature and the people have, by their action, left nothing to construction. To say that this section, as amended, which is the entire law, authorized a session in January, 1876, would be simple judicial legislation. In all of the States in which the method of amendment here followed has been adopted, the unvarying rule is that nothing of the old section which is omitted from the new section as enacted is in the future operative as law. The very purpose of requir-

ing the section, as amended, to be published entire, is to give certainty, by declaring the *whole law*, leaving nothing open for construction. The Legislature and people *expressly omitting* all authority for a session in January, 1876, from the new section, and nothing but the new section being now operative as law, it follows, necessarily, that there is no constitutional sanction for any regular session until the first Tuesday after the first Monday in January, A. D. 1877.

No general election took place in Florida this year, and no important action of the political organizations calls for notice. The Republican State Central Committee held a meeting at Tallahassee on the 20th of October, and determined to issue an address to the people, "setting forth the objects and principles of the Republican party, and inviting the coöperation and support of all liberty-loving and law-abiding citizens." This was done, but the document, which dealt with civil and political equality, education, the suppression of crime, immigration, internal improvements, State finances, etc., had no immediate reference to any political action.

The Florida Fruit-Growers' Association held a four days' session at Jacksonville, beginning January 20th. A great variety of topics was discussed, including the best means of transporting the products of the State to the Northern markets, and the advantages and methods of cultivating oranges, grapes, tobacco, sugar, and other productions for which the soil and climate of Florida are specially adapted. The importance of special lines of steamers from Florida ports was urged on the ground that a large share of the advantage and credit of her work was obtained by Georgia. The earliest fruits were sent north from Florida, but credited to Savannah because shipped from that port, and the finest shad from the St. John's River were noticed in commercial and other reports as coming from the same place for the same reason. It was shown that orange-trees could be made to yield from \$20 to \$30 a year each, and that there was hardly any limit to the possible production of this fruit. It was also mentioned that the grape and other small fruits, including the fig, could be raised in the greatest abundance and of the finest quality. Cuba tobacco was said to be a very profitable crop wherever there had been any systematic cultivation of it. It had been neglected for some years, and in Gadsden County, where 1,200,000 pounds were raised in 1860, the product in 1874 had been only 200,000 pounds, but would be doubled in 1875. It was also said that the sugar-cane was much better adapted to Florida than Louisiana. Some comparisons were made of the natural resources and advantages of Florida for agricultural purposes with those of other sections of the country, and it was claimed that this State was the very garden of the continent, needing only capital, enterprise, and systematic industry, to develop its riches.

In a lecture on "The Resources of Florida,"

delivered at Jacksonville on the 24th of March, it was claimed that the climate was not only adapted to the cultivation of the best tropical fruits, but was preëminently healthy and delightful at all times of the year. It was stated that in almost any part of the State 100 orange-trees could be raised on an acre of land, producing 1,000 oranges to each tree, worth at least a cent a piece to the grower. This would make the gross revenue of an acre of land planted with orange-trees \$1,000 a year. It was also said that lemons could be grown to advantage, larger and finer flavored than any from the Mediterranean. Pineapples of the most luscious quality were grown on the islands of Southern Florida, and their production could be increased to almost any extent. Bananas, guavas, bread-fruit, cocoa-nuts, mangoes, paw-paws, Spanish plums, avocado pears, Otaheite apples, and other tropical fruits, were mentioned as growing with great perfection on Florida soil. It was also said that sugar-plantations yielded \$500 to the acre, and that the State was capable of supplying the whole country with this product. Tapioca, arrow-root, and cassava, were enumerated as among the profitable products of the State, besides medicinal plants of great value, cotton, tobacco, and a variety of the most valuable grasses.

In an address before the Medical Association of the State on the "Climatology of Florida," by A. S. Baldwin, M. D., results were given of observations at various stations extending over a period of many years. The mean temperature of the entire State was given as 71.62° in spring, 80.51° in summer, 71.66° in autumn, and 60.04° in winter, or 74.87° for the whole year. The difference between the northern and southern stations is given as 4.28° degrees in spring, 1.83° in summer, 6.84° in autumn, and 5.40° in winter. It is seldom that the temperature is as low as 20° in winter or higher than 90° in summer. The average number of frosts at Jacksonville in twenty-seven years has been 5.4 in January, 3.1 in February, 1.3 in March, 0.2 in April, 0.2 in October, 2.3 in November, and 5.2 in December. In the same period the first frost came in October four times, in November sixteen times, and in December seven times, and very few frosts have occurred in April. From twenty-two years' observation it has been found that the average number of clear days was 20.3 in January, 19.5 in February, 20.4 in March, 25 in April, 22.1 in May, 17.1 in June, 18.5 in July, 19.1 in August, 17.2 in September, 19.2 in October, 20 in November, and 20 in December. The relative humidity was for January 67.20, for February 67.15, for March 57.50, for April 63.20, for May 62.60, for June 73.3, for July 74.7, for August 73.4, for September 76.8, for October 74.4, for November 71.5, for December 74. What is called the rainy season ordinarily begins about the middle of June and continues sixty days, but oscillates about a month either way. The average rainfall is 9.09 inches for the spring

months, 21.16 for summer, 12.64 for autumn, and 7.90 for winter, or 50.97 for the year.

The unsold school lands of the State amounted at the beginning of the year to 589,508 acres, seminary lands 38,714 acres, internal improvement lands 216,000 acres, swamp and overflowed lands 10,676,919 acres, besides 4,326,007 acres to which the State is entitled, but for which patents have not yet been issued. Much has been done and is doing to induce immigration into the State. The results thus far are not altogether satisfactory.

The bonded debt of the State in January was as follows:

Bonds issued previously to 1871 with interest to January 1, 1874, to be exchanged for bonds of 1873	\$512,322 50
Bonds of 1873, sold	300,000 00
Bonds of 1873 exchanged for other bonds	191,900 00
Bonds of 1873 exchanged for Controller's warrants	17,300 00
Bonds of 1871	250,000 00
Bonds due school fund	190,722 68
Bonds due seminary fund	71,322 45
	\$1,482,767 58
Deduct amount of bonds in sinking fund for payment of bonds of 1871	\$15,600 00
Deduct amount of bonds in sinking fund for payment of bonds of 1873	23,800 00—
Total bonded debt, less bonds in sinking fund	\$1,394,567 58

There were also warrants and certificates outstanding to the amount of \$185,646.14. The receipts of the Treasury for 1874, the last for which there is any official report, were \$401,679.68; expenditures, \$292,037.37. The receipts of the year from taxes and license fees were \$368,459.97.

The number of public schools in the State in 1873 was 511; in 1874, 557; number of pupils in 1873, 19,196; in 1874, 20,911. The amount of money received from State and county for educational purposes in 1873 was \$94,102.77; for 1874, \$95,774.53; total amount expended in 1873, \$103,907.06; in 1874, \$189,870.61. The interest derived from the common-school fund in 1874 was \$15,089.30. The amount obtained from the Peabody fund was \$8,000. The work of building the State Agricultural College at Eau Gallie on Indian River is in progress.

FORBES, ALEXANDER PONROSE, a bishop of the Scotch Episcopal Church, was born in Edinburgh in 1817; died October 8, 1875. He was the son of Lord Medwyn, a Scottish Judge of Sessions. He graduated from Brasenose College, Oxford, in 1844, and was soon afterward ordained. In 1847 he was consecrated Bishop of Brechin, and at the same time received the honorary degree of D. C. L. He wrote a considerable number of devotional works, among which the "Commentaries" on the Canticles, the Litany, the Seven Penitential Psalms, and the Te Deum, are best known. He held very advanced High-Church views, and was more than once suspected of an intention to join the Roman Catholic Church.

FRAAS, KARL NICOLAUS, a distinguished German writer on agriculture, was born September 8, 1810, in Stettelsdorf, Bavaria, and died November 9, 1875. He entered the University of Munich in 1830, where he studied medicine, natural history, and particularly botany. In 1835 he went as inspector of the Royal Gardens to Athens, and in 1836 was also appointed Professor of Chemistry and Technology and Botany at the university of the same city. He returned to Bavaria in 1842, became inspector and Professor of Chemistry and Technology in the Agricultural School in Schleishheim in 1845, and in 1847 Professor of Agriculture in the University of Munich, to which was added in 1851 the directorship of the school for veterinary surgeons. Among his works may be mentioned: "Synopsis Floræ Classicæ" (1845), "Klima und Pflanzenwelt in der Zeit, ein Beitrag zur Geschichte beider" (1847), "Geschichte der Landwirthschaft" (1851), "Die Schule des Landbaues" (second edition, 1852), "Die künstliche Fischerzeu-

gung (second edition, 1854), and "Buch der Natur für Landwirth oder landwirthschaftliche Naturkunde" (1860). He was also for eighteen years the editor of the *Journal of the Agricultural Society of Bavaria*.

FRANCE, a republic of Europe. President, Marshal Marie Edmond Patrice Maurice de MacMahon, Duke of Magenta, elected May 24, 1873. Chief of the Cabinet, Colonel Robert; Secretary of the President, Viscount d'Harcourt; Vice-President of the Council of Ministers at the close of the year 1875, Louis Joseph Buffet.

The National Assembly consists of 738 members. President, the Duke d'Andiffret-Pasquier.

The area of France, according to the official report on the census of 1872 ("Statistique de la France"), was 204,092 square miles.* The population, according to the census of 1872, was 36,102,921.

The following table exhibits the area and population of each department, and the movement of population during the year 1872:

DEPARTMENTS.	Area in Square Miles.	Population in 1866.	Population in 1872.	Births, 1872.	Deaths, 1872.	Marriages, 1872.

* The area of the several départements, as published below, agrees with the table given in the ANNUAL CYCLOPEDIA for 1873, except for the district of Belfort and the department of Vosges. The "Statistique de la France" gives for the former 238.44 square miles (instead of 2,84.72), and for the latter 2,268.98 (instead of 2,266.17).

DEPARTMENTS.	Area in Square Miles.	Population in 1866.	Population in 1872.	Births, 1872.	Deaths, 1872.	Marriages, 1872.
Mayenne.....	1,996	867,855	850,687	8,968	7,890	8,616
Meurthe-et-Moselle.....	2,025	866,617	856,187	8,975	8,968	8,150
Meuse.....	2,405	801,658	854,725	9,481	8,465	2,598

Vooges.....	2,269	397,951	892,968	10,621	7,889	
Yonne.....	2,868	872,589	868,608	7,511		
Total.....	204,092	86,469,886	86,102,921	966,000	738,064	852,754

The relation of sexes, in the total population, is as follows:

DIVISIONS OF COUNTRY.	Males.	Females.	Males to 100 Females.
Département de la Seine.....	84,920	83,454	104.39
Towns.....	129,795	125,737	103.21
Rural districts.....	829,766	812,308	105.59
Total.....	494,481	471,519	104.57

The movement of population from 1866 to 1872 was as follows:

YEARS.	Births.	Deaths.	Surplus of Births (B.), or Deaths (D.)	Percentage of Increase (I.), or Decrease (D.), of Population.
1866...	1,006,258	884,573	B. 121,685	I. 0.83
1867...	1,007,515	886,887	B. 120,628	I. 0.81
1868...	954,140	922,088	B. 32,052	I. 0.16
1869...	943,536	864,820	B. 84,206	I. 0.21
1870...	944,115	1,046,909	D. 102,894	D. 0.28
1871...	826,121	1,271,010	D. 444,815	D. 1.32
1872...	966,000	798,064	B. 172,936	I. 0.43

The excess of births over deaths was, in 1872, greater than in any year since 1830. It did not, however, balance the loss of population caused by the excess of deaths over births in the two years 1870 and 1871; and the three years from 1870-1873 show, when regarded conjointly, an average annual excess of 127,118 deaths. The favorable change in the movement of population during the year 1872 is apparent throughout France. All departments, except eight, report an excess of births over deaths, while in 1871 there was an excess of deaths in every department except three. It remains to be seen whether the favorable

change will keep on in subsequent years and check the decline of population which has been going on for years. The proportion of births to the total population, which, in 1827, was still 3.11 per cent., did not average, from 1848 to 1868, more than 2.62 per cent.; it was 2.57 in 1869, 2.55 in 1870, and 2.26 in 1871. While, from 1817 to 1854, there was one birth to every 34.3 inhabitants, it declined from 1847 to 1871, in the following proportions:

1847-1854.....	1 birth to 37.4 inhabitants.
1854-1860.....	1 birth to 37.8 "
1860-1868.....	1 birth to 37.9 "
1869.....	1 birth to 38.8 "
1870.....	1 birth to 39.4 "
1871.....	1 birth to 44.2 "
1872.....	1 birth to 38.1 "

The mortality in 1872 was not only less than in the war years 1870 and 1871, but also considerably less than in 1869; and the improvement was manifest in the cities and towns as well as in the rural districts. The following table shows the percentage of deaths:

DIVISIONS OF COUNTRY.	Total Deaths of 1872.	PROPORTION OF DEATHS TO POPULATION.			
		1869.	1870.	1871.	1872.
Département de la Seine.....	49,205	2.55	3.86	4.43	2.22
Towns.....	223,638	2.78	3.25	4.06	2.49
Rural districts.....	520,201	2.19	2.58	3.19	2.09
France.....	798,064	2.84	2.88	3.48	2.19

The number of stillborn children from 1869 to 1872 was as follows:

1869.....	45,390
1870.....	45,160
1871.....	40,815
1872.....	43,967

The proportion of marriages contracted in

1873 was larger than in any former year, which is partly explained by the fact that, by the almost universal enlistment of the young men in the army, a number of marriages which otherwise would have been contracted in 1870 or 1871 were postponed until 1872. The following table shows the proportion of marriages to the total population from 1825 to 1872:

1825-1829.....	1 to 133 inhabitants.
1829-1833.....	1 to 126 "
1834-1838.....	1 to 123 "
1839-1844.....	1 to 125 "
1845-1863.....	varying from 142 (1847) to 115 (1858).
1869.....	1 to 121 inhabitants.
1870.....	1 to 165 "
1871.....	1 to 129 "
1872.....	1 to 104 "

The number of illegitimate children has, since 1825, been invariably from seven to eight per cent. of all the children born. From 1861 to 1866 it amounted, on an average, to 7.56 per cent.; in 1872, to 7.21 per cent. There is, however, a marked difference in the towns and in the rural communities. In the department of the Seine they constituted, in 1871, 24.50, and in 1872, 24.61 per cent.; in the towns, by which name the French statisticians designate all the communities with more than 2,000 inhabitants, in 1871, 10.87, and in 1872, 10.42; in the rural communities, in 1871, 4.80; in 1872, 4.08 per cent.

The department of the Seine shows a very different percentage in the proportion of marriages to population from towns and rural districts, as is shown in the following table:

Département de la Seine.....	25,181 or 1.18 marriage per 100 inhab'ts.
Towns.....	86,498 or 0.96 " " "
Rural districts..	241,195 or 50.97 " " "
France.....	353,754 or 0.98 " " "

The following table, which exhibits the number of voters who, in December, 1874, were entitled to take part in the general and municipal elections, has a special interest in view of the general elections which will take place in the course of the year 1876:

DEPARTMENTS.	General Election.	Municipal Election.
Ain.....	108,975	100,776
Aisne.....	149,968	147,997
Allier.....	107,851	104,900

Sèvres (Deux).....	99,604	96,584
Somme.....	162,115	156,975
Tarn.....	109,583	108,897
Tarn-et-Garonne.....	73,086	73,286
Var.....	85,905	83,079
Vaucluse.....	88,286	78,416
Vendée.....	114,098	109,940
Vienne.....	92,760	91,410
Vienne (Haute).....	84,218	82,791
Voogres.....	111,889	108,879
Yonne.....	110,559	108,697
Total.....	9,911,787	9,549,640

The results of the census of 1872, relative to the religious denominations of the inhabitants, were as follows:

DENOMINATIONS.	Number.	PER CENT.	
		1872.	1866.
Catholics.....	35,887,708	95.02	97.43
Protestants:			
Reformed.....	467,531		
Lutherans.....	80,117	1.60	2.23
Others.....	38,109		
Israelites.....	49,439	0.14	0.23
Other non-Christian religions.....	3,071	0.01	
Persons declaring no religion, or whose religion was not known.....	81,951	0.23	0.06

Only in the following six departments the Protestants constitute more than ten per cent. of the population:

DEPARTMENTS.	Protestants.	Per cent. of Total Population.
Drôme.....	86,590	11.3
Doubs.....	88,064	11.4
Deux-Sèvres.....	87,581	11.5
Ardèche.....	45,689	12.1
Lozère.....	90,688	15.8
Gard.....	118,488	33.2

The latest educational statistics of France are as follows:

PERSONS.	Below 6 Years.	6 to 20 Years.	Above 20 Years.
Not able to read or write.....	8,540,101	2,082,838	7,702,862
Able to read only.....	292,848	1,175,125	2,805,180
Able to read and to write.....	151,595	5,458,097	18,078,057
Unknown.....	88,042	70,721	214,005
Total.....	4,092,086	8,786,851	28,294,554

If the latter class is not taken into account, we obtain the following table of percentage:

PERSONS.	Over 6 Years.	6 to 20 Years.	More than 20 Years.	Upward of 6 Years.
Not able to read or write.....	68.85	28.89	28.87	30.77
Able to read only.....	7.38	18.48	9.99	10.94
Able to read and write.....	8.88	62.68	56.64	58.29

Leaving the children below six years of age aside, it appears from the table that about 30 per cent. of the population are unable to read and write.

Among the married people the number of illiterates was, in 1872, as follows:

DIVISIONS OF COUNTRY.	1872.		1872. 1856.		Improvement.
	Illiterate Persons.	Married Persons.	Percentage of Illiterate Persons.	Percentage of Illiterate Persons.	
Département de la Seine.....	8,064	50,262	6.10	10.17	4.07
Towns.....	42,622	172,556	24.60	34.63	10.02
Rural districts.....	156,858	482,890	32.52	48.21	10.69
Total.....	202,489	705,508	28.69	39.08	10.89

The budget for 1876, voted by the National Assembly, comprised the following sources of revenue and branches of expenditures:

REVENUE.		France.
Direct taxes.....		854,839,709
Special taxes, assimilated to the direct taxes.....		22,040,000
Stamps and enregistrement.....		619,458,515
Produce of forests.....		85,064,639
Duties.....		234,382,239
Indirect taxes.....		999,615,455
Produce of posts.....		110,174,000
Miscellaneous receipts.....		146,941,182
Extraordinary receipts.....		3,598,000
Additional taxes.....		14,908,000
Total.....		2,575,028,562

EXPENDITURES.		France.
Public debt and donations.....		1,161,580,231
Ministries—		
Ministry of Justice.....		26,771,640
Ministry of Foreign Affairs.....		11,255,508
Ministry of the Interior.....		112,514,715
Ministry of Finances.....		19,832,220
Ministry of Public Instruction.....		98,640,540
Ministry of Agriculture and Commerce.....		19,184,500
Ministry of Public Works.....		161,106,138
Ministry of War.....		500,065,115
Ministry of the Navy.....		165,998,496
Administration of colonies.....		249,614,386
Revenue collection.....		17,782,900
Deficits and repayments.....		
Total.....		2,570,505,518

The public debt, according to the budget of 1876, was as follows:

DEBT.	Interest.	Capital.
Consolidated debt.....	747,998,866	19,900,906,900
Capital that may be called in.....	277,599,598	3,508,000,000
Debt viagers.....	124,776,346	
Total.....	1,150,375,050	22,408,906,900

On January 1, 1873, the new army law of August 16, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for twenty years, namely, four years in the standing army, five years in the reserve of the standing army, five years in the "territorial" army (landwehr), and six years in the reserve of the "territorial" army (landsturm).

The recruiting in 1874 showed that the number of young men registered in the military lists as becoming twenty years old in 1873 ("class of 1873") was 296,504. In addition to these there were 21,022 properly belonging to the class of 1872. Of these numbers there were—

MEN.		Class of 1872.	Class of 1873.
1. Declared fit for service.....		152,435	6,797
2. Exempted on account of family relations (eldest son of a widow, etc.).....		43,598	845
3. Exempted partly, or conditionally, on account of their calling (priests, teachers, etc.).....		26,705	58
4. Reserved for sanitary and other services.....		27,497	2,336
5. Put back for one year.....		21,855	8,789
6. Rejected on account of bodily infirmities.....		25,650	3,128
Totals.....		296,504	1,0222

Of the men declared fit for service, 6,056 were assigned to the navy for a service of five years. The remaining 146,369 men of the class of 1873, and the 6,797 of the class of 1872, were divided into two sections:

Class of 1872. Class of 1873.		Class of 1872.	Class of 1873.
1. For five years' service in the standing army (class of 1872 only four years.).....		60,080	3,948— 92,973
2. Embracing all those who may be furloughed after a service of from six to twelve months.....		57,239	2,553— 60,194

As a small number of young men are always exempted after having been declared fit for service, the number really entering the army may be estimated at about 165,000. The number of young men who, in accordance with the law of 1872, were allowed to enlist as volunteers for one year, either as graduates of educational institutions of a higher grade, or on account of having passed the examination prescribed by law, was 13,314.

By a law of July 24, 1873, on the reorganization of the army, France is divided into eighteen districts, each of which is occupied by an army corps. The commanders of the army corps have, since August 16, 1874, been exercising the functions which formerly belonged to the commanders of the "territorial divisions." For recruiting purposes the eighteen army corps are divided into 144 subdivisions. One army corps, moreover, is organized in Algeria. Each of the eighteen army corps consists of two divisions of infantry, one brigade of cavalry, one brigade of artillery, one battalion of engineers, one squadron of the train, a general staff, and the subordinate staffs. The composition of the army, in time of peace, will be as follows:

Infantry (156 regiments, 505 battalions, 2,445 companies).....	281,601
Cavalry.....	68,517
Artillery.....	66,831
Engineers.....	10,950
Train.....	9,332
Staff.....	23,407
Gendarmes.....	37,014
Total.....	490,332

To this number may be added the second division of the yearly contingent, amounting to about 60,000 men, who serve from six to twelve months, and swell the number of the army to 551,007 men. In time of war, the army will be composed as follows:

Field army (divided into 19 army corps and 9 divisions of cavalry).....	800,000
Battalions, squadrons, batteries, etc., of the <i>armées actives</i> remaining in France and Algeria.....	50,000
Garrison troops.....	230,800
The "territorial" army.....	560,000
Garrison troops of the "territorial" army.....	80,000
Corps forestier and douaniers.....	20,000
Total.....	1,750,000

The following table exhibits the movements of French commerce from 1859 to 1874 in francs.

YEAR.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1874.....	4,576,400,000	4,323,300,000	3,743,000,000	3,877,300,000	951,000,000	159,000,000
1873.....	4,576,400,000	4,323,300,000	3,554,800,000	3,737,300,000	565,000,000	492,000,000
1872.....	4,501,600,000	4,756,600,000	3,570,800,000	3,761,600,000	338,000,000	884,000,000
1869-1873.....	4,107,000,000	4,061,300,000	3,343,500,000	3,359,700,000	462,000,000	871,000,000
1864-1868.....	3,813,900,000	3,988,800,000	3,363,700,000	3,961,800,000	799,000,000	451,000,000
1859-1863.....	3,846,600,000	3,088,900,000	3,131,100,000	3,371,000,000	607,000,000	513,000,000

The foreign countries chiefly interested in the trade of France in the years 1871, 1872, and 1873, were the following (the value being expressed in francs):

COUNTRIES.	IMPORTS.			EXPORTS.		
	1871.	1872.	1873.	1871.	1872.	1873.
Great Britain.....	836,100,000	662,000,000	595,900,000	815,700,000	981,900,000	920,500,000
Belgium.....	476,800,000	440,400,000	474,600,000	479,900,000	473,900,000	470,200,000
Italy.....	441,500,000	375,200,000	345,900,000	153,000,000	228,800,000	222,800,000

French colonies.....	198,100,000	248,900,000	268,800,000	178,700,000	206,800,000	199,100,000
Total.....	3,666,700,000	3,670,800,000	3,556,000,000	2,872,500,000	2,761,600,000	2,787,900,000

The following table gives a list of the principal articles of import and export, in 1873 (value expressed in francs):

ARTICLES.	Imports.	Exports.
Corn.....	266,100,000	210,300,000
Seeds, fruits, and vegetables.....	175,100,000	76,700,000
Colonial produce.....	242,400,000	175,300,000
Tobacco.....	80,400,000	800,000
Beverages.....	52,500,000	888,300,000
Animals and animal food.....	296,000,000	242,000,000
Total provisions.....	1,062,500,000	1,088,800,000
Combustibles.....	245,600,000	14,200,000
Ores, stones, earthen.....	70,400,000	45,600,000
Raw metals.....	125,100,000	56,900,000
Hair, hides, leather.....	216,800,000	170,200,000
Spinning material.....	981,500,000	275,600,000
Materials of wood.....	178,600,000	49,900,000
Materials for carving.....		
Raw materials.....	1,817,500,000	612,400,000
Pottery and glass-ware.....	10,900,000	60,400,000
Yarns.....	50,300,000	59,600,000
Textures and articles of clothing.....	156,400,000	1,002,000,000
Articles manufactured of several materials.....	185,600,000	685,600,000
Paper.....	8,100,000	28,500,000
Books, cuts, etc.....	9,000,000	23,700,000
Manufactured articles.....	867,100,000	1,856,800,000
Manure and offal.....	42,400,000	23,400,000
Drugs, dyeing materials.....	196,000,000	187,800,000
Chemical articles.....	139,500,000	65,900,000
Resins, greases, oils.....	807,900,000	224,600,000
Miscellaneous.....		
Total goods.....	3,554,800,000	3,787,800,000
Precious metals.....	564,700,000	491,700,000
Total.....	4,119,500,000	4,279,000,000

imports amounted to 3,672,286,000 francs, and the exports to 4,022,162,000.

The movement of shipping, from 1870 to 1873, was as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
French.....	11,078	2,470,000	12,158	2,600,000
Foreign.....	24,306	5,800,000	24,268	5,280,000
Total, 1878.....	35,379	7,770,000	36,421	7,970,000
" 1879.....	33,928	6,772,000	27,566	6,174,000
" 1871.....		6,276,000		8,966,000
" 1870.....		6,582,000		8,979,000

The merchant navy, in 1873, was composed as follows:

VESSELS.	Vessels.	Tons.
Sailing-vessels of more than thirty tons.	4,858	794,392
Steamers of more than sixty horse-power	414	153,638

According to the report of the Minister of Public Works on railroads, there were

	Kilometres.*
In operation.....	20,771
In course of construction.....	7,008
Total.....	28,779

Algeria has three roads in operation, from Algiers to Oran, 426 kilometres; from Philippeville to Constantine, 87 kilometres; and the little road from Bona to the mines of Ain-Mokra, 30 kilometres; total, 543 kilometres.

The number of letters forwarded by the French Post-Office, in 1874, was 841,068,000. The revenue of the department was, in 1874, 110,416,000 francs; the expenditures, for administration, 71,797,000 francs.

* One kilometre = 0.62 English mile.

From January 1 to December 31, 1875, the

At the end of the year 1873 there were 47,055 kilometres of lines of telegraphs in operation, comprising 125,808 kilometres of wires. The number of telegraph-offices was about 3,800. The aggregate revenue, in 1873, 13,750,048 francs; the expenditure, 12,990,000 francs. The area and population of Algeria, according to the census of 1872, were as follows:

PROVINCES.	Area in Square Miles.	Frenchmen.	Foreigners.	Mohammedans.	In Government Institutions.	Total.
Algiers	89,190	67,008	42,181	757,908	5,854	872,951
Oran	111,881	51,729	47,488	411,874	2,456	518,492
Constantine	107,866	45,488	23,909	958,968	8,173	1,029,783
Total	258,217	164,175	115,516	2,128,045	11,483	2,416,225

In the number of Frenchmen given above are included 34,574 native Jews, who have received the full rights of citizenship.

The French colonies and dependencies had, according to the latest official reports, the following area and population:

COLONIES AND DEPENDENCIES.	Area, sq. m.	Population.
I. Algeria	258,217	2,146,225
II. COLONIES.		
A. Asia.		
1. India: Pondichéry, Chandernager, Karikal, Mahé, Yanam (1872)	191.35	266,808
2. French Cochinchina	21,716.49	1,385,849
Total possessions in Asia	21,912.94	1,652,150
B. Oceania.		
1. New Caledonia and Loyalty Islands (1872)	7,614.51	60,000
2. Marquesas Islands	478.86	4,200
3. Clipperton Island	2.13	
Total Oceania	8,094.09	64,200
C. Africa (exclusive of Algeria).		
1. Senegambia		210,889
2. Gaboon		8,000
3. Réunion	969.70	193,363
4. Mayotte and Nosso Bé	195.17	21,908
5. St. Marie	67.18	6,680
Total Africa	1,282.05	485,289
D. America.		
St. Pierre, Miquelon, etc.	81.23	4,934
Martinique (1872)	381.42	156,799
Guadeloupe and dependencies (1872)	719.44	163,600
French Guiana (1872)	46,979.77	24,171
Total America	48,054.85	349,554
Total colonies (except Algeria)	79,294.93	2,451,193
III. DEPENDENCIES.		
A. Asia.—Cambodia		
82,879.29	1,000,000	
B. Oceania.		
1. Tahiti, Moorea, Tetiaroos, Maitea (1864)	461.78	18,547
2. Tubai, Varitu, and Rapa	55.80	675
3. Tuamotu Islands (79)	2,572.54	8,000
4. Gambier Islands (8)	11.48	986
Total, Oceania	3,101.60	1,028,500
Total, dependencies	85,481.59	5,621,000

The commerce of Algeria in 1872 and 1873 was as follows:

YEARS.	Imports.	Exports.
1872	197,000,000	164,600,000
1873	206,700,000	152,300,000
Total	403,700,000	316,900,000

The countries principally interested in the trade of Algeria were as follows:

COUNTRIES.	Imports.		Exports.	
	1872.	1873.	1872.	1873.
France	157,018,000	176,545,000	121,849,000	112,000,000
England	19,768,000	10,444,000	20,081,000	19,986,000
Spain	6,887,000	7,324,000	10,329,000	8,027,000
Tunis, Tripoli, etc.	7,674,000	8,249,000	898,000	1,102,000
Italy	1,567,000	1,502,000	5,895,000	4,475,000
Belgium	21,000	47,000	1,988,000	5,017,000

On January 5, 1875, the National Assembly resumed its sessions. President MacMahon, on January 6th, sent in a message, in which he urged upon the Assembly the necessity of taking up immediately the discussion of the constitutional bills. Contrary to the wish of the President, the Assembly resolved to discuss the transmission of powers before the definite organization of the Septennate and the creation of a Senate. The ministry regarded this decision as a defeat, and offered its resignation. The President, on January 7th, declared that the offered resignation could not be accepted until he succeeded in forming a new cabinet supported by the majority of the Assembly. He requested, therefore, on January 10th, the ministers to retain provisionally their positions. On January 21st, the Assembly began the discussion of the bill introduced by M. Ventavon relating to the transmission of powers. It was defended by the ministry, but opposed by both the Right and the Left. Lacombe spoke in favor of restoring a monarchical form of government, Carayon-Latour in favor of restoring monarchy under the sceptre of Count de Chambord. Jules Favre eloquently defended the Provisional Government of September 4, 1870, and hurled violent charges against royalists and imperialists. On January 22d the second reading of the bill was ordered by 588 against 145 votes. The bill provides that the public power be vested in a National Assembly, a Senate, and the Marshal President, and the executive power be transferred to the successor of Marshal MacMahon by a Congress consisting of the Chamber of Deputies and the Senate. The opposition to the bill consisted of the extreme Right and the extreme Left. On January 25th, the Senate law was ordered to a second read-

ing by 512 against 188 votes. The second reading of the new constitutional laws began on January 28th. An amendment to the first clause, moved by Laboulaye, intended to proclaim formally the legal existence of the republic, and therefore proposed that it should read, "The government of the republic consists of two Chambers and a President." The discussion of this amendment was of a violent character. Louis Blanc, in the name of the extreme Left, denied the right of the Assembly to sanction once more the republican form of government, which, moreover, existed by its own higher law. Notwithstanding this opposition to the principle on which the amendment was based, Louis Blanc and the other five members of the extreme Left cast their votes for it, as they hoped that its adoption might strengthen the permanency of republican institutions. When the amendment was, nevertheless, rejected, the extreme Left fell out again with the Left, and Louis Blanc published a vehement declaration against Gambetta. Soon, however, there was a considerable change of public opinion. A letter from Marshal Canrobert, who undisguisedly placed his sword at the service of the Bonapartists, so alarmed the Orleanists of the Right Centre that they concluded to vote with the conservative Republicans, for the express recognition of the republic. Accordingly, an amendment by M. Wallon, to clause 2, providing for the election of "the President of the Republic" by the Senate and Chamber of Deputies united in National Assembly, was on February 2d adopted by 449 against 249 votes. On the following days, the expression "President of the Republic" was adopted for the following clauses. A still greater triumph of the Republicans was achieved on February 11th, when an amendment introduced by Duprat, providing for an election of the Senate by the same electors who chose the Chamber of Deputies, was adopted by 827 against 810 votes, 80 Bonapartists and 50 Legitimists voting for it. General Cisse, in the name of President MacMahon, declared that the Government regarded the conservatives interests endangered by the last vote of the Assembly. The latter, nevertheless, adopted several other amendments supplementing that of Duprat, relative to the election of Senators; but, when the whole new section of the election of the Senate was put to a vote, it was rejected by 868 to 845 votes. Brisson, in the name of the indignant Left, now demanded the dissolution of the National Assembly, but the urgency of the motion was negatived by 407 against 266 votes, and a resolution was passed to refer new conciliatory amendments, in regard to the composition of the Senate, to the special committee. Again a union of the Orleanists and Republicans was effected, and on February 24th the bill introduced by M. Wallon relative to the election of a Senate was adopted, by 448 against 241 votes. The definitive adoption of the whole of the new consti-

tutional laws took place on February 25th, by 486 against 262 votes, and on February 28th the new state laws were published in the official paper. Among the Republicans who voted against them was M. Thiers.

The new constitutional laws, as adopted by the National Assembly, are as follows:

CLAUSE 1. The legislative power is exercised by two Assemblies—the Chamber of Deputies and the Senate. The Chamber of Deputies is elected by universal suffrage, under the conditions determined by the electoral law. The composition, mode of nomination, and functions of the Senate, will be regulated by a special law.

CLAUSE 2. The President of the Republic is elected by a majority of votes by the Senate and Chamber of Deputies united in National Assembly. He is nominated for seven years, and is eligible for re-election.

CLAUSE 3. The President of the Republic has the initiative of legislation concurrently with the two Chambers. He promulgates the laws when they have been voted by the two Chambers. He watches over and insures the execution of them. He has the right to pardon; amnesties can only be accorded by law. He disposes of the armed force. He appoints to all civil and military posts. Every act of the President of the Republic must be countersigned by a minister. He presides at national ceremonies. The envoys and ambassadors of foreign powers are accredited to him.

CLAUSE 4. According as vacancies may arise after the promulgation of the present law, the President of the Republic in cabinet council nominates the Councilors of State. Those so nominated can only be superseded by a decree adopted in cabinet council. The Councilors of State nominated by virtue of the law of the 24th of May, 1872, can only, until the expiration of their powers, be superseded in a manner prescribed by that law. After the separation of the National Assembly the suppression can be pronounced only by a resolution of the Senate.

CLAUSE 5. He may, with the assent of the Senate, dissolve the Chamber of Deputies before the legal expiration of its term. In such event the electoral colleges are to be summoned for new elections within three months.

CLAUSE 6. The ministers as a body to be responsible to the Chambers for the general policy of the Government, and individually for their personal acts. The President of the Republic to be responsible only in case of high-treason.

CLAUSE 7. In the event of vacancy by death or any other cause, the two united Chambers to proceed immediately to the election of a new President. In the mean time the Council of Ministers to be invested with executive power.

CLAUSE 8. The Chambers to have the right, by separate deliberations carried on in each of them, by an absolute majority of votes to declare either spontaneously or at the instance of the President of the Republic that the constitutional laws should be revised. After each of the two Chambers shall have taken this resolution, the two unite into a National Assembly for such revision. Any deliberation revising the constitutional laws, either in whole or in part, to be carried by an absolute majority of the members forming the National Assembly. Nevertheless, during the term of power granted by the law of November 20, 1873, to Marshal MacMahon, such revision cannot be made save on the proposition of the President of the Republic.

CLAUSE 9. The seat of the Executive power and of the two Chambers to be at Versailles.

THE SENATE LAW.

CLAUSE 1. The Senate is composed of three hundred members—two hundred and twenty-five elected

by the departments and the colonies, and seventy-five by the National Assembly.

CLAUDE 3 designates the number of Senators to be elected by each department.

CLAUDE 3. No one to be elected Senator unless he be a Frenchman of at least forty years of age, and in full enjoyment of his civil and political rights.

CLAUDE 4. The Senators of the departments and the colonies to be elected by an absolute majority, and conjointly, where there is more than one, by an Electoral College, consisting of Deputies, General Councils, Councils of Districts, delegates elected by each Municipal Council among the electors of the Commune.

CLAUDE 5. The Senators nominated by the Assembly to be elected by an absolute majority of votes by *scrutin de liste*.

CLAUDE 6. At the beginning of the first session the department will be divided into three classes, each containing an equal number of Senators. It will be decided by lot which class is to retire on the expiration of the first triennial period, and which on the expiration of the second triennial period.

CLAUDE 7. The Senate to have conjointly with the Chamber of Deputies the right of initiating and framing laws. Nevertheless, financial laws must be first presented to and voted by the Chamber of Deputies.

CLAUDE 8. The Senate may be constituted a judicial court to try either the President of the Republic or the ministers, and to take cognizance of plots against the safety of the state.

CLAUDE 9. The Senate will be elected one month previous to the day fixed by the National Assembly or its dissolution. The Senate will enter on its duties and will constitute itself on the day that the National Assembly is dissolved.

The following list gives the number of Senators to be elected by each department, as well as the number and classification of the electors:

The three departments of Algeria, and the four colonies, Martinique, Guadeloupe, Réunion, and the French India, will also elect one Senator each.

On March 1st the bureau of the National Assembly was reelected. M. Benoist d'Azy, the senior deputy, presided. At the election for the president 532 members voted, and of this number 479 gave their support to M. Buffet, who had never before had so large a majority. He gained more votes on the Left than he lost on the Right, there being 280 members of the Left among his supporters. His majority was composed of all the deputies who voted for the constitutional bills, besides some members of the Right. This demonstration was made with the view to show that M. Buffet would have a majority in the House should he accept the task of forming a ministry. The Bonapartists and Legitimists abstained from voting. Three of the four former

vice-presidents were reelected. The fourth successful candidate, M. Ricard, replaced M. Benoist d'Azy. Five hundred and ninety-five votes were recorded, and the results were as follows: M. Martel (Left Centre) received 468 votes; the Duke d'Audiffret-Pasquier (Right Centre), 451; M. de Kerdrel (Right), 343; and M. Ricard (Left Centre), 300: these four were elected. M. Benoist d'Azy, of the Right, who was unsuccessful, obtained 275 votes. The three former questors were reelected, viz., M. Baze, of the Right Centre, by 482 votes; M. Toupet des Vignes, of the Left, by 460; and General Martin des Pallières, of the Right, by 294 votes.

Soon after the adoption of the new Constitution on March 10th, a new cabinet was formed, composed as follows: Buffet, Minister of the Interior and Vice-President of the Ministerial Council; Dufaure, Minister of Justice; Duke Decazes, Minister of Foreign Affairs; General de Cissey, Minister of War; Rear-Admiral Marquis de Montaignac de Chauvaure, Minister of the Navy and the Colonies; Léon Say, Minister of Finances; Wallon, Minister of Public Instruction, of Public Worship, and of Fine Arts; Cailleaux, Minister of Public Works; Vicomte de Meaux, Minister of Agriculture and of Commerce. The policy of the new cabinet was explained by M. Buffet, by the following declaration which he read from the tribune of the Assembly:

The new ministers would be incapable of fulfilling the task they have accepted without the support of a majority approving and associating itself with their policy. Their first duty is to make you acquainted with this policy, which is most distinctly conservative, and will be devoid of any characteristics either of provocation or weakness. This declaration, which will be falsified by no act of the Government, might appear superfluous if the interpretations placed upon the vote on the constitutional bills, and the consequences deduced from that vote, had not caused indecision in public opinion, and even disquietude in the public mind, which it is desirable to reassure. All ambiguity must be removed, and to each commune of France must be conveyed the conviction that the industrious population attached to order by the sense of its own interests has the Government on its side, and may rely upon us to protect it against subversive attacks and passions. We shall be seconded, we doubt not, by the intelligent and devoted administrative staff which knew how to maintain order under difficult circumstances, and which may rely upon our constant support. So long as the organization of the public powers remained an open question it was a source of division among men who were perfectly agreed as to the course the Government, when constituted, should pursue. This question having now been settled, the division ought to disappear. We renew with confidence the appeal made by the President of the Republic to the moderate men of all parties, and we earnestly claim their support. It is our duty to insure the obedience and respect of all toward the constitutional laws. We are firmly resolved to defend them against all factious intrigues; but, as the servants of the law, we shall never be the instruments of any policy of vindictiveness in France, where the changes of institutions and dynasties have left in the hearts of a great many citizens regrets and convictions which are worthy of respect so long as they are not displayed

by any reprehensible acts. Any other conduct on our part would be contrary to justice and good policy. We should have approved at all times of this firm and conciliatory conduct; to-day it is the only one suitable to the state of things to which our misfortunes have given birth. Who can think that this is a fit moment for us to tear each other to pieces and afford the world the spectacle of our internal dissensions? Should we not thereby strike a blow at the power of France? It seems to us that before this supreme consideration all hesitations should cease. The Government intend submitting to you modifications of the laws by which the press is at present regulated. It is necessary normally to secure the efficient repression of excesses which, in the eyes of the most moderate men, would discredit the legitimate use of free discussion. So long as this new law is not voted, the Government cannot relinquish the exceptional powers which are conferred upon it by the state of siege in a certain number of departments. We ask also, for a stated period, the maintenance of the present legislation respecting the appointment of mayors, who will be chosen as much as possible from among the members of the Municipal Councils. Should the Assembly not share the views we have laid before it relative to the Government's course of policy, we would ask it to express itself immediately, and we should not fail to understand the obligations which this refusal of support would impose upon us.

On March 11th the National Assembly elected the Duke d'Audiffret-Pasquier President of the House by 418 votes out of 598. The members of the extreme Right gave 181 blank voting papers. M. Martel, who was supported by the Bonapartists, obtained 34 votes.

On March 18th a motion was adopted to adjourn on March 20th until May 5th, and provision was made for the appointment of a permanent committee of 25 deputies to sit during the recess. A few days before the adjournment the National Assembly adopted the law on the increase of the French army.

The chief of the new ministry, M. Buffet, declined to comply with the request made for a change of prefects. In reply to the members for Toulouse who urged this change Buffet replied that it would be impossible, without disturbing the country, to effect any great changes in the administrative staff, which was in fact, merely carried out the instructions of the former ministers. He could not admit he had the right to blame public functionaries for respectfully obeying the orders transmitted to them. In fine, M. Buffet thought the present prefects, with very few exceptions, must be retained, and that it would be sufficient to give them clear and precise instructions in harmony with the new order of things. The new Government also determined to put a stop to the Bonapartist intrigues. The Bonapartist agents were arrested in three departments and fined for distributing pamphlets. The organ of M. Rouher in Corsica was prosecuted for publishing a violent article against the republic. The Minister of Foreign Affairs showed himself anxiously intent upon avoiding any conflict with Germany. Instructions were sent to the prefects of the eastern departments to use all legal means to prevent the

ligious orders expelled from Germany from settling there, and to sternly discountenance all attempts to foment clerical agitation against Prussia.

The National Assembly reassembled on May 11th, after nearly a two months' recess. On May 18th a resolution was passed, by 370 against 279 votes that no further elections be ordered for members of the Assembly until the general elections for the new Chamber are held. The number of seats vacant in the Assembly was at this time 15. On May 18th, Minister Dufaure submitted a bill regulating the relations between the public powers. It provides that the Senate and Chamber of Deputies shall meet annually in January, and at least five months in the year. The President of the Republic may communicate with the Chambers by message. The Chambers are obliged to reconsider any decision if the President makes a request to that effect. The President and ministers can be impeached only by the Chamber of Deputies, and must be tried by the Senate. M. Dufaure also introduced a bill relative to the organization of the Senate. It provides that elections for Senators shall be ordered by decree, which must be issued six months before the day appointed for the holding thereof. A motion was made by the minister that the bills be referred to the Committee of Thirty. The Left opposed the motion, and urged that the bills be referred to a special committee. M. Dufaure's motion was defeated, whereupon M. Batbie announced that the Committee of Thirty resigned their functions. M. Laboulaye, a member of the Committee of Thirty, objected that M. Batbie had no right to tender the resignations of the entire committee. The Duke d'Audiffret-Pasquier, President of the Assembly, declared that the resignation of the committee was unprecedented. The committee should first meet and consider the subject, and those of its members who propose to resign should inform the presiding officer of the Assembly of their intention. A few days later, M. Laboulaye and the remaining members of the Committee of Thirty also resigned. The election of a new committee was completed on May 26th. The new committee is composed of twenty members of all sections of the Left, four supporters of M. Wallon, and six deputies of the Right. The Left voted in the six deputies of the Right, so that this section might be represented in the committee.

On June 1st the Duke d'Audiffret-Pasquier was reelected President of the National Assembly. The vice-presidents and secretaries were also reelected.

On June 5th the National Assembly began the discussion of the important bill of superior instruction. M. Laboulaye, in the name of the special committee, recommended that the principle of complete liberty be recognized, and, in particular, full freedom be also granted to the Church. A motion by M. Ferry, that

the academical degrees be only granted by the state, was on June 14th rejected by a vote of 369 against 323, and on June 17th an amendment of M. Paris was passed by 54 votes, providing that the degrees be awarded by a board of examiners which shall consist half of state and half of free professors.

On June 21st, a grant of \$120,000 to procure a worthy representation of France at the United States Centennial Exhibition was voted by the Assembly without opposition.

On June 21st the Assembly began the debate on the public powers. The measure was opposed by M. Louis Blanc, because he held that it would confer royal prerogatives and have a tendency to organize a monarchy. M. Montjan also spoke against the bill. The opinions expressed in the utterances of these deputies appeared to be repudiated by the Left, whose vexation was much increased by the ironical cheers with which the Right greeted the enunciation of the extreme Republican views. On June 22d M. Buffet announced that the Government would not make known until the second reading the disposition of the measure with regard to which it disagreed with the committee. He then replied to some of the remarks made on the previous day by M. Louis Blanc and M. Madier de Montjan. The attacks by those members on the constitution and the ministerial programme of the 10th March were somewhat tardy. That programme, M. Buffet added, should not be departed from while he remained at the head of the cabinet. It was quite true that the public powers bill did not intrust the President with the same powers as were conferred upon an American President, but to do so it would be necessary to alter all the existing laws, as there was no political analogy between France and the United States. General du Temple, a Legitimist Deputy, created great confusion by some intemperate remarks, in the course of which he insulted Minister Buffet and the Duke d'Audiffret-Pasquier, President of the Assembly. He declared MacMahon equally guilty with Napoleon III. for Sedan. The speaker was called to order and silenced by the interposition of the House. The first reading of the public powers bill was ultimately voted by a show of hands. On July 7th the bill was passed to a third reading by 546 yeas to 97 nays.

On July 22d the National Assembly, by a vote of 470 against 155, agreed to adjourn from the 4th of August to the 16th of November.

On July 27th the President promulgated the law on superior instruction.

On July 29th M. Raoul Duval, in the Assembly, asked the Government why the United States had not paid to French citizens the indemnity due them for losses sustained during the civil war, while the claims of other foreigners had been settled. The Duke Decazes, Minister of Foreign Affairs, in reply, said the

indemnity due to other foreigners was likewise unpaid. President Grant, in his last message to Congress, recommended it to take legislative action on this matter. Congress, however, had not moved yet. In conclusion, the Duke Decazes said he had full confidence in the good faith of the American Government.

On August 2d the bill constituting the Senate was passed in the Assembly by 559 against 78 votes.

The Channel Tunnel bill was likewise passed. This bill sanctions the convention signed between M. Caillaux, Minister of Public Works, and M. Michel Chevalier, representing the French company for constructing a tunnel under the Channel. The convention is substantially as follows:

The company undertakes within five years at the utmost to expend on French territory a minimum sum of 2,000,000 francs in investigations, experiments, etc. At the expiration of five years it will have the right of abandoning or retaining the concession. It is bound to come to an understanding with an English company furnished with the necessary powers to insure the construction and working. The period allowed for the execution of the work is fixed at five years. The term of the concession will be ninety-nine years from the opening of the undertaking. The French Government pledges itself to authorize no other tunnel between France and England for thirty years from the opening. The company has thus a monopoly of thirty years. These conditions have been submitted to Lord Derby, who declared he had no objection to them. The French company has been formed, and the 2,000,000 francs subscribed in 400 shares of 5,000 francs each. The chief-engineers of the enterprise will probably be Mr. Hawkshaw on the English side, and M. Lavally, the general contractor of the Suez Canal, on the French side. The estimate of the cost of the submarine tunnel has been calculated according to the outlay on French railways as regards everything applicable to the tunnel. The tariff per kilometre has been considerably raised, but, as the tunnel will have to compete with navigation, the tariff will necessarily be governed by the convenience of the public.

The Bern Postal Convention was approved by the National Assembly on August 3d.

The Assembly adjourned on August 4th.

On the prorogation to November 4th being declared, a cry of "Vive la république!" was raised on the Left benches, which were less deserted than the Right. The Committee of Permanence, which consists of twelve deputies of the Right, two of the Lavergne group, and eleven of the Left, met immediately after the dispersion of the Assembly and resolved to meet on August 19th, and, as heretofore, every Thursday fortnight during the vacation. At a meeting of the Left Centre on August 3d, M. Laboulaye, the President, delivered a speech which produced a great impression, and was the absorbing topic of discussion in the lobbies of the Assembly. Looking back on the past six months, he declared that the session had been a good one for the country. Last January France had not extricated herself from the *provisoire* which had enervated it for four years, the future

was uncertain, and the Government without strength; but, thanks to the patriotism of a certain number of the Right Centre, and to the coöperation of the Left, the *provisoire* had been condemned, the chimera of the Septennate had vanished, and the republic had been recognized as the Government of France. By assuring to the country the only Government all parties may accept, men's minds had been soothed and public uneasiness has been dispelled; France thus gained hope and prosperity. Describing the constitution as a compromise, constitutional monarchists, he said, had returned with confidence to a system which they had always regretted, while Republicans had given it a democratic form by instituting a presidency and maintaining universal suffrage.

The Bonapartists in Paris celebrated the 15th of August, the Fête Napoléon, with their customary mass at the Church of St-Augustine. The weather was fine, and the attendance of the faithful a fair one. There was no attempt at demonstration beyond the wearing of violet-flowers and *immortelles*. M. Rouher, the Duke de Mouchy, and the Duke de Padoue were conspicuous by their presence, but the assemblage, on the whole, was less distinguished than usual. About 1,500 persons in all were present. The demonstration passed off in the most pacific manner, not even the faintest cry of any sort being raised.

A Bonapartist banquet was held at Evreux on September 5th, at which a letter was read from Admiral Baron de la Roncière-le-Noury, the commander of the French Mediterranean squadron. This letter, dated on board the Magenta, September 2d, was afterward published in the *Courrier de l'Eure*, and created great excitement and violent comment among all supporters of the constitution. The admiral says his constant desire is to associate himself with every manifestation looking to the union of the Conservative party. He says: "He is a Conservative in my eyes, whatever faction he may belong to, who repudiates the doctrine of the Revolutionists of the 4th of September, and of their sectaries." This passage and the following were bitterly attacked by the Republican and Orleanist journals: "I shall not cease to be the devoted servant of the Government of Marshal MacMahon so long as he shall not be borne outside of the conservative paths in which to-day he is concentrating his most ardent efforts. But I assert that when the moment comes France should become free to choose, and thus once more take her place among the European hierarchy, which is denied her by her present form of government." On hearing of the publication of the letter, Marshal MacMahon called a council of ministers to take cognizance of the matter, and the Minister of Marine, who was absent from Paris, was summoned to return to participate in the council. Accordingly the *Journal Officiel* of September 9th

published a decree appointing Admiral Roze commander of the Mediterranean Squadron, vice Boncière-le-Noury.

In the latter part of the month of September a Bonapartist council was held at Arenenberg, Switzerland. No official account of it was published, but it was believed that henceforth the Prince Imperial will take the lead of the Imperialist policy, and M. Rouher will be his chief adviser. On October 16th M. Rouher made a speech at Ajaccio. He made an attack on ex-President Thiers and the Orleanists, accusing them of having blocked up all the avenues to power. He censured President MacMahon, and said since the 24th of May, 1873, when the marshal was chosen President, he had incurred heavy responsibilities. M. Rouher declared that the revisionary clause of the Constitution remained intact. The Bonapartists, he said, are in favor of universal suffrage, and would contend for an appeal to the people in order to give expression to the national will.

A serious difficulty between the Vice-President of the Ministerial Council, M. Buffet, and the Minister of Finance, Léon Say, arose in consequence of a speech delivered by the Minister of Finance at a banquet on the 27th of September. M. Buffet prohibited the publication of the speech on account of the following sentence: "The coalition of the 24th of May is happily dissolved." At the cabinet council held on October 1st explanations were given, and the affair was settled amicably. Consequently M. Say did not resign, as he intended, and the *Journal Officiel*, on October 2d, published the speech, with a letter from M. Say explaining the objectionable passage. The letter had previously been read in the cabinet meeting and approved.

The last session of the National Assembly began on November 4th. The Duke d'Audifret-Pasquier was on November 5th reelected President by a combination of the Left with a portion of the Right. He received 896 votes, and 104 of the ballots were blanks. On November 9th the Assembly, by a vote of 507 yeas to 26 nays, adopted the amendment to the electoral bill, enabling half-yearly residents to vote, in accordance with an agreement with the Government committee. The most disputed point of the electoral law was whether the *scrutin d'arrondissement* (vote for only one deputy in the arrondissement) or the *scrutin de liste* (vote for all the deputies of a department on one ticket), was decided on November 10th. The Committee of Thirty was in favor of the *scrutin de liste*, but the Government, though not making the matter a cabinet question, in favor of the *scrutin d'arrondissement*. M. Ricard, a moderate Republican, opened the discussion. He stigmatized voting by arrondissement as an attack on universal suffrage. He declared that M. Buffet, having endeavored to retain the prefects of the empire, now, because he repudiated the majority which voted

the constitution of February 25th, wished to reestablish the electoral system of the empire. "We demand," continued the deputy, "the *scrutin de liste*, which will preserve the alliance formed on the 25th of February." M. Dufaure, Minister of Justice, replied, saying: "The Government will not accept at the next elections all who voted for the constitution. The Government will say to them, 'Thank you for voting the constitution; but we require more; your republic is not ours; you will not have our confidence or our vote.'" This declaration caused an uproar of denunciation and dissent on the left of the Chamber. M. Gambetta said: "The *scrutin de liste* is the only method of uniting the energies of all. We must no longer proclaim our disunion to Europe. The ministry opposes the *scrutin de liste* because it is afraid of universal suffrage. By the arrondissement system men like Thiers and Dufaure will be defeated if they are against the Government. Local officials will be able to warp the suffrage." A vote was then taken by means of secret ballot, and resulted in favor of the Government, standing 357 yeas to 326 nays.

On November 12th M. Dufaure introduced the press bill. By its provisions the state of siege is to be raised, except in Algiers and the departments of the Seine, Rhône, Bouches-du-Rhône, and Seine-et-Oise. The bill also provides that numerous press offenses, such as insults to the authorities, false intelligence, and instigation to crime, shall be tried by the correctional tribunals instead of by jury. In the special committee elected by the bureaux to consider the bill, eleven members belonged to the Opposition and only four favored the bill. The report of the committee on the bill was made by Albert Grévy. M. Grévy, in his report, recommended the unconditional raising of the state of siege. "If the bill of the Government should be adopted," M. Grévy says, "the most sacred rights of citizens, and the most dearly-bought public liberties, are at the mercy of arbitrary power, just as if there were foreign and civil war. A law of public safety, essentially exceptional and temporary, is made normal and permanent, just for the convenience of an administration which finds martial law handy." He spoke with great severity of the ministerial doctrine that martial law is required to maintain the sincerity of the elections. It cannot honestly be necessary for such a purpose that the Government should be empowered, without judgment or even prosecution, to suspend or suppress journals, prohibit public or private meetings, make domiciliary visits by day and night, and remind citizens that they are liable to be tried by court-martial. The bill proposes a restitution of the most noxious legislation of the empire, with aggravations. The reporter scorns the idea that such an abominable press law is to be the ransom for the abolition of the state of siege, and says that in the ministerial project which would keep Paris, Lyons, and Marseilles, under the

state of siege, there is only a partial abolition of martial law.

On November 23d, M. Barthe, Moderate Republican, moved an amendment forbidding the Government from suggesting candidates to the electors. The amendment was rejected by a vote of 314 yeas to 318 nays. M. Picard and other Deputies endeavored to elicit a declaration from the Government as to whether it repudiated the system of official candidatures. Ministers Dufaure and Buffet evaded the question, the latter saying he could not add anything to his previous explanations. On November 29th the Assembly finally adopted the clause of the electoral bill providing for voting by *arrondissement*. In the division the Assembly stood 401 for and 200 against the clause. On November 30th the entire electoral law was adopted by 582 against only 87 votes.

The balloting for the election of the seventy-five Senators who, according to the new electoral law, were to be chosen by the Assembly, and to hold their office for life, began on December 9th. At this time the strength of the several parties in the Assembly was computed as follows:

GROUPS OF THE RIGHT.	
Extreme Right	68
Moderate Right	72
Right Centre	107
Group de Clerg.....	80
Group Pradé.....	40
Total Right.....	312

GROUPS OF THE LEFT.	
Republican Union	} 314
Republican Left	
Left Centre.....	

GROUPS OUTSIDE OF THE TWO COALITIONS.	
Irreconcilables of the Extreme Right	10
Bonapartists.....	80
Group Lavergne.....	45

On the first ballot only two Senators, the Duke d'Audiffret-Pasquier, President, and M. Martel, First Vice-President, of the Assembly, were elected, no other candidates obtaining an absolute majority. The Left developed surprising strength in the voting. Their candidates received an average of 325 votes each, against 317, the average number thrown for those of the Right. The members of the Right were astounded at the result.

On the second ballot, sixteen Republicans and only three members of the Right were elected. The success of the Left was owing to a coalition with the extreme Right. The Assembly did not complete the election until December 21st. Of the seventy-five Senators elected, fourteen belong to the extreme Right and the Right, four to the Right Centre, thirty-two to the Group Lavergne and the Left Centre, twenty-four to the Left, and one to the Bonapartists. M. Jules Dufaure, member for Charente-Inférieure, made the important statement that Marshal MacMahon pledged his respect for the newly-elected Senators, and asserted that they occupied a position in the Government second only to that of the marshal.

On December 19th, M. Noquet, a radical leader, introduced a motion that amnesty be granted to the Communists, and requested that it be declared urgent. Great tumult followed the introduction of this motion, and the previous question was almost unanimously carried, the Left considering the motion, which cannot pass, an electioneering trick. The affair caused a complete rupture between the extreme Radicals and the Left.

During the discussion of the press bill, M. Grévy, on December 24th, proposed that the press law and the state of siege be dealt with in separate bills; that the state of siege be raised throughout the country, and the consideration of the press bill be postponed. M. Buffet defended the Government's bill as it stood. He denied, notwithstanding the result of the senatorial elections, the existence of an opposition majority. The ministry would support the conservative union, both at the elections and in the Chambers. He pointed to the overthrow of several previous Governments to which the whole conservative population freely adhered. The conservative union would appeal to all the partisans of those Governments. He showed how the Bonapartists had supported the senatorial candidates of the Left and gained nothing in return, and asked, "Will our alliance afford them any less guarantees?" He concluded as follows: "The Constitution of the 25th of February is not the last word of political wisdom, but we must admit that it is law. The country requires reorganization. It must return to the Chambers men who are disposed to pursue, in conjunction with President MacMahon, the policy of social preservation, and give aid to the victor of Magenta, who will never become the docile instrument of radical passions." M. Grévy's proposal to legislate separately on the press laws and the state of siege was rejected by a vote of 376 to 303. The Bonapartists voted with the Government.

On December 29th a long and animated debate took place, on the clauses providing for raising the state of siege. M. Challemlacour, radical Deputy for Bouches-du-Rhône, urged that the siege be raised throughout the country. The Government, he said, desired to maintain it in the great cities because they were too strongly Republican. Minister Buffet declared that the Government did not hope to influence the elections. It simply wished to prevent manifestations in the great towns which might disquiet and alarm the whole country during the elections. The proposal to raise the state of siege throughout the country was rejected by a vote of 377 to 329. The Government's proposals to maintain the state of siege in Paris, Versailles, Lyons, and Marseilles, were voted on separately for each city, and were carried by large majorities, the continuance of the state of siege in Paris being voted by 881 yeas to 273 nays. The Government withdrew a similar proposal in regard to Algiers. M. Gambetta, on behalf of his friends, declared that, although

the bill was detestable, the Left would vote for it, in order to secure a partial raising of the siege. The press bill finally passed by a nearly unanimous vote.

In compliance with the recommendation of the Committee on Dissolution, the Assembly, on December 30th, resolved "that the delegates to choose Senators be elected January 9th;" "that they proceed to the election of Senators January 23d;" "that the general election for members of the Chamber of Deputies be held February 20th, and both the Houses meet March 8th."

On December 31st a Permanent Committee was chosen, according to an agreement between the various parties. It consists of thirteen members of the Left and twelve of the Right. The Duke d'Audiffret-Pasquier, President of the Assembly, then arose and made a speech, closing the session. He eloquently recapitulated the achievements of the Assembly, which, having undertaken its trust on the morrow of a madly undertaken war and the horrors of the Commune, had paid the ransom of the country, thus demonstrating its credit and vitality. He continued: "The Assembly has reorganized the internal administration and voted a Constitution in which individual preferences have been subordinated to love of country. That Constitution is, perhaps, imperfect, but without it there would be the double peril of despotism and anarchy. You will confide the Constitution to the honor of the President and the wisdom of the new Assemblies. You may with confidence submit yourselves to the judgment of the country, for you restore to it its flag and liberties intact."

The bishops of France availed themselves of the new law on education to make preparations on a grand scale for the establishment of free Catholic universities. Three of them, at Lille, Paris, and Angers, were opened before the close of the year.

In conclusion he declared the National Assembly prorogued until the 8th day of March, 1876, when the new Chambers are to meet. The Assembly separated, the Deputies of the Left shouting, "Vive la république!"

The south of France, in June and July, suffered terribly from inundations. An official statement, made by M. Caillaux, Minister of Public Works, to the Assembly, estimates the total damage done to property by the inundations at \$15,000,000. The number of deaths caused by the inundations was about 800. The subscriptions raised for the sufferers amounted, about the middle of July, to 3,600,000 francs.

In July an International Maritime Exhibition was held at Paris, in the Palace of Industry. The exhibition was a display of marine and fluvial apparatus for all that belongs to fishing. In addition, there were constructions for water animated by fish, waterfalls, diving-machines, etc. England contributed largely, a committee having been long working in London, patronized by the Lord Mayor, in order to worthily

represent a branch of industry for which the British Isles are famous. Other countries also contributed, more particularly those of Northern Europe, while the French fishing interests were fully represented. The exhibition lasted until November.

A Diplomatic Conference on the Metric System was held, on March 2d, at the Ministry for Foreign Affairs, under the presidency of the Duke Decazes. England, Germany, Austria, Belgium, Denmark, Italy, Holland, Russia, Spain, the United States, Turkey, Switzerland, Sweden and Norway, Peru, Portugal, Brazil, the Argentine Confederation, Greece, and Venezuela, were represented by their ambassadors. The conference transferred the solution of the questions to be decided to a commission, composed of delegates of the various Governments. M. Dumas, the Permanent Secretary of the Academy of Sciences, was appointed president of this commission.

On December 27th the statue of Napoleon the Great was replaced on the newly-finished Vendôme Column. A large crowd assembled in the Place Vendôme and the Rue de la Paix, and other streets adjacent, to witness the proceeding. There was no ceremony.

M. BUFFET, the new Vice-President of the Ministerial Council, holds the position of State Minister for the third time. The son of an officer of the First Empire, he was born in 1818, and gained his first successes in chemistry, to which his analytical mind first devoted itself. He studied the English language at an early age, and while, during a prolonged stay in England, following the debates of the House of Commons, acquired his first notions of parliamentary science. He was subsequently, together with the Duke de Broglie, among the favorite pupils of the celebrated M. de Rossi, and he was practising at the bar at Nancy when the Revolution of 1848 broke out. Benefiting rather by his father's popularity than by his own reputation, he was elected by 75,000 votes for the Vosges to the Constituent Assembly. A partisan of General Cavaignac, he, nevertheless, twice figured in the ministry between 1848 and 1851, on each occasion quitting it rather suddenly for the sake of defending the idea of ministerial responsibility, of which he had always been an upholder. On the 30th of October, 1849, he was succeeded by M. Rouher, whose place he was to take twenty years afterward as a member of the Ollivier cabinet. Relected to the Legislative Assembly, he sat with M. Baroche on the commission which framed the famous electoral law of the 31st of May, 1851, and, on the 14th of October withdrew from a cabinet including MM. Magne and Rouher, for the purpose of defending that same law which was destined to disappear. Confined in Mazas, at the *coup d'état*, he devoted his leisure to a tour in Italy with M. Thiers. He was defeated as an enemy of the Emperor in 1857. He was again defeated at the general election of 1863, but was

returned the following year, his rival's election having been annulled. In 1866 he signed and defended the amendment of the 45, who called on the Emperor to march frankly along the path of political liberty. "I quite understand," said Napoleon III. to him at the end of this discussion; "the object is to draw the lion's teeth, cut his claws, and leave him only his imposing and useless mane." He was also in 1870 one of the signers of the interpellation of the 116 which brought about the Ollivier ministry, the formation of which was so warmly hailed by the country. He left it when the adversaries of the Liberal Empire invented the *plébiscite* of 1870, which he considered an infringement of the rights of the Assembly, the dissolution of which he had demanded. He was among those who, on the 4th of September, 1870, protested the most strongly against the forcible dissolution of the Chamber. Returned to the present Assembly, he at first refused to enter M. Thiers's first cabinet, figured among the most active members of the Right Centre, and succeeded M. Grévy as President of the Assembly.

DUFAURE, JULES ARMAND STANISLAS, was born at Saujon, December 4, 1798. He studied law, and settled first at Paris, and then at Bordeaux, where he soon became one of the best lawyers. In 1834 he was elected to the Chamber of Deputies, was appointed Councilor of State in 1836 under the Thiers ministry, resigned after a few months, when the ministry was defeated, and then organized a bitter opposition to the Molé ministry. After the Revolution of 1848 M. Dufaure was elected to the Constituent Assembly, and on October 18th of the same year was appointed Minister of the Interior by General Cavaignac. In this position he did everything in his power to secure the election of General Cavaignac to the presidency. When it was found that Louis Napoleon had been elected President, Dufaure resigned his position, and again took his seat in the Assembly. In 1849 he was elected to the Legislative Assembly, was appointed Minister of the Interior on June 2d, and suddenly dismissed on October 31st. The *coup d'état* caused him to retire to private life. In 1868 he was elected a member of the French Academy in replacing the Duke de Pasquier. In 1871 he was elected to the National Assembly from four departments, and chose for Charente-Inférieure. On February 19th he was appointed Minister of Justice by President Thiers. In this position he remained until 1873, when Thiers resigned. On March 10, 1875, he was again appointed Minister of Justice, which position he still held at the end of the year.

MEAUX, CAMILLE, Vicomte de, was born in 1830. In 1871 he was elected to the National Assembly from the department of the Loire, and on March 10, 1875, was appointed Minister of Commerce and Agriculture, which position he retained at the end of the year. He is a

son-in-law of the late M. de Montalembert, and like him a zealous royalist, and an ardent defender of the interests of the Catholic Church.

CAILLAUX, EUGÈNE, was born at Orleans, about 1828. In 1871 he was elected to the National Assembly from the department of Sarthe, and on March 10, 1875, was appointed Minister of Public Works, which position he still retained at the end of the year. In the Assembly he is a member of the Left Centre.

The life Senators, seventy-five in number, will constitute one-fourth of the Upper House. They are given below in the order of the number of votes each obtained, with the departments which they represented in the National Assembly, and the party to which each one belongs. They are as follows:

Nos.	Votes.
1. The Duke d'Audiffret-Pasquier (Orne), Right Centre.....	551
2. General de Cissey (Ille-et-Vilaine), Right Centre.....	396
3. General de Chabron (Haute Loire), Left Centre.....	376
4. M. Wallon (Nord), Right Centre.....	372
5. General Frebault (Seine), Left.....	367
6. M. Krantz (Seine), Left Centre.....	366
7. M. Eugene Duclerc (Basses-Pyrénées), Left.....	364
8. General Changarnier (Somme), Right Centre.....	365
9. M. Jules de Lasteyrie (Seine-et-Marne), Left Centre.....	365
10. Admiral Pothuau (Seine), Left Centre.....	362
11. M. Corne (Nord), Left Centre.....	359
12. M. Laboulaye (Seine), Left Centre.....	357
13. M. de la Rochette (Loire-Inférieure), Right.....	357
14. M. Foubert (Manche), Left Centre.....	355
15. Count Roger (Nord), Left Centre.....	355
16. M. Léonce de Lavergne (Creuse), Left Centre.....	355
17. M. Corbon (Seine), Left.....	355
18. M. Léon de Maleville (Tarn-et-Garonne), Left Centre.....	358
19. The Marquis de Francien (Hautes-Pyrénées), Right.....	352
20. M. Le Royer (Rhône), Left.....	352
21. Count de Cornulier-Lucinières (Loire-Inférieure), Right.....	351
22. Admiral Jaurès (Tarn), Left Centre.....	350
23. M. Dumon (Gers), Right.....	350
24. M. Théry (Nord), Right.....	350
25. M. Bertauld (Calvados), Left Centre.....	350
26. M. Lanfrey (Bouches-du-Rhône), Left.....	350
27. M. Barthélemy-Saint-Hilaire (Seine-et-Oise), Left Centre.....	349
28. M. Calmon (Seine-et-Oise), Left Centre.....	349
29. M. Wolowski (Seine), Left Centre.....	349
30. M. Hervé de Saisy (Côtes-du-Nord), Bonapartist.....	349
31. General - Letellier - Valazé (Seine-Inférieure), Left Centre.....	349
32. M. Oscar de Lafayette (Seine-et-Marne), Left Centre.....	349
33. M. Ernest Picard (Meuse), Left.....	349
34. Colonel de Chadols (Dordogne), Left Centre.....	349
35. M. Fajot (Nord), Right.....	347
36. Count de Tréville (Aude), Right.....	347
37. M. Casimir-Perier (Aube), Left Centre.....	347
38. M. Gauthier de Rumilly (Somme), Left Centre.....	347
39. M. Luro (Gers), Left Centre.....	347
40. General d'Aureilles de Paladines (Allier), Right.....	346
41. M. Tribert (Deux-Sèvres), Left Centre.....	346
42. Admiral Fourchon (Dordogne), Right Centre.....	346
43. M. Kolb-Bernard (Nord), Right.....	346
44. General Chanzy (Ardennes), Left Centre.....	346
45. M. Cordier (Seine-Inférieure), Left Centre.....	345
46. M. Baze (Lot-et-Garonne), Right Centre.....	345
47. M. Humbert (Haute-Garonne), Left.....	345
48. M. Martel (Pas-de-Calais), Left Centre.....	345
49. M. Fourcaud (Gironde), Left.....	345
50. M. Carnot (the elder) (Seine-et-Oise), Left.....	344
51. Count de Douchet (Puy-de-Dôme), Right.....	344
52. M. Gouin (Indre-et-Loire), Left Centre.....	344
53. M. Lepetit (Vienne), Left Centre.....	343
54. M. Littré (Seine), Left.....	343
55. M. Schérer (Seine-et-Oise), Left.....	343
56. M. Crémieux (Algérie), Left.....	343
57. M. Scheurer-Kestner (Seine), Left.....	341
58. Viscount de Lorgery (Côtes-du-Nord), Right.....	340
59. M. Rampont (Yonne), Left.....	340
60. Count de Tocoqueville (Manche), Left Centre.....	340
61. M. Paul Morin (Seine), Left.....	339
62. M. Testelin (Nord), Left.....	339
63. General Chareton (Drôme), Left.....	339

No.	Votes.
64. M. Bérenger (Drôme), Left Centre.....	325
65. N. Magnin (Côte-d'Or), Left.....	324
66. Admral de Montaignac (Allier), Right.....	323
67. M. Denormandie (Seine), Left Centre.....	318
68. M. Jules Simon (Marne), Left.....	318
69. M. Edmond Adam (Seine), Left.....	315
70. Mgr. Dupanloup (Loiret), Right.....	310
71. Le Marquis de Maleville (Dordogne), Left Centre.....	309
72. M. Laurent Pichat (Seine), Left.....	309
73. M. Schœlcher (Martinique), Left.....	306
74. M. Cazot (Gard), Left.....	305
75. General Billot (Corrèze), Left.....	299

The significance of these figures will be easily perceived when it is remembered that the National Assembly numbered 711 members. Thus only thirteen Senators have been elected by an actual majority (356) of the whole House. Moreover, since the summer of 1875 no new writs have been issued to fill up vacancies caused by death or otherwise, and the Assembly accordingly lacked twenty-seven members to make up its full complement of 733. An absolute majority of the full House would, therefore, be 370, a figure only secured by four of the Senators. Nine of the Senators are generals and one is a colonel; four are admirals; twenty-two are titled or bear the nobiliary prefix of "De;" one is a bishop; three are members of the Academy; twelve are deputies for the Seine, in other words members for Paris; one is deputy for the "Mouths of the Rhone," or Marseilles; one for the Rhone, or Lyons; one for the Gironde, or Bordeaux. Thirteen of the new Senators belong to the Extreme Right, or the Legitimists, the adherents of the Comte de Chambord; six are Orleanists, thirty belong to the Left Centre, and the group of Lavergne, twenty-four to the extreme Left, while only one Bonapartist has been elected.

The life Senators represent forty-one departments and two colonies, and are distributed as follows:

Algérie.....	1	Loiret.....	1
Allier.....	2	Lot-et-Garonne.....	1
Ardennes.....	1	Manche.....	2
Aube.....	1	Marne.....	1
Aude.....	1	Martinique.....	1
Bouches-du-Rhône.....	1	Meuse.....	1
Calvados.....	1	Nord.....	7
Corrèze.....	1	Orne.....	1
Côte-d'Or.....	2	Pas-de-Calais.....	1
Côtes-du-Nord.....	2	Puy-de-Dôme.....	1
Creuse.....	1	Pyrénées (Basses).....	1
Deux-Sèvres.....	1	Pyrénées (Hautes).....	1
Dordogne.....	2	Rhône.....	1
Drôme.....	2	Seine.....	14
Gard.....	1	Seine-et-Marne.....	2
Garonne (Haute).....	1	Seine-et-Oise.....	2
Gers.....	2	Seine-Inférieure.....	1
Gironde.....	1	Somme.....	2
Ille-et-Vilaine.....	1	Tarn.....	1
Indre-et-Loire.....	1	Tarn-et-Garonne.....	1
Loire (Haute).....	1	Vienne.....	1
Loire-Inférieure.....	2	Yonne.....	1

ADAM, EDMOND, was born at Bec-Hellouin in 1816. He studied law, and also devoted himself to journalism. In 1848, after holding several minor offices, he was elected a Councillor of State by the Constituent Assembly. After the *coup d'état* he withdrew from politics. In 1870 he was appointed prefect of police by the Government of Defense, which position, however, he held for a short time only.

In 1871 he was elected to the National Assembly from the department of the Seine. He was a member of the Left, vice-president of the Republican Union, and has voted against the preliminaries of peace.

AUDIFFRET-PASQUIER, Duke d', was born in Paris about 1815. The chancellor, Baron Pasquier, his grand-uncle, adopted him. By a royal ordinance of December 16, 1844, he was created a duke and declared heir to the title of his grand-uncle. From 1845 to 1848 he was an auditor in the Council of State. During the reign of Napoleon he withdrew entirely from public life. In 1871 he was elected to the National Assembly from the department of Orne. In the Assembly he was a member of the Right Centre, chairman of various committees, was elected fourth Vice-President in 1874, second Vice-President March 1, 1875, President of the Assembly March 15th, and in December, 1875, Senator for life, receiving 551 votes, the largest number cast for any candidate. He is a brother-in-law of Casimir Périer.

AURELLE DE PALADINES, CLAUDE MICHEL LOUIS D', born January 9, 1804, at Malazieux. He entered the military school in 1822, served in Africa from 1841-'48, during which time he rose to the rank of colonel, took part in the Roman campaign, became general of brigade in 1851, distinguished himself in the Crimea, and was appointed general of division in 1855. He did not take part in the Italian campaign of 1859, but, as the commander of the Ninth Military Division in Marseilles, distinguished himself in the quick shipment of troops and provisions. In 1869 he passed to the reserve. At the beginning of the German-French War he was again placed at the head of the Ninth Division. In consequence of the Revolution of September 4, 1870, he was obliged to leave Marseilles; but, after the defeats of General de la Motterouge near Orleans, he was placed in command of the Army of the Loire. In this position he succeeded in forcing General von der Tann to retire. The Germans, having been reinforced, in turn defeated him at Beaune la Rolande, and forced him to retreat to Sologne. A committee was appointed, through M. Gambetta, to inquire into his conduct. General de Paladines thereupon resigned, and, although offered several commands, did not again take part in the war. In 1871 he was elected to the National Assembly from two departments, and selected the department of Allier. He was a member of the Right Centre. He published in 1872 a description of his operations, under the title of "Première Armée de la Loire."

BARTHÉLEMY-SAINT-HILAIRE, JULES, was born August 19, 1805, in Paris. After he had finished his studies he was connected for some time with the ministry of finance, but at the same time wrote numerous articles for the *Globe*. In 1880 he signed, together with Thiers, Mignet, Carrel, Rémusat, and others, the protest of the journalists. After the Revo-

lution of 1830 he founded, together with Rodde and Cauchois Lemaire, the *Bon Sens*, and also wrote for other journals of the Opposition. In 1833 he severed his connection with political journalism and devoted himself exclusively to scientific labors. In 1834 he was made tutor of French literature in the Polytechnic School. A translation of Aristotle's works, which he began in 1832, obtained for him the professorship of Greek and Roman Philosophy in the College of France. In 1839 he was elected a member of the Academy of Moral and Political Sciences, and in 1840 he was for four months general secretary in the Ministry of Education. In 1848 he was elected to the Constituent Assembly, and there became one of the leaders of the *tiers parti*. After the *coup d'état* of 1851 he refused to take the oath of allegiance and resigned his professorship. He was elected to the Assembly in 1871 from the department of Seine-et-Oise, and from 1871-'73 was private secretary to President Thiers. He has written "Sur les Védas" (1854), "Le Bouddhisme" (1855), "Lettres sur l'Égypte" (1856), "Bouddha et sa Religion" (1859), "La Vie de Mahomet" (1863), "Mahomet et le Coran" (1865), and "Philosophie des deux Ampères" (1866).

BAZE, JEAN DIDIER, was born January 8, 1800, at Agen. In 1821 he was admitted to the bar in his native town, where he soon rose to the head of his profession. In 1848 he was elected to the Constituent and afterward to the Legislative Assembly, of which body he was elected questor. He was a strong partisan of the Orleanist dynasty, and a bitter opponent of the Bonapartist policy, but voted, nevertheless, against the revision of the republican constitution. In October, 1851, he, together with some others, prepared the famous bill called "Des Questeurs," whose object it was to put beyond a doubt the authority of the National Assembly to directly require troops, which authority had been implicitly attributed to it by the constitution of 1848. In the night of December 1, 1851, he was arrested and expelled. He went to Belgium, and remained there until the declaration of general amnesty in 1859, when he returned to Paris. In 1871 he was elected to the Assembly from the department of Lot-et-Garonne. He again became questor of the Assembly, and has been reelected to that position every succeeding year.

BÉRENGER, RENÉ, born April 22, 1830, studied law, and established himself in Paris. He has held various offices under the empire, as attorney-general and procurator-general, which position he held in Lyons at the time of the Revolution of 1870, when he was arrested by order of the Committee of Safety, but having been released he joined the National Guards. In 1871 he was elected to the National Assembly from the department of the Rhone. A few days before the resignation of M. Thiers he was appointed Minister of Public Works.

BERTAULD, CHARLES ALFRED, born June 9, 1812, at Verson; was appointed assistant professor in 1846, and titular professor in 1853, in the University of Caen. He had been decorated with the medal of the Legion of Honor in 1859. In 1871 he was elected to the Assembly from the department of Calvados. The Left Centre, with which he has generally voted, elected him its president. He has written numerous works, of which the following are the most important: "Essai sur la Providence" (1863), "Mesmer et le Magnétisme Animal" (1853), "Études sur le XVIII^e Siècle" (2 vols., 1855), and "Libre Philosophie" (1868).

BILLOT, JEAN BAPTISTE, was born in 1828. At the beginning of the war with Germany he was serving in Algeria, with the rank of lieutenant-colonel. Returning to France he was rapidly advanced to the rank of general of division, but was reduced to that of brigadier-general by the committee on the revision of the grades. He was elected to the Assembly from the department of Corrèze.

CALMON, MARC ANTOINE, born in 1815, studied law, and during the empire held himself aloof from public life. During the term of M. Thiers he was of great service to the president, first as under-Secretary of State in the Ministry of the Interior, and then as prefect of the department of the Seine. He was elected to the Assembly from the department of Seine-et-Oise at the supplementary election of 1873.

CARNOT, LAZARE HIPPOLYTE, was born April 6, 1801. His father, who had been a member of the Convention, was forced to leave France, and went to Belgium, Germany, and Poland, being accompanied by his son. In Magdeburg, where they remained seven years, Carnot studied the German language and literature. He returned to France in 1823, and was elected to the Chamber of Deputies in 1839, 1842, and 1846, where he voted with the Radicals. He was for a time one of the editors of the *Revue Indépendante*, and also published several pamphlets on political questions. After the Revolution of 1848 he was for a short time Minister of Public Instruction. In 1850 he was elected to the Assembly, and remained there until the *coup d'état*. In 1852 and 1857 he was elected to the Corps Législatif, but refused to serve. Being elected again in 1863 he took his seat, but in 1869 he was defeated by M. Gambetta. After the Revolution of September 4, 1870, he was elected mayor of the eighth arrondissement, and in 1871 was elected to the Assembly from the department of Seine-et-Oise. He has written several works, of which "Mémoires sur Carnot par son Fils" (1861-'64) is the best known.

CAZOT, THÉODORE JULES JOSEPH, was born at Alais, February 11, 1821. He has practised law in Paris for some time. In 1871 he was elected to the Assembly from the department of Gard. He is considered one of the ablest speakers of the extreme Left.

CHABRON, MARIE-ÉTIENNE EMMANUEL BERTHAUD DE, was born January 5, 1806, at Retournac. He entered the army in 1824, became second-lieutenant in 1830, served from 1830 to 1834 in the Vendée and in Brittany, and became a captain in 1838. He became chief of battalion in 1852, and took part in the siege of Laghouat in the same year. He was sent to the East in 1854, was honorably mentioned after the battle of the Alma and after the capture of Mamelon-Vert, and was soon after appointed lieutenant-colonel. He was wounded at Sevastopol, and, having been appointed colonel of Zouaves, he returned to Africa, where he took part in all the expeditions against the Arabs. In 1859 he fought at Palestro, was again honorably mentioned, and created a general of brigade. In 1870 he was made a general of division, and took an active part in the war with Germany. In 1872 he was elected to the Assembly from the department of Haute-Loire.

CHADOIS, PAUL DE, was born in 1830 at St.-Barthélemy. He was appointed a colonel of the *Mobiles* and an officer of the Legion of Honor during the war with Germany. In 1871 he was elected to the Assembly from the department of Dordogne.

CHANGARNIER, NICOLAS ANNE THÉODULE, was born at Autun, April 26, 1793, entered the body-guard of Louis XVIII. in 1815, was transferred to a regiment of the line, distinguished himself in Spain in 1823, became a captain in 1825, took part in the campaign in Africa, where he distinguished himself before Mascara. Having become chief of battalion in 1835, he again distinguished himself in the campaign against Achmet Bey, and in 1837 became lieutenant-colonel. Having risen rapidly in consequence of his brilliant services against the Kabyles, he became an officer of the Legion of Honor, was created general of division in 1848, and in 1847 was appointed to the command of the division of Algeria. In 1849 he was appointed commander-in-chief of the National Guard of Paris, and his energetic measures prevented, to a great degree, the outbreak which threatened in that year. For two years he was President of the Assembly, but in 1851 was deprived of both his positions by Louis Napoleon, owing to the hostile attitude observed toward the President's policy. He was arrested in December, 1851, and banished from France on January 9, 1852, when he went to Belgium. He returned to France when the general amnesty was declared. Upon the declaration of war in 1870 he offered his services to the Imperial Government, which, however, were refused. After the surrender of Napoleon he joined Bazaine in Metz, and, upon the surrender of that place, was sent to Germany as a prisoner of war. He returned after the armistice was concluded, and was elected to the Assembly from three departments, and selected the department of Somme. He has generally voted with the Right Centre.

CHANZY, ANTOINE EUGÈNE ALFRED, was born March 18, 1823, at Nouart. He was admitted to the school of St.-Cyr in 1841, took part in the campaigns in Algeria, Italy, and Syria, went to Rome with the army of occupation in 1864, returned to Algeria at the outbreak of the great Arab insurrection, and was made brigadier-general in 1868. At the first news of the war with Germany he returned to France to solicit a command, but was kept out of the way by Marshal Lebœuf. After the Revolution of September 4th, he was made general of division by the Government of National Defense. After the retreat of General de Palladines, he received the command of the Second Army of the Loire, and during the following campaign displayed military talents of the highest order. In 1871 he was elected to the National Assembly from the department of the Ardennes. In the Assembly he joined the Left Centre, and voted against the ratification of peace. When the Assembly was removed to Versailles, he was arrested on his way to that city by order of the Central Committee of the Communists, and would have been shot but for the intercession of a large number of his friends, and his oath not to bear arms against the insurgents. In 1872 he was appointed commander of the Seventh Army Corps, and in 1878 Governor-General of Algeria, which position he still retains. He became a grand officer of the Legion of Honor in 1870, and has been decorated with numerous French and foreign orders.

CHARETON, JEAN JOSEPH VÉYÉ, was born July 8, 1813. He entered the Polytechnic School in 1832, and soon after entered the Engineer Corps. He took part in the campaigns in Algeria and the Crimea, and as colonel he served with the Fifth Corps of the Army of the Rhine in 1870. He was taken prisoner at Sedan, and, having returned after the declaration of peace, he was made a brigadier-general, and in May, 1875, was raised to the rank of general of division. He was elected to the Assembly in 1871 from the department of Drôme. In the Assembly he joined the Left Centre.

CISSEY, GENERAL (*see* ANNUAL CYCLOPÆDIA for 1874).

CORBON, CLAUDE ANTHIME, was born at Arbigny-sur-Varennes, December 23, 1808. He was in his youth a carver in wood, and in the midst of his works studied the religious and political questions of the day. He was one of the founders of *L'Atelier*, a journal devoted to the interests of the laboring-men. In 1844 he was arrested on the charge of having incited the citizens to riot, but was acquitted. He took an active part in the Revolution of February, 1848, and with his friends did not leave the barricades until the republic was proclaimed. He was elected to the Constituent Assembly from Paris, which body elected him one of its vice-presidents. The *coup d'état* caused him to retire to private life. In 1870

he was elected *maire* of the fifteenth arrondissement of Paris, and in 1871 was elected to the Assembly from the department of the Seine. He joined the extreme Left, and in the debate on the Internationals he opposed the law presented by M. Dufaure as dangerous and useless.

CORDIER, STANISLAS ALPHONSE, was born February 27, 1820, at Éconche. He studied at Lisieux, and in 1838 went to Paris and devoted himself to commercial and manufacturing pursuits. He was admitted to the Free Society of Commerce and Industry in 1850, and one year later became its vice-president. In 1857 he was elected a member of the Chamber of Commerce of Seine-Inférieure, and soon after secretary of the same, which office he held for ten years. At the Universal Exhibition of 1867 he obtained two silver medals for his impressions on cloth and his new process of dyeing. In the National Assembly, to which he was elected in 1851 from the department of Seine-Inférieure, he joined the Left Centre.

CORNE, HYACINTHE MARIE AUGUSTE, was born August 28, 1802, at Arras. In 1837 he was elected to the Chamber, but was defeated in 1846. In 1848 he was appointed attorney-general for Douay by the Provisional Government, and shortly afterwards, attorney-general in the Court of Appeals in Paris, in which position he asked for the indictment of Louis Blanc and Causidière. In the same year he was elected to the Assembly from the department of Nord. After the *coup d'état*, against which he protested, he retired to private life. In the National Assembly, to which he was elected in 1871 from the department of Nord, he joined the Left Centre. Among his numerous literary labors, the works on the Cardinals Richelieu and Mazarin and the works "Marcel" (2 vols., 1858), and "Souvenirs d'un Proscrit" (1861), are best known.

CORNILLIER-LUCINIÈRE, ALBERT HIPPOLITE HENRI, COUNT DE, born July 17, 1809, at Joux-sur-Erdre. He entered the *gardes-du-corps* in 1830, but in consequence of the revolution left France, and in 1833 obtained a position as lieutenant in Dom Miguel's army in Portugal. In 1871 he was elected to the Assembly from the department of Loire-Inférieure, where he belongs to the extreme Right.

CRÉMIER, ISAAC ADOLPHE, was born of Jewish parents at Nîmes, April 30, 1796. Having finished his studies at the College of Louis le Grand, he became a lawyer in his native town, where he distinguished himself in the defense of political criminals. His advent in Paris in 1830 was not so successful. He exerted himself to such a degree in the defense of M. Guernon-Ranville, a minister of Charles X., that he fainted away in the court. Having purchased of Odillot his office and functions as advocate, he defended with great ability a number of Republicans accused of political offenses. In 1840 he went to Egypt and Tur-

key, where he defended with success the Jews of Damascus charged with the murder of a Catholic priest. In 1842 he was elected to the Chamber of Deputies, and was reelected in 1846. After the revolution of 1848 he was in favor of the regency of the Duchess of Orleans. But the Chamber had already been taken possession of by the Republicans, and, carried away by the movement, he assisted in the proclamation of the Republic, and as Minister of Justice took part in the Provisional Government. He resigned on June 7th, but, having been elected to the Assembly from two departments, he took his seat for the department of Indre-et-Loire. In 1848 he favored the election of Louis Napoleon, but soon went over to the opposition. After the *coup d'état* he was arrested. After this he withdrew for a time from politics. In 1870 he was a member of the Government of National Defense and Minister of Justice. In 1871 he was elected a member of the National Assembly from Algeria, and on February 14th of the same year resigned his position as a member of the Government. In the Assembly he has voted with the moderate Republicans. He has been for years the president of the Universal Israelitic Alliance, in which position he has done very much to relieve the sufferings of his co-religionists.

DENORMANDIE, LOUIS JULES ERNEST, a Parisian attorney, was during the siege of Paris *maire* of the eighth arrondissement, and is a devoted friend of M. Thiers. In 1871 he was elected to the National Assembly from the department of the Seine. In the Assembly he joined the Left Centre.

DOUET, COUNT, is a member of the extreme Right, but of no use to his party except for voting. During the entire session of the Assembly he has not once taken part in debate.

DUCLERO, CHARLES THÉODORE EUGÈNE, was born at Bagnères de Bigorre, November 9, 1812. In 1836 he began his literary career as proof-reader of the journal *Le Bon Sens*, of which he soon became one of the editors-in-chief. In 1838 he became editor of *La Revue de Progrès*, and at the same time edited the "Dictionnaire Politique." In 1840 he assumed the editorship of the *National*, which he left in 1846. On February 25, 1848, he was appointed assistant to the Mayor of Paris, Garnier Pagès, Jr., and as such prepared several measures to remodel the police on the plan of the London force, which were afterward put into execution. On March 6th he became under-Secretary of State. He was soon after elected to the Constituent Assembly by the department of Laude, and on the 10th of May was appointed Minister of Finance. When the Constituent Assembly adjourned he retired to private life. In 1871 he was elected to the National Assembly from the department of Basses-Pyrénées. He joined the Left, and voted against the preliminaries of peace.

DUMON, M., born in 1806; is the proprietor

of large vineyards. He was formerly a member of the General Council of the department of Gers, and in 1871 was elected to the National Assembly from the same department. He has joined the Right, and is a zealous royalist and Catholic.

DUPANLOUP, Bishop (*see* ANNUAL CYCLOPEDIA for 1874).

FOUBERT, M., born in 1812, was elected to the National Assembly in 1871 from the department of La Manche. He voted originally with the Right Centre, but supported M. Thiers, and demanded in the session of May 24, 1872, that the resignation of the President should not be accepted. Since then he has voted with the Left Centre.

FOURCAUD, ÉMILE, was formerly president of the Tribunal of Commerce of Bordeaux. In 1871 he was elected to the National Assembly from the Gironde, and also to the General Council of the same department. He became a knight of the Legion of Honor. He is a member of the Left.

FOURICHON, MARTIN, was born January 10, 1809; graduated from the Naval School in 1824. He advanced rapidly, became a captain in 1848, was sent to Algeria in the same year, and soon after was appointed Governor of Cayenne. He was made a rear-admiral in February, 1853, was placed in command of the station of the Pacific, and was recalled to the Mediterranean and made vice-admiral in 1859. On July 15, 1870, he was appointed commander-in-chief of the second squadron, which was ordered to operate in the German Ocean. As the German fleet had retired to the port of Jahde, M. Fourichon devoted himself to blockading the German coasts. After the Revolution of September 4th, he was appointed Minister of the Navy by the Government of the National Defense. On the 16th he joined Messrs. Crémieux and Glais-Bizoin at Tours, and was ordered to take charge for a time of the Ministry of War. In this position he organized the First Army of the Loire, but owing to the dissensions between him and his colleagues he resigned his seat to M. Crémieux. In 1871 he was elected to the National Assembly from the department of Orne. He was a member of the Right Centre.

FRANCHIEU, PASQUIER, Marquis de, was born in 1810, served in the navy until 1830. He was elected to the National Assembly in 1871 from the department of Hautes-Pyrénées. He was a member of the extreme Right, and has ever been a devoted royalist, and is particularly opposed to the house of Orleans. At one time he called M. Thiers the evil genius of his country, and at another time went so far as to accuse Marshal MacMahon of cowardice. He is also a zealous Catholic, and as such was at the head of the celebrated pilgrimage to Paray-le-Monial.

FRÉBAULT, CHARLES VICTOR, was born February 1, 1813, entered the artillery as second-lieutenant in 1835, became lieutenant in 1837,

captain in 1840, chief of battalion in 1848, lieutenant-colonel in 1854, colonel in 1856, brigadier-general in 1861, and general of division in 1867. He has held various offices as commandant of the Pyrotechnic School at Toulon, and Governor of Guadeloupe from 1859 to 1863. He was created grand officer of the Legion of Honor in 1866. During the siege of Paris, he commanded the artillery of the Second Army. In 1871 he was elected to the National Assembly from the department of the Seine. He was a member of the Left.

GOUIN, ALEXANDRE, was born at Tours, January 26, 1792. He was elected to the Chamber of Deputies in 1831, and, as general secretary of the budget committee, was the author of the budgets of 1833, 1834, 1835, and of various financial laws. In 1840 he became Minister of Commerce, was elected to the Constituent and afterward to the Legislative Assembly in 1848, and in 1852, after the *coup d'état*, to the Corps Législatif, to which he was reelected at each succeeding election, and in 1867 was created a Senator of the Empire. During the occupation of Tours by the Germans he was mayor of that city, and in 1871 was elected to the National Assembly from Indre-et-Loire, and to the General Council of that department. He was a member of the Right Centre. In 1865 he was made commander of the Legion of Honor.

HUMBERT, GUSTAVE AMÉDÉE, was born June 28, 1822, at Metz, studied law at Paris, and was made a doctor of laws in 1844. In 1845 he obtained the first prize for his essay on "Conséquences des Condamnations pénales." In 1848 he was appointed Sub-prefect of Diedenhofen (Thionville), was appointed titular Professor of Roman Law at Toulouse in 1861, and was chosen Perpetual Secretary of the Academy of Legislation of the same city. In 1871 he was elected to the National Assembly from the department of Haute-Garonne. He was a member of the Republican Left, of which he was for a time vice-president. He voted against the preliminaries of peace. Besides the above-mentioned essay he has published several others on Roman antiquities, and has also contributed numerous articles to the *Revue de Toulouse* and the "Dictionnaire d'Antiquités."

JAURÈS, CONSTANT LOUIS JEAN BENJAMIN, born February 8, 1823, entered the Naval School at Brest in 1839, became a captain in 1861. He took part in the campaigns in the Crimea, in Italy, in China, in Cochinchina, and in Mexico. At the beginning of the war with Germany, he was placed by the Navy Department at the disposal of the Minister of War, was put in command of a brigade, and after the battle of Sillé-de-Gaume he was promoted to the rank of general of division. At the conclusion of peace the committee to revise the grades, not being able to retain him in the army, recommended to the Minister of the Navy to raise him to the rank of rear-admiral, in recognition of the services rendered by him.

This recommendation was acted upon in October, 1871. In July, 1871, he was elected to the National Assembly from the department of Tarn. He was a member of the Left. He has been made a commander of the Legion of Honor.

KOLB-BERNARD, CHARLES LOUIS HENRI, was born January 16, 1798, at Dunkirk. He was elected to the Legislative Assembly in 1849, to the Corps Législatif in 1859, and was re-elected in 1863 and 1869. In 1871 he was elected to the National Assembly from the department of Nord. He was a member of the Right.

KRANTZ, JEAN BAPTISTE SEBASTIEN, was born January 17, 1817. He has attained great eminence as engineer. He built the Palace of the Exhibition in 1867, and distinguished himself at the siege of Paris by his labors for the fortification of that city. In February, 1871, he received a nomination for the Assembly, and was defeated; but at the supplementary election, held in July of the same year, he was elected from the department of the Seine. He has voted with the Left Centre.

LABOULAYE, ÉDOUARD RENÉ LEFEBVRE, was born January 18, 1811, at Paris. In 1863 he was a candidate for the Assembly from the department of the Seine, but was defeated, as also in 1866, in the department of Bas-Rhin, and in 1869, in Seine-et-Oise. In 1870 he was a member of the investigating committee on the administrative organization of the city of Paris, and in 1871 he was elected to the Assembly from the department of the Seine. He is also distinguished as a lawyer, and has published numerous works, the most important of which are "Histoire du Droit de Propriété foncière en Europe depuis Constantin jusqu'à nos Jours" (1839), "Essai sur la Vie et les Doctrines de Frédéric Charles de Savigny" (1842), "Histoire politique des États-Unis, depuis les premiers Essais de Colonisation jusqu'à l'Adoption de la Constitution fédérale" (3 vols., 1855-'66), "Les États-Unis et la France" (1862), and "Études sur l'Esclavage aux États-Unis" (1855).

LAFAYETTE, OSCAR THOMAS GILBERT DU MOTIER DE, a grandson of General Lafayette, was born in 1816, in Paris. In 1835 he was appointed an artillery officer, and as such took part in several campaigns in Algeria, where he became a captain, and obtained the decoration of the Legion of Honor in 1841. In 1848 he was appointed commissary-general in Seine-et-Marne by the Provisional Government, which department soon after elected him to the Assembly. After the *coup d'état* he resigned. In 1871 he was again elected to the Assembly from Seine-et-Marne.

LANFREY, PIERRE, was born in 1828, at Chambéry. After the Revolution of September 4, 1870, he was one of the first to demand an immediate election. In 1871 he was elected to the Assembly from the department of Bouches-du-Rhône. On October 9, 1871, he was ap-

pointed minister plenipotentiary to Switzerland. He has also distinguished himself as an historical writer. Among his best known works are "L'Église et les Philosophes du XVIII^e Siècle," "L'Histoire politique des Papes" (1860), and "Histoire de Napoléon I" (4 vols., 1867-'70; sixth edition, 1872).

LA ROCHETTE,* ERNEST DE, was born in 1804. In 1848 he was elected to the Assembly. Owing to his strong royalistic tendencies, he took no part in public affairs during the Empire. In 1871 he was again elected to the Assembly from the department of Loire-Inférieure. He is president of the group of the "Chevaux-légers," is in correspondence with the Count of Chambord, inspires in his name the royalist paper *Union*, and is known for the hatred he bears for everybody and everything connected with the Orleanists.

LASTEYRIE, ADRIEN JULES, Marquis de, was born October 31, 1810. He is a grandson of General de Lafayette, and a brother-in-law of M. de Rémusat. At an early age he entered the service of Dom Pedro, and took part in the expedition which expelled Dom Miguel from Portugal. In 1842 he was elected to the Chamber of Deputies, where he voted with the Left Centre; in 1848, being elected to the Assembly, he took a hostile attitude to the republic and to the President. Owing to his continued opposition to Napoleon, he was banished in 1852, but was included in the amnesty promulgated on the 7th of August of the same year. In 1871 he was elected to the Assembly from the department of Seine-et-Marne.

LAURENT-PICHAT, LÉON, was born at Paris, July 12, 1828. In his youth he became acquainted with Victor Hugo, who fostered the talent the young man showed for literature. In 1854 he became the editor and proprietor of the *Revue de Paris*, which was suppressed in 1858. He has written numerous poems, novels, etc., which have been generally well received. In 1871 he was elected to the Assembly from the department of the Seine.

LAVERGNE, LOUIS GABRIEL LÉONCE GILHAUD, was born January 24, 1809, at Bergerac. He entered the Council of State in 1842, as referendary, became soon after sub-director of the Ministry of Foreign Affairs, and in 1846 was elected to the Chamber of Deputies. In 1848 he retired to private life. In 1871 he was elected to the Assembly from the department of Creuse. He is the leader of a small section of the Left Centre, called after him the "Groupe Lavergne."

LEPETIT, M., dean of the Law School of Poitiers, is an experienced and able jurist. He was elected to the Assembly from the department of Vienne, and is an adherent of M. Thiers.

LE ROYER, ÉLIE, born in Geneva, of French parents, in 1816, was appointed Attorney-General of Lyons in 1870, and in 1871 was elected

* M. de La Rochette died January 20, 1876.

to the Assembly from the department of the Rhône.

LEFELLIER-VALAZÉ, General, is one of the old friends and supporters of M. Thiers. He has distinguished himself very little in the army. He was elected to the Assembly from the department of the Lower Seine.

LITTRÉ, MAXIMILIEN PAUL ÉMILE, was born in Paris, February 1, 1801. Having first studied medicine, he soon abandoned it for philology, in which branches as well as in philosophy he has greatly distinguished himself. In 1830 he became one of the editors of the *National*, a Democratic newspaper. He has also written a number of papers for the "Dictionnaire de Médecine," and the *Revue des Deux Mondes*. In 1839 he was elected a member of the Academy of Inscriptions, and was chosen by that body to continue the "Histoire littéraire de la France," to the twenty-first, twenty-second, and twenty-third volumes of which he made important contributions. In 1871 he was appointed Professor of History and Geography in the Polytechnic School, and in the same year was elected to the National Assembly from the department of the Seine. The General Council of the department of the Seine, of which he was also chosen a member, elected him vice-president. In 1871 he was elected a member of the French Academy. He had been a candidate for the same honor in 1868, when he was defeated. Both in 1863 and in 1871 he was bitterly opposed as an infidel by Bishop Dupanloup, who upon M. Littré's election resigned his seat. He has published, besides the works noticed above, an edition and translation of the works of Hippocrate (10 vols., 1839-1861), "De la Philosophie positive" (1845), "Dictionnaire de la Langue française" (1863-1869), a translation of Strauss's "Life of Jesus" (second edition, 1855), "Histoire de la Langue française" (2 vols., 1862), "Médecine et Médecins" (1872), and "La Science sous le Point de Vue philosophique" (1873). In 1863, upon his rejection by the Academy, M. de Sainte-Beuve published a notice on his life and works.

LOBREAU, HIPPOLYTE LOUIS, Viscount de, was born at Trébedan, May 24, 1811. Having finished his studies, he traveled through Europe, and in 1842 edited the *Impartial de Bretagne*, a Legitimist journal. In 1871 he was elected a member of the Assembly, from the department of Côtes-du-Nord, where he distinguished himself by his persistent opposition to President Thiers.

LEBO, BERTRAND VICTOR ONÉSIME, was born October 16, 1823, at Ville-Comtal. He succeeded M. Pascalis as advocate in the Council of State and in the Court of Appeals, was elected a councillor-general of Gers in 1866, and in 1871 was elected to the Assembly from the same department. He has published several works, of which "Du Travail et de l'Organisation des Industries dans la Liberté" (1848), and "Marguerite d'Angoulême, Reine

de Navarre, et la Renaissance," are the best known.

MAGNIN, JOSEPH, was born at Dijon, January 1, 1824. As the owner of numerous forges, he possesses great influence in his department of Côte-d'Or. In 1863 he was elected to the Corps Législatif, was reelected in 1869, and in that year was one of its secretaries. After the Revolution of 1870, he was appointed Minister of Agriculture and Commerce, and as such completed, with great ability, the provisioning of Paris. In 1871 he was elected to the Assembly from the department of Côte-d'Or, and at the same time to the General Council of that department.

MALEVILLE, GUILLAUME JACQUES LUCIEN, Marquis de, born August 30, 1805; was a counsellor at the court of Bordeaux, and afterward in Paris, and was elected to the Chamber of Deputies from the Dordogne in 1842. He was created a peer of France in 1846, and is one of the few survivors bearing that title. After 1848 he confined himself to his duties as magistrate. In 1871 he was elected to the Assembly from the Dordogne. In 1839 he was made a knight of the Legion of Honor.

MALEVILLE, LÉON DE, was born May 8, 1808, at Montauban. In 1834 he was elected to the Chamber of Deputies, of which he was the youngest member. In 1840 he was under-Secretary of State in the department of the Interior. He was a member of the Constituent and Legislative Assemblies, and in 1848 was for ten days Minister of the Interior in the first cabinet of the Prince-President. In 1849 he left his party to act with the Left against the Bonapartists. After the *coup d'état* he retired to private life. In 1871 he was elected to the National Assembly from Tarn-et-Garonne, and was, from February to August, vice-president of that body.

MARTEL, LOUIS JOSEPH, was born September 15, 1813, at Saint-Omer; studied law, and became a judge at the tribunal of Saint-Omer. In 1849 he was elected to the Legislative Assembly, where he voted with the Right. He protested against the *coup d'état* in December, 1851, and then returned to the bar at Saint-Omer. He was elected in 1863, and again in 1869, to the Corps Législatif, and in 1871 to the National Assembly. The Corps Législatif chose him as one of its secretaries, and the National Assembly as one of its vice-presidents.

MONTAGNAC, LOUIS RAYMOND DE CHAUVANOR, Marquis de, was born in Paris, March 14, 1811. He was admitted to the Naval School at Brest in 1827, and, having entered the navy, rose gradually to the position of captain in 1848. In 1865 he was made rear-admiral. During the siege of Paris he commanded the seventh "sector," comprising the batteries of Auteuil, Passy, and La Muette. In 1871 he was elected to the National Assembly from the department of Allier.

MORIN, PAUL, took part in the Revolution of

1848. He is the proprietor of a large aluminum factory at Nanterre. In 1871 he was elected to the National Assembly from Paris.

PAJOT, M., was elected to the Assembly from the Nord. He has taken very little part in the proceedings of the Assembly, the only time that he addressed that body being in defense of the Catholic petitioners who asked for a French intervention in favor of the Papal States. He is a devoted royalist and a zealous Catholic.

PÉRIER, AUGUSTE CASIMIR VICTOR LAURENT, was born August 20, 1811, at Paris. He entered the diplomatic service in his twentieth year, and was successively secretary of embassy at London, Brussels, and the Hague; *chargé d'affaires* at Naples and St. Petersburg, and minister plenipotentiary at Hanover. In 1846 he was elected to the Chamber of Deputies, and in 1849 to the Legislative Assembly. Having protested against the *coup d'état*, he was placed in confinement for a few days. In 1871 he was elected to the National Assembly from two departments, and selected the department of Aube. On the death of M. Lambrécht, October 11, 1871, he became Minister of the Interior, which office he held until February, 1872. In May, 1873, he again held this office for a few days. In 1846 he was created a grand officer of the Legion of Honor, and in 1867 a member of the Academy of Moral and Political Sciences.

PICARD, LOUIS JOSEPH ERNEST, was born December 24, 1821, at Paris. As a member of the council of inspection of the *Siccle*, he obtained the support of this journal for M. Ollivier in the elections of 1857. In June, 1858, he was himself elected to the Legislative Body as a member of the Opposition, and was reelected in 1868, and again in 1869. In the Revolution of September 4, 1870, he was proclaimed a member of the Government of the National Defense, and was appointed Minister of Finances. Being the only member of the Government remaining at liberty during the insurrection of October 31st, he contributed much, by his coolness and firmness, toward the release of his colleagues. In 1871 he was elected to the Assembly from two departments, and selected the department of Meuse. M. Thiers appointed him in the same year Minister of the Interior, but, owing to the violent attacks of his opponents, he resigned soon after.

POTHUAN, LOUIS PIERRE ALEXIS, born October 30, 1815, entered the Naval School in 1831, became a captain in 1850, and rear-admiral in 1864, and was in 1869 a member of the Council of the Admiralty. During the siege of Paris he at first had command of Fort Bicêtre, and afterward commanded the Sixth Division of the Third Army, in which position he greatly distinguished himself. He was created grand officer of the Legion of Honor in 1870, and in 1871 became vice-admiral. In the same year he was elected to the Assembly from the department of the Seine. On February 19, 1871,

M. Thiers offered him the Ministry of the Navy and of the Colonies, which he accepted and retained until May 24, 1873. His administration was marked by strict economy.

RAMPONT-LECHIN, GERMAIN, was born at Chablis, November 29, 1809. He studied medicine before the Revolution of 1830, took part in that Revolution, established himself as physician in Yonne in 1834, and was elected to the Constituent Assembly in 1848. In 1870 he was elected to the Corps Législatif, where he voted against the *plébiscite* and the declaration of war. After the Revolution of September 4th he was appointed Postmaster-General, and as such organized the balloon and pigeon service during the siege of Paris. In 1871 he was elected to the Assembly from the department of Yonne.

ROGER, EDWARD, Count de, was born in 1802 entered the Diplomatic Corps after the Restoration, was secretary of embassy in Constantinople, and was elected to the Chamber of Deputies in 1834. In 1848 he was elected to the Legislature, but retired to private life. In 1871 he was elected to the Assembly from the department of Nord. He is an intimate friend of M. Thiers, and like him was originally an Orleanist, but now votes with the Left Centre. He was appointed a commander of the Legion of Honor in 1871.

RUMILLY, LOUIS MADELEINE CLAIR HIPPOLYTE GAULTHER DE, was born December 8, 1792, at Paris. In 1818 he became a lawyer in Paris, and distinguished himself in several trials of editors. In 1831 he was elected to the Chamber of Deputies, and, with a short interruption from 1835 to 1837, was reelected until 1848. In 1848 he was elected to the Constituent Assembly, and in 1849 was elected by that body a Councillor of State. He protested against the *coup d'état*, and then retired to private life. In 1871 he was elected to the Assembly from the department of Somme.

SAISY, HÉRVÉ DE, born in 1833, was elected to the National Assembly in 1871, from the department of Côtes-du-Nord. He is the only Bonapartist elected by the Assembly to the Senate.

SCHÉREER, EDMOND, was born in Paris, April 8, 1815. He studied theology at Strasburg, and in 1845 became Professor of Exegesis in the Evangelical School in Geneva. He was at the same time editor of the journal *La Réformation du XIX^e Siècle*. In 1850 he resigned his position as professor, in consequence of his liberal theological views. During the siege of Paris he was a member of the Municipal Council, and in 1871 he was elected to the National Assembly from the department of Seine-et-Oise.

SCHNEURER-KESTNER, AUGUSTE, was born at Mühlhausen, February 11, 1833. He studied chemistry in Paris, and soon took charge of the factory of his father-in-law. He has taken part in various movements to better the condition of the laboring-men, and has frequently aided the Republican party by his immense

wealth. On February 8, 1871, he was elected to the National Assembly from the department of Haut-Rhin, but, upon the session of Alsace to Germany, he withdrew. He was reelected, July 2d, from the department of the Seine.

SCHORLEHER, VICTOR, was born at Paris, July 21, 1804. Having finished his studies, he traveled through the United States and the West Indies, and, disgusted with slavery, he at once set about to have the slaves in the French colonies emancipated. In 1848 he was appointed under-Secretary of State in the Ministry of the Navy, and in that position published the decree which proclaimed the principle of emancipation, and instituted the committee charged with the preparation of the law abolishing slavery. In the same year he was elected to the National Assembly from the island of Guadeloupe. After the *coup d'état* he was banished from France and went to England, and, refusing to make use of the general amnesty, did not return to France until 1870. He took a prominent part in the defense of Paris. In 1871 he was elected to the National Assembly from Paris, Guiana, and Martinique, and accepted for the latter.

SIMON, JULES, was born at Lorient, December 31, 1814. In 1839 he was appointed professor in the Sorbonne, and in 1848 was elected to the Constituent Assembly. He was a bitter opponent of Louis Napoleon, and, refusing to take the oath of allegiance, he was removed from his professorship in 1851. In 1868 he was elected a member of the Academy and of the Corps Législatif, where he soon became the leader of the Liberals. After the Revolution of 1870 he became Minister of Public Instruction. As such he took a prominent part in the events that followed in Paris. In 1871 he was elected to the Assembly from the department of Marne, was again appointed Minister of Public Instruction, and as such prepared a bill providing for compulsory primary instruction.

TESTELIN, M., was born in 1810. He studied medicine, and is known as an able and witty speaker. As an extreme Republican he was very intimate with Delescluze, one of the leaders of the Commune. In 1871 he was elected to the National Assembly from the department of Nord.

THÉRY, N., born in 1807, elected to the Assembly from the department of Nord in 1871.

TOCQUEVILLE, HIPPOLYTE, Count de, was born in 1812. He has served in the cavalry, and is a brother of Alexis de Tocqueville, the author of "Democracy in America," and "Ancien Régime." In 1871 he was elected to the National Assembly from the department of Manche.

TRÉVILLE, HERMANN, Count de, was born in 1803. He took part in the Spanish campaign under the Restoration, and asked for his discharge in 1830. In 1871 he was elected to the National Assembly from the department of Aude.

TRIBERT, LOUIS, was born June 29, 1819, at Paris. He studied at the Collège Bourbon and the University of Berlin, and traveled through a large part of Europe and America. He took part in the war with Germany, was taken prisoner at Ville-Evrard and was sent to Silesia, where he still remained when, in 1871, he was elected to the National Assembly from the department of Deux-Sèvres.

WALLON, HENRI ALEXANDRE, was born at Valenciennes, December 23, 1812. In 1849 he was nominated for the Legislature by the moderate party in the department of Nord, and was elected. In 1850, thinking that the Assembly overstepped its powers by passing a law restricting universal suffrage, he resigned. In 1871 he was elected to the Assembly from the department of Nord, where he voted with the Right Centre. He has also distinguished himself as an historian. He was Professor of History and Geography at the Sorbonne, was elected a member of the Academy of Inscriptions and Belles-Lettres in 1850, was created a knight of the Legion of Honor in 1847 and an officer in 1868. He has also distinguished himself by his treatises on slavery. Among his principal works are "Géographie politique des Temps modernes" (1839), "Histoire de l'Esclavage dans l'Antiquité" (1848), and "Vie de N. S. Jésus-Christ selon la Concordance des quatre Évangélistes" (1865). In 1875 he published a new history of the Maid of Orleans, for which he received a congratulatory letter from the Pope.

WOLOWSKI, LOUIS FRANÇOIS MICHEL RAYMOND, was born at Warsaw, August 31, 1810. He took an active part in the Polish Revolution of 1830, and was sent as secretary of legation to Paris. The misfortunes of his country forced him to remain there, and in 1834 he was naturalized in France. He founded in 1833 the *Revue de Législation et de Jurisprudence*, became professor in the Conservatory of Arts and Sciences in 1839, and a member of the council of this institution in 1848. In the latter year he was elected to the Constituent Assembly, and afterward to the Legislature for the department of the Seine. In 1851 he left the Assembly and founded the first company of "Crédit Foncier de Paris." He was elected a member of the Academy of Moral and Political Sciences in 1855, and was created an officer of the Legion of Honor in 1869. In 1871 he was elected a member of the Assembly from the department of the Seine, and has taken an active part in the discussion of financial questions. He has written numerous works on finance, of which the following are the best known: "Mobilisation du Crédit foncier" (1839); "Les Finances de la Russie" (1864); "La Question des Banques" (1864); "La Banque d'Angleterre et les Banques d'Écosse" (1867), and numerous essays and memoirs on the same subject.

FRANCIS V., the last sovereign Duke of Modena, was born June 1, 1809, and died on

November 21, 1875. He succeeded his father on the throne in 1846. In 1860 the duchy of Modena was incorporated with the kingdom of Sardinia, against which action the duke entered a protest. He remained in Vienna up to his death. The sister of the deceased duke became, in 1847, the wife of Don Juan, heir to the pretensions of the first Don Carlos. The Spanish Pretender is, therefore, the nephew, on the mother's side, of the Duke of Modena, and it is to this relationship that he owed the possibility of maintaining thus long his struggle for the Spanish crown. The mysterious and, indeed, unaccountable supply of money which has enabled Don Carlos to continue the contest has been derived from his maternal uncle, whose vast wealth enabled him to give this material support to that cause of Legitimism to which he was throughout his whole life fanatically devoted. It is not too much, in fact, to say that the late Duke of Modena was the backbone of the Carlist rebellion. The gigantic fortune of the Duke of Modena is the largest princely one in Europe. Besides his nephew, Don Carlos, he also assisted the French Legitimists. The duke had at heart the cause of Legitimacy in Italy, France, and Spain. His munificence to the young Duke of Parma seemed almost fabulous. For the Comte de Chambord, his brother-in-law, his veneration was unbounded. One of the causes of the Italian campaign of 1859 was his persistent determination to ignore the Third Empire. Count Cavour turned it to account in overcoming opposition to his policy. The Empress Eugénie, to chastise what she conceived to be his insolence, was led to disregard papal advice. The duke felt an intense hatred against Louis Napoleon, to overthrow whom he did not recoil from assisting republican journals in France. It was at his expense that the famous proceedings for a separation suit in the Montijo family were republished in the form of a *brochure*, and circulated in France, Belgium, and Switzerland, in 1868. The personal property left by the duke is estimated at two hundred million francs (\$40,000,000).

FRANKEL, ZACHARIAS, was born in Prague, October 18, 1801, and died February 18, 1875. He received his education in the University of Pesth, and in 1832 was appointed as rabbi in Teplitz. Here he did much for education until in 1836 he received a call from the Saxon Government as chief rabbi of Dresden and Leipsic. In this position he worked successfully for the recognition of the Jewish religion by the state, and in 1840 succeeded in having the first synagogue erected in Dresden. A memorial, entitled "Die Eidesleistung der Juden, in theologischer und historischer Beziehung," which he presented to the Diet of Saxony, caused the abolition of the Jewish test-oath not only in Saxony, but also in other German states. In 1854 he was appointed director of the new Jewish Theological Seminary in Breslau, which position he retained up to his death. He wrote

numerous works, among which the following are the most important: "Ueber den Einfluss der palästinensischen Exegese auf die alexandrinische Hermeneutik" (1851), "Grundlinien des mosaisch-talmudischen Eherechts" (1859), and "Entwurf einer Geschichte der Literatur der nachtalmudischen Responsen" (1865). Since 1851 he has published a monthly, devoted to the history and science of the Jews.

FRANKLIN, LADY JANE, was born about 1805, died July 18, 1875. In 1826 she became the second wife of Sir John Franklin. Eight years after, she accompanied her husband to Van Diemens Land, and it was to her in great part that he owed the popularity which he enjoyed during his six years' term as Governor. Having returned to England in 1845, he sailed in command of the ships Erebus and Terror to discover the Northwestern passage, but from which expedition he never returned. When he did not return in 1847, as was intended, Lady Franklin felt great anxiety for his fate, and began that series of heroic efforts which have secured her imperishable fame. In the spring of 1848 she offered rewards of \$10,000 and \$15,000 to any persons discovering or affording relief to the missing party, or making any great effort to do so. In 1849 she addressed a pathetic appeal to the American people, through the President, for active co-operation in the search, which was nobly responded to by Henry Grinnell. In 1850, and in subsequent years, Lady Franklin fitted out expeditions, chiefly at her own cost, supplementary to those sent by the Government. Finally, she sent out in 1857 the steamer Fox, under command of Captain McClintock, who returned about three years later, with the melancholy news of Sir John Franklin's death, but with abundant proof that the daring explorer had accomplished the discovery he was sent to make, namely, the existence of a north-west passage. The tidings of the commander's death McClintock had learned from a document left in a cairn on the shores of King William's Land by the survivors of Franklin's company. The paper, dated April 25, 1848, stated that Sir John Franklin died June 11, 1847; that the Erebus and Terror were abandoned April 22, 1848, when the survivors, one hundred and five in number, started for the Great Fish River. Many relics were found of this party, who perished on their journey soon after they left the vessels. Although there was no further reason to doubt the fate of her husband, Lady Franklin was henceforth unceasing in her efforts to learn more of him and his brave companions. She held out liberal rewards to any one who would bring her further tidings, and took a warm interest in every scheme for exploring the polar regions. She offered to pay liberally the late Captain Hall, of Cincinnati, if he would go over to London and tell her the story of his five years' voyage in the arctic zone. Finding that Hall was too intent on going to

the north-pole, and so could not spare time, Lady Franklin set out for the United States, and arrived in Cincinnati, in July, 1870. Lady Franklin had a long conversation with Captain Hall, and learned his views regarding the fate of the missing records of her husband's voyage, and the prospect of finding a last message, which she firmly believed he had written her. During her visit she was treated with great respect, and was waited upon by the city officials and many prominent citizens. In 1873 Lady Franklin bought Franklin House, in Lincolnshire, intending to collect there the relics of her husband's expeditions. In the same spirit, she offered rewards for further tidings of her lost husband and his men at the recent sailing of a British expedition to explore the arctic regions, and, if possible, to reach the north-pole.

FREDERICK WILLIAM, ex-Elector of Hesse, was born August 20, 1802, and died January 6, 1875. He was the only son of the Elector William II. and Augusta Friedrike Christiane, daughter of Frederick William II., King of Prussia. His father, for various reasons, left Cassel for Hanau in 1831, and made him not only co-regent, but even sole ruler during his own absence. His reign, up to his father's death, was marked by constant troubles with the Diet. Upon his father's death, in 1847, he made a slight attempt to relieve himself of all responsibility about the constitution, which attempt, however, failed in consequence of the determined stand taken by the military. During the movements of 1848 he granted the demands of the people, and formed a liberal ministry. This was succeeded in February, 1850, by a reactionary ministry under Hassenpflug, who soon made the Government so unpopular that in September, 1850, the Elector was forced to leave the country. The Bundestag, governed by Austrian influences, took this opportunity to interfere in the affairs of Hesse, and on October 25th the Bundestag ordered Austria and Bavaria to proceed with the execution against Hesse. On November 1st the troops of the Bund entered Hesse, and on December 27th the Elector returned to Cassel. April 13, 1852, the constitution of 1831 was abolished, and a new one put in its stead. In 1855 Hassenpflug was dismissed, and the Elector again took the affairs of state in his own hands. The constitutional quarrels, however, continued until 1862, when Prussia sent notice to the Elector that the Hessian question must be ended, otherwise Prussia would interfere. This settled the question, and on June 21, 1862, the old constitution of 1831 was restored. The Elector never forgave Prussia for the pressure brought to bear upon him on this occasion, and when in 1866 the difficulties arose between Austria and Prussia, he considered the time to have come to make this known. He rejected the Prussian overtures, and ordered his troops to join those of Austria. But only four days later (June 18th) Cassel was occupied by the

Prussians, and the Elector taken as a prisoner of war to Stettin, and on August 18th the electorate was formally incorporated with Prussia. At the end of the war he went to his estate of Horzovitz, in Bohemia, where he remained until his death. With the annexation of his state to Prussia, in 1866, the proud and ancient German title of Elector became extinct.

FRIENDS. The Associated Executive Committee of Friends (Orthodox) on Indian Affairs met at Indianapolis, Ind., October 28th. The committee is composed of twenty members, two each from the New York, New England, Philadelphia, Baltimore, North Carolina, Ohio, Indiana, Western, Iowa, and Kansas yearly meetings. The commission has charge of the eight agencies, comprising the central superintendency. The agency near Topeka, Kansas, includes the prairie band of Pottawatomies and the Kansas Kickapoos, numbering in all 117 Indians, with 111 children of suitable age for school. The schools number about 84 pupils. The Quapaw agency, situated in the northeast corner of the Indian Territory, includes the Quapaws, Ottawas, confederated Peorias and Miamis, Wyandottes, Shawnees, Senecas, and the remnant of Captain Jack's band of Modocs from Oregon. They number 1,544 persons, with 300 children suitable for school. Three boarding-schools and one day-school were reported in operation, with a total enrollment of 294, and an average attendance of 202 pupils. The Indians were behaving well, and were improving in temperance and knowledge. The Sac and Fox agency includes 1,557 Indians of the Sacs and Foxes, Shawnees, and Mexican Kickapoos. A boarding-school for the Sacs and Foxes, and a school and stock farm, had been established, and four Indians of influence had been appointed school directors. The agency of the Little Osages and Kaws includes 3,523 Indians of those tribes. According to the report of the agent, 66 children attended the "agency school," and 11 children the Roman Catholic school. The Wichita agency includes 1,900 Indians of the Wichitas and affiliated bands, and, being situated on the borders of the Indian Territory, is exposed to depredations from the wild tribes. The school had a total enrollment of 65, and an average attendance of 50 pupils. The Kiowa, Comanche, and Apache agency includes 2,918 Indians. These tribes had heretofore refused to allow their children to go to school, but the agent now reported that a school had been established and had an average attendance of 60 pupils, of whom 28 were Kiowas, 16 Comanches, and 16 Apaches. The Indians had cultivated considerable crops of corn during the summer. This is said to be their first attempt at agriculture.

Superintendent Haag reports the following general statistics of the progress of civilization in the superintendency: Population, 15,622; number of schools, 15; of scholars, 886; of Indians who wear citizen's dress, 8,753; of

houses occupied by Indians, 1,042; amount of money contributed by religious denominations for the work of the superintendency, \$5,790.48.

The Unitarian Friends have been assigned the charge of the Northern Indian Superintendency and the agencies therein, as follows: the Great Nemaha, Omaha, Winnebago, Pawnee, Otoe, and Santee agencies, all being in the State of Nebraska. The reports of the agents show generally improvement in the disposition of the Indians under their charge, and increasing inclination to become civilized, and a growing interest in education. An industrial home had been established among the Iowas at the great Nebraska agency, with an average attendance of 25 persons, and also a day-school with an average attendance of 31 children. A building for a schoolhouse had been erected among the Sacs and Foxes of the Missouri. The Omahas were taking much interest in their schools. The schools had prospered, and the attendance was reported good. A day-school had been in operation among the Otoes for ten months of the year, and, as long as the Indians were conveniently situated to it, the attendance was good. At the Santee agency were schools supported by the American Board of Commissioners for Foreign Missions, and the Protestant Episcopal Board of Missions, and a manual-labor school supported by the Government. All were prospering, with pupils showing great intelligence and aptness to learn. Three day-schools and an industrial school were in operation at the Winnebago agency, with Sunday-schools taught every week. Some newly-elected chiefs had thrown their influence against the schools, and hampered their usefulness.

The Superintendent, Barclay White, reports the following general statistics of the progress of civilization in the superintendency: Population, 6,446; number of the population who are of mixed blood, 708; number of schools, 18; of teachers, 22; of scholars, 702; of Indians who can read, 640; of church-members, 424; of Indians who wear citizen's dress (no report from the Otoes), 2,192; of houses occupied by Indians, 480; of male Indians who work at civilized pursuits with their own hands, 1,308; per cent. of subsistence of Indians obtained by their own labor in civilized pursuits, 64; amount of money contributed by the Friends for the work of the superintendency, \$5,887.47.

The London Yearly Meeting of the Society of Friends was held in May. The statistical statement showed the number of Friends in England to be 14,199, or 118 more than were reported the previous year, and the number of attendants upon the regular meetings for worship, who were not members, to be 1,767, or 517 more than the year before. The educational enterprises of the society were represented as in an advancing condition. The schools of the association in the metropolis included 1,840 children, and 180 teachers. Other evangelizing agencies were described,

as breakfast meetings with the poor, open-air preaching, sewing meetings, mothers' meetings, "British workmen" libraries, reading-rooms, and Bible-classes. The total number of tracts issued in the year by the Tract Association was, from London, 153,980; from Sunderland, 86,000; from Bristol and Somerset, 58,000; from Leominster, 602,000; from Leeds, 28,500; from Manchester, 78,780. The total number of tracts issued from London, since the formation of the society in 1813, was 6,444,808 tracts, and 1,284,014 leaflets. Better translations of tracts into the Danish, German, and French languages were called for, and an increased variety. Several alterations were made in the queries addressed to the subordinate meetings, the answers to which were supposed to convey an understanding of the general condition of the society. Certain questions which seemed no longer called for, or not capable of receiving a definite answer, were omitted. The most important question omitted was that referring to the proper inspection and relief of the poor, the abolition of which, in effect, annuls the rule for the compulsory maintenance of the poorer members. Mr. John Bright attended the meeting and addressed it on the subject of the revision of the queries.

The meeting of ministers and elders of the English Friends comprehends a monthly meeting of the ministers and elders within certain local districts, a quarterly meeting covering a larger area, and a yearly meeting in London of all the ministers and elders in the country. At recent meetings of the general yearly meeting of Friends, the question of widening the basis of the meeting of ministers and elders was discussed. One proposition was made contemplating the addition of overseers, who should be charged with the relief of the poor, and the admonition of the disorderly. In 1874 a committee was appointed to consider plans for revising the constitution of this meeting, and to consider the whole question of ministry, pastoral care, overseerships, etc. The committee met in the fall of 1875. It recognized that the idea had got abroad that the meeting had some hierarchical functions, agreed that this idea must be dissipated, and that a widening of the basis of the meeting would have that effect. It was agreed to drop the name elder; to merge the elder into the overseer, and to convert the meeting of ministers and elders into one of ministers and overseers; to charge it largely with the pastoral care of the church (as a kind of committee); to provide for a report to the monthly meeting at least once in each year; and to have a joint committee of Friends appointed once every five years by the quarterly and monthly meeting to revise the list of recorded ministers, with a view of recommending the monthly meeting to continue them in their position, or to remove them, as the case might be. The adjustment of details was committed to a sub-committee, who were to report in February, 1876.

FROSSARD, CHARLES AUGUSTE, a French general, was born April 26, 1807; died September 1, 1875. Having finished his studies in the Polytechnic School of Paris and the Artillery School of Metz, he served with distinction in Belgium in 1831, and 1832 in Algeria, and at the siege of Rome in 1849, where he remained until 1850 as commander of the engineer corps, after the surrender of the city. Having returned to France, he became second commandant of the Polytechnic School. He went again to Algeria in 1853, and in 1855 was sent to the Crimea, where he arrived just at the time when the operations before Sevastopol were to assume larger dimensions. He received the command of the second engineer corps, while at the same time the works of the siege to be performed by General Bosquet's division were placed under his direction. His

work in this service eventually led to the fall of Sevastopol. In May, 1855, he had been raised to the rank of general, and for a time served as commander-in-chief of the entire engineer corps of the Army of the East. He also had the command of the engineer corps in Algeria, and in Italy in 1859. At the close of the war in Italy he was created grand officer of the Legion of Honor, and in 1867 was appointed governor of the prince imperial. At the beginning of the German-French War he received the command of the Second Army Corps. He was defeated at Forbach and retreated to Metz. Here he took part in the three large battles of August 14th, 16th, and 18th, and upon the surrender of Bazaine was sent to Germany. After his return to France he suffered from a throat-disease, which eventually caused his death.

G

GEOGRAPHICAL PROGRESS AND DISCOVERY IN 1875. The explorations of the past year have yielded few complete and determinate discoveries of any weight; and many questions which, it was believed, would have now reached a certain solution, remain still but partially explained. This is not a sign that exploratory enterprise has remitted any of its ardor; on the contrary, there never have been more explorations under way, nor better equipped, nor more vigorously prosecuted, than just at present. Governments, private associations, and individuals, all unite in the support of expeditions in every quarter of the globe; geographical, scientific, and trade societies, scientific and commercial interests, vying with each other in munificence. Every little while a new party enters the field liberally supplied with means for its support and appliances for thorough scientific investigation, composed of men bold and ardent as the early voyagers, with minds trained and sharpened to scientific observation, replete with the science of the best schools of either continent, and the fruits of year-long closeted research. It suits the compass of the present summary to mention only a few of the numerous expeditions just starting. Geographical research has been directed not less assiduously than heretofore to the interior of Africa; and in those regions the two most distinguished feats of the year have added lustre to the names of Stanley and Lieutenant Cameron. Stanley has attained the strongest and most satisfactory inductive proofs that the Lake Victoria Nyanza with its tributary streams is the chief source of the Nile; it seems also established, though by less convincing testimony, that the Albert Nyanza contributes a large volume of water to the vast flood of the mysterious river; whether, and in how far, this is so, our doughty explorer may be expected yet to clear up. Cameron

by his courageous passage across the continent of Africa has proved, satisfactorily to himself and to most minds, the identity of the Lualaba, which carries off the waters of Lake Tanganyika, and the great river Congo. Yet he was still less able than Stanley to actually trace the course of the river downward, so as to confirm his inductions by actual vision. The German explorations from the west coast of Africa have been hindered by sickness and various causes. The great island of New Guinea with its strange and abundant forms of animal and vegetable life, and its peculiar races of men, it was expected, would now be in good part explored, and its rich store of naturalistic and ethnographical facts disclosed, and the way broken for the commercial utilization of the unquestionably great resources to which Eastern trade has long looked expectantly; but the several expeditions which have been undertaken for the accomplishment of these purposes have each of them failed, beaten back by the boisterous storms which are frequent upon its coast, repelled by the fierce manners of its wild inhabitants, and obstructed by the impenetrable jungle: a single courageous man, the Italian *savant* D'Alberty, has perched himself upon an island, and zealous for science amid the most discouraging drawbacks, is busily exploring the adjacent parts, conversing with the savages in their own tongue, and collecting the natural products of the island. The discovery of the past year which may be expected to yield the largest practical results was that of an open sea-way between the Russian ports and the river-harbors of North-eastern Siberia, which brings Europe and the vast grain-fields, the mines, and peltry-producing shores and forests of Northern Asia into close commercial connection; this discovery is to be strenuously followed up by new searches for other such passages, and a rich

harvest for trade may be looked for from this new field. The surveys in our own West have been prosecuted with unremitting industry, and the triangulation of the whole country is now all but complete: the new discoveries in the Territories have been unimportant; though some new light has been thrown upon the habits of that ancient, semi-civilized people, who planted their dwelling-places so strangely in the craggy fastnesses of dizzy cañons. Of arctic discovery there is no novelty to be related; but before many months remarkable revelations may be brought to us by the most completely equipped expedition, and the one most intelligently planned, and most wisely instructed by the failures and partial successes of its predecessors, which has ever yet assailed the icy barrier. The Challenger is still prosecuting its hydrographic investigations, and in the light of the new facts which they have discovered, new theories of the nature and character of the ocean's floods are growing in the minds of speculative scientists. Another ably-conducted expedition for marine exploration was that of the German man-of-war *Gazelle*. The exploration of the interesting Oxus Valley is being carried on fitfully by the Russian military. The Germans are turning their attention to the antiquities of Persia. The explorations which have lately been instituted by the English and Americans in Palestine will probably be conducted with vigor and method; and their investigations in this really neglected field, in which the numerous researches of late times have mostly been conducted by irresolute triflers or bunglers, may be expected to throw a flood of light upon the subjects of Biblical topography and antiquities; so that scholars will not much longer have to turn to the pages of the Dutchman *Relandus*, who wrote over a century and a half ago, for the completest investigations into the ancient condition of the land of the Bible.

NECROLOGY.—Lady Franklin, who prosecuted with such devoted zeal the search for her ill-starred husband some thirty years ago, has passed away, though her noble labors have not yet departed from the memory of the people, nor will they soon be forgotten. She was but four or five years younger than her husband.

General W. H. Dufour, editor of the great topographical map of Switzerland, died at Geneva in July.

Commodore James Graham Goodenough was murdered on the island of Santa Cruz by the natives, on the 15th of August. After conveying Sir Arthur Gordon, the first Governor of the Feejee Islands, to his destination, Commodore Goodenough started out on a round cruise through the South Sea in order to become more nearly acquainted with the islanders. After being hospitably received everywhere else, he landed on the Santa Cruz, the largest of the group of fifteen islands of the same name. After a feignedly friendly reception by the natives, and when presents

had been given and traffic conducted, the commodore with some officers and sailors started to visit a village lying near, leaving their weapons in the boat in order not to arouse suspicions. Then Commodore Goodenough was struck by two arrows, and five sailors were wounded. The ship's company set fire to the village, and after sailing toward a cooler climate, on the 20th, the commodore died, and on the following two days two of the sailors. On these same islands, two or three years ago, Bishop Patteson was in a similar manner treacherously murdered. The occasion for these murders may have been former kidnapping of some of the islanders. The journals of Commodore Goodenough kept during his Polynesian cruise, containing interesting observations on the formation of coral reefs, are shortly to appear in London.

Werner Munzinger, born at Alten, Switzerland, in 1832, an ardent geographical scholar and explorer, was recently murdered on the road from Tadjura to Shoa. He pursued commerce in his early life in Alexandria, and lived some time in the Bogos country at Keren, becoming familiar with Abyssinian affairs, and thoroughly conversant with the Amharic language. He was one of Heuglin's party in 1861, and was afterward British consul at Massowa, and furnished valuable assistance to the Abyssinian Expedition. In 1870 he was appointed Governor of Massowa and Suakin by the Egyptian Government, and was efficient in putting down the disorders on the border of Abyssinia. He was the author of "*Die Sitten und das Recht der Bogos*" (1859), and "*Ostafrikanische Studien*" (Schaffhausen, 1864).

Sir William E. Logan, late Director-General of the Geological Survey of Canada, died in England, in June, at the age of 77 years. Born in Montreal, the deceased entered trade, devoting himself collaterally to geological studies. He has written much on coal formations and other geological subjects, and for his useful labors in Canadian geology received the honor of knighthood.

BIBLIOGRAPHY AND CARTOLOGY.—The press has been exceedingly busy in every country this last year in the production of geographical works of manifold variety. The fruits of the late explorations in Central Africa, in Australia and New Guinea, and in the northern seas, have been presented to the reading public in a long list of popular accounts and narratives; and detailed and scientific reports, in some cases illustrated by the aid of the very perfect appliances of modern graphic art, bear witness to the high scientific purposes which govern geographical research to-day. The subject of ocean circulation, which very much engages speculation at present, has called forth a number of studious theoretical treatises, elaborated in the light of the late hydrographical investigations; and the newly-discovered fauna, by which the catalogue of marine zoögraphy has been greatly enlarged, has

been brought into the cognizance of the scientific world through various literary records. The unusually large number of geographical works which have been printed in the languages of all the cultivated nations this last year evidences not alone the rich results of late investigations, but still more the widespread and active interest which people now take in geographical discoveries, and in the whole round of physical sciences whose nurture and growth come from exploratory research. Among the more important publications of the year we note the following:

C. & S. Blackie: *Etymological Geography*. (London, 1875.)

Cortambert: *Histoire des Progrès de la Géographie de 1857 à 1874*.

Carpenter: *Summary of Observations on Ocean Temperature*. (Challenger, Reports Nos. 4 and 5.)

Koldewy: *Oberflächchen-Temperaturen in den Äquatorialgegenden*.

Handelsgeographie der Europäischen Staaten.

Déchy: *Zur Geschichte der Mont-Blanc-Ersteigungen*.

Sirelitzky: *Berechnung des Flascheninhalts des Russischen Reiches*.

Butler-Johnstone, H. A. M.: *Trip up the Volga*.

Vambéry: *Der Islam im neunzehnten Jahrhundert*.

Rambles in Istria, Dalmatia, and Montenegro. By R. H. R. (London, 1875.)

James Creagh: *Over the Borders of Christendom and Esamiah: a Journey through Hungary, Slavonia, Servia, Bosnia, Herzegovina, Dalmatia, and Montenegro, to the North of Albania, in the Summer of 1875*. 2 vols. (London, Tinsley, 1875.)

Elohta Tenrub (Athole Burnet): *Vade Mecum Guide to Sweden, Denmark, and Norway*. (London, 1875.)

W. L. Watts: *Injoland, or Iceland*. (London, 1875.)

Sam. Kneeland: *An American in Iceland*. (Boston, Lockwood, 1875.)

J. Hazeland: *Handbook for Norway*. (London 1875.)

John Dean Caton, LL.D.: *A Summer in Norway; with Notes on the Industries, Habits, etc., of the People, etc.* (Chicago, Jansen, McClurg & Co., 1875.)

Hubert Howe Bancroft: *The Native Races of the Pacific States of North America*. Vol. ii. *Civilized Nations*. (New York, Appletons, 1875.)

Jackson: *Ancient Ruins in Southwestern Colorado*.

Rhoda: *Report of the Topography of the San Juan Country*.

Geological Survey of Missouri by Ralph Pumpelly, G. C. Brodhead, F. B. Meek, and B. F. Shumard. *Containing Reports on Iron Ores and Coal-Fields*. (New York, Van Nostrand, 1875.)

Prof. J. D. Whitney: *The Yosemite Guide-Book*. (Boston, Little, Brown & Co., 1875.)

Id.: *Contributions to Barometric Hypsometry*. (Boston, Little, Brown & Co., 1875.)

Captain J. H. Lawrence-Archer: *Monumental Inscriptions of the British West Indies*. (London, 1875.)

Franz Keller: *The Amazon and Madeira Rivers*. (Philadelphia, Lippincott, 1875.)

Andrew Thomson, D. D.: *In the Holy Land*. (New York, Randolph, 1875.)

J. Burton: *Inner Life of Syria, Palestine, and the Holy Land*.

Wolf: *Das Deutsche Colonisations-Werk in Palästina*.

J. Van Lennep, D. D.: *Bible Lands; their Modern Customs and Manners, illustrative of Scripture*. (New York, Harpers, 1875.)

Maria A. West: *The Romance of Missions; or, Inside Views of Life and Labor in the Land of Ararat*. (New York, Randolph, 1875.)

William Perry Togg: *Arabistan; or, The Land of the Arabian Nights: being Travels through Egypt, Arabia, and Persia, to Bagdad*. With Introduction by Bayard Taylor. (Hartford, Dustin, Goodman & Co., 1875.)

A. Zehme: *Arabia und die Araber seit hundert Jahren*.

General Cunningham: *Archæological Survey of India*. (London, 1875.)

Roussellet: *L'Inde des Rajas*.

Roussellet: *India and its Native Princes*. Edited by Lieutenant-Colonel Buckle.

Markham: *Travels in Great Tibet*.

Izzut-Oollah Meer: *Travels in Central Asia*.

H. W. Bellow, Surgeon-Major Bengal Staff Corps: *Kashmir and Kashgar*. (London, Trübner, 1875.)

Frederick Drew: *The Jummoo and Kashmir Territories*. (London, Stanford, 1875.)

Reise des Ungarn Berzency ueber Kaschgar nach Bombay.

Von Hellwald: *Centralasien*.

De la Haille: *Le Cours du Hong-Kong*.

Hirth: *The Peninsula of Lei-chou*.

Von Schlagintweit-Sakunlinski: *Die Pässe des Karikorum und Künlun*.

L'Abbé Armand David: *Journal de mon troisième Voyage d'Exploration dans l'Empire Chinois*. (Paris, Hachette, 1875.)

Captain B. W. Bax, R. N.: *The Eastern Seas: being a Narrative of the Voyage of H. M. S. Dwarf in China, Japan, and Formosa*. With a Description of the Coast of Russian Tartary and Eastern Siberia, from the Corea to the River Amur. (London, John Murray, 1875.)

Prof. Carl E. Meinicke: *Die Inseln des Stillen Meeres*. Eine geographische Monographie. (Leipzig, Paul Froberg, 1875.)

Charles H. Eden: *Australian Heroes*. (London, Society for Promoting Christian Knowledge, 1875.)

John Forest: *Explorations in Australia*. (London, Low, 1875.)

Dr. Georg Schweinfurth: *Artes Africanæ*. (London, Low, 1875.)

De Compiègne & Marche: *Voyage dans le Haut Ogooué*.

Marquis de Compiègne: *L'Afrique Equatoriale*. Gabonais, Pahouins-Gallois. (Paris, Pion, 1875.)

Duveyrier: *Voyage au Sahara par N. Dournoux-Dupéré*.

Paladini: *Il nuovo Mare del Sahara Algerino*.

E. Mohr: *Nach den Victoriafällen des Zambesi*.

Gerhard Rohlfs: *Quer durch Africa*.

Alvan S. Southworth: *Four Thousand Miles of African Travel; a Personal Record of a Journey up the Nile and through the Soudan to the Confines of Central Africa*. (London, Low, and New York, Baker, Pratt & Co., 1875.)

Richard F. Burton: *Two Trips to Gorilla-Land and the Cataracts of the Congo*. 2 vols. (London, Low, 1875.)

Joachim John Montiero: *Angola and the River Congo*. 2 vols. (London, Macmillan, 1875.)

Adolf Bastian: *Die deutsche Expedition an der Loango-Küste*. Zweiter Band. (Jena, Costenoble, 1875.)

Von Heuglin: *Das Gebiet der Beni Amor und Habad*.

Marno: *Reisebriefe vom oberen Nil*.

Skertchley: *The Northwest African Expedition*.

Soleillet: *Voyage dans le Sahara Central*.

Charles John Anderson: *Notes of Travel in South Africa*. (London, Hurst & Blackett, 1875.)

W. W. Lloyd: *Notes of Travel in South Africa*. (London, 1875.)

Renévier: *Renseignements sur le Sud de l'Afrique*.

Erskine: *A Journey to Umzila in Southeastern Africa*.

Hon. W. H. Drummond: *Large Game and Natural History of Southern and Southeastern Africa.* (New York, Worthington, 1875.)

A work on Western Africa is looked for from Mr. R. B. N. Walker, who has returned to England after a residence of over twenty years in the Gaboon.

Giles: *Geographical Travels in Central Australia* in 1872-74.

Colonel Peter Egerton Warburton: *Journey across the Western Interior of Australia.* (London, Sampson Low & Co., 1875.)

Captain A. J. Lawson: *Wanderings in New Guinea.* (London, Chapman & Hall, 1875.)

Moresley: *Discoveries in Eastern New Guinea.*

De Ricci: *Fiji, our new Province in the South Seas.*

F. Jagor: *Travels in the Philippines.* (London, Chapman & Hall, 1875.)

P. J. Veth: *Java.* (Haarlem, 1875.)

The Arctic World. (London and Edinburgh, Nelson, 1875.)

F. Whymper: *Heroes of the Arctic.* (London, 1875.)

Richards: *On the Route toward the Pole.*

Bessels: *Einige Worte über Inuit (Eskimo).*

Tagebuch des Nordpolfahrers Otto Kriech.

Von Drasche-Wartinberg: *Reise nach Spitzbergen.*

Rotomahana, and the Boiling Springs of New Zealand. By Prof. von Hochstetter, of Vienna, with

Photographs by D. L. Mundy. (London, Low, 1875.)

Cartology: The results of a German expedition in the Greenland, Captain Dahlgren, which sailed in 1873 to the Antarctic Seas, which was sent out under the auspices of the German Society for Polar Navigation, have furnished the data for a new chart of the South-Polar regions, published in Stieler's *Hand-Atlas*.

A map of the northeastern frontier of Persia, embracing also Khiva and the intervening deserts, has been published, compiled from the surveys and observations of Colonel Valentine Baker and Lieutenant W. J. Gill, together with recent Russian surveys, etc.

Steinhauser's *Wandkarte der Alpen* is a valuable addition to the many fine maps of Switzerland.

Fleming, of Glogau, has published the first sheets of a map of European Turkey, scale 1:600,000, by F. Handke.

PARIS GEOGRAPHICAL CONGRESS.—The Geographical Congress at Paris was the second convention of this kind: the first International Congress of Geographers met at Antwerp in 1871. The invitation was issued by Vice-Admiral de la Roncière de Noury, president of the Société de la Géographie, MM. Delesse, Manno, and the Baron Reille, to the geographers of all countries, in March; and on August 1st the Congress met in the hall which was once the Salle des États. The meeting was opened by M. van Steenhuyse, who was the presiding officer at the Antwerp Congress. The president-elect, Vice-Admiral de la Roncière, then took charge of the meeting. The presidents of the geographical societies of Berlin, London, St. Petersburg, Geneva, Rome, Pesth, Amsterdam, and Cairo, were seated by the president. The secretaries were MM. Manno and Duveyrier. Among the other distinguished geographers present were, General Baeyer, Vambéry, Von Schlagintweit, Ravenstein, Quatrefages, Vivien de St.-Martin, the honorary president of the French Geographical Society, and the only surviving member of the 217 who instituted the society in 1821, D'Abadie,

Duveyrier, De Saussure, General Crawford, General Dobner von Dobbenau, Von Tschischkeff, Andrew Johnson, Negri, Nachtigal, Alfred Maury, Wagner, Behm, Scherzer, Kiepert, Săwerzow and Granddidier, Wappaus, Griesebach, A. B. Meyer, etc. The Congress was divided into seven groups, which debated their appropriate questions separately. The first group concerned itself with mathematical geography, geodesy, and topography: it deliberated upon the substitution of the centesimal instead of the sexagesimal division of the quadrant, or of the whole circle. The second group had to deal with hydrography and maritime geography: it voted in favor of the project of M. Bouquet de la Gries to count the points of the compass from left to right around the whole circle, from 0° to 360°, in such manner that, commencing from north, 90° should be counted west, and from west, 90° to south, etc. On the question of averting inundations, such as lately desolated a portion of France, the planting of the mountainous parts of the country with woods was suggested, since it has been observed that great and sudden floods occur mostly in countries stripped of forest. The third group had for its subject physical geography, universal meteorology, geology, botanical and zoological geography, and general anthropology. The fourth group discussed historical geography, and the history of geography, ethnography, and philology. The fifth was the economical group, to which was assigned economical and commercial geography, as well as statistics: it took up the question of the emigration and colonization of Europeans in inter-tropical lands; wherewith it was decided that in the torrid zone Europeans can only direct labor, while Hindoos, Chinese, and other subtropical races, are admirably made for the actual work: the question of an interoceanic canal across the isthmus of Darien was discussed, and M. de Lesseps recounted the difficulties which had to be contended with in the construction of the Suez Canal, how the engineers attempted to prevent the sanding of the harbor of Port Said by extending the harbor-piers, and mastered it at length by the aid of dredging-engines; he suggested that, as the Suez Canal must bear vessels 732 feet in length, it would be scarcely practicable to provide the Darien Canal with locks. They gave some attention also to a railroad, which has long been projected, to connect Russia and Eastern Asia, which should depart from Nishni-Novgorod, and cross the Ural Mountains, an ascent of 400 metres only being necessary, thus traversing the broad steppes of South Siberia, ascending in the mountainous region of Amuz to the height of 1,150 metres, and coming out at Peking, the whole length having to be 7,800 kilometres; this plan is entertained by M. de Lesseps, and to it the Russian Colonel Bartolovich devoted his whole life and fortune. The same section discussed the construction of artificial lakes in South Algiers, the practicabil-

ity of which was advocated by M. Roudaire, formerly, in the *Revue des Deux Mondes*, in consequence of which an investigation was undertaken, conducted by Henri Duveyrier, under the auspices of the Parisian Geographical Society, whereby it was proved that the portion of the Sahara in Algeria and Tunis, called the Shott Melrir, is depressed below the level of the Mediterranean; but another expedition, under the Italian Antinori, proved that the land which lies between this depression and the sea is formed of rock instead of sand, thus rendering the excavation too costly. The sixth group considered the question of the propagation of geographical knowledge, and the method of instruction: debating whether geographical didactics ought to commence with topography or with cosmography, the principle was received that instructors should proceed from the known to the uncertain and abstract, and lead up to the description of the globe and general cosmographical notions through topographical studies and partial maps; it was advised that a professoriate of geographical science be established in every university. The seventh group dealt with exploration, travels undertaken for scientific, commercial, or artistic purposes. While the other sections were attended by only 20 or 30 on an average, 150 to 200 participants were present at these meetings. Gerhard Rohlfs described his travels through the Libyan Desert, and from Tohad Lake to the Gulf of Guinea; Nachtigal related his adventures in Central Africa; Sauerzow recounted his Asiatic explorations; and Soleillet described his journey in farther Algeria. His starting-point, Goleah, latitude $30^{\circ} 40'$ north, is the southernmost oasis in the French dominion; Ain Ssala, the goal of expedition, lies about 80 miles to the southwest, across the Tademait Desert plateau, the latter being the chief place in the province of Tichelt, which belongs to the oasis of Tuat. The latter, one of the most populous of all the oases of the desert, is really independent, but acknowledges the sovereignty of the Sultan of Morocco, thinking thus to escape French annexation. Soleillet was not allowed to enter the oasis upon his arrival at Ain Ssala. Not dismayed by this experience, he proposed to the Geographical Society to undertake a second journey over the same route, and through Timbuctoo to St.-Louis in Senegal, although the inhabitants of Tuat are the most fanatical in Sahara, and especially hostile to any Christian coming from Algiers. Henri Duveyrier also proposed a new expedition to Hogar; which land, with its plateaus, Tasili, Maydar, and Abagar, is one of the most interesting portions of the Sahara, but the people are treacherous and murderous. Under the chairmanship of the celebrated Quatrefages, the ethnologists discussed their science apart, examining the pictures sent by the Italian Miani of the pygmy race of Acca or Tiki-Tiki; listening to M. Pinard on the Esquimaux, and Waldemar Schmidt on the Greenlanders, and

to Quatrefages on the red-skins of North America, between which race and the Ynpas of Central Siberia M. Mainoff believes he has detected numerous points of resemblance. The exhibition connected with the Congress was a large and most interesting one: almost every country had contributed objects of geographical and ethnographical interest, comprising, amid a host of other articles, the original charts of all the famous English explorers; the great Government map of France, on the scale of 1 : 80,000, and many other government maps and nautical charts; the publications of all the various geographical societies, and many early plans, maps, and globes, from Austria, Holland, and Belgium, as well as from France; a great variety of geographical and astronomical instruments of all ages, and especially of recent inventions; and large collections of ethnographical curiosities, the Russian booty from Khiva, Javan objects from Holland, etc.: even the Hawaiian Islands, Turkey, Chili, Japan, and the Argentine Republic, had each taken pains to send its contingent of interesting objects to the exhibition.

GEOGRAPHICAL SOCIETIES.—The Khedive has established a society which is to occupy itself with the geography of Africa. It is called *La Société Khédiviale de Géographie*, and receives a subsidy, besides the salary of the president, from the Khedive, who has appointed Dr. G. Schweinfurth president, and the Marquis de Compiègne secretary.

A commission of German scholars, appointed by the imperial chancellor to deliberate upon the question of arctic exploration, met at Berlin in October, and returned the counsel stated here: That observing stations be established whence expeditions might depart by sea and by land; a principal station on the eastern shore of Greenland, and at least two secondary posts for scientific investigations, at Jan Mayen, and on the west shore of Spitzbergen; that the German explorations should be occupied with the entrance to the upper latitudes between the eastern shore of Greenland and Spitzbergen; that it is desirable that the explorations be begun in the year 1877; and that the measures adopted for German explorations be communicated to other governments, and that it be proposed that, each country taking part, a series of explorations should be initiated over the whole circle inclosing the pole.

ARCTIC EXPLORATION.—The Alert and Discovery, equipped by the British Government for the exploration of the arctic seas from the west, at the instance of the Royal Geographical Society, commenced their voyage auspiciously. They took in coal and stores at Disco, and sailed forth to the northward on the 17th of July. The ice in Melville Bay, which usually renders navigation exceedingly difficult, they found so thin and yielding that they steamed through it without stoppage, and reached Carey Islands on the 26th of July, depositing provisions there, and setting forth for Smith's

Sound the following day. Messages from both Captain Nares and Commander Markham report the state of the ice and the condition of the weather so favorable, that they expect to reach latitude 85° before putting up for the winter. Later accounts of sailors who have returned from these seas confirm their favorable reports. The latest news from the explorers was brought by Captain Allen Young, who, upon a search for the remains of the Franklin expedition, touched at Carey Islands after they had left, and brought back the records deposited by Captain Nares, reaching England October 16th.

The Swedish Arctic Exploring Expedition, under direction of Prof. Nordenskiöld, the widely-known explorer and scholar, has effected a discovery of exceeding commercial importance; to wit, a navigable passage by the way of the North Cape to the mouths of the Siberian rivers Obi and Yenisei, thus rendering the mineral and agricultural wealth of Western and Central Siberia accessible to commerce. This solves a problem which has occupied maritime exploration for ages, and renders the vast domains of Russia in the East now for the first time tributary to Western trade. Prof. Nordenskiöld started from Tromsø on the 8th of June, and crossed the Kara Sea, which has hitherto been deemed impassable on account of the ice, and reached the mouth of the river Yenisei on the 18th of August. He proceeded up the river to Yeniseisk, and returned to Europe, leaving that place on the 19th, by the great Siberian route *via* Tomsk, Omsk, and Ekaterinburg, reaching the latter city on the 30th day of October, with Drs. Stuxberg and Landström. Concerning the country passed through in his voyage up the Yenisei, Prof. Nordenskiöld wrote:

We saw snow only once during our voyage on the Yenisei, and in many places, especially on the islets which during the spring are submerged, vegetation is most luxuriant and beautiful. The great richness of the grass-fields excited jealousy in the mind of one of our companions, a farmer fisherman. He was envious that God should have given so splendid a country to the Russians—a country where there was no one to cut the grass. This statement was repeated daily and hourly, especially when we came to the splendid woods and rich black soil between Yeniseisk and Turnchausk, an almost uninhabited region, which for fertility may probably be compared with the best parts of Scania in Sweden, and is of greater extent than the entire Scandinavian peninsula. Three different Russian expeditions have this summer been dispatched in Siberia to report on the river communication there. When in Yeniseisk I was informed (not officially) that these expeditions had resulted in the opinion that for 700,000 roubles the river Angara, a tributary of the Yenisei, might be made sufficiently safe for ships as far as Baikal Sea, without fear of the whirlpools, and that the Obi might be joined to the Yenisei, and the latter to the Lena. The tract of country within the range of these rivers may be tolerably well conceived when it is remembered that, according to Prof. Baers, the Obi, Irtysh, and the Yenisei, together cover a greater area than the Don, Dnieper, Dniester, Nile, Po, Ebro, Rhone, and all the other rivers flowing into the Black Sea, the Mediterranean, and the sea of Marmora. Although north of the polar circle, there

are here some of the finest timber-woods on the globe. South of these forests are stretches of most fertile soil, waiting only for the husbandman and the plough.

During the voyage out, soundings were taken frequently, and the bottom dredged. In the Kara Sea an unexpected store of animals, mollusks, brushworms, etc., were raised in the dredgings. An interesting collection of fossils was made at Vaygat's Sound.

An expedition, it is announced, from St. Petersburg, will be fitted out under the conduct of Prof. Nordenskiöld, for the exploration of a commercial route from Northern Russia to Behring's Straits. A Russian has contributed the required fund, and the expedition will sail in the summer. Other large subscriptions have been made for an exploration of the sea of Obi and the sea-route to the Siberian rivers; Captain Wiggins has been offered the command.

THE OCEANS.—The report of the Challenger Expedition, which treats of the temperature of the Sooloo, Celebes, Banda, and China seas, prepared by Staff-Commander Tizard, furnishes interesting facts concerning the subject of oceanic circulation. The seas partially inclosed by the Indian Archipelago are shown to be separate basins cut off from the general oceanic circulation by ridges connecting the islands which inclose them. Very deep soundings, over 2,000 fathoms, were found in each of these seas. The temperature below a certain degree remained constant; in the Sooloo Sea, at the depth of 400 fathoms, the lowest temperature, 50.5° , was reached; the minimum temperature of the Celebes Sea, 38.5° , was found at a depth of 700 to 800 fathoms; the Banda Sea remains at 37.5° below 900 fathoms. The results of the soundings in the sea of China were not at all uniform; but from a general comparison it would appear that the ridge which parts this sea from the Pacific lies from 700 to 1,000 fathoms below the surface.

The Challenger sailed from Hong-Kong, January 6th, under the command of Captain Frank Thomson, who succeeded Captain Nares, and arrived at Manila on the 11th, having found the greatest depth at 2,100 fathoms, with gray-ooze bottom, in latitude $17^{\circ} 54'$ north, longitude $117^{\circ} 14'$ east, near the centre of the China Sea: they made thermometrical experiments at different depths, finding, at 900 fathoms, the temperature was 36° , and continued so to the bottom. Other similar observations in the other Australasian seas prove that they are cut off from the main ocean, as is noticed above. In passing the island of Mindoro they observed few indications of cultivation; it is said to abound in deer and other game, and to be inhabited by a tribe of Moros, who reject the Spanish rule, and are a wild, untamable people.

She then took the course to Zebu, and the island of Camiguin. The island of Zebu presented interesting scenery, and showed signs of

being well cultivated; the bright-green sugarcane was seen growing in every direction, relieved by the dark-leaved Manila hemp-patches, and the unbroken groves of the coco-palm stretching out in every direction; while here and there the curious, basket-like dwellings of the natives perched upon piles were visible. The town of Zebu is a thriving trading-place. The island is enormously productive, but the inhabitants will not work. Coal is found on the island in quantities sufficient to supply all the Philippines, but the beds are not worked. The natives are a handsome race; the women wear their jet-black hair loose, and bedeck themselves with bright-colored dresses and handkerchiefs. The *Euplectilla*, or Venus's flower-basket, the beautiful sponge often used as a drawing-room ornament, is fished up with curiously-contrived instruments. The volcano on the island of Camiguin, it was found, does not affect the temperature of the neighboring waters; this volcano has in four years attained the height of 1,950 feet. The population of the island, once 25,000, has been reduced to a few hundred. Sailing thence to Samboanga, they obtained a sounding of 2,225 fathoms, and arrived at the latter port on the 29th of January. They sounded between the Tulao groups and Meangis in 2,050 fathoms. The ship called at Point Caillé, in Humboldt Bay, on the 23d of February. In this bay the savages put out in their canoes, surrounding the vessel, and disturbing them all the night with a monotonous chant, eagerly conducting a barter of their native productions for knives, handkerchiefs, etc., in the morning. The ship's boats attempted to land, but only one party succeeded; the women on the shore threatened them with bows and arrows; and the attitude of the natives was altogether so menacing that Captain Thomson determined to sail away to prevent a rupture. They reached the Admiralty Islands on the 8d of March. The natives here were less wild, and seemed more accustomed to foreigners' visits. Their hue was dark brown; but they had nothing of the negro type, having well-shaped noses, the men being sturdy and well built; the women were much inferior, and had acquired a repulsive appearance from the use of the betel-nut. They were all tattooed and branded with round marks. Their canoes were large, and capable of holding ten to sixteen men. Instead of bows and arrows, they were armed with light spears, six or seven feet in length, with long heads; which in casting they grasped close to the head, propelling them with great power and accuracy. They were at first unwilling that the English should approach their villages, but afterward suffered them to do so without restraint. They have the custom, it would seem, of cooking and devouring the bodies of those who die from among them. On the 10th of March the Challenger left her anchorage on the northwest side of the largest island, to which they gave the name of Nare's

Harbor, for Japan, reaching Yokohama on the 11th of April. The deepest sounding taken, and the deepest ever found except one from the Tuscarora, was in latitude $10^{\circ} 24'$ north, longitude $143^{\circ} 16'$ east; the depth was 4,575 fathoms; to prevent a mistake it was repeated, with the result, 4,475 fathoms. The pressure was so exceedingly strong that three of the protected thermometers broke, the remaining one registering 84.5° Fahr. Deep water of from 2,300 to 2,500 fathoms continued to within a short distance from the Japan shore.

Among other strange fauna brought to the surface during the dredging was a gigantic invertebrate of the order of Hydroids belonging to the Corymorphoid group. It was found at the enormous depth of 2,900 fathoms. It is of a pale pink-color, transparent, and when distended measures four feet or more.

The Challenger left Honolulu August 19th. Between Hawaii and Tahiti dredging showed a bottom of red clay, and an average depth of 2,800 fathoms. In the section between the last-named island and Juan Fernandez, which they attained November 18th, the average depth was 2,160 fathoms. They reached Valparaiso November 19th. Numerous excursions were made upon all the islands, and specimens collected.

The German corvette *Gazelle*, which was sent out for the observation of the transit of Venus in the summer of 1874, to Kerguelen Island, was then commissioned to sail on a cruise of discovery from the isle of Mauritius through the Indian Ocean to the west coast of Australia, and then to pursue an extended series of scientific explorations in the seas and islands of the archipelago. During the past year this mission has been faithfully discharged, and with valuable scientific results. Upon the first difficult course from Mauritius, they made careful experiments on the depth of the ocean, the course of the surface-streams, and the specific gravity, temperature, and degree of transparency of the water; and from the results of these observations the following principles were deduced: The ocean-currents are occasioned and explained by the differences in the specific gravity of the water in different parts of the ocean; so that a very slight variation of specific gravity will produce a powerful current. The strength of the currents is greatly modified by the difference in the salt contents of the ocean in high and in tropical latitudes, which counteracts the variations of temperature, thus only rendering navigation possible. There exists, as can be proved by the laws of physics, a certain zone in the ocean where differences of the saline contents and differences of temperature offset each other so that waters of varying temperature and varying saltiness can be next each other in equipoise; this zone is found in the Indian Ocean between parallel 40° and parallel 45° south; it may be deflected in other regions, or interrupted, but it exists and can be determined in

all seas. On the west coast of Australia, where they anchored first by Dirk Hartog Island, then in the neighboring Shark Bay, and then in the Dampierre Archipelago to the northwest, they prosecuted a close and thorough study of the boundary between the animal and vegetable worlds of Australia and those of Asia; they made also hydrographical observations with reference to the accessibility of this shore to large vessels. In their naturalistic examinations they remarked the uniformity of vegetation on all the shores, the singular fact that the hilltops are more fruitful than the valleys, and the singular lack of alimentary plants in the indigenous flora; among the naturally growing plants there is none which would substantially contribute to the sustenance of a population but moderately numerous. Animal life also is monotonous and scanty. They visited next the island of Timor, which offered abundant material for the study of the differences between the natural productions of Australia and Asia. Timor, which is the southeasternmost of the small Sunda Islands, is on the border, as it were, between the two continents. From the Sunda Islands they directed their course to the Moluccas, anchoring in the road of Amboyna, by the island of the same name, the seat of the Governor of the Moluccas. For their course to the Auckland Isles, which are the final goal of their expedition, the commander chose the route around the northern extremity of New Guinea. They thus had an opportunity for an interesting intercourse with the child-like and impulsive natives of that almost unknown land. These savages belong to the Oceanian race, differing from the black Papuans and Alfurns, and resembling in their light-yellow hue, their bodily build, their language, and their arts and customs, the Malaysians and Hindoos. It has been calculated that the number of inhabitants in the district claimed by the Dutch, taking up about half the island, and embracing over 50,000 square miles, is somewhere near 200,000. All attempts have totally failed which have been made to instruct and cultivate them, and none of them have even been induced to settle on one spot and till the soil. The German explorers entered McCluer Inlet and anchored in Segaar Bay. The inhabitants here are a little more advanced than in other parts of the island, owing to the influence of the Chinese and Malay traders, who furnish them with clothing, weapons, and household implements, from Tidore and other islands, and to their dependence on the Sultan of Tidore, who stands under the protection of the Dutch. The natives follow fishery chiefly, and many pale-villages were seen in this bay and other parts of McCluer Gulf. They made an examination of the coral-island Pinon, instead of attempting to penetrate the mangrove-marsh and dense thickets of the mainland. Sailing thence they passed through the dangerous and almost unknown Galevo Strait. Their next station was the islands of New Hanover, New Ire-

land, and New Britain. They had some communication with the wild and shy inhabitants of all three. The natives of Northwest New Ireland came out in canoes, and, after their first fears were overcome, entered into a barter with the ship's people; even the women and maidens moved by curiosity, swam out to the ship's side; but neither men nor women could be persuaded to trust themselves on deck. The natives of the southern shore of this island were still more shy; and they behaved as though they had never seen white men before, stealing clothing which was hung out to dry under the very eyes of the crew, and attacking a boat which was sent out after them; and when the commanding officer with a detachment landed in order to inspire fear and regain the stolen goods, they came together in hundreds, and from every hill and village the alarm of war was sounded upon their martial instruments. They were speedily cowed, however, by an example of the effect of gunpowder, and yielded up the pilfered articles without bloodshed. The geographical configuration of the island of New Britain, as well as the organic forms, differs entirely from that of the other two islands: instead of a central mountain-region, a single volcanic peak mounts steeply upward, with a lower mountain standing on either side. The coasts and bights lack the marshes which are a distinguishing feature of the other Polynesian islands. The interior is a wooded, hilly country, with here and there a plantation bordered with fertile lowlands around the shores. The Gazelle had here a little diplomatic mission to fulfill, to wit, to obtain satisfaction for a wrong which the natives had done to German traders two years before, or at least to impress upon them a sufficient fear of the consequences of a repetition of such an injury. The ship sailed thence through the Solomon Archipelago, spending several days in measurements and observations of the water-marks on the island of Bougainville. The vegetation here is rich and luxuriant; the islanders are Papuans, sly and treacherous in their dealings with Europeans, and brave and spirited in battle. They have been often transported to the Australian colonies, especially Queensland, as laborers, of late, and when well treated perform better service than the coolies. On October 29th the Gazelle reached the Auckland Islands safely, intending to extend her expedition from there to Samoan and the Feejee Islands.

NORTH AMERICA.—From the report of Commodore Ammen, Chief of the Bureau of Navigation, it appears that the steamer *Fortune* has this last year been superseded by the *Gettysburg* in the coast-survey of Central America and the West Indies. The longitude of Panama, Aspinwall, Santiago de Cuba, and Havana, has been determined by means of the telegraph. The work will include points on the Windward Islands and the north coast of South America. The outer coast of Lower California and the Gulf of California have been sur-

veyed by Commander George Dewey, of the *Narragansett*. The gulf has not before been surveyed, but has now been well enough examined to render navigation safe. The coast by the mouth of the Río de la Plata has been surveyed by Commander A. J. Mahan, of the *Wasp*. It is proposed to make a running survey of the coast of Guatemala, making the surveys continuous from Behring's Straits to Cape Horn. The *Tuscarora* has been continuing the soundings in the Pacific, having run another line from San Francisco to the Sandwich Islands, and on her return made some soundings between the Navigator Islands and Honolulu. The interoceanic survey, which has been carefully pursued for the five last seasons by two or more parties, has been completed, the surveyed district extending from the isthmus of Tehuantepec to about twenty miles south of the mouth of the Napipi. A careful survey has been made of the isthmus of Panama, and the results placed before the Interoceanic Canal Commission.

In the above-mentioned useful survey, which was recently made of the peninsula of Lower California, by the U. S. steamship *Narragansett*, the geological portion was conducted by Assistant-Surgeon Thomas N. Streets, who investigated minutely the geological character and mineral products of the peninsula and adjacent islands. He found fossil shells imbedded in the rock 1,000 feet above the level of the sea, which correspond to species now existing, indicating that the peninsula was at no distant age a group of scattered islands, and has been elevated since the beginning of the post-Pliocene epoch. The high, mountainous region, at the southern end of the peninsula, was the only large island.

The principal work of the Hayden Exploring Expedition this year has been in Colorado, completing the explorations carried on in 1873 and 1874, finishing the southern and southwestern sections, and including parts of Northern New Mexico and Eastern Utah. The operations in the southeast of Colorado were directed by A. D. Wilson, going over an area of 12,400 square miles. The district comprises the lower elevations of the front range sloping eastward, the southern portion of the Sangre de Cristo Mountains, the southern part of the San Luis Valley, the continuation of the La Plata Mountains, and the tract drained by the Lower Río San Juan. South of the Río Grande a high plateau was discovered instead of clearly-defined mountain-chains. This was scattered over with many isolated volcanic peaks. The valleys between the Río Pinos and the Río Piedra are fertile, with pastures and timber. Proceeding down the La Plata range to the San Luis Valley, the traces of two large lakes, of an early geological era, were discovered. The southwestern district, surveyed by the party under W. H. Holmes, containing 6,500 square miles, lying southward from parallel $37^{\circ} 30'$ north, is drained by the San Juan,

the La Plata, the Mancos, and the Dolores. The geological formation of this region is of sedimentary rock, principally lower cretaceous, with a considerable extent of upper cretaceous and some lignite. The cretaceous deposits both contain coal. Fossils in ten different horizons were discovered. In this section cliff-houses were found, and graves and skeletons of the ancient races; also many pieces of pottery, stone arrow-heads, axes, ear-ornaments, ropes and mats, jars, and corn and beans, were dug up under one of the houses. The western division was conducted by Henry Gannet. The fourth division, under G. R. Bechler, surveying a considerable tract from the foot-hills of the Rocky Mountains to the Lower Arkansas and between Pike's and Long's Peaks, was attacked by a party of Ute Indians. The photographer, Mr. Jackson, visited the seven prehistoric Moqui cities, and examined the ruins found north of the country of the Moqui Pueblos. He brought back a hundred or more views, many of them most interesting representations of the cliff-dwellings. He has made a model of a row of these structures, and brought back also an interesting collection of clay utensils. The remains of one of these settlements, which he found in a cave, he describes as follows:

Imagine a perpendicular bluff nearly 300 feet in height, the upper half of which is a firm, white sandstone, and the lower half a dull-red, soft, and pliable variety. Time has excavated an almost perfectly hemispherical cave in this bluff, equally divided between the two kinds of rock. It is 250 feet wide, 200 feet deep, and the same from top to bottom at its outer face. Midway between the top and bottom, and running completely around the half-circle which formed the back of the cave, are two benches, upon the upper of which is built the town, or series of rooms, 200 feet in length in the aggregate, the lower serving as a walk or promenade, from which access could only be had by ladders. A little to the left of the centre is the principal building, consisting of three rooms, each two stories in height, and now standing twelve feet high. Adjoining it on the right is a long row of twelve apartments, built as a solid block, and on the left an open space of sixteen feet, and then another small building. In the open space were four holes, four inches in diameter and twelve deep, drilled into the rock, serving evidently as post-holes for a loom. All the rooms have been burned out clean, so that not a vestige of woodwork remains. The walls are remarkably well preserved, the adobe mortar on the inside still retaining the impression of the delicate lines on the thumbs and fingers of the builders. Impressions of the whole hand were frequent, showing it to be small and finely formed. Corn-cobs and pieces of pottery were found imbedded in the mortar. In the centre of the larger rooms, beneath the *alcoves*, were found the fireplaces—circular excavations, which still retained the charred wood and ashes of aboriginal fires.

A considerable range of architectural skill is discovered in these buildings. In some of the cañons the houses extend uninterruptedly for twenty-five miles; and, indeed, there is scarcely an available break in the rocky cliffs and dry cañons in all this region which is not occupied by them. Many of the villages, now

first discovered by Mr. Jackson, are in better preservation and of more workmanlike construction than anything before found. Some whole towns were discovered protected and kept dry by the sheltering rocks, with the roofs of some of the houses still preserved.

The expedition has been accompanied this season by the distinguished entomologists Drs. A. S. Packard and P. R. Uhler, the results of whose observations will be given in an appendix to the report.

In a bulletin of the survey a report of the mines and geology of the San Juan country was issued, which was prepared by Dr. Endlich.

The Wheeler Expedition has almost completed its task. Not much new has come to light in this year's explorations. The main division, Lieutenant Boyland's, started out on the 20th of June. In the party were, besides Dr. Loew, the surveyor Thompson, the topographer Birnse, and the meteorologist G. Hasson. The route traversed by them was from Los Angeles over the Cayon Pass to the Mohave River, whose course they followed to the spot where it disappears suddenly from the surface; thence to Ivanpah, a small mining station on the border of Nevada, then to Cottonwood Island, in the Colorado River, which is six miles long and is inhabited by Pah-ute Indians; following along the Colorado to Calville, an old Mormon settlement, they passed over the mountains to the Rio Virgin; then they entered Arizona and the Hualpais Mountains, which abound in minerals.

Dr. E. D. Cope's "Report of the Vertebrate Paleontology of Colorado," in the "Memoirs of the Geological Survey under Dr. Hayden," describes formations rich in fauna belonging to the Cretaceous, Eocene, Miocene, and Pliocene periods. Dr. Cope has also published a systematic catalogue of the Eocene vertebrata of New Mexico, the fruit of the explorations of 1874. It comprises 47 species, 24 of them entirely new.

An essay on the Minnesota Valley, by Major J. K. Warren, estimates that the valley was once drained by a gigantic river, which, issuing from the basin of Lake Winnipeg, flowed into the Minnesota and Mississippi, carrying off the waters which now pass through Nelson's River into Hudson's Bay. He explains the altered direction of the drainage by an elevation of the southern part of the continent and a sinking of the northern.

SOUTH AMERICA.—A terribly destructive earthquake laid waste the district of Cucuta, in the republic of Colombia, on the 18th of May. The town was entirely demolished, and five other towns were nearly destroyed; in the district over which the disaster extended 16,000 out of a population of 35,000 perished. The earthquake at the end took the form of a volcanic eruption.

EUROPE.—Herr Verkrüzen has, on a third trip to Finmark and other parts of Norway for

the Rüppel Museum, of Frankfort, made a large collection of the marine fauna of the firds and around the island of Mageröe. Among the mollusks were some of remarkable size, compared with the same types in lower latitudes.

A German naturalist, Oscar Grimm, has spent three months dredging in the Caspian Sea at Baku on the west coast and at other points. He reports that animal life is very abundant in the western waters, though singularly wanting on the eastern shores, which he explains by the washing away of sand from the adjacent steppe. Among the new forms of life reported are 6 new species of fish, *Gobius* and *Bentophilus*, 20 mollusks, 35 crustacea, including huge varieties of *Gammarus*, and 20 annelids.
